Appendix

Address by Former Senator Hendrickson of New Jersey on the Constitution of the United States

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. CASE of New Jersey. Mr. President, I know that my colleagues are always interested in what my predecessor, Senator Robert C. Hendrickson, has to say. In his capacity as our Ambassador to New Zealand, he has recently had occasion to tour some areas of New Zealand, and to bring an American message to the people of that land. The Senate will be very much interested in reading an address made by Bob Hendrickson to the Overseas League on April 23, 1956. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OVERSEAS LEAGUE, CHRISTCHURCH, APRIL 23, 1956

Tonight it will be my purpose to bring to my good neighbors of the Overseas League some enlightenment in respect to the provisions of the Constitution of the United States of America and since we in America are on the eve of an election very important to free peoples the world over, I will endeavor in the short time at my disposal to treat briefly with those features of American constitutional government which give rise to an election procedure which seems filled with complications to our good neighbors abroad.

In any discussion of the Constitution of the United States it should be said at the very beginning that we in America all agree, save those who subscribe to Communist ideologies, that as a legal document, it establishes a highly successful system of Government. A great British statesman, William E. Gladstone, speaking of the American Constitution put it this way: "As the British constitution is the most subtle organism which has proceeded from progressive history, so the American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man." The precision and brevity of our Federal Constitution are admirable. It is true, of course, that millions of words have been devoted to its constitutional principles. Great jurists have interpreted the meaning of the Constitution in all its parts. Obviously as a framework of Government it has stood the test of time, wars, and depressions. It is a document based upon truth and, like truth, it laughs at all the assaults of time.

Before I treat with any of its basic principles or with laws and usages which have grown up thereunder, I would like to make just a few observations in respect to the heart and soul of the Constitution, and the qualities within its framework which spring from the human heart and not merely from the human intellect. Unless a Constitution satisfies the aspirations of the heart and feeds the human soul, unless it stirs our emotions deeply, it could not be regarded as an appropriate expression of any free people and this is particularly true, I think, of a written Constitution such as ours in the States—so we might ask these four questions: Why was the Constitution formed? Who were the framers? What emergency fronted them? And what did they aim to accomplish?

Stated briefly, the answers are that the American Constitution was formed for the purpose of perpetuating American liberty by uniting 13 separate and distinct Colonies in 1 indissoluble Government. When one recalls that few, if any, of those Colonies had little in common with their neighboring Colonies as of that time, it becomes immediately evident that all other aims of that new partnership were secondary to the basic objective which was to safeguard the liberty so recently won by giving those new and unprotected States a medium of common defense.

The history of the Articles of the Confederation by which the interests of the new States were loosely bound—very loosely bound, indeed—for approximately 11 years preceding the adoption of the Constitution makes it self-evident that at the close of the Revolutionary War the American liberty which has come to mean so much to the world of today would have been completely lost for all time unless the States had banded together under a solemn agreement possessing the strength and character to preserve their liberties. Now, then, if you believe as I do that our lines stem from God and that our Creator endows man with the right of liberty the moment he breathes life into him, it becomes difficult to take issue with the framers of the Constitution of the United States in their search to perpetuate their newly won liberty for their sons and daughters—and their children's children.

In any event, the framers of the Federal Constitution set their hearts and minds to the task ahead with all the earnestness and vigor they possessed as they undertook to write a legal document which would enable a new nation, "the American people," to exercise their power within their own hands to maintain their liberty against either foreign attack or internal dissension.

At the very outset these men who were soldiers, planters, lawyers, physicians, merchants, and judges—some very rich, others quite poor—wrote into the preamble of their new charter of human rights five basic purposes of their inspired mission. The first was to form a more perfect union; the second to establish justice; the third to insure domestic tranquility; the fourth to provide for the common defense; the fifth to promote the general welfare; and finally, they declared that the Constitution is to secure "the blessings of liberty to ourselves and our posterity." Having completed a statement of the mission, they then proceeded to write the pattern under which a new government might proceed. First, they gave us a legislative branch of Government by which they vested in a Congress all legislative powers. For this purpose they created a House of Representatives and a Senate: The House of Representatives to be composed of Members chosen every second year by the people of the several States according to population. The Senate to be composed of 2 Senators from each State to be chosen by the legislature thereof for 6 years. I hasten to say here that this provision was changed by the 17th amendment so that today, Senators are elected by popular election in each of the States. In addition to its legislative powers, the Senate of the United States has the power of impeachment of all officials of the United States, including the President. The Senate possesses another power which is not possessed by the House, namely, that of approving treaties and confirming the appointments of Ambassadors, public ministers, and consuls, judges of the Supreme Court, and of other officers of the United States whose appointments are not expressly provided for in the Constitution.

Having written a very competent program for the legislative branch of Government, the Convention proceeded to the task of establishing the executive branch of Government. This falls under article 2, which provides the methods by which the President and Vice President shall be selected, and defines their duties and powers. It will interest you to know that our Cabinet system has no constitutional status. It was created by enabling acts within the constitutional framework.

The next step in order was the establishment of the judicial power of the United States which is found in article 3—whereunder there is established one Supreme Court and such inferior courts as the Congress from time to time may ordain and establish. The 2d and 3d sections of article 3 spell out rather carefully the areas of the law or jurisdictions in which the courts may function.

To any of you who have listened to any extended discussions of the American Constitution—you will recall the frequent references to the phrase: "checks and balances." It may sound confusing to some, but the explanation is rather simple.

The framers of the Constitution had lived through rich and varied experiences in Colonial Government for over 169 years and under their own poorly conceived Articles of Confederation for 11 years. So that in all they had more than 180 years of "trial and error" to guide them. They had been taught by hard and sometimes costly experience that their great safety lay in preventing any concentration of power in one authority. Thus, by a complete separation of the legislative, executive and judicial powers and making them each a check upon the others, it was felt that all powers necessary could be entrusted to the Government without any danger of usurpation of power or resulting tyranny in any form by any branch of their new Government

But those wise and sagacious men went one step further. They provided one additional check which has been a great salvation on at least one occasion in my own lifetime. In article IV they retained large powers in the States and by so doing erected a further barrier or check against encroachment upon their liberties by the great central Government which they were creating.

In order to fully comprehend the unique system provided in the United States Constitution it must be borne in mind always that the States existed and each had its own individual sovereignty before the United

GPO

States was created. It was to bind them together and swing them into their coordinated orbits that the Union was perfected.

Perhaps the next vital feature of the Federal Constitution—next to the Bills of Rights, which was not adopted until 1792—is the Amendment Clause (art. V). Here again, the Founding Fathers exhibited farseeing wisdom. They provide a medium by which changes could be made from time to time to meet the most pressing needs of the people, but at the same time established safeguards against hasty and ill-considered proposals stemming from ill-tempered reactions in periods of great strain and strong emotions.

Now there are other provisions of importance but the articles I have mentioned coupled with the Bill of Rights (the first 10 amendments) vitually furnish the blueprint upon which our legal system is based and under which the Government of the United States has been administered now for 169 years. And it should always be remembered that the laws which are passed pursuant to the Constitution must conform to that blueprint—even a State law which violates the design of the pattern will upon proper legal review be declared unconstitutional and held to be without force and effect. Aside from the laws which are expressly prohibited to the Congress and the States the legislative authority is very broad indeed—and covers many fields and facets of life for the language of section 8 of article I very carefully spells out the express grants of power to the Congress for the enactment of every law a nation might need to adequately maintain itself within the terms of the preamble of the Constitution.

The laws specifically prohibited include such matters as the suspension of the writ of habeas corpus, bills of attainder or ex post facto laws, certain tax laws, laws giving preferences to the ports of one State over another or imposing duties between States; laws granting titles of nobility, etc. Then, there also are certain limitations in respect to the laws which the several States may enact which were very wisely included.

Since I might go on now for hours treating with hypothetical cases of the categories of laws that might be the subject of judicial review to test whether a constitutional right had been violated, I think the time has arrived now to make good my earlier promise to treat with some of the proceedings under which our elections are conducted for most of the present enabling legislation in this field has been tested by time, precedent, and careful constitutional review through both the State and Federal courts.

Here, I hasten to say that most of the election laws are State laws enacted by the State legislatures. This is so because aside from the President, the Vice President, the Members of the United States Senate and House of Representatives, all other elected officials are State, county, or municipal officers.

So the Constitution after providing a very unique, but I think archaic fashion, for the selection of presidential electors—for the election of the President and Vice President—leaves the election of the Members of the Senate and House upon the electors of each State who are qualified to vote for Members of the most numerous house of the State legislature.

Thus, our elections in the United States do become complicated to one who has never had residence there—for each State has its own laws to treat with its voting procedures—as well as the qualification of candidates and voters. By and large the State laws have over the years become fairly uniform but there still remain differences in registration procedures, dates of elections, filing procedures for candidates, limitations on campaign expenditures which under the wise guidance of organizations like the Council of State Governments will one day become uniform throughout the 48 States. At least this is my fond hope.

I am quite sure that the American election system which has developed under our Constitution becomes more difficult to understand abroad because of the two elections each election year—a primary election between the candidates of the same parties and then later, after an extensive campaign, the final or general election. In our primaries, as we call them, any qualified voter is eligible to become a candidate in the party of his choice for any office in the land—from the lowest to the highest. He qualifies himself by the filing of a petition signed by a number of qualified voters fixed by the statute according to the importance of the office. In some primaries there have been upwards of 30 candidates in a given party. The candidate who receives the greatest number of votes of course becomes the candidate for his party in the general election. Since both parties operate on the same basis in this respect, the winners in the primary election are the contestants in the general election. Here, I hasten to add that although we have only two major parties, there are always spaces on the ballots in which to write in candidates of one's choice and in addition to this fact, a candidate may always file as an independent or as a member of a minor party, as for example the Socialist Party. I wish that time permitted to relate some of the interesting experiences I have had in primary contests in my own State.

Now, when a President is running, the delegates for the party convention are selected from each State to represent their parties at the Presidential conventions. In my own State of New Jersey these delegates were selected last Tuesday in the primary election held three. These delegates may or may not, according to their designations on the ballot, be pledged to certain candidates for President or Vice President. In the year in which a President is to be elected it is usually customary for all other candidates in both parties to lean heavily upon the presidential candidates' popularity and by the same token, county and municipal aspirants for office generally lean heavily upon Statewide candidates—as, for example, the candidate for Governor or for the United States Senate. Our campaigns in the United States are properly the subject of much criticism both at home and abroad, and this is so primarily because candidates for various offices will start to announce their intentions very early in the year and the first announcement immediately brings on the beginning of a primary campaign.

Both in 1940, when I ran for governor, and in 1948, when I ran for the United States Senate, I was campaigning constantly from the middle of February until the day before the general election, which in every State, except Maine, falls on the first Tuesday after the first Monday of November of the election year.

We have pictures here which tell vividly the story of our party conventions for the Presidency, so for the sake of brevity I will not dwell on that subject.

It should be mentioned that we have adequate proceedings in the law of each State for contesting elections on the grounds of fraud or corruption, or even for an alleged faulty count. In the case of the election of United States Senators and Congressmen there are not only safeguards in the law against fraud and corruption but the Constitution provides specifically that each House may be the judge of the qualifications and fitness of their Members so that there are occasions where Members of the House of Representatives and the Senate are investigated for integrity both at the State level and again by the respective Houses to which they might seek membership.

I had the unpleasant task for a number of years of serving on the Senate Committee on Privileges in Elections and had to pass judgment on the qualifications of men who were duly elected by a majority of voters of their own State. I can assume you it is not an easy task to look beyond what seems to be the will of the people of one of our great States.

All this election machinery falls within the blueprint of the Constitution of the United States and is established, as I have indicated, by laws enacted pursuant to that great charter of the Government. Under its benign influence America has enjoyed on the whole that quality of service from its elected officials and its representatives in its 49 legislative bodies which has given the people of the country both the inspiration and incentive to expand their national resources in a period of 169 years to a position which has no parallel in the world. I know that I speak for my President, for the Congress, for the people of America when I express the hope that, as we try to share with others who seek liberty akin to our own, our unselfish purposes will be fully understood everywhere.

May it be the will of the Almighty to give to all people throughout the world the bountiful blessings which have been ours in the fields of justice, liberty and a well-balanced free way of life—through the medium of free elections and sound constitutional procedures.

Partisanship Set Aside

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following editorial from the St. Louis Post-Dispatch:

PARTISANSHIP SET ASIDE

Walter S. Robertson is one of the most responsible officials in the Eisenhower administration. As Assistant Secretary of State for Far Eastern Affairs he shoulders the responsibility for United States policy with respect to the perplexing problems of the Orient. His specific assignments have taken him to the Geneva Conference of 1954 and to the Manila Pact Conference at Bangkok last year.

Because Assistant Secretary Robertson is this trusted official of the Eisenhower administration special importance attaches to an address he delivered at Staunton, Va., the birthplace of Woodrow Wilson. The occasion was a notable gathering, including ambassadors or their representatives from 35 countries, in connection with the centennial year of the birth of the World War I President.

Mr. Robertson's review of the Wilson career was in striking contrast to the slurs frequently thrown at that great President by Republican partisan speakers. There was no low blow at Woodrow Wilson as the first of "three Democratic Presidents to get the country into war." There was no attempt to dismiss him as a visionary, an impractical idealist, an egghead.

On the contrary, Mr. Robertson made a point of saying that when war came in Europe in 1914, "Wilson was primarily concerned to keep our Nation out of it." He told how Wilson as a boy of 8 "had seen at firsthand in Georgia the horror that follows in the wake of war."

Because Wilson's "devotion to peace was genuine and compelling," the Democratic President struggled through 3 years of the war in Europe to find a common ground on which the belligerents could meet. Of this Mr. Robertson said:

"Wilson's statesmanship stands out as matured and inspired. He could not have tried harder than he did to bring about peace without victory, but no man could have held back the tide of events that was to follow—the sacrifice of more hundreds and thousands of lives, the achievement of power by the Communists in Russia, the internal collapse of Germany, and the eventual rise of nazism, bringing on Europe another and near fatal war."

The Assistant Secretary of State not only commended Wilson's 14 points as a historic peace program with overpowering psychological effect that shortened the war. He commended also Wilson's vision in proposing the League of Nations and in insisting that it be part of the World War I peace treaty. Then Mr. Robertson made this remarkable statement:

"President Wilson's defeat came not in Paris but at home. It is not my purpose to explore the causes of that rejection. No one can question the earnest patriotism of the opposition. No one can question that the blame must be shared.

"It is enough for us to recall that on August 8, 1945, the United States Senate voted in favor of American membership in the League's successor, the United Nations, vindicating Woodrow Wilson's ideals by the startling vote of 89 to 2.

"We had by then paid in copious measure for our failure to join the League of Nations that Woodrow Wilson had founded."

What relevance does the Wilson example have for us today? Mr. Robertson made it very clear when he recalled how Wilson's idealism was derided in the 1920's and then said: "We have had to learn once more that when Wilson said 'the world must be made safe for democracy' he was expressing the necessary and transcendent objective of our Nation's foreign policy, the end we still must achieve if we mean to survive."

At the start of 1956 the hope was expressed on this page that the centennials of those two great men of ideas, Woodrow Wilson and his Supreme Court appointee, Louis Dembitz Brandeis, would somehow raise the level of campaigning in the presidential election year.

Certainly Assistant Secretary of State Walter S. Robertson has done his part to set partisanship aside and to give credit where due. His address at the historic and lovely town of Staunton, Va., ought to be required reading for Republican and Democratic speakers in the months ahead. It has the stamp of statesmanship.

United States Potters Association Consolidated Report on Sales, Earnings, Wages, and Man-Hours, 1947–55

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. McGREGOR. Mr. Speaker, I am today in receipt of a chart showing what our so-called reciprocal trade and low tariff program is doing to one of our great industries, who for years has given employment to many, many people. The chart that I am inserting shows a steady decrease in earnings, in total wages, and total man-hours worked.

Mr. Speaker, for many years I have been calling to the attention of Congress this situation and others of similar nature as it affects industries in my district. It is disgraceful that we are asking our American labor and manufacturers to compete with products produced in other countries by low wage rate labor. I say it is time to stop such a procedure.

EXHIBIT A.—*United States Potters Association consolidated report on sales, earnings, wages, and man-hours, 1947–55*

Year	Sales, less allowances and returns, prepaid freight, packages, and discount	Earnings before taxes	Earnings after taxes	Total dozens shipped	Total wages, production employees, including all premium and vacation pay	Total man-hours worked, production employees
1947	$56, 620, 850	$6, 688, 246	$4, 150, 350	27, 293, 281	$32, 806, 817	25, 681, 758
1948	59, 409, 591	5, 552, 471	3, 428, 569	27, 466, 052	35, 796, 623	24, 895, 846
1949	52, 765, 241	1, 998, 548	1. 158, 747	21, 862, 812	31, 504, 426	21, 472, 919
1950	54, 881, 791	3, 467, 055	1, 951, 892	23, 365, 968	31, 505, 141	20, 596, 834
1951	59, 670, 911	3, 790, 339	1, 811, 416	22, 987, 942	34, 124, 409	20, 958, 997
1952	58, 789, 381	2, 275, 621	942, 504	22, 701, 589	34, 617, 634	20, 385, 137
1953	53, 508, 651	1, 026, 227	255, 815	19, 337, 151	31, 744, 522	16, 703, 501
1954	48, 315, 607	[1] 683, 786	[1] 1, 107, 882	18, 932, 883	26, 976, 496	15, 858, 009
1955	45, 529, 915	510, 025	48, 938	19, 065, 937	24, 867, 746	14, 377, 871

[1] Loss.

Cotton Research Needed

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 16, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following newspaper article describing a recent proposal for major acceleration of cotton research made by W. T. Wynn, of Greenville, Miss., chairman of the board of directors of the National Cotton Council:

WYNN URGES FIGHT FOR RESEARCH AT TEXAS MEETING

DALLAS, TEX.—If cotton is to insure its long-range future, cotton farmers should begin thinking about paying from $1 to $1.50 per bale into an industry fund for research and promotion.

This proposal was advanced here today by W. T. Wynn, Greenville, Miss., in an address to the Texas Cottonseed Crushers Association. Emphasizing that cotton must choose between research or recession, he said that with an average 12-million-bale crop the collection of from $1 to $1.50 per bale would yield $12 million to $18 million annually for work on cotton and cottonseed problems.

Chairman of the board of directors of the National Cotton Council and long prominent in the industry, Wynn said, "In no other way can I envision that over the long pull we will be able to give cotton a truly adequate research program.

"In no other way can I see how we are to hold and expand our markets, to utilize effectively our land and capital investments, and to be assured of a prosperous cotton economy.

"I make this proposal," he said, "knowing we have made great progress and that fine work is being done in Government and private research laboratories, and in our textile schools and textile mills. I make it, however, knowing, too, that we must continually plan for the future."

Wynn said he was addressing the group as an individual, "a farmer and a businessman whose experience and observation have been impressed with the vital role that research plays in the changing patterns of economic growth, business survival, or business catastrophe."

The $12 million fund he proposes admittedly is but a start, he said, toward matching the money that is being spent by producers of man-made fibers; but $12 million is enough to get into a really effective program of research and promotion.

COLLECTION PLANS

How could such a fund be collected? There are several possibilities, he said, all of which must be considered carefully. He quoted a resolution passed by cotton council delegates at the organization's annual meeting, putting the organization on record to "seek to develop a long-range program to finance, from private sources, research and promotion in amounts adequate to make cotton fully competitive with synthetic fibers and other competing materials."

The purpose of this resolution, he explained, is to make sure that the right answer is found to the problem of financing such a program as he envisions.

Mr. Wynn also called attention to a bill introduced recently in Congress, incorporating the idea of a greatly expanded fund for research and promotion.

"This bill, as I understand it, would have the farmers vote a levy on themselves when they vote on production controls each year. This is one method at which the industry will be looking. But whether we come out with this method of financing or some other, we can all agree that the time for half measures is past."

IDEA NOT NEW

The idea of farmers assessing themselves for their own protection is not a new one, the cotton industry leader declared, noting that in the Mississippi Delta cotton producers for a period of 50 years paid a dollar per bale each year for levees to protect their lands from floods. In many of these years the price of cotton was less than a dime a pound.

"The threat to the cotton industry by the Mississippi River was no more real," the industry leader warned, and not nearly so permanent in nature as the threat now facing the cotton farmer—the threat that his means of livelihood will be swept away by the onrushing flood of synthetic fiber production."

Foreign Aid and the Taxpayer

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following statement which gives the results of some calculations I have made in an effort to relate the foreign-aid bill to my own district.

In reaching a decision as to whether or not to go along with the administration on their request for $4.9 billion in funds for foreign aid, I found it of considerable interest to apply this figure to my district. I felt it important to bring my constituents' attention to the amounts which are actually coming from their pocketbooks without their being given an actual opportunity to vote on the measure. As their Representative in Congress, I am very much aware of the fact that they are heavily burdened with tax and that I should extend my efforts wherever possible to ease that load.

Since coming to Congress I have fought consistently for cuts in foreign aid and this year for the first time voted for the bill after the cuts I worked for in committee were made. While I certainly do not base my decision to fight for cuts entirely on the basis of per capita cost to the taxpayer, I do feel it is of great importance.

In applying the 1956 foreign-aid figure to my State, I find that Michigan's share amounts to $277,340,000. My Eighth District, with a population of 333,277, would carry a portion of this request amounting to $14,504,882.

In my district, there were 104,995 voters who cast a ballot in the congressional election in 1954. It is surprising to realize that their share of the proposed $4.9 billion would amount to $138.14 each.

I believe the following figures on the 6 counties and 6 largest cities in the Eighth District are worthy of our study:

	Population	Share of 1956 foreign aid
Clinton County	31,195	$1,358,966.00
Gratiot County	33,429	1,453,261.60
Ionia County	38,158	1,658,493.20
Montcalm County	31,013	1,350,645.80
Saginaw County	153,515	6,683,894.00
Shiawassee County	45,967	1,999,621.40
8th district	333,277	14,504,882.00

Applying the same figures to our six largest cities:

City	Population	Share of 1956 foreign aid
Ionia	6,412	$278,626.85
Alma	8,341	361,861.74
Greenville	6,608	290,388.85
Owosso	15,948	696,968.74
St. Johns	4,954	215,803.80
Saginaw	92,918	4,043,755.87

Technical and Scientific Education and Proposed Federal Scholarships

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter written to the editor of the New York Times by William Benton, former United States Senator from Connecticut.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 31, 1956.

The EDITOR,
THE NEW YORK TIMES,
New York, N. Y.

DEAR SIR: In his important address at Baylor University last Friday President Eisenhower called upon American universities and foundations to help provide "adequate institutions of modern techniques and sciences" in underdeveloped areas.

The President thus makes a tentative approach to a problem of the highest importance and urgency. He eloquently sketches the breadth of the opportunity. At Baylor he said:

"Do we not find here a worthy challenge to America's universities and to their graduates? I firmly believe that if some or all of our great universities, strongly supported by private foundations that exist in number throughout our land, sparked by the zeal and fire of educated Americans, would devote themselves to this task, the prospects for a peaceful and prosperous world would be mightily enhanced.

"I honestly believe that the opportunity here for each educated American is invaluable beyond the comprehension almost of any one of us."

I read the Baylor address in Paris. Perhaps this explains why I reacted with distress over the considerable misunderstanding it will cause abroad. Foreigners don't realize that our Federal Government has no authority over the programs of our universities or our foundations. Further, abroad as well as at home, some people think of foundations as bottmless cornucopias, and of universities perhaps as turbines of energy and intelligence that can be redirected at will.

Naturally, the ideal in any such situation is to hope that private money can carry the load. But all of our universities today commit all of their annual income to maintaining their own existing programs. Many are incurring deficits to keep them going. I do not know one institution that could undertake important new obligations overseas in the underdeveloped nations without slashing drastically the services it now renders to its own students or to its own State and community; or to the cause of science and scholarship. Indeed, our universities must develop far bigger budgets to do justice to their present obligation. Some estimates predict a doubling of college and university enrollment, on present trends, by 1970.

The foundations, for their part, don't often have deficits. But they do have existing programs and commitments, worked out painstakingly between their officers and their trustees, which consume most of their income. If all of the uncommitted 1957 income of all the major American foundations were to be devoted to President Eisenhower's suggestion, the total would not remotely meet or match the need or the challenge implicit in it.

In the Times and elsewhere I have pointed out that the classroom is a critical front in the cold war. Last fall I personally saw the evidence of this in Moscow, Kiev, and Leningrad. One small example is that Soviet engineering institutes last year graduated 63,000 new engineers—competent and indoctrinated engineers. We graduated only 23,000 in the face of a domestic need for 45,000 to 50,000. The surplus export crop of Soviet engineers is now beginning to infiltrate the underdeveloped areas. Soviet technicians and educators are arriving in Rangoon to build and staff the technological institute Khrushchev promised the Burmese people as a gift of the Russian people. They are the advance point of the new offensive.

The conference called for June 12 will clearly see that President Eisenhower has opened up a new and little recognized problem in national defense. Viewed as such, it is manifestly a Federal problem. I therefore emphasize three proposals for immediate consideration and action:

1. Because we ourselves are wasting our own manpower potential so grievously—with only one-quarter of the top 20 percent of our high-school youngsters graduating from college—I have suggested the establishment of competitive Federal 4-year scholarships, beginning with 20,000 a year and increasing to 100,000 annually as rapidly as the colleges can handle them. Why should not service overseas be expected from some or all of the scholarship winners? Just as graduates from the service academies are expected to serve their country for 3 years, so our young engineers and scientists, educated at the expense of the American people, could be expected to serve an interneship in their specialty overseas. Further, I suggest that a proportion of any Federal scholarship program be set aside for students from the underdeveloped lands, with special consideration given for students and for curricula which would contribute most to economic, political and scientific development.

2. I have proposed the creation by the Federal Government of a series of technical assistance academies, here in this country, in conjunction with existing centers of higher training—"West Points of Point Four." Foreign students should be welcomed and supported in these academies, just as students from friendly powers are welcomed in our service academies.

3. Since both the United States and the U. S. S. R. are already embarked on limited educational technical assistance efforts abroad, I suggest that the United States take the leadership in proposing to the Soviet Union and to the free world that the United Nations, with the full support of the United States and the U. S. S. R. greatly step up its budget for technical and scientific education in underdeveloped areas.

Very sincerely yours,

WILLIAM BENTON.

SOUTHPORT, CONN.

Commendation of the Hicks Corp.

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Adm. F. S. Withington, Chief,

Bureau of Ordnance, USN., congratulating the Hicks Corp. for the fine work it has done in the development and production of certain guided missile rocket motors.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE NAVY,
BUREAU OF ORDNANCE,
Washington, D. C., June 14, 1956.

THE HICKS CORP.,
Boston, Mass.

GENTLEMEN: I desire to acknowledge personally the outstanding performance of the Hicks Corp. in the development and production of Terrier guided missile rocket motors. You have been the leader among the producers in quality and price reduction. The Hicks Corp. is the only supplier classed as small business.

I wish to congratulate you particularly on two major contributions made recently. The response on your part in introducing the flame deflector as a safety feature for shipboard use into the later units of the booster Mk 3 is greatly appreciated. The U. S. S. *Boston*, the Navy's first guided missile cruiser, was outfitted with these safer Terrier-missile boosters off your production line.

Your cooperation in introducing the current motor design into production at an accelerated rate has permitted steady and rapid progress in the improvement programs of missiles. The work of your production engineering staff in close cooperation with the Bureau's design personnel plus the ordering of long lead time critical materials at your financial risk in advance of contract has reduced the normal lead time by two-thirds. This is particularly noteworthy when considering you are a small business concern.

I am anticipating equally successful performance on your part through adaption of hydraulic spinning techniques and the research type contracts with the S. D. Hicks & Son Co.

Sincerely yours,

F. S. WITHINGTON,
Rear Admiral, U. S. N.,
Chief, Bureau of Ordnance.

Dangerous Decision

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Dangerous Decision," which appeared in the Manchester Union Leader, Manchester, N. H., on June 16, 1956, which I feel will be of interest to everyone.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGEROUS DECISION

There will be general agreement among the American people with the dissent against the majority decision in the United States Supreme Court that the Government must not only find an employee is a subversive in order to fire him, but also that he occupies a sensitive job.

This kind of ruling can, as the dissenters said, have the Government honeycombed with subversives. It is a flagrant violation of the power given to the President by Congress to pass judgment on whether a Government employee is a risk to national security or not.

The significance of the majority decision is revealed by the hearty approval that it has received from an organization such as the American Civil Liberties Union. Approval by a group like this simply means that the decision is a victory for pro-Communists and Communists, who as a result, are better able to carry on their program of subversion and undermine our national security.

It is therefore important that Congress enact legislation on this matter to see that the Government is not a harbor for subversives. It is disturbing to see the United States Supreme Court basing decisions on technicalities, while the broader application of principle is ignored.

Martha Shull, Oregon's Choice

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most capable article entitled "Martha Shull, Oregon's Choice," by Richard Barss, editor of periodicals for the Oregon Education Association. The article, from the June 1956 issue of the Portland OEA Bulletin, describes the Portland school teacher and education leader, who this month very probably will be elected as president of America's largest organization of educators, the National Education Association.

Although Martha Shull has not been on the same side of political questions as Mrs. Neuberger and myself, we are pleased and privileged to cast partisanship aside to join in congratulating Miss Shull on the eve of her great honor. May her administration as head of the National Education Association be crowned with achievement and success.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARTHA SHULL, OREGON'S CHOICE

(By Richard Barss)

Truly a remarkable classroom teacher. That's Miss Martha A. Shull, Oregon's candidate for the presidency of our great National Education Association.

She is a thoroughly charming personality—warm and friendly, gracious and gay. But she's much more than that. She's a woman of great educational experience and a long-time leader in organizational affairs. Consider these few recent examples of her busy professional career:

Only 2 summers ago, she was one of 2 United States delegates to the 17th International Conference on Education in Geneva, Switzerland, appointed by the Department of State.

She has just completed serving as one of 33 national leaders on President Eisenhower's Committee for the White House Conference on Education.

And now, of course, she's first vice president of the NEA and doing other professional work as well.

Yes, she's a remarkable teacher, one I would like to have known far longer than I have.

I first began working with Martha in 1943–44, shortly after I started editing publications for the Oregon Education Association. She was then chairman of our Economic Welfare Committee—and how that committee functioned. It really knew where it wanted to go. It brought group insurance to OEA members for the first time. And it got the ball rolling on sick leave, improved salaries, health certification procedures, and credit unions—a vigorous action program soon realized.

True, Martha had a good committee. But it was she who kept it moving and helped pull misty visions into manageable practicalities. Her quiet sallies relaxed tension in committee debate. And her poise and charm brought about significant educational gains in work with laymen, legislators, or reluctant educators.

Martha Shull was discovered by her fellow educators long before I came to know her. She had already served as president of the Inland Empire Education Association which meets every year in Spokane, Wash., and draws the attendance of leading educators from Oregon, Washington, Idaho, and Montana. She was one of the first women presidents of that large organization. She had also held various offices in the Portland High School Teachers Association and was secretary and a charter member of the Portland Teachers' Credit Union.

After 1943–44, the list of her professional services became even more impressive. That was only natural, because she believed thoroughly in the significant work to be done through effective educational organization.

Successively she became Northwest regional director of the NEA Department of Classroom Teachers, member and vice chairman of the National Commission on Teacher Education and Professional Standards, chairman of the Oregon TEPS Commission.

She was president of the Oregon Education Association, on the executive committee of the American Association of Colleges for Teacher Education, and a member of the executive committee of the National Education Association from 1950 to 1954. An OEA delegate to the World Organization of the Teaching Profession at Ottawa, Canada, Martha was later an NEA delegate to its successor organization at Oslo, Norway.

Phi Beta Kappa she is, and a member of such groups as the National Council of Teachers of English, AAUW, League of Women Voters, National Conference of Christians and Jews. Portland's Quota Club recently honored her as its annual "Woman of Achievement" and Theta Sigma Phi cited her as 1 of 5 leading women in Oregon public affairs.

Despite all her organizational interests, Martha does a teaching job that draws the plaudits of pupils in Portland's Jefferson High School. Wrote one, in a recent pregraduation note: "I feel so fortunate to have had you our last year at Jefferson. You have been my absolute favorite teacher of all times. English literature and reading would never have been interesting to me if it had not been for you, your knowledge, experience, and patience."

My own favorite tribute to Martha was given in the seconding speech for her as NEA first vice president last summer. Said former NEA President "Andy" Holt:

"I wish I had the vocabulary so I could do justice to a description of Martha Shull's innumerable virtues. Lacking such, I can only describe her in my native Tennessee dialect.

"As you can see, she is as pretty as a speckled pup. When she smiles, you feel warm inside, just like somebody has said something nice about your grandchild.

"She is as shrewd as a farmer's wife at a Sears, Roebuck sale.

"She knows the NEA like a moonshiner knows his corn.

"She is as eloquent as a Baptist preacher at camp meeting, and when she talks she sounds like a spring branch running down a mountainside.

"She is as sweet as sorghum molasses fresh off the mill, and she is as pleasant as a hog at sloppin' time.

"She will be invited everywhere, and wherever she goes, we'll be glad she has been."

North American Regional Broadcasting Agreement

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Long Overdue Treaty," published in the New York Times of June 7, 1956. The editorial deals with the North American Regional Broadcasting Agreement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LONG OVERDUE TREATY

For more than 5 years the Senate Foreign Relations Committee has failed to act upon a treaty that has an important bearing upon our relations with Canada and ouf Latin-American neighbors. It is the North American Regional Broadcasting Agreement, generally referred to as NARBA.

Just as broadcasting stations in the United States must operate on assigned frequencies in order to avoid radio anarchy, similar regulation should exist bilaterally between our country and each of those near our borders. That is the purpose of NARBA.

Interference from Cuban radio stations is effectively destroying the service rendered by some United States broadcasters, particularly in the South and along the eastern seaboard. Even a weak station in Cuba can cause interference hundreds of miles away. Radio waves do not respect national boundaries and an international agreement is the only practical method of obtaining mutual protection.

Although the proposed NARBA does not satisfy everyone, in many respects it is more favorable to the United States than any earlier agreement. Opposition to it comes from only 15 of the more than 2,500 AM stations in this country. Some critics of NARBA say that ratification still will leave us without a radio treaty with Mexico. Efforts are being made to work out an agreement with that country, but in order to strengthen our position in Mexican negotiations we should have a deal with the other North American stations. NARBA would give us a much-needed bargaining tool.

The Chairman of the Federal Communications Commission, George C. McConnaughey, has urged the Senate to take immediate action on NARBA and consent to ratification. The work of the FCC constantly is hampered by trying to adhere to the provisions of a treaty which in fact does not exist. The Senate should make a decision before adjournment this summer and, in the public interest, we think that decision should be to ratify NARBA.

Importance of Coal to the National Economy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, there has been much discussion of the economic situation of coal in the United States. The increased uses of power, because of the expanding economic situation of our country, have created new uses for coal. In addition, the depletion of the mines of Europe has also created an additional market for this important product.

Mr. President, a few days ago the President of the Chesapeake & Ohio Railway Co. delivered in Washington, D. C., a very important address on this subject. The title of the address is "Coal's Vital Place in World Prosperity and Peace."

Capt. John M. Cummings, a special writer for the Philadelphia Inquirer, has also made comments along this line.

Railroad officials, heads of the coal-producing companies, and also the United Mine Workers have organized a new corporation for the purpose of promoting the increased use of coal.

Mr. President, inasmuch as I feel that all my colleagues will be interested in reading these two important documents, I ask unanimous consent that the address by Mr. Tuohy and the article by Captain Cummings be printed in the Appendix of the RECORD.

There being no objection, the address and article were ordered to be printed in the RECORD, as follows:

COAL'S VITAL PLACE IN WORLD PROSPERITY AND PEACE

(By Walter J. Tuohy)

If coal could be rediscovered today in the research laboratory the world would hear with wonder of this amazing energy source. Coal, nature's concentrated power package in the handy black container, is perhaps taken a bit for granted these days.

Coal powered the industrial revolution which began a century and a half ago. Today a second industrial revolution is sweeping the world, bringing with it as radical a change in the way of living as did the first. Nations all over the world are rebuilding after the war years, and are driving hard for higher living standards for their people. One may be the impression that new sources of energy are to power this second revolution. We hear of atomic energy, petro energy, and hydro energy. The fact, however, is that coal energy, which powered the first industrial revolution, will carry the heaviest part of this second one, too.

Coal actually furnishes today the greatest share of the world's energy. As energy needs double in the next generation, more and more coal will be required. The energy demand will be so great that all coal, as well as all other energy sources, will be needed.

How will this extraordinary demand for coal be met?

We know the United States has the world's largest recoverable coal reserves, and the capacity efficiently to produce it. Behind the Iron Curtain, in Russia and Red China, are also vast reserves of coal. We may assume their ability to mine it and their own growing need for it. In South America and Japan, the coal resources cannot keep up with the growing needs and they are importing United States coal.

There is one vital area in the free world, however, where a serious shortage of coal threatens both prosperity and peace. It is about the coal hunger of the nations of Western Europe that I should like to speak. This year over 40 million tons are going abroad to help meet this deficiency. In the years ahead Europe's import needs will be much greater. It is vital that American coal in the necessary amounts be made available to Western Europe, for it has a direct bearing upon the economic strength that underlies the ability to resist aggression.

If I may I will use slides to help make understandable the statistical material. How big is Western Europe's new demand for energy? The slide shows that Western Europs used 805 millions of short tons of coal equivalent in energy in 1955. This is made up of coal and lignite 597, oil products 139, hydroelectric 63, and natural gas 6. Of the coal, 27 million tons were imported from the United States. This was 71 percent of all United States coal exports in 1955.

The next slide gives the biggest customers in Western Europe. Last year Germany took 6,672,000 short tons; Italy, 6,056,000; the United Kingdom, 4,858,000; the Netherlands, 4,623,000; Austria, 1,219,000; Belgium and Luxembourg, 1,142,000; and France, 1,017,000.

What is the probable future coal demand in Western Europe? The slide shows that Western Europe's energy demands expressed in the equivalent of millions of short tons of coal will go to 926 in 1960, and to 1,323 in 1975. It shows also the proportion of that demand that must be filled with imported sources of energy. These projections are made in the report just published by the Organization for European Economic Cooperation.

The worldwide expansion of steelmaking capacity is a reliable guide to the magnitude of future increased coal use, keeping in mind that it takes a ton of coal to make a ton of steel. The slide portrays steel production in several countries in Western Europe in 1955 and estimated capacity by 1960, with the increase in tonnage that this represents. The hard core of European demand for United States coal is for metallurgical purposes. Europe consumed 17.5 million tons of United States metallurgical coal in 1955, and is reported to be seeking 22.5 million tons for 1956.

The next slide charts the OEEC's estimate of European coal imports from the United States—27 million tons in 1955, 44 million in 1960, and 55 million tons in 1975. The report says it has taken 55 million tons as the maximum because larger amounts would probably need considerably increased port and transport facilities. "Larger imports in the future," says OEEC, "would almost certainly have to come from the United States and their cost would be largely dependent on the level of transatlantic freights at the time." It is my belief that both port and transport facilities can and will be improved, and that United States export can go to the level of 100 million tons a year.

The exportation of American coal overseas began as far back as the 1890's. The first really substantial movement of export coal occurred in 1920 when 22 million tons went to overseas destinations. Another peak movement of 22 million tons occurred in 1926, acused by the British coal strike. But in other years the export volume varied widely, and it was not until after World War II that export became a major factor in the coal industry.

The slide shows coal exports from the United States since 1920—first, the average

annual tonnage from 1920 to 1945, which was 4 million tons—second the average of 22 million tons in the 10-year period 1946 to 1955—and finally, the estimate of 42 million tons this year, based on the first quarter.

The next slide shows production and overseas exports of coal for the last 10 years. There were two high points, 1947 and 1951, but beginning with 1954 we see the development of a year-to-year upward trend in exports. The forecast for this year is a continuation of this rise.

The real significance of the trend is the change in the character of the export coal movement. It is becoming more evident day by day that the foreign demand for American coal is no longer on a spot basis, but is permanent and expanding. Export coal is now being purchased in sizable quantities on contracts of 3 to 5 years duration.

Can Europe increase its coal production materially and lessen dependence on United States imports? It cannot.

Chief among the problems of the European coal industry are a declining labor force in spite of recruiting efforts, and the low output of manpower.

The next slide gives the coal output per man per day the United States is 10 tons, compared with 1.21 in Great Britain, 1.12 in Germany, 0.98 in France, 0.78 in Belgium, and 0.63 in Italy.

In addition to low productivity and manpower decline, other reasons are given for the inability of some countries abroad to increase production in the face of rapidly expanding energy requirements. These include faulty and wasteful mining practices of the past, inability to adopt older mines to mechanization, and difficulties involved in deeper mining. The shafts of British coal mines grow deeper and deeper. In 1924, the average depth was 1,000 feet, today it is 1,300 feet. New mines opened in recent years range from depths of 1,800 to 3,000 feet.

The authoritative London publication, the Economist, regards the British coal production outlook as dismal. After 6 years of diligent long-term planning by the British National Coal Board, and the investment of large amounts of Government money in capital improvements and new mines, output targets have been revised downward and capital costs have been revised upward.

The National Coal Board forecasts that declining coal production in present collieries would necessitate in the next 10 years for new equipment and the opening of new mines, capital expenditures of 1 billion pounds (close to $3 billion). Even with this huge new exepnditure, British coal production in 1965 will be only 20 million tons more than it was last year. Under these circumstances it is quite apparent that Great Britain, once the coal supplier to Europe, can never again fill that role.

A friend of mine who holds an important place in the British coal and shipping trade recently told me that in 1913 Great Britain exported 75 million tons of coal, 18 million tons moving through his home port of Cardiff, Wales. Last year no coal was exported from Cardiff, and coal-loading terminals in that port are being converted into unloading facilities for the permanent importation of coal.

Other sources of energy can be expected to expand in response to the heavy demand for more energy. But petroleum, natural gas, and falling water are not available in quantities sufficient to meet the current energy deficit. Atomic energy, on a commercial basis, is too far in the future to bear any sizable portion of the load.

The OEEC report says that the popular enthusiasm aroused by nuclear energy, and the headline publicity given to developments of relatively small importance have been unfortunate. This is a false impression of the contribution that nuclear energy is likely to make to Western Europe's energy needs during the next 20 years. The report forecasts that nuclear energy will not provide more than 8 percent of the total energy demand in Western Europe in 1975. It is a mistake, the report indicates, to assume that atomic energy on a large scale is just around the corner. The conclusion is:

"For many years to come conventional forms of energy will be needed and coal must remain the mainstay of the Western European energy economy."

Thus, we find that international trade has become an established part of the coal industry in the United States. We now face the responsibility of seeing to it that the exportation of coal continues to be the billion-dollar business the United States Department of Commerce has called it.

Now is the critical time to examine this channel of international trade that has been set up, connecting the American coal mine with the foreign consumer. What needs to be done to strengthen the channel, and keep the coal moving?

There are four major parts in this channel: (1) Production of the coal at the mines; (2) rail transportation from mine to tidewater; (3) ocean transport to foreign shores; (4) unloading and distribution of the coal overseas.

As to the first our highly mechanized and efficient coal mining industry has well established its ability to produce the coal at low cost. The coal producers are making heavy capital expenditures to enlarge operations, increase capacity, and reduce costs. It is estimated that they will increase their capital spending this year to $300 million. This faith and confidence being exhibited by the American coal industry have spread to our most conservative financial institutions, such as banks, investment houses, and trust funds.

Look at this slide of a recent advertisement by a leading bank, the First National City Bank of New York. It is headlined "Bright Future for Black Diamonds," and it continues "Coal production can more than double by 1975 * * * with bank help." Please notice particularly those last three words. When a bank wants to put its money behind coal's future, it is saying it with more than words.

A heavy responsibility rests upon the coal industry to produce good low-ash coal, well prepared, and reasonably priced. Farsighted producers recognize that a quality product alone is the firm foundation of the export coal trade.

We can count on the solid backing of the miners in maintaining high productivity and efficiency. The United Mine Workers of America, to its credit, has historically supported mechanization in the industry. Six years of peace in the coal industry have proved what progressive men can do working together.

2. Next is rail transportation from mine to tidewater. Speaking for the two largest railroads that originate coal for export, who together move 80 percent of all the coal exported through the port of Hampton Roads, we recognize fully our obligation to provide an ample supply of coal cars for loading, to maintain adequate facilities for dumping, and to give good service at reasonable rates.

These railroads are now making heavy capital expenditures to increase the capacity to handle export coal at Hampton Roads. At Lambert's Point in Norfolk, the Norfolk & Western is building additional tracks, piers, and terminal facilities.

The Chesapeake & Ohio has under construction at Newport News a new coal pier that will go into operation this fall, with supporting yards, tracks and other terminal facilities.

The 2 roads together now have nearly 14,000 new hopper cars on order, and bad orders are at an all-time low—around 1 percent.

The railroads are handling this export traffic at less than a cent per ton mile, in trains which represent the world's lowest cost land transportation.

Because of these efforts of the coal producers and the coal-carrying railroads to do their cooperative job more efficiently and more economically this remarkable fact can be stated:

The superior coals of the United States can be mined and delivered to tidewater piers, ready for shipment overseas, at much less than the cost of coal at the mines in Great Britain, Germany, France, and other coal producing countries.

3. Third is ocean shipping. Much credit is due to the shipping companies for their part in preserving the export market. When we consider that there has been no merchant marine as such for the handling of export coal, a miracle of transportation has taken place. A fleet of ships has been put together that last year transported 38 million tons of coal abroad, truly a great achievement.

But the quality and quantity of ocean shipping are limited. Herein lies one of our greatest problems. We need larger, better and more modern ships that can get the coal across the ocean at a cost low enough to hold the markets.

4. No less important is the fourth factor, the unloading of the coal at the foreign port and its delivery to consumers. Large bulk terminals, as modern and efficient as the United States coal loading piers, should be constructed at the other end of the ocean routes for low-cost redistribution of the coal cargo.

Forward looking decisions taken now can provide immediate relief for these four problem areas, and will lay the foundation for an international coal trade that could go a long way in stabilizing the economy and peace of the world. There is too much at stake to stand by and do nothing when we see that there are inadequacies in our international coal trade channel.

The American coal industry, the miners' union, and the railroads have joined in an unprecedented partnership. It is my privilege here today to announce the formation of an organization which will have a far-reaching effect on the future of our foreign trade in coal.

Late last fall the top executives of the industries and organizations most vitally concerned with the overseas export of coal held joint discussions in Washington. Called by Joe Moody, president of the Southern Coal Producers Association, the group included the chief executives of the larger exporting and coal-producing companies, the president of the miners' union, and the presidents of the coal-originating railroads. A survey of all phases of the coal business was made, and on May 28 the group voted to organize a new corporation, to be known as American Coal Shipping, Inc. Papers of incorporation were filed earlier this week, capitalizing the company at $50 million.

This new corporation will promote the export coal trade on the broadest possible basis. Its first proposal is to enter immediately into the ocean shipping business, by acquiring ships of its own and placing them in the export coal trade. Other plans will follow, directed toward additional problems in the international movement of American coal. It will be remembered that it was 4 years ago that Mr. John L. Lewis proposed a cooperative venture to provide more ships for export coal.

This is an historic moment in the coal industry. We stand as a cohesive group—the coal producers, the miners' union, the exporters, and the railroads. Our unity is the assurance to the free nations that coal, America's greatest and most abundant natural resource, will find its vital role in world prosperity and peace.

[From the Philadelphia Inquirer]

Pennsylvania, as the Nation's leading coal-producing State, has much more than an academic interest in the formation of a $50 million corporation to engage in the business

of exporting the fuel. And Philadelphia, as the State's leading port, could very well become the central point of the export trade.

Bulk cargo is a specialty of the port of Philadelphia. Coal, particularly anthracite, has for many years been shipped from this city and at Port Richmond the Reading Co. has the finest plant in the country for transferring the fuel from rail- to water-borne commerce.

The new corporation, from all accounts, will deal especially in bituminous shipments. Expanding European industry has created an ever-increasing demand for coal of this type and to meet it we find capital and labor cooperating.

American Coal Shipping Corp. was born the other day in Washington. Coal producing companies, railroads, and the United Mine Workers of America are financing the new venture in international trade.

Here you find Walter J. Tuohy, president of the Chesapeake and Ohio Railroad, a large coal carrier; Ralph Knode, chairman of Philadelphia's General Coal Co., among others, joining with John L. Lewis, president of the United Mine Workers, and Tom Kennedy, its vice president, to take advantage of the new opportunity to increase the output of American mines.

Each of these groups, the carriers, the mine owners and the union will toss some $16,700,000 into the kitty. The company will acquire ships of its own which will ply between American and European continental ports.

Until the last big war much of the continental supply came from England. But this source is unable to produce in quantity sufficient to meet the demands of an expanding economy. American coal in large quantities is constantly going abroad. But with their own bottoms the new company hopes to be able to increase deliveries substantially.

Here is where Philadelphia comes into the picture in a big way. Here, too, is where Mayor Dilworth and his port officials should bestir themselves to action. The Pennsylvania Railroad has frequently boasted of being the largest coal carrier in the world. Its lines tap the richest coal lands in the country. Philadelphia is the natural coal port of the Pennsylvania system. Here is has built an enormous plant to handle the bulk of ore coming in from South America. It could just as readily transfer from car to ship as well as from ship to car.

Most of the anthracite coming to Philadelphia is handled by the Reading Co. But the bituminous coal in large quantities is carried east by the Pennsylvania and the B. & O.

With the St. Lawrence seaway being pushed to completion, port cities on the Great Lakes are alert to the opportunities this new artery will afford. Cleveland is preparing for a big business in overseas trade. Coal, being a nonperishable commodity, is the type of cargo with a strong appeal to shippers via the seaway. Cleveland is expanding as a steel city and this, naturally, calls for more coal to feed its mills. And if they go into the coal shipping business, too, well, it's time for Philadelphia and Pittsburgh to square away for action.

A Telegram to Drew Pearson

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. BROWN of Ohio. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I insert therein copy of a telegram which I sent to Drew Pearson, columnist, last Saturday morning, June 16. The telegram is self-explanatory:

JUNE 16, 1956.

DREW PEARSON,
Washington, D. C.:

Was amazed to read in your column in this (Saturday June 16) morning's Washington Post your statement I had said President Eisenhower's operation was "the last straw," and that he should not be a candidate for reelection. Story completely incorrect and untrue, as I have never made any such statement, either publicly or privately. Instead, during the past week, I have expressed in public addresses, press releases, and radio reports, my confidence President Eisenhower will soon fully recover from his operation and will be a candidate for reelection. Furthermore, as a duly elected Delegate at Large from Ohio to the coming Republican Convention I shall cast my vote for Mr. Eisenhower's renomination. As a fellow newspaperman I regret your failure to check story with me before publication. Will appreciate correction of report as promptly as possible.

CLARENCE J. BROWN,
Member of Congress.

Problems and Need of Armed Forces Reserve—Address by Brig. Gen. Richard L. McNelly, USAR

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Brig. Gen. Richard L. McNelly, USAR, at the Akron, Ohio, military dinner, on April 4, 1956. This speech sets forth the problems and needs in the Reserve, and, I believe, discusses our Armed Forces Reserve program with keen insight.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY BRIG. GEN. RICHARD L. MCNELLY, UNITED STATES ARMY RESERVE, AT AKRON, OHIO, MILITARY DINNER, APRIL 4, 1956

The suggestion was offered that my talk tonight should partake somewhat of the self-appraisal climate, upon the premise that one of the best ways to improve self or cause is to submit first to self-examination. I'll buy that with one proviso; let's look mainly at our problems and needs in the Reserve—not waste any time preening our feathers and gushing over what's good about us; and there are many good things, believe me.

For me to bore you with a long resume of oft repeated facts and figures and categorical statements concerning the Reserve program, many of which would be already familiar to you, would doubtless carry out my mission tonight. But I fear those who hadn't slipped out during the speech would be practicing that difficult of social graces—yawning with their lips closed, by the time I had finished.

In contrast to a repetitious treatment of the mechanics of the Reserve program, I would like to treat of a few problems which seem to be vital to the Reserve's future operations, no matter the details of daily routine. I suppose we will always be haunted by that typically American weakness where military matters are concerned, namely, a smug contentment and lackadaisical attitude amongst the general public where military peacetime effort is indicated. We are often faced at the individual level in the Reserve recruiting phase with cynicism, skepticism and what sometimes borders on an organized sales resistance to the objectives of the military Reserve.

Since we are indulging in self-appraisal tonight we may as well admit that we have to date approximately only one-third of the 1,600,000 trained and organized reservists needed. Why should it be such a task to interest men in a proposition which, if offered by an experienced pitchman on a circus midway or by a promoter in a plush office, would be a self-evident bonanza? Suppose I were to hold under your nose a beautifully embossed certificate similar to the pieces of paper you get from corporations as stock certificates, instead of an enlistment blank, and I said to you, "No money required. All I want of you is your signature and your promise to give me 2 hours of your time 1 evening a week and 2 weeks out of the summer—that's all. For your promise you will receive (if you keep your part of the bargain), with no strings attached, the following:

"1. A minimum of 63 days pay—63, all earned in off business hours, mind you.

"2. This pay can be anywhere from $2.77 to $6.88, to start, per day; with increases that can go as high as $12. per day, according to how you apply yourself; and higher when and if you can qualify for a commission.

"3. Free schooling at no extra charge in everything from photography, electronics, radar, automotive mechanical training, communications, weapons, police science—nearly any subject you can think of and all of which fit into civilian life.

"4. Free clothing—no need to wear out your own clothes.

"5. Opportunity to draw a pension under our pension plan which requires absolutely no payments down on your part—only your sticking to your bargain."

Wouldn't you sign it—almost automatically? Did you ever hear anything like it in this day and age? An age when you ordinarily can't turn around without it costing you money. And I have not even touched on the intangibles of friendships formed, valuable personal connections, pride of a job well done, standing in your community, to say nothing of the heart warmth and satisfaction of patriotic participation in preserving the greatest way of life man has ever known since the dawn of civilization.

Now, after that sales outburst, what is wrong that so many folks turn it down? Why is it that this bonanza I've described is ducked by otherwise acceptable and prudent individuals; is evaded by subterfuge at times degenerating into utter defiance? Is it the fear of losing one's daily livelihood—losing a job? That is a very powerful human force—the struggle to gain and hold onto security.

Which brings me to the first problem of importance in our self-scrutiny. This is a dire need for a Federal Law to implement employer cooperation in the matter of active duty, summer field training and so on, with stringent enough penalties upon the uncooperative to make it effective. Such regulation has been flirted with, but a workable, fair and enforcible law with real teeth in it is yet to emerge from the hopper, as far as Reserve forces are concerned. So the nightmare of maintaining even minimum strength and going to field training with a respectable showing of troops gives responsible commanders bad dreams. The complication of the demands of the uncooperative

employer but adds to the confusion and frustration.

I pay high tribute to the many employing firms who have been most cooperative in releasing men for tours of Reserve duty in the Armed Forces.

Many chambers of commerce have diligently studied the problem and contributed many a plan to establish definite employer policies where reservists require time off for drill and field training. However, there are many employers who aren't as wholehearted and patriotic. The reservist and the future of the defense policy need protection and guaranties against this type of resistance; a man has to eat—his family has to be supported—and patriotic duty and fervor run a poor second to junior's and mommy's breakfast and Fido's kennel ration. Many are the number of employers whose cooperation will be enlisted only under the boom of the law.

Some of this resistance probably is hatched among subversive channels, and amongst enemies of the state. However, it appears to me that much of the apathy and resistance, as it applies to public and private nonsupport of Reserves participation, is engendered from statements of otherwise well-meaning folks who pose as experts; prate blithely about a pushbutton war, and actually hypnotize themselves and their audiences into the conviction that armies as we've known them are no longer necessary. "Save your breath and time," "It'll all be in the sky next time," "All we need are a few highly trained specialists to man the machines," are among the careless statements heard every day. Now this all combines to build up disdain toward the standard troop establishment; to build up public apathy and skepticism toward the fundamental concept of "the man with the gun in his hand." It makes it tough to get men who will conscientiously support the Reserve. While the units famish and struggle for effective strength thousands of available youngsters, even in the face of what force there is in the Reserve program bill, hide behind the false hope that deferment "until they can't get at me"; "if I could only grab onto that indispensable job"; "I'll get married quick and raise a family"; "maybe the draft won't catch up with me"—some one of these gimmicks will save his hide until the pushbotton war is a reality. What wonder that such a climate begets a dismal personnel picture?

We use the term "man with the gun in his hand" in the broad sense, of course. All the usual ground, amphibious, and airborne troops are included, from the special weapons team to the signalman. The ground combat unit will ever be needed as long as man argues and exchanges blow for blow. The individual whose very presence in the deployed ground position serves to preserve that status quo, which in turn creates the climate for diplomatic negotiation, is probably one of the oft-overlooked, effective means of terminating strife and warfare, once begun; to say nothing of prevention through the same means. The difficulty with this atomic and nuclear war business is that there is no alternative—no twilight between the black clouds of war and the first glimmer of the dawn of reason, wherein the man deployed on the ground can hold the diplomatic atmosphere charged with ions of force long enough to compel men to make peace. In atomic warfare you do as the little Italian crapshooters said, "Go for broke." Hanson W. Baldwin, in his recent article in Combat Forces Journal entitled "Land Power as an Element of National Power" writes: "Control of the land or—more properly speaking—control of the land animal, man, must be, therefore the ultimate objective of all military force, no matter how applied. This has been true throughout history and will be true as long as man walks upon two feet * * * and this will certainly be the objective of any future war earth men may fight, even if it be an all-out nuclear war. For the goal of any such war would be to compel the enemy to submit; to control the land animal man; the military animal, man; the political animal, man, who in turn controls various areas of the earth. * * * The ultimate objective of war between men is men. The penultimate objective is land—the other fellow's land—and what is on it and beneath it."

Hans J. Morgenthau, writing in the Bulletin of the Atomic Scientists, says: "Atomic war is no longer, as was traditional war, an instrument of national policy; rather it is a means of universal destruction and, as such, a last resort of desperation. Thus it has become incumbent upon all nations to pursue their objectives with the traditional weapons of warfare rather than through resort to atomic war. However, to do this successfully requires preparedness with traditional weapons."

A further problem which is timely at this point and which involves again public apathy, nay actual public resistance, is the matter of military installations. It has become a legend in these parts as you all well know, concerning resistance to the Nike sites in Cleveland. I speak particularly of experience in my own community as regards the gaining of an armory site. You of Akron can deem yourselves fortunate that you have in view a well situated plant which will aid in all aspects of the Reserve program—your training, recruiting, security, and best of all, the great element of pride of unit and esprit. There is no substitute.

Housing and slum clearance have become national bywords. One of the greatest aspects of personal and public self-respect and dignity can be said to be adequate and dignified housing. Yet it is tragic to observe the viciousness and utter selfishness with which public officials and their screaming mobs of misled constituents in some localities attack the military when it asks for the basic privilege of housing itself adequately and dignifiedly. Legislators may often be observed turning about-face as to the location of an armory site merely because some bleeding heart or colloquial public official burns up the wires to the lawmaker's sanctorium with the plea that certain so-and-so's do not want "one of those armories" in their neighborhood. So, rights of the military, rights of eminent domain, rights of adequate compensation to the contrary notwithstanding, the appropriation is permitted to lapse, oil is poured on the local waters and the loyal group of reservists are permitted to continue to meet in the basement of Joe Bloe's store or over the town pool parlor. If I speak with feeling, I do so advisedly, having donated many days of my personal time over a period of some years on such futile projects.

The most vital aspect of this housing problem for Reserve units is the dire necessity for storage and security for arms, equipment and rolling stock. We of the 83d Division, after intense recruiting efforts, all sorts of inducements and attractions to build up our Reserve strength, with, say, a modicum of success, are convinced that the egg must by all means precede the chicken. Small arms, crew served weapons, tanks, trucks—all the usual implements of the traditional army are a must before you can expect a full complement of men to be interested in joining up. Pictures out of books, lectures, and blackboard talks ultimately fail. The man loses interest and drops away.

The equipment is available. But, you've got to have a place to put it. That place must be secure, adequate in facilities, and fit for human habitation and must lend itself to training facilities for the type unit housed therein. That is how important this housing problem is. You will readily observe that it is vitally and integrally tied in with the recruiting problem and the relative strength problem.

Now these armory installations have still a further angle which is often overlooked. In most of the discussions of assistance and resistance from communities, in establishing armories, the purely mercenary angle is often ignored. Some of the highest powered promotion work is at times put on by communities to bring manufacturing plants, business, or other payrolls into that community. The yearly payroll of a Reserve unit, with its combination of full-time personnel, with its part-time bulk of spendable dollars, is not without economic impact. From a business viewpoint it is what you might call extra money, that is, it spends easily. Communities should be made aware of the immediate dollar value of a Reserve unit. It will in the long run far offset any loss in property tax for the municipality.

Gen. Maxwell Taylor, present Chief of Staff, United States Army, in a recent interview commented: "We still have no pushbutton method of waging war, and the man who closes with the enemy and lives under the gun for a long period of time is still the man who wins the battle in the end." He goes on to say, "I often reflected in Korea that we had behind us thousands of people running a vast supply system; we had the greatest Navy in the world in the waters around Korea; we had the greatest Air Force in the sky overhead—the purpose of all of which was to help a few men seize an objective on the ground. The cutting edge of the military machine is formed by those men up forward, those whom James Michener called the few who actually storm the blockhouses."

History, if we will but read, provides adequate justification for the thesis that we cannot approach our Reserve program with too much fervor and enthusiasm. One of the most pathetic, as well as prophetic, pronouncements on the importance of a live, red-blooded, working Reserve program is found in a very extraordinary publication of the year 1950, the Memoirs of Marshal Mannerheim. Among his reflections upon that rough winter war, as it was known, carried on against the Soviet state in the winter of 1939–40, he remarks:

"In earlier chapters I have described how our defense had been neglected. * * * The winter war clearly illustrated the unfortunate result of our policy of passing over part of the annual contingent of recruits to the second category of the territorial army, which would only be trained at the outbreak of war. The mobilized army thus smaller than it should have been, and our possibility of raising new detachments and making good losses, reduced. The lack of manpower became more and more desperate during the war, and the almost untrained troops who were brought up to fill the gaps in the ranks suffered disproportionately heavy losses. The economies achieved in time of peace had now to be paid for in blood. The officer cadres of peacetime were insufficient and largely used up after years of exhausting work; both officers and noncommissioned officers of the reserve carried out their duties with the greatest devotion, but they could naturally not take the place of regular cadres. The war trained them, but the price was too high."

Our Reserve program is designed to avoid this tragic result. It seeks to prepare in peacetime the cadres, indeed the going units, adequately efficient initially to take the field in emergency and form the great bulwark with which to exploit success in the field.

It seems self-evident for success that the civilian and quasi-military bodies must more earnestly shoulder responsibility along with us who are intimately active. The watchword is get out and get men. Personal contact and persuasion are necessary. Sales-

manship. As there is no pushbutton war, so is there no pushbutton recruitment formula. You can't do it by remote control. It's a gridiron game; you've got to contact the body. If properly approached, no red-blooded man, otherwise qualified, could refuse to become an American fighting man, the finest soldier the world has ever known. Never has the American soldier left an area that he hasn't left it a better, finer, cleaner, more self-respecting place for man to inhabit. History is replete with example.

Which brings me to the third and last point which seems appropriate. This is the fact that we may have become overly materialistic in this military business and may have lost the concept of unit esprit de corps. We hear a lot about the term "automation." Have we carelessly begun to apply that to the making of soldiers too? Perhaps. Have we gone overboard on the concept that you can make troops by the automation process, on the production line scheme? Turn him out like a lead soldier—no guidon, no standard under which to rally, no unit to tie to?

There is little glory and satisfaction stirred in a man's soul to be returned as a lonely castoff from the travail of military field duty; just another GI coming back. Is it any wonder that so few veterans of the Korean conflict and World War II would have anything to do with us? They drifted back like lost sheep, for the most part unsung and unhonored save for the town pool parlor.

The concept of return of men by unit must be enlarged and retained. Operation Gyroscope was a beginning, but regimental, battalion, and separate company identity must be stressed. You can't hold victory reviews, homecoming parades, and unit recognitions with a heterogenous mass of indivdiuals. Personal honor, personal dignity, the desire to continue to belong—these are the stuffs that tradition, unit honor, and esprit de corps are made of. Such are not maintained by the periodic decimation of proud units to return lonely individuals home, merely because the howl for immediate rotation goes up from every fireside. I can't help but feel that our Army system lost much of its attraction and historical lore when we adopted the production line method of fillers by the conveyor system. It was a sad day when they aboloished the regimental band. It is human nature to follow the hoorah—join up with an honorable going outfit. The fellow who came home alone, and there were thousands, came home with a bad taste in many cases.

Witness the return about 2 years ago of the Third Battalion, Hamilton Light Infantry, Canadian Territorial Forces, from Korean duty. A more stirring spectacle seldom seen. Matter not that many of that group had not seen the entire tour of service, 800 men marching as a returning battalion, with all the honors thereunto appertaining, made headlines. Eight hundred individuals dribbling back may have made page 5. Needless to say, that outfit has few recruiting problems.

Armies may travel on their stomachs. Soldiers fight with their hearts. Maybe the prideful heart and proud chest somehow got lost in our too practical thinking.

And now in closing I would like to leave the words of a poem I once heard, the author of which I cannot at the moment give you, and which in its original form did not refer explicitly to the soldier. However, its implication so well fits the spirit of the American trooper as many of us have seen him, in action and in repose, that I cannot resist the temptation to change a word or two and adopt this theme to our discussion tonight. It might be dedicated to the men who really win wars—those who aren't here any more to talk about it.

"Let me live, O Mighty Master, such a life as men should know,
Tasting triumph and disaster, joy, but not too much of woe.
Let me run the gamut over, let me fight and love and laugh;
And when I'm beneath the clover, let this be my epitaph:
Here lies one who took his chances in a world of fighting men;
Battled luck and circumstances; fought and fell, but fought again;
Won sometimes, but did no crowing; lost sometimes, but did not wail;
Took his beatings, kept on going, never let his courage fail.
He was fallible and human, and therefore loved and understood
Both his fellow men and women, whether good or not so good;
Kept his spirits undiminished and was never false to any friend.
He played the game until it finished—that's your American fighting man."

Ladies and gentlemen, it has been a pleasure and an honor to have been here this evening, and I thank you deeply for listening to our cause.

Why I Am a Republican—Prize-Winning Essay by Dan Harmon

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. MUNDT. Mr. President, out in South Dakota the Young Republican organization has sponsored a contest on the subject "Why I Am a Republican." The winning essay in this Statewide contest was written by Dan Harmon, a student at General Beadle State Teachers College, in my hometown, Madison, S. Dak.

I am sure that it is a wise and worthwhile idea for political parties to sponsor contests of this type which stimulate the thinking of our young citizens on the matter of getting better government. It is an idea that should be repeated every year in every State.

I ask permission to have this essay, which was recently printed in the Madison Daily Leader, Madison, S. Dak., inserted in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY I AM A REPUBLICAN
(By Dan Harmon)

My first reason for being a Republican is the way our own State has been developed and enriched by Republican administrations. South Dakota is a Republican State and has no reason to be ashamed of that fact. The record of South Dakota's Republican government is an apt refutation of the antiprogressive charge against Republicans. The development of South Dakota, economically, in the past 20 years, and the present statewide plan is an indication of the farsightedness of our State administration.

The second reason for my stand as a Republican is the Republican program on a national level. A good majority of the young people with whom I have been associated have been quick to see that policies of appeasement in foreign fronts and "creeping socialism" on the domestic scene were designed by those who desired war as a crutch for their high economy. President Eisenhower and his advisers have now pointed the way for our generation to an era of prosperity with peace. We realize that our President has the influence and friendship with our allies to insure a permanent peaceful cooperation. Republican policies have restored the faith of my generation in its future and have shown us anew that readiness is better than war.

Perhaps the major reason for my belief in the Republican Party is my recent study of the men in our history who have been great Republicans and Americans. The lives of men like former President Hoover, Senator Robert Taft, and President Eisenhower, as well, are an inspiration to me as a young person. They have seen that the Republican Party has held to a paramount belief in individual freedom. Every young American can be proud to follow their examples.

Eventful Record of Shipyard Employee

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the RECORD an item from the Boston Naval Shipyard News commenting on the record of William A. "Billie" Dowd, in his more than 50 years of continuous service for the Navy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Naval Shipyard News of June 8, 1956]

WILLIAM A. "BILLIE" DOWD BIDS ADIEU TO SHIPYARD—EVENTFUL RECORD—YARD EMPLOYEE CLOSES CAREER OF 50 YEARS, 9 MONTHS, AND 23 DAYS

A well-known shipyard employee, William A. "Billie" Dowd, the second BNS worker to compile over 50 years of continuous service in Navy Department history, retired last week and closed a Federal Government career of 50 years, 9 months, and 23 days.

Dowd, a resident of Somerville, was appointed honorary shipyard commander on August 9, 1955.

His first visit to the shipyard came on August 17, 1904, when he was among those who witnessed the launching of the U. S. S. *Cumberland*. One year later, on August 8, 1905, he began his shipyard career as a messenger boy at $1.04 a day. Promotions followed, and Dowd, a former supervisory clerk in shop 31, can look back on an eventful career of almost 51 years of service to the shipyard.

Dowd's half-century of employment covered many changes in the Navy. He saw ships converted from coal burners to oil burners, and the beginnings of the use of nuclear power. The shipyard has progressed too; while Dowd was an employee, he witnessed the addition of the South Boston annex, the Lynn gear plant, and fuel farm in east Boston to the shipyard family.

Dowd recalls the days when the commandant's office, now in South Boston, was in the shipyard, and remembers when a ball park existed on the site now occupied by the pipe shop and the electric shop. In those days, there were sometimes as many as six battleships at a time berthed in the yard.

The climax to Dowd's career in the shipyard came on August 9, 1955 when, in recognition of his having completed 50 years of service, he was appointed honorary shipyard commander for the day. Honors that came to him that day included a Marine Corps formal guard mount, which he reviewed on the marine barracks parade ground, a luncheon tendered to him by the shipyard Masters' and Foremen's Association, and a personal letter from the Secretary of the Navy, Charles S. Thomas.

Chief Joseph

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. NEUBERGER. Mr. President, frequently we tend to forget the motivation behind the name which we give to a mighty edifice, such as the Chief Joseph Dam, on the Columbia River, which was dedicated June 12 near Bridgeport, Wash.

So that Members of the Senate will know something of the illustrious and noble Indian leader for whom the colosal dam is named, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jim Running, from the Oregon Daily Journal of June 12, 1956, describing an eloquent address at the dedication of the dam by Erskine Wood, noted attorney of Portland, Oreg., whose father, Col. Charles Erskine Scott Wood, figured prominently in the historical events of the Indian wars in which Chief Joseph fought.

Let me add that Erskine Wood himself lived for a time with the great Indian leader, before the death of Chief Joseph in 1904.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHIEF GETS HIGH PRAISE—PORTLANDER SPEAKS AT DAM DEDICATION

(By Jim Running)

BRIDGEPORT, WASH., June 12.—A Portland lawyer who, as a boy, lived in Chief Joseph's tepee, gave one of the most touching talks at the dedication today of the mighty Columbia River Dam that bears the Nez Perce warrior's name.

Erskine Wood, 77, admiralty law specialist who has practiced in Portland 44 years, shared the platform with Harold Stassen, Gov. Arthur Langlie, and other bigwigs in the sun-drenched dedication ceremony in this many hued, semidesert country.

Wood paid tribute to Chief Joseph as "great and noble" soldier and leader who "ruled his people by sheer force of character."

Chief Joseph was reluctant to enter the 5 months' series of battles in Wyoming, Montana, and Idaho that culminated in his surrender to United States Army Gen. Oliver Howard and his Federal troops at Bear Paw, Mont., in 1877.

The general's aide-de-camp was a young lieutenant who was to become Erskin Wood's father. Lieutenant Wood fortunately wrote down the Indian warrior's surrender speech—described today by the son as paragon of magnanimity—thus preserving it for history.

Fifteen years later Lieutenant Wood, now the defeated enemy's fast friend, asked the Indian chief if his 13-year-old son, Erskine, could live with him.

And the boy did, for 6 months in 1893, and 3 months in 1894, on the Colville Indian Reservation at Nespelem, 30 miles from here, where Chief Joseph died and was buried in 1904.

Wood recalled today that the chief had a fine physique, bearing, and carriage, "a great gift of eloquence with a melodious, somewhat deep voice."

The 55-year-old Indian and the 15-year-old boy slept side by side on the floor of the chief's tepee, sharing the same fire and food of meat, bread, berries, and roots.

They herded ponies together, hunted together, and crossed the Columbia River in dugout canoes, their horses swimming at their side.

Death, Danger, and Tired Feet

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article about the American policemen, by Chester Morrison, of the staff of Look magazine. It is a well-deserved tribute to the men appointed to enforce the laws we make. The article is entitled to wide circulation, in the hope that all who read it may have added respect for the men and women who have the arduous duty of enforcing the law.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH, DANGER, AND TIRED FEET—HE MIGHT NOT COME HOME TOMORROW

(By Chester Morrison)

Nineteen and a half million people are going to see this issue of Look, and every single one of them, with the possible exception of a few saints, is, has been, or will be a lawbreaker. There are only about 280,000 policemen of all kinds in the entire country, but, sooner or later, they collar most of the country's many lawbreakers. That's why a lot of people don't like them.

To be sure, there are corruption and skulduggery in some police departments. There always were and there always will be wherever there is moral weakness, and wherever the police are subject to the pressures of politicians who ally themselves with criminals. But it does not mean that a policeman is or should be automatically suspect. He just has more chances than ordinary people have to turn a buck.

When tempted, however, most policemen, like most laymen, turn their backs. This is a predominantly honest world, and cops are predominantly honest—only don't call them cops; call them police officers or policemen. You owe them at least that small courtesy. (Incidentally, in London, they're called Bobbies; in France, they're Flics; in New York, they're Bulls, and in San Francisco, where the dramatic photographs on these pages were taken, they's The Fuzz.)

He does more for you, this policeman, than you probably know, or let yourself know. If he is in a mood to define his social position, he can think of himself as the public guardian. He does guard the entire population against those among us who become killers, thieves, or violators of other categories. And he guards all us nice people (we who are resentful of punishment if guilty) with his life.

And what does the policeman get out of it, besides, among other frightening things, a chance of getting shot down in a dark alley? This man who lives in a world of death, constant danger, and tired feet gets, on the average, $3,600 a year to start with on a police force in a big city and as little as $1,770 in a small town. If he is energetic, and lucky, he can work his way all the way up to a glorious $5,000 as a big-city patrolman. Only 1 policeman in 5 ever gets above the grade of patrolman. And not because he is a dumb cop either. It is simply that he has little time in which to better himself, and besides, there is little room left at the top.

He is always on duty with his gun in its holster, even on his day off. If he makes an arrest while he is working the night shift that ends at 8 a. m., he has to go to court that day, on his own time, and tell the judge just what happened. Of course, he is supposed to get a compensating day off.

On his average top pay of $3,900, he is expected to get married and have a family. In most cities, a policeman is not permitted to take a part-time job, even if he has time for one. So his wife works. She works days while he often works nights. He has to sleep sometime, but who takes care of the kids while he sleeps and she works?

At this point in many a policeman's career comes temptation. It is easy money. It makes the difference between comfort and nagging financial discomfort. He has reached the ceiling pay fixed by us taxpayers, who think policemen cost too much anyhow. Will he fall? Answer this one yourself. Of all the policemen in the country, how many crooked ones do you know about?

The day of the grafting bully in police work is on the wane. Law enforcement has become a respected profession, rather than something to be socially ashamed of. The police officer patrolling his beat on foot or on wheels is the personification of the public conscience. He is the man on the spot, who must decide, on the basis of his knowledge, intelligence and experience, how to handle a breach of the peace—exactly how much of the letter of the law to enforce, what aspects of ornery human nature to consider.

He is the man with the club, the gun, the handcuffs, the badge of authority. All our laws would be ineffective if it weren't for the man appointed to enforce them—the policeman. Subject to the safeguards of due process, he is the law.

No Choice But To Run

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an interesting and penetrating editorial, "No Choice But To Run" which appeared in the Boston Post, Boston, Mass., of June 13, 1956:

Deliberate misinterpretation of straightforward medical reports on the physcial condition of President Eisenhower, and distortion of the degree of management he exercises over the Nation's affairs, seem to have become the principal political objectives of those who by almost any means are determined that the President will run for a second term, whatever the state of his health.

Fortunately there are some voices raised to keep the medical reports in context and to apply sound, common sense to the excep-

tionally partisan nature of reports of the President's sickroom activities.

Dr. David D. Rudstein, of Harvard Medical Shool, debunked the notion that the President can be expected to arise from a sickbed and caper around like a youth with his unvarnished declaration that when the President's physicians said that he will be better than ever they meant that he would be better than he was before the intestinal blockage developed. He emphasized the fact, too, that no one is better off for having had coronary thrmobsis and ileitis, and that there is still a 50–50 chance for relapse.

No one can take great joy in learning that an overoptimistic interpretation has been placed upon the medical reports. But, the President and the Nation are ill-served by deliberate distortion.

Some of the commentators on various news media say flatly that the President will be a candidate, that he's better than ever and that he is carrying out the duties of the Presidency even while he is convalescent.

The facts are entirely different. If he were able to carry out the duties of the Presidency he would be in the thick of a personal effort to have his foreign aid bill enacted, he would be dealing with Chancellor Adenauer, he would be carrying out his manifold duties from the White House. The fact is that he put in 10 mintues with his chief assistant, Sherman Adams, who, since last September, has shouldered a great deal of the load of the Presidency, which necessarily takes place away from the inquisitive view of press and public.

The medical profession shows no apparent alarm over the capricious manner in which straightforward medical bulletins have been twisted around to show only the poltically optimistic aspects, ignoring the fact that ileitis is a chronic disase, that the President's convalescence may take longer than presently supposed, and that as a man of 65 the President cannot be expected to run a 4-minute mile. Yet, there is justification for considerable misgivings on the part of medical men over the grave damage which could result to their professional integrity should this practice of putting words into their mouths for poltical purposes continue.

The American people share a heartfelt wish that the President recover speedily and completely. There are many who will vote for him if he seeks election from convictions they hold quite apart from considerations of health. But, there are many other Americans who feel that the acute crisis of our times is at hand and that the President's health is of paramount importance.

Resolution Adopted by Democratic Farmer Labor Club of Minneapolis Regarding Income Taxes

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a resolution unanimously adopted by the Democratic Farmer Labor Club of Minneapolis, Minn., regarding income taxes:

Whereas about 75 percent of the Federal Internal Revenue collections are derived from income taxes; and

Whereas prior to 1934, corporate income-tax dollars usually totaled greater than the dollars received from individual income taxpayers; and

Whereas beginning in 1934, 1937, and every single year from 1944 through 1953, the individual income-tax dollars exceeded the corporate income-tax dollars; and

Whereas from 1925 through 1953, figures do indicate that the tax burden in those 28 years has been shifted to the individual income taxpayers; and

Whereas in 1947 and 1948, the individual income-tax dollars collected by the Federal Internal Revenue Department not only exceeded, but were actually double the corporate income-tax dollars collected (in explanation, verification of above statements is found on p. 304 of Historical Statistics of the United States, 1789–1945, issued in 1949, and on p. 38 of the Continuation to 1952 of the Historical Statistics of the United States 1789–1945, issued in March, 1954, by the United States Department of Commerce and the Bureau of the Census); and;

Whereas newer data now available indicates an accelerated shift of the tax burden, and specifically shows that this tax burden is falling more greatly on the individuals who pay through withheld taxes; and

Whereas corporate income-tax dollars reached their high point in 1953, the total dollars being just over $21½ billion; and

Whereas nonwithheld income-tax dollars also reached their high point in 1953, the total dollars being just over $11½ billion; and

Whereas corporate and nonwithheld dollars collected fell from 1953 through 1955, the dollars collected through withholding taxes have not yet reached a high point in 1955, and indications are such that the 1955 total of $26.8 billion withheld will increase for the year 1956 (in explanation, p. 763 of the World Almanac for 1956 contains the figures for 1951–55): Now, therefore, be it

Resolved, That the Congress of the United States do immediately eliminate all income taxes for those persons below a certain gross income (in granting full exemption for those grossing below $1,000 per year, 1952 revenue losses would have been only $51 million, about $330 million if full exemption for those below $1,500 gross income); raise all exemptions to $1,000; repeal present tax loophole and special privileges laws such as, 27 percent oil allowances, depletion allowances on natural gas, capital gains preferential treatment, exempt-securities income, corporate stock option plans for executives, minors-in-partnership income for tax purposes, corporate deductions abuses now allowed from operating expenses, source of income preferential treatment, deviations from basic rate tables which favor some businesses or persons against the rest of the taxpayer.

United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. SPARKMAN. Mr. President, in yesterday's Washington Post there appeared a very interesting, informative, and thought-provoking article on our foreign policy. The article was written by Chalmers M. Roberts. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article war ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of June 17, 1956]

IKE'S ILLNESS FURTHER BECLOUDS FOREIGN POLICY

(By Chalmers M. Roberts)

Eighty-year-old Konrad Adenauer stood ramrod straight at a press conference here last week and declared with force and feeling:

"You must lead us because you are the strongest."

Back home in the Federal Republic of Germany, newspapers were bewailing the illness of President Eisenhower, 15 years Adenauer's junior. Instead of an anticipated long talk with the President at the White House, Adenauer was able to see him for a bare 10 minutes at Walter Reed Hospital.

The President's illness has not stopped the wheels of the Federal bureaucracy. But coming at a time of great Western uncertainty over military, political, and economic policies to be pursued in the new phase of relations with the Communist world, it has compounded the uncertainty over American policy—and over the American leadership which Adenauer called for.

A SEPTEMBER MEMORY

Government is not a single act or set of acts. It is a continuing flow of actions and decisions. Last September, when the President suffered a heart attack, the world was basking in the post-summit Conference warmth. But while the President lay in a Denver hospital bed, the Russians at the Geneva Foreign Ministers Conference torpedoed the hopes of those who had thought that Moscow was prepared to do business on such hard issues as German reunification.

The President was back at decision-making in 4 months. But then the beginning of an attack on the massive problem of how to face the new Soviet look was sidetracked by the Middle East crisis. By the time this problem had dropped from boil to simmer and the administration had begun once again to attack the main issue, the President was taken sick.

Even at best, according to the doctors, he can hardly tackle the main issue again until next month, just a year after the summit Conference. And then come the national conventions and a presidential campaign.

MEMORANDUM STAGE

The net result is that the United States, in the year since the historic tacit agreement at Geneva that nuclear war was out for both sides, has been able only to consider the new problems and to build a mound of paper work on what to do about them. The administration has made only the merest beginning in resolving these questions. And, in the end even more important, it has not told Congress or the American public what new policies should be followed.

One has to look no further than the conflicting events at the Capitol on the foreign aid bill to realize that confusion over what should be done—and what the administration believes should be done—is general today.

Sometimes, of course, foreign policy changes are announced in dramatic fashion, as when President Truman went to Congress to announce his Greek-Turkish policy. But more often they come about through a series of seemingly disjointed actions so that one only slowly begins to see that a major shift of attitude has taken place.

That a shift has taken place in Washington is undeniable. The Summit Conference last July is, in retrospect, the major foreign policy benchmark of the Eisenhower administration. At Geneva Mr. Eisenhower exercised his unquestioned talents to impress a wary world that our brink of war phase was ending; that America realized that nuclear war must be avoided; that somehow the Soviet Union and the Western democracies had to find a way to live together on the same planet.

But a benchmark is only a point of reference. Since Geneva the question for the West West has been, how does the United States propose to go about it? The Russia of Khrushchev, Bulganin and company quickly demonstrated that it had a plan and a procedure and was swiftly putting them into practice. Adenauer was still asking that question about the United States last week.

Military power is the core of a nation's strength, and strength brings the opportunity for leadership, as Adenauer indicated. The Eisenhower administration, in adjusting to the nuclear weapons age, has altered or begun to alter military concepts. The uncertainty today over the future of NATO springs in part from the uncertain effectiveness of nuclearizing the NATO forces. American power elsewhere in the world is founded on what Secretary John Foster Dulles keeps referring to as our "mobile striking power," though congressional hearings have cast doubt on the extent, and future, of our military power in general.

A TACTICAL SETBACK

On top of this, a report by the National Academy of Sciences last week on the biological effects of atomic radiation casts a new shadow over the employment of nuclear weapons. It reenforces at least the moral position of those who cry out for an end to the big bombs.

But it may turn out also to make more difficult any Presidential decision to use the smaller nuclear weapons. Yet the world knows how dependent on such weapons the United States would be in a conflict with Communist China, for example, where the President has said they would have to be used just like bullets.

More than incidental, too, is the scientists' quiet alarm over the problems of atomic waste connected with nuclear power—a further complication to what has seemed to be one of the President's most successful proposals, the peaceful atomic pool plan.

The biological effects of radiation is a subject the Kremlin already has used to whip up world opinion against the United States. It seems reasonable that the scientists' report will further complicate the already intricate disarmament problem.

Beyond these unsettled aspects of American military power and its future lie a host of political problems.

Discussions are now underway on how to harmonize the political policies of the 15 NATO nations. Publicly to the press and twice privately last week (to Adenauer and to Canadian External Affairs Minister Lester B. Pearson), Dulles expounded the American dilemma: Yes; the United States favors more harmonizing, but it will not accept any procedure which would enmesh us or deprive this country of the power of quick and decisive action. We will not be subject to the veto of any NATO member (he named one that had better be left unnamed) because America is a world power, not just a European power.

In short, we want Western European nations to give up a measure of their sovereignty in the common interest, as we see it. But we will not give up any measure of our own. In effect, the United States seems to be approaching the longtime British position that Britain is for European integration but cannot take part itself because of its worldwide commonwealth obligations. Each thesis is at least subject to question in today's shrinking world.

One point of alarm to Adenauer before he came here last week was the shift in American thinking about neutralism indicated by Mr. Eisenhower's recent press conference remarks, despite the subsequent clarification.

It was Dulles, on his recent trip to Asia, who began to shift toward at least a benign acceptance of neutralism in such nations as India and Indonesia. Yet it was the same Dulles who called neutralism an immoral concept only a few days after the President had said that such a choice was not a choice between right and wrong or decency and indecency."

Adenauer, too, was alarmed about talk of an East-West arms agreement before an agreement on German reunification.

Adenauer was additionally unhappy last week over the increasing Soviet-American exchange of persons as dramatized by the visit to Russia this week of Air Force Chief of Staff Nathan Twining and the possible later visits of the other chiefs. Yet the President has conceded that here is no general American policy on exchanges.

Washington, despite the harmonizing in the Dulles-Adenauer communique, is unwilling to take the rigid stand the Chancellor seeks for the West. Washington knows that it is not a sustainable policy after Geneva. But the President has yet to provide the answers, or to offer the lines of reference for an American debate.

If Europe offers so many problems, what of Asia? Here the beginning of a Sino-American thaw has been halted. But once the presidential election is past, the Chinese Communist issue will arise again in the United Nations General Assembly.

On this issue, the President has always been careful publicly to leave a loophole. Yet there have been varying reports of a hard presidential stand in the talks here last winter with British Prime Minister Anthony Eden. One unconfirmed report, by a Member of Congress in the vocal anti-admission group, is that the President went so far as to say that he would sign a congressional resolution taking the United States out of the U. N. if Red China were admitted.

The free world's statesmen are now in general agreement that if war is out, they must pursue a stepped up economic aid policy, especially in the underdeveloped areas of the world. But they go off in all directions as to how to do it. Congress thus far has only served to demonstrate the American uncertainty.

In the Middle East, there is only a precarious sort of peace. And as for sub-Sahara Africa, there is no American policy but only a growing recognition that that continent will shortly become the focus of a new struggle between freedom and communism. Here the United States will again be plagued by the ambivalence of its historic anticolonialism and the widely varying colonial policies of its four NATO allies with great African holdings—Britain, France, Belgium and Portugal.

No administration, of course, can have a policy to meet all problems everywhere at all times. Too often the curse of American policy has been an attempt to enunciate a coverall doctrine such as massive retaliation or a plague on neutralism. But policies go out of date, and post-Stalin Russia has made a lot of American policies out of date.

As yet there has been only a groping toward new policies and new methods, and some of that has been with reluctance on the part of an administration which calls for deeds, not words, but too often, its critics say, indulges in words, not deeds.

Spanish War Widows

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by invitation of the national legislative committee of the United Spanish War Veterans I introduced H. R. 2867, a bill to increase the pensions of Spanish War widows from $54.18 to $75 a month. I deeply appreciate the honor and the privilege given me of presenting to the consideration of my colleagues this most meritorious measure. I deeply appreciate, too, the fine cooperation of the distinguished gentleman from California, [Mr. McDONOUGH], who has introduced a companion bill and has been most active in support of our efforts to get relief for the widows of Spanish War veterans in their pitiable fight to make both ends meet on a monthly pittance of $54.18.

The widows of Spanish War veterans are not young in years or many in number. They have passed the age when they can find employment. Most of them have no other means of subsistence than the meager pensions they receive. If the Congress takes no action this session, for many of these aged widows what the next Congress might do would be of no concern. Let me be realistic in speaking of the immediate need for this legislation. The widows of the men who fought a war now almost six decades ago are falling as leaves of a tree in approaching winter. Steel indeed would be the structure of the congressional heart if for the few days or months or years remaining we should deny these aged women this pittance of $75 a month.

The Spanish War veterans have set for us the pattern. They ask nothing for themselves. Their claims as a veteran group upon the consideration of the Congress they lump in this one request—a little aid, a bit of a pension boost, to the aged widows of comrades gone to the beyond.

In the CONGRESSIONAL RECORD of May 31 on pages A4352–A4355 I extended my remarks to include the statement of the Honorable Lloyd Thurston before the House Committee on Veterans Affairs. Mr. Thurston was accompanied on that occasion by Past Commander in Chief William S. Otjen, chairman of the national legislative committee of the United United Spanish War Veterans; Hattie B. Trazenfeld, national secretary of the Auxiliary United Spanish War Veterans and cochairman of the auxiliary legislative committee; and James Craig, adjutant general, United Spanish War Veterans.

WILLIAM OTJEN'S STATEMENT

At the conclusion of Mr. Thurston's statement Chairman TEAGUE inquired as to the rules in the Spanish-American War as to service conection and line of duty. The testimony of Past Commander in Chief Otjen follows:

Mr. OTJEN. It is my view, Mr. Chairman, that during the Spanish War and the Philippine Insurrection you had to be able to trace the injury to the actual service.

For instance, I had a man in my company who came off of guard one night and put his arm over his rifle and pulled the trigger. He was denied any pension on the ground that the injury was self inflicted; and in every case that I knew about, I did not know of any of the Spanish War veterans who received pensions when we got out other than when, at time of discharge, they were given simply a cursory examination.

My personal experience was that clothes were removed and a doctor walked down the line in front of them and walked down the line in the rear and looked them over.

In my personal acquaintance with Spanish War veterans I did not know of any that drew a pension until they could show injuries which were attributable to the service and, because of the lack of records, it was very difficult for them to do so.

I would also like to call the attention of Mr. Thomson, who asked about the average length of service, to the fact that this states 7½ months, but you will note that the note below says:

"Information and length of service during the Boxer Rebellion-Philippine Insurrection not available."

Now, my own service in the Philippines was that there were 24 United States regiments called United States Volunteers, who went to the Philippines for 2 years' service. Some of us were held overtime. About all the soldiers who went to the Philippines and the Boxer Rebellion served, at the least that I know, about 2 years except the State regiments which went, like the 10th Pennsylvania, and the Iowa Regiment.

* * * * *

The CHAIRMAN. The point I was making was the point of need. I believe that the people of this country will support any kind of veterans' program to take care of widows, orphans, and disabled, and people in need; but I do not think you will get them to give a man with 91 or 92 days service a pension for the rest of his life if he does not need it. I do not think that the people of this country will accept that.

If we had just the Spanish-American War Veterans and widows, it would be different.

Mr. OTJEN. I would be against such a thing myself. I attended the briefing that General Bradley gave to the veterans representatives. As I understand his statements, and I think he discussed them before you, the theory on which that Commission made the report was that for the period following the earlier wars, commencing with World War I, that many of the men were actually benefited by their period of service. He advanced that argument and said that they found much to support it by reason of the fact that they did not suffer any injury when they were in the service; they were also given liberal pay, and educational opportunities were afforded to the younger men when they came out; various loans were made available to them; so that they were actually benefited by the service they incurred. I don't think it would probably be proper to quote him personally. I talked to him afterward and so did Mrs. Trazenfeld.

As he discussed it, he said that the theory they were following was that need was necessary but, referring to the Spanish War veterans, he said that he considered the advantages which were given and the pay which was given to the later veterans as so much more of an assistance toward making progress in either profession or business or getting started.

* * * * * * *

Now, my understanding is that, as to the law at this time, there is no financial limit to the service-connected veteran. On that theory, as I say, the Spanish War veterans feel that the Congress has treated them liberally, and I don't know of any man in the Spanish War category who was asking that more be paid to the men, but on the widows it is a different story.

The pay when a private was $13. When I went abroad, my pay was $15 and when I got to be a noncommissioned officer, it jumped $4 or $5. However, for the 2 years I was over there, I thought I did awfully well when I saved on discharge about $156.

When I came home I studied law and, goodness, if I could have had that educational course, I don't think I would have ever felt I ought to have a pension even though I was in very severe fighting.

WIDOWS HAVE NO INSURANCE

As to the widows of the Spanish War veterans, I know that you have been receiving letters from widows of other wars and they would say, "Why should the widow of a Spanish War veteran receive more?"

Well, we fellows, when we went out and got a job and got to working and got married, could not very well pay for insurance and, if any of us did do well, it took a long time. There are so few of these Spanish War widows that have any insurance available. I think it was a splendid feature that you gentlemen of the Congress put on when you provided the Government insurance available for the men in the service. I would certainly have liked to have been eligible for it. It is a thing to be considered with the widows of the Spanish War for whom we are asking this raise.

I can appreciate the situation you men are in when you are asked those questions of why should the Spanish War widows' pension be raised.

In reading the CONGRESSIONAL RECORD here with Senator LANGER's discussion of this very Bradley Commission report, he narrates how he obtained a pension for a World War veteran who had most of his stomach removed. His wife was driving a taxicab and, when he got that pension of $66.15 per month, he states that the wife wept with joy but he just felt sad at heart that it wasn't more. I would heartily agree with that.

Now, few of our widows had the benefit of any insurance, or any insurance amounting to anything. They might have a thousand dollars.

I think that should the needs provision be applied right down the line, it ought to also have an age provision attached to it, or, when a man comes up into the 75's and 80's, it costs him far more to live because of medical treatment, hospitalization, and things of that kind; and not all of them by any means can get in the veterans' hospitals.

On the married ones, if they have that, I think that there should be a higher limit on income than $2,700 for the married couple because, when they become aged, it is so much more expensive for them to live.

I appreciate, gentlemen, the situation that you are in with the increase in pension demands, and the graphs that were pictured there of the enormity of the expenses that went along with it.

However, I think it would be well said that, even as the pension load of this country has increased, the national income has also increased proportionately, and the heavier taxation is not simply represented by that. There has been a heavier national income almost commensurate with the increase in the pension rolls. That argument has been advanced by some of those who have appeared before you, but I can appreciate the difficulty you have in reconciling all of the situations that arise.

I do feel that it is a very meritorious bill that the Spanish War veterans have here, and that it is seriously needed by those widows.

Now, so few of either the veterans or the women are eligible for social security. Their husbands, if they worked, were not under positions where they would get social security because nearly all of them were so old that they couldn't work in such an occupation after the social security became available.

However, as I say, the Spanish War veterans have not asked an increase of pension for years, and I do feel that it is a meritorious thing for these widows to have this even though it is more than the widows of the World War I and World War II veterans for the reason that the age makes for more expense and more infirmity.

I think that, if you would put an age provision on there for the older widows of World War I and World War II, it would be a just measure.

Could Mrs. Trazenfeld say a word?

The CHAIRMAN. Certainly.

STATEMENT BY MRS. TRAZENFELD

Mrs. TRAZENFELD. Mr. Chairman and members of the committee, I think that our own Mr. Thurston and our chairman have covered pretty well our opinion of the report of the Bradley Commission. They have covered our thinking in regard to not downgrading the veteran in any instance.

I would like to speak for the opinion of the widows. Now, in listening to the briefing and in studying the report, and also from the hearings before this committee, it would seem that the Commission took the stand that our veterans when they returned from the wars were compensated in many ways. They received—I think it enumerated—rehabilitation, hospitalization, mustering-out pay, vocational training, home loans, and what have you, and many of them took advantage of that and it made it possible for them to assume a higher scale of living than they would have otherwise had.

Now, our war, the Spanish-American War, terminated on July 4, 1902. The records will show that nothing was requested from the Congress until 1918. In 1918 the widow of a Spanish War veteran was awarded $12 a month and $2 a month for each minor child.

They did not receive mustering-out pay, hospitalization, rehabilitation of any kind, vocational training, home loans, or anything.

The Spanish War veteran in the majority came from the mines, the fields, the stores, the jobs of any kind that were just salaried jobs. Very few came from the big industrial firms, from the stock market, or from the banks or from that category of men. We have a few, but very few.

The records will also reveal that.

When they were discharged from the service, many of them didn't care whether they were examined. There were no records of disabilities. They wanted to get home. You can talk to any of them, and those were the facts. They went back to those same jobs if they could get them, and they asked for nothing.

They increased the widows' pension in 1922 to $20 a month and $4 for the child.

In 1922 the veteran received nothing. He received none of the other things that would enable him to make a better living.

Certainly you cannot apply the findings or the treatment of the Bradley Commission to the Spanish War veteran or his dependents.

There is another thing that is pretty important. In the latter years since World War I, the wife has been able to go out and supplement the husband's income, and in many, many instances they do. Many make as much as their husbands, and some make more. Back in the Spanish-American War period and following up until World War I, it was almost a disgrace for the wife to work, and the average husband would almost rather have seen his family go hungry than for her to be employed. They did not have a chance to add to their income.

May lose their homes

Many bought homes and had small mortgages on them. They could not amortize them every month. They had to be renewed every 3 or 5 years. The only worry they had was that they were going to be unable to renew that because they knew that they couldn't pay it off. They bought a home with a mortgage and usually died with that home and a mortgage. Many widows still have that home.

Many widows have written to me in the last spot poll we took, saying that they had a home but are having difficulty in keeping up the water rent and the necessary repairs

on that home on the pension they receive. Therefore, I do not believe that the report of the Bradley Commission can conscientiously be made applicable to the Spanish War veterans or their widows or those of prior wars, and I speak certainly for those of prior wars—the Civil War veterans' widows. It cannot be made applicable to them if we are going to consider all the angles.

I am just stacked up in the office with letters of fear. It would wring your hearts to read them: "What is going to happen to us because of the Bradley Commission report?"

Certainly this Veterans' Committee has it within its power to grant the greatest happiness in the world if you could give a word of comfort to them that this Bradley Commission, in your opinion, should not apply to them.

The CHAIRMAN. You have been present here most of the time. This committee has tried to point out that this commission report is just a recommendation to the President, not a law. We are getting letters saying that pensions and compensations are going to be cut off. The Bradley Commission report is by no means a law. It is merely a recommendation to the President of the United States. Many people read the headlines and assume that it is a law. We are getting a lot of those letters, and we have done everything we could to try to get the information out that it is a recommendation and not a law; that no one is fixing to be cut off of the pension rolls because of it.

Mutual Security Act of 1956

SPEECH
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I shall support the Kelly amendment with the Williams amendment, to cut off all aid to Yugoslavia unless the President himself determines otherwise.

But I rise primarily to point out that this is a situation from which it seems to me we can learn a great deal as we wrestle with difficult problems around the world. It is important periodically to take inventory on a given operation and draw lessons from our experience.

Our aid to Yugoslavia is an illustration of the truth of Abraham Lincoln's statement that nothing that is morally wrong can ever be politically right. The immoral things that have been done in the Yugoslavia case, beginning with actions by some of our allies during the war, had led us to the difficult position we are in today, where there is no good way out. About our only choice now is to decide which course will do least harm to our country.

It is also a case study in the larger question of whether we can better serve the interests of the United States in the long run by helping Communist dictators retain tyrannical control over their people, or by encouraging and helping the people to resist the dictators.

Tito has opposed and is opposing every one of our policies in Europe, in the Middle East, in Asia, and all around the world that this whole $4 billion program of aid is supposed to promote. He opposes every one of the foreign policies we are trying to carry out today. But still we have continued to help him all these years, until it now may be more dangerous to stop than to go on.

How did we get into such a predicament?

To begin with, some of our European allies sold out another ally, Mihailovitch, a genuine friend, a man of the people, and committed to real democracy, in order to bring to power in Yugoslavia, this Communist dictator Tito, thinking it might shorten the war and save lives. There was little, if any, real gain then; and look at what that betrayal has cost us since and is threatening to do to us today, with Tito rearmed by ourselves and proclaiming publicly his undying union with our mortal enemy, the Communist world conspiracy.

Anything that is morally wrong will not turn out to be politically right. I hope we will learn something from this painful experience.

Then, during the postwar period, we gave vast UNRRA aid to Yugoslavia, whose people were desperately hungry. But we gave it through Tito. Some of us fought then against that system of giving aid to Communist rulers, because food in such circumstances is the strongest and most powerful political weapon in the world. A man will himself stand up against the machine guns of a tyrant; but if the tyrant controls all food and the only way the man can keep his children alive is by signing the tyrant's card, he is likely to sign up. With our food, we enabled Tito to entrench himself and fasten his oppressive rule on the Yugoslav people. Once more a thing that was morally wrong turned out to be politically wrong.

Then in 1949 there was a hard famine in Yugoslavia. It was partly due to peasant resistance to Tito, but there was also a severe drought. For 2 years it did not rain; the ground was baked and barren. Our instinct, of course, was to help hungry people there, as everywhere. But we had to decide whether our sending of food to Tito would bring more good to the people than it would bring them harm in the long run by strengthening his hold on the country. The gentleman from Ohio [Mr. VORYS] led the fight against the aid. I spoke for it, arguing that we ought to try to get some help to the people even if it did also help their oppressor. I suspect the gentleman from Ohio was right. We should have required Tito to give freedom to his people in return for our aid. But we are softhearted. Food seemed more important to us than freedom.

Just about that time Tito and Stalin had their differences. Stalin kicked Tito out.

Let us have this point clear. It is frequently said, as if to Tito's credit, that he broke with the Kremlin and the Communist world conspiracy, that he put his nation's independence ahead of communism. That is not the case. Tito had a personal quarrel with Stalin. He is not a nationalist; he was not trying to save Yugoslavia's independence or working for the well-being of the Yugoslav people. He is an egotist; he was trying to save his own neck.

At that point I thought we should stop aid. Year after year I supported in committee this same effort to cut off aid to Tito which the gentlewoman from New York [Mrs. KELLY] is making today. The argument that can be made today with validity, namely, that to stop aid just now would leave Tito no choice but to go back to the Kremlin, become wholly dependent upon it and, therefore, under its complete control, did not apply then. In 1950, 1951, 1952, and until Stalin died in 1953, Tito could not go back. He would have lost his head. Stalin never forgave anybody. Tito knew it better than anyone—except perhaps the admitted coward, Khrushchev.

That was the time to shut off our aid and cause Tito's power at home to be weakened so that the freedom-loving people of Yugoslavia could rise up and overthrow the dictator. We could have had now in Yugoslavia a genuinely free government, a democratic government, friendly to the West, under leaders chosen by the Yugoslav people themselves.

But instead, for 4 years, we not only sent Tito food and supplies, but needlessly armed his divisions and sent him scores of jet planes. I say needlessly, because we did not have to bribe him to stay away from the Kremlin. He could not go back as long as Stalin lived.

Within a month after Stalin died, in Marhc 1953, I said in a Town Hall speech, in New York, "I think we can anticipate that Tito will now gradually slip back into bed with the Kremlin and its Communist conspirators everywhere." The reason for the break was gone.

Sure enough, Tito now reveals his true colors and proudly reavows his allegiance to communism. Why should anyone ever have doubted it?

But some protest that he has not gone back to the Kremlin completely. Of course not. Why should he? He would be of far less use to the world revolution if he were openly and completely in the Kremlin's arms. He would be like East Germany and Czechoslovakia and Poland, something of a drain on the Soviet Union. How much more valuable he is to Russia if he can keep us supporting him and building up his armed forces. What sense would there be in the Kremlin making him break with us yet? He would not be any more use to them than are Hungary and Bulgaria and Rumania.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

(By unanimous consent, Mr. JUDD was granted 3 additional minutes.)

Mr. JUDD. Mr. Chairman, Tito's greatest value to the Kremlin is not as a satellite. His greatest value is as a supposed neutral or independent. That gives him all the advantage of being on both sides. We continue to support him, we enable him to maintain large armies in the field, and we help him keep the Yugoslav people under his thumb. Doubtless he can also learn a good deal

about our plans and our strength and that of NATO, and of Greece and Turkey. What better arrangement could there be? The free world sustains him and the Communists world reaps the benefit.

Mr. Chairman, there was no justification for our helping Tito as we did while Stalin lived. Tito was dependent on us for his life and his power, not we on him.

But now Stalin is gone. As predicted, Tito has moved back openly into the Kremlin's orbit. But perhaps not completely. That is what makes our predicament and our decision today so difficult. Having given him such vital aid all these years, is this the moment to stop? Should we adopt here today so drastic an amendment as the Kelly amendment which would rule out any possibility of perhaps keeping up some division between Tito and the Kremlin, to the extent that there may still remain some of the division that existed as long as Stalin was alive and kept it going?

Mr. Chairman, I sympathize entirely with what the gentlewoman from New York [Mrs. KELLY] is trying to do as I have all these years. But I think the direction of foreign policy must come from the President, and so I shall support the Williams amendment to allow the President to continue the aid if he determines it to be in our national interest. That unquestionably puts the President on the spot. But that is the proper thing to do; it should be his responsibility to make the decision, just as it is ours to express our views in favor of stopping the aid.

Mr. Chairman, having fooled along with the immoral policy of aiding a Communist tyrant all these years when we did not need to, we have now got ourselves into a position where I believe we ought to accept the Williams amendment and then pass the Kelly amendment as so amended.

But at the same time we should take to heart some of the lessons of this whole unworthy episode—and please God, never get into such a sorry mess again. At this stage of affairs we, and the President, must weigh the possible benefits that may develop with the other satellites, to the extent that our aid to Tito might conceivably encourage other Communists to try to be independent in their communism—if that is not a contradiction in terms, as I suspect it is—against the certain benefits that would occur all around the world should the people of the United States, the Congress, and the Executive, in their proper relationships, decide the time has come to cut off all aid and comfort to any and all Communist regimes. I am sure the latter would electrify hundrers of millions of people, especially those enslaved behind the curtain and those threatened around its borders. It would give them hope and courage to hang on. It would demonstrate that it pays to be an ally of the United States and that it does not pay to pull Uncle Sam's whiskers or to bite his hand while it feeds them.

I do not blame Tito for trying to get us to feed him; I do not blame Tito for biting our hands; I just blame us for being so dumb as to keep on feeding him while he kept on avowing his devotion to communism and opposing all our efforts against communism everywhere in the world.

I have said all these years, and I say it again today, that in the long run only those things counts and will endure that promote the well-being not of tyrants but of people. What we have faced all along is a moral decision. Does the United States stand with the oppressors or with the oppressed?

Do we put our faith for the future in deals with tyrants or in standing everlastingly on the side of their victims and against the tyrants?

We have never yet quite made that decision as a government.

For myself I have never believed the deals would work out, and I do not believe it now. But at the same time, inconsistent as it may seem, I fear it would be unwise for the Congress to cut off all aid to Tito at this particular moment. It is wrong for a person to be given narcotics year after year. But once that has happened, it generally is unwise to stop them suddenly and entirely before one is completely sure of the condition of the addict.

Mr. Chairman, I think the President soon will have to end this aid to Tito, because that is the right thing to do, it is the moral thing to do, and it will prove to be in the end the expedient thing to do. But I think it probably should be done under the procedures set forth in the Williams amendment. That is the proper way for us to carry on the conduct of our foreign affairs.

The Moral Basis of Our Foreign Policy in the Americas

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. FALLON. Mr. Speaker, it is highly commendable when a leader of our Nation's commerce and industry analyzes present day trends and purposes a course of positive action to advance America's interests without the sacrifice of the principles and ideals which have enabled the United States to remain pre-eminent in the family of nations.

Such an instance has occurred in the public address delivered by Mr. J. Peter Grace, president of W. R. Grace & Co., at the commencement exercises of Loyola College, Baltimore, a leading liberal arts institution, of which the Reverend Vincent F. Beatty, S. J., is president. Mr. Grace made an eloquent and impressive presentation of United States policy and demonstrated that its preservation has been the result of constant adherence to fundamental principles throughout the execution of a forward-looking international policy.

The sound advice given to the graduates by President Grace was so timely and based on such rich experience that it would be fortunate if our citizenry throughout this Nation would be conversant with the views and recommendations outlined in Mr. Grace's persuasive presentation. For that purpose, I insert the salient portion of the address in the Appendix of the CONGRESSIONAL RECORD:

THE MORAL BASIS OF OUR FOREIGN POLICY IN THE AMERICAS

In recent years, I have been invited to speak in Baltimore on two occasions, much to my gratification. Each time, however, those groups with whom it has been my good fortune to meet, have gathered in places where men talk of trade and of commerce, as has been their wont from the days of clipper ships to these of industry and science and finance.

It was on such a springtime afternoon, 3 centuries ago, that 16 men—not far from this place where the daily recollection of the Calverts is so strong—proclaiamed the first colony dedicated to freedom of thought and of conscience, and blessed it with the name of our lady. It was 3¼ centuries ago that the *Ark* and the *Dove* brought 200 pioneers to the shores of the bay so near us. And Loyola graduates will know that among those who came to, found that colony were Andrew White and John Altham of the Society of Jesus, priests bringing with them the tradition and the training of Ignatius Loyola which you today and henceforth proudly share.

In an age when teachers, jurists and even some spiritual leaders are talking the language of shifting moral concepts, it is inspiring to realize that the sound principles which have guided your education are based on immutable truths and on pedagogical methods which, under the test of centuries, stand today as the finest in the world. Here on this uniquely American campus, one may reflect on the richness of the blood stream of our Nation with the very best of the Old World's qualities molded into the uniqueness of the American character.

As I speak to you today, I am reminded too that gratuating classes of previous years—far too many in fact—have gone forth with high hopes and enthusiasm as you are doing, only to find that instead of the bright, New World they dreamed of, they faced apprehension and concern. But why should there be this doubt and uncertainty? Why should our young men be constantly confronted with an apprehensive world? Why should these conditions exist in our country which most certainly has been blessed by God, "conceived in liberty," endowed with tremendous natural resources and enriched with an intelligent, hard-working, God-fearing people? These questions are all the more pertinent when we realize that our democracy is a model to the world and that our country has never been more prosperous or productive. Never have our people enjoyed material goods as much as they do today. Our schools are filled to overflowing. Our churches are well attended. The State of the Union is good. In the words of the preamble to our Constitution, we have established justice, we enjoy domestic tranquility, we are providing for the common defense, and promoting the general welfare. But what of the blessings of liberty, have we fully secured them?

This great American heritage means many things other than the simple exercise of free will. It means that parents can plan the education of their children; that our young people can plan for marriage and raising of a family. It means that this Nation must have that indispensable sense of security with which it can enjoy the blessings of liberty. But I must say in all frankness that that sense of security is lacking of the overbearing fear that this age of thermonuclear weapons has produced in us along with its threat of annihilation of our way of life. It is this insecurity which is breeding apprehension,

doubt and uncertainty in our generation. This situation relates not so much to our domestic affairs as to the state of our international relations.

"It is in the area of foreign affairs that we and our sacred institutions are threatened by the great menace of communism. It is this menace that is causing us to conscript our youth in peacetime and spend 61 cents of every Federal dollar for major national security programs. And it is precisely that menace which has brought worry to the face of America.

Latin America is not only significant to us, it is actually essential. It is strategically essential as a key area of the world and economically essential to us as a customer for our exports and principal source for vitally needed raw materials. Culturally and politically Latin America is tied to us as the common inheritor of the western Christian tradition. With its population growing at the fastest rate in the world, Latin America will have twice as many people as the United States at the end of this century.

It is particularly timely for us to review our policy in this area because this year the 21 American Republics are celebrating the 130th anniversary of the call by Simon Bolivar, the great South American liberator, for an Inter-American conference at Panama to lay the ground work for cooperation among the nations of this hemisphere. The realization of Bolivar's dream came about in later years when the 21 American Republics fashioned a cooperative international system that has proved an example of a peaceful international coexistence. In fact, it has been so successful that Secretary of State Dulles in his memorable speech of April 23 held up the Organization of American States as an example of the kind of system he would like to see developed in the North Atlantic Treaty Organization.

A substantial part of our achievements in the Western Hemisphere, I believe, is derived from the very foundation stones of American diplomacy and political thinking set down by our forefathers. In his classic account of American diplomatic history, John W. Foster, Secretary of State under President Harrison and grandfather of Secretary Dulles (and, by the way, great-grandfather of Avery Dulles of the Society of Jesus who will be ordained on the 16th of this month), pointed out that the Declaration of Independence, the Farewell Address of President Washington, and the Monroe Doctrine, constitute the basis of American foreign policy. He maintained in his book, "A Century of American Diplomacy" that these three documents have had the most profound influence on the destiny of America and have significantly affected the conduct of many nations of the world. This is a very striking but simple fact about American foreign policy which we should always bear in mind.

The point that Secretary Foster made was that each of these three documents served as a foundation stone during the development of American foreign policy down through the years and even to this day. The Declaration of Independence, for instance, announced to the world that the United States of America would be guided by the natural law and that the American people, created equal, receive their inalienable rights from God and not from any sovereign, parliament or charter. I would like to recall at this point the view of scholars of which my Jesuit friends are aware, that Jefferson, author of the Declaration of Independence, was undoubtedly influenced by Robert Cardinal Bellarmine, the great Jesuit saint and advocate of human rights.

Washington's Farewell Address was not just a warning against foreign entanglements, as it is too frequently described, but it was in fact a set of great moral precepts designed to serve the Nation in its later years. Washington's words are as full of meaning today as they were over 150 years ago and they reflect a wisdom which has made the Father of his Country one of the truly great men of world history.

The third foundation stone of American foreign policy is the Monroe Doctrine, one of our greatest heritages. Although President James Monroe announced his ringing doctrine to the world in 1823, the origin of this proclamation appears to go back as far as 1808—to Jefferson's idea of the independent common destiny of the Americas. John Quincy Adams, Secretary of State under President Monroe developed it as a master stroke of American diplomacy and secured for us an everlasting interest in the freedom and independence of the nations of Latin America.

The important aspect of what I have just related to you is that from the very beginning of American foreign policy our conduct abroad was set forth on a high moral plane. This was particularly true of our initial relationship with the newborn republics of Latin America. It was John Quincy Adams who established that the basis of our relationship with the new nations of Latin America should be "disinterestedness, cordial good will, fair and equal reciprocity." As Adams succeeded Monroe to the Presidency, his Secretary of State, Henry Clay, proposed to put the Monroe Doctrine into effect through a series of what he called good-neighborhood treaties with the new American republics. I would like you to note at this point that it was over a century ago that the neighborly tone of our relationship with Latin America was introduced into our foreign policy.

Our policy in Latin America later progressed through the proposal of Adams and Clay for the United States to participate in in a Panama conference of the Western Hemisphere nations as a realization of the great dream of Bolivar. This brought about our leadership in the Pan American Union which was established in 1890 under the guiding hand of Secretary of State James G. Blaine. It was advanced by Herbert Hoover and brought to magnificent heights by Roosevelt, Cordell Hull, and Sumner Welles. Today President Eisenhower and Vice President Nixon and Dr. Milton Eisenhower, the President's special Ambassador to the Latin American nations, are sparing no effort to maintain and further these friendly relations.

In test after crucial test, through feast and famine, then nations of the Western Hemisphere have been bound together in peace and friendship, with mutual respect, prosperous and growing trade, and a rising standard of living. Undoubtedly we made a number of unfortunate decisions in Europe and Asia through force of circumstances, unbearable pressures, and conditions over which we had no control. Nevertheless, this does not explain everything. It is plain to see from our present situation in Europe and Asia that somehow during the past two decades our faith and the faith of others in us has suffered. Great and good men are working hard to restore it, but damage has been done, and our situation with regard to Europe and Asia is not a very happy one today.

It was the spirit of the American Revolution and the sharp cry of independence in this country that influenced the Latin American nations to revolt and win their own independence.

It was the idealism of America that captured the hearts and minds of Europeans who had long since had their fill of power politics. It is the vision of America as a land of the free and the land of opportunity that gives the captive peoples of Europe their only source of hope and strength.

It was the torch of freedom, equality, and justice which influenced the hearts of Asiatics and set up in their minds a glowing picture of the United States as a brilliant sun illuminating a dark horizon. To give you an example of what I mean, let me make only a brief reference to the recent visit of President Sukarno, of Indonesia, to this country. As you may recall, he made a special pilgrimage to the home of Thomas Jefferson out of appreciation for the inspiration which Jefferson's life and ideas had given him during the many years of his struggle for the independence of Indonesia.

We can seek to win the faith of the peoples of Europe and Asia by the justice of our policy, and we can realize that only Divine power can prevent a catastrophe. We can attain our true greatness by insisting upon principles and we can avoid expediency.

My esteemed graduates of Loyola College, you are the custodians of our great American heritage. In your hands this Nation places the most powerful tools for justice, equality, and the common good. Whether you go forth in the religious field, in the professions, the military, or some other activity, I urge you to remember that as an American your rights and privileges are found in this great American heritage, but your duty is to exert leadership and wisdom. Out of a combination of the two the world may find the remedy for its fears and anxieties.

I feel that God has richly endowed this great Nation in order that it may lead the way to world peace. Perhaps He is testing this generation with the worldwide challenge of communism to ascertain its strength of character. I urge you to meet it inspired with the history of your Nation, armed with the faith of your fathers, and guided by the purity of purpose which is the essence of American Catholic manhood.

Value of Research and Extension Service

EXTENSION OF REMARKS
OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. VURSELL. Mr. Speaker, Secretary of Agriculture Benson, and all of his department heads each year come before our Appropriations Subcommittee of seven members with their request for funds for the Department of Agriculture for the coming year. This year, after lengthy hearings and careful evaluation of their requests, we appropriated about $800 million for the regular activities of the Department.

Today, I want to discuss the importance of the Research and Extension Service, and the great benefits it brings to agriculture.

As an illustration, our scientists are doing a tremendous job in protecting farm crops from the ravishes of insects by developing chemicals, and by many other means that help to protect the farmers' crops from insects and plant pests.

Not withstanding the constant fight made against insects, and plant pests, the annual loss runs about $3½ billion.

Were it not for the constant fight we make the destroy or hold back these insects, the damage would run many times the above amount, and they would multiply to the point where they would almost destroy the agricultural production of this country. So you see, the $12

million annually we spend on this phase of research is paying the farmer, and the economy of our Nation tremendous dividends.

The purpose of one type of research in cooperation with the State departments of agriculture, the extension service, and the State experiment stations is to increase farm production.

One illustration, of the many that could be made, of the benefits of this research can be illustrated by referring to the development of hybrid corn, which development at the cost of only a few million dollars has increased the farmers' production of corn by 25 percent, and has increased their income on corn alone by over $750 million a year.

BRUCELLOSIS

The work of our scientists in the United States Department here cooperating with the State departments of agriculture and the extension service toward the eradication of brucellosis, is another outstanding example of the benefit of research with which every county agent and most farmers are familiar. It is estimated that the total loss to livestock farmers since 1930 to the present time has been over $2 billion. Our committee and the Congress in 1954 increased appropriations to $15 million a year up to 1956, and in this session of the Congress increased it to $20 million a year for another 2-year period.

This stepped-up program is bringing results. In 1930, 11 percent of the cattle was infected. Through the work of the United States Department of Agriculture, State experiment stations, county agents, and progressive farmers, infection has been reduced to 2½ percent, and with the additional funds to employ additional veterinarians, our purpose is to reduce it to the lowest possible minimum.

NEW USES FOR FARM PRODUCTS

Tremendous benefits have been brought to the farmers, through the work of the research scientists in finding new markets, and new uses for farm products.

A good illustration of the benefits of this work can be found in soybean production, and markets.

Since 1935, our total production of soybeans has increased from 49,000,000 bushels to 372,000,000 bushels this year, and has become one of the most profitable farm crops—yielding the farmers about $000,000,000 annually.

Since 1935, research scientists, by cross-breeding of soybean plants, developed new varieties with greater resistance to plant disease—all producing higher yields. On an average, these varieties now yield 20 percent more oil, and 10 percent more beans than the varieties they have replaced. There is a great demand for soybean oil at home and abroad, and for soybean meal, which demand has caused the price to raise from $2 a bushel at harvest time to over $3. At this time, when we have so much surplus wheat, corn, and other products, I would like to point out that this huge crop of soybeans is selling far above any support prices, and we are not plagued with any surpluses.

NEW USES FOR SOYBEANS

In addition to its great use for livestock feed, soybeans today provide 70 percent of all vegetable oils used in margarine and 54 percent of all vegetable shortenings.

Research has also opened an outlet for 221,000,000 pounds of soybean oil annually for use as drying oil products. Many new industrial products have been developed including: acids, special resins, and plasticizers made from soybeans. In plastics alone, the potential market for soybean oil is estimated at 200,000,000 pounds annually.

Industrial uses of both soybean oil and soybeans cover a long list from linoleums and tile, to glues and plastics.

In the field of printing inks and paper, ever-increasing amounts of soybean oil are being used, as well as in the making of such things as shotgun shells. A great field is open for the use of soybean products in the manufacturing of textile sizing, and automobile tire-cored sizing. These are only a few new uses of soybeans.

As a result of the continued work of research scientists, markets in industry are steadily being extended, which help to keep the demand for the farmers' soybeans strong in our domesic and export markets.

From July last year to February this year, 55 million bushels of soybeans were exported—40 percent more than a year before.

Out of the total production of soybeans last year, Illinois led all of the 48 States, with 77 million bushels.

POULTRY RESEARCH

Let me discuss briefly the value of research as applied to the poultry business.

You will recall not many years past, poultry, both chicken and turkey, was a luxury generally reserved for the Sunday dinner. Today, chicken and turkey are served daily in hundreds of thousands of restaurants and have become one of the leading meat menus throughout the country. Research scientists, by cross-breeding, have developed the broad-breasted turkey, a better meat-type chicken, and greater production in the number of eggs per hen. Through research has come better feed nutrition, producing heavier broilers in less time, on less feed—both a saving to the farmers. We have seen the broiler business expand from 43 million broilers in 1935 to over 1 billion broilers today. Better type birds are produced in shorter time with less feed, which has brought a great saving and more profit to the farmers.

Egg production per hen has been increased from 122 in 1935 to an average of 184 eggs per hen this year. The 200-eggs-a-year hen is becoming more common on the farms, and the research scientists have set their goal for a 240-eggs-a year hen in the near future.

The poultry business, which was a fringe sideline for the farmers 20 years ago, has grown into a $3,450,000,000-a-year business—over 10 percent of the total gross national farm income today.

Mr. Speaker, may I close by saying that for the past 2 years we have substantially increased appropriations for Research and Extension Service. We feel that these appropriations in the hands of the research scientists in the Department of Agriculture, cooperating with the States' departments of agriculture, and the States' experiment stations are bringing vastly greater benefits to the farmers, generally, than any other like amounts we have appropriated for agriculture.

Federal Support for the Public Schools

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 18, 1956

Mr. HUMPHREY. Mr. President, on the occasion of the 50th anniversary of the College of Education of the University of Minnesota, a distinguished American, Mr. Beardsley Ruml, delivered a remarkable address entitled "Federal Support for the Public Schools." As is customary with Mr. Ruml, he not only expresses his thoughts in a clear and persuasive manner, but documents his observations with facts and statistical evidence.

Mr. Ruml's address should be read by every Member of Congress. It will remind us of our responsibilities in the field of education. It will also call to our attention what I believe to be a dereliction of duty by our failure to this date to take any positive action in behalf of our public-school system. The American people are looking to Congress for action—not delay. The parents and the schoolchildren of this Nation are at a loss to understand why we procrastinate when our school plant is becoming evermore inadequate and the school population ever larger. The failure to properly care for our educational structure could be every bit as serious—in fact, more serious—than an inadequate military defense.

I, for one, am deeply indebted to Mr. Beardsley Ruml for again reminding each and every Member of the Congress that the cause of education requires immediate assistance, and I ask unanimous consent that the address delivered by him be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL SUPPORT FOR THE PUBLIC SCHOOLS

(By Beardsley Ruml)

Point of view shapes the way and the will to action, and point of view is revealed by language, in the words by which purpose and action are described. Thus, point of view is revealed in the phrase, "Federal aid for education." The point of view that is implied is that of giving help where help is needed, of sharing with the poor or the less fortunate. It implies the means test, the hand-out.

Federal aid for education takes us back to the early thirties when the means test and the hand-out characterized public and private programs for aiding the unemployed and people of advanced years. I well remember an incident told to me in those unhappy years of an elderly man applying at the proper bureau for assistance for himself and his ailing wife. He was asked a question proper to the times, "Do you have any money of your own?" "Yes," he replied, "I still have $83 left in my savings bank." The answer was routine. "Come back when that is gone and we will see what we can do."

The means test and the hand-out have substantially disappeared from unemployment and old-age security. They will not and should not completely disappear, since human life enfolds both deep tragedy and instant generosity. However our society today is not the society of 25 years ago with respect to provision for the aged and the unemployed. And since the phrase "Federal aid for education" implies a point of view now obsolete in these other areas, the phrase should be dropped from the language of current discussion. A new phrase should be substituted, a phrase that reveals a modern point of view. I suggest as a substitute, "Federal support for the public schools."

Support implies interest and duty. Certainly we have a Federal interest in making certain that our future citizens can communicate and can compute. These are the basics on which our society rests; and having a Federal society as we do, a Federal interest in the basics of education follows inescapably.

A Federal duty to support the public schools flows both from the national interest, and from the fact that access to the growing income of the country is most direct and most equitably imposed through the Federal income tax. State and local bodies will add to the foundation of support built federally as their vision, conscience, and means provide. There is neither prudence nor equity in making plans such that the requirements of the public schools would have to be met from the resources to which State and local bodies have access.

The phrase, "Federal support for the public schools," deliberately uses the term "public schools" rather than the broader term "education." The public schools are an essential but not exclusive instrument in the Nation's educational policy. State and local bodies, churches, families, formal and informal voluntary agencies, will have plenty to do in expressing their own variety of insights in the general educational fabric of which the public schools are part. Federal support for the public schools should therefore provide important substance to the communities' educational programs without the rigidity and interference usually associated with responsible Federal use of Federal funds.

The question still remains, Can Federal support for the public schools be provided in a form that carries no danger of objectionable interference? I believe that Federal support can be so provided once the point of view of aid and the means test is set aside.

In its report, Financing Public Education in the Decade Ahead, the National Citizens Commission for the Public Schools had this to say: "Equalization of one kind or another has been used in the past, but the amounts involved were small. By 1965, on the other hand, the amounts would be large. Equalization, involving as it does, some measures of need and ability to meet need, always threatens to bring about Federal dominance or control of education. The possibility of the Federal Government coercing the States in education matters would exist—at least potentially. This should be avoided and could be by distributing Federal aid for education on a per capita, school-age-child basis. Each State government would receive this money each year upon certification that the funds would be spent that year for public education as defined by the State."

Later, speaking to the American Association of School Administrators in Cleveland on April 4, 1955, I said that such Federal funds "should be on a per capita child in public school basis, the definition of public school to be made by each particular State. One objection might be that the wealthier States that now pay the larger share of the Federal income tax are already able to take care of public education on any level they feel suitable. This I doubt, but even if it were so, it still remains true that a child in a wealthier State is also at the same time a child of the United States and deserves equal Federal support for the basic costs of his school system."

On what scale of expenditure should we think about Federal support for the public schools? This question will be deeply studied and long debated. My suggestion is that a start be made for fiscal 1958 with a per capita child in public school payment by the Federal Government of $20 and that this amount be continued in fiscal 1959. In subsequent years the amount should be raised to $80 per capita in 2 or 3 steps, reaching this figure in fiscal 1961 or 1962. The aggregate amount need only be estimated roughly at this time; the payments at the $20 per capita rate would be about $750 million and at the $80 per capita rate in fiscal 1962 would be about $3½ billion. These figures though important are not unmanageable, particularly when account is taken of projected increases in national income. It should also be observed that no new or increased Federal taxes would be required, since these amounts can be obtained by reducing present taxes somewhat more slowly than might otherwise have been the case. Some perspective is given as to relative magnitudes when it is realized that an increase of $100 in the present exemption in the individual income tax would result in loss of revenue at present national income figures of about $2¾ billion. A reduction of 7 percentage points in the corporation profits tax, that is from 52 percent to 45 percent would reduce tax revenue from this source at present profit levels by about the same amount, $2¾ billion. These examples showing the relation between tax rates and revenue show clearly that the suggested scale of Federal support for the public schools would constitute no significant burden to the taxpayer.

Some explanation of the suggested per capita rates and timing is in order. The $20 figure is intended to give a period of time to allow for the development of administrative, accounting, and auditing procedures. I have mentioned fiscal 1958 as the starting date in order to give time for the passage of legislation and for determination by State and local authorities as to how the funds will be distributed and used.

As to the $80 figure, some gradualism in arriving at this point is clearly desirable. If it can be reached efficiently in 2 steps, that is certainly better than 3. Time may show that the $80 figure is somewhat too low in view of rapidly mounting population at the high-school age level. Eighty dollars per capita is about one-third of the amount now being spent by the States, exclusive of interest and amortization of school building costs. If local expenditure is substantially higher by 1962, a somewhat higher Federal support figure would seem appropriate. It would seem undesirable for the Federal support figure to exceed the per capita expenditure of the lowest State.

How do these Federal support figures compare with projected public-school needs? The Citizens Commission's report previously mentioned estimates a range of from $13.5 to $19.2 billion for 1965 requirements for public, private, and parochial schools. The Federal support at the $80 level, amounting to $3½ billion, would thus be between 25 and 18 percent of the projected estimates. Such percentages, particularly at the higher expenditure levels, still leave a very heavy financial burden for education on non-Federal sources of revenue.

The suggested level of support should be related also to projections of increased gross national product. The current figure of $400 billion is up $35 billion since 1593. Estimates of $425 billion for 1960 and $525 billion for 1965 are likely to be exceeded in the light of current trends. Federal support for the public schools of $3½ billion 5 years from now is clearly no substantial withdrawal from increased productivity.

Another quotation from the report of the citizens commission is relevant here. "The financing problem is a problem of policy, not of resources; the problem is to select the best basis on which to make a small portion of the increased national production and income available for education."

Although at the level of broad purpose and policy, Federal support for the public schools on a per capital basis offers no difficulty except the effort to get it going, there are nevertheless several sensitive points that must be anticipated and dealt with. Of these I shall mention five.

First, the definition of what is a "public school" must be left to the individual State. The definitions will vary and will seem to some fanciful and even inconsistent wtih prevailing notions of what a public school really is. Some will define a public school in terms of its top controlling board, some in terms of its availability to students, some in terms of the character of its support. Some States will define parochial schools as public schools, others will not. Latitude must be given to the State to define "public school" as it sees fit. This is a prime consideration for State freedom from Federal control.

Second, there must be a definition of what is a "child in school." This is the unit in terms of which support will be given. Here are some of the questions: What is a child, that is, from what age to what age is the child to be counted as such? When is he in school, that is how many days a year, how many hours a day? Must he be on the school premises, or only under school supervision? These points as a statement of minimum standards should be a matter of Federal determination.

Third, what about present funds now going to the schools from State and local bodies? Must they be maintained? My answer here is that the maintenance of existing funds should not be required, otherwise the Federal support is not really the discharge of a Federal responsibility, and the State would be coerced as a result of a history that may or may not be currently in tune with overall needs as the State itself presently appraises them.

Fourth, what about desegration? I feel that aid should be given to all States on a per capita basis without regard to how the administration of the public schools is currently handled. Law enforcement of national policy is in the hands of the courts. Improved educational opportunity will be a powerful force in aiding in the establishment of a rational and humane democracy.

A special problem arises however if a State defines what is ordinarily considered to be a public school as a private school for purposes of evading the intent of national desegregation policy. Should a State be permitted to define public school in one way for the Supreme Court and in another way for the Comptroller General. Personally, I feel that one definition is enough, and public school once being defined, that concept should prevail uniformly in all juridical and administrative matters where the public school as such is involved.

Finally, the dreary question of accounting and auditing. Here I feel that the accounting should be done by the State, certified to by some high agency other than the school authority. The auditing should be done by an agency of the Federal Government, and the rules of the audit should provide whatever uniformity and flexibility in accounting the State machinery will use as its guide to procedure and to form. Such Federal supervision is not an interference with the educational program of the State, it is only the assurance that the declared policy of the State has been performed in terms that reflect Federal responsibility and accountability.

Opposition to Federal support for the public schools is rarely heard on economic

grounds, that the burden on the Federal budget would be too great. It is frequently contended that the States could do more if they only wanted to, by means of reassessments, higher rates of real estate taxes, higher general and specific sales taxes, new taxes on business turnover and the like. There is no doubt some truth in these contentions; but what is not always recognized is that States and local communities have many public responsibilities other than the schools, and that growth and shifts of population have created many a new problem for local government. In any case catching up with school necessities and keeping up with school demands will require more State and local funds than have ever been planned for, even with moderate assistance in Federal support.

The most vocal opposition to Federal support for the public schools comes as exressed apprehension that Federal money means Federal interference and ultimate Federal control of education. The right of each State to determine what kind of education it wants is constantly asserted, a somewhat legalistic position considering the interference of the State in the educational affairs of local communities and of both in the decisions of the individual family, which after all should have some final rights as to how the children should be brought up.

It is true that the protestations of fear of Federal interference are mostly based on the assumption of an equalization formula, of the means test, handout policy which always presented a potential danger. If, however, the measure of Federal support is on a per capita child in public school basis, the only Federal concern would be to prevent false reporting or fraud of other kinds. The opposition will now come from those who favor Federal aid because they expect at the same time to get Federal influence on local educational policies and standards. This opposition feels that working through local citizens groups is too slow and too uncertain, and that unless there is conformance to Federal standards there should be no Federal aid. Whether or not this group is large, it is extremely vocal; and recent disclosures as to what the Soviet Union has been able to accomplish educationally by means of central expenditure and central control makes this group understandably impatient with the slower policies of popular consent and popular will.

There is, however, another angle to this controversy—one that is very old and very deep. Briefly it is the question of whether the burden of social programs, such as education, should be borne by a tax on real property or by a tax on income.

This issue was brought home to me very vividly in 1931 when I was a dean at the University of Chicago. Prof. Charles H. Judd had just returned from New York where he had attended a small private meeting of businessmen and educators. The subject under discussion was increasing the required age of school attendance. I asked him how the meeting went. He said, "Fine. There was unanimous agreement that the compulsory school attendance age should be raised." I was surprised and asked him to explain. "Well," said Judd, "the educators and the businessmen have a common interest. The educators want more children to teach and the businessmen want to put the burden of unemployment on real estate."

This conflict between the income-tax payer and the real estate taxpayer or renter is not a conflict between the rich and the poor. We now have over 44 million income-tax payers, and the median taxable income on which income tax is paid is only $3,800. To make it concrete, here is a man making $100 a week who has a wife and 3 children. He now has $3,000 in exemptions. If the exemption allowance should be raised $100 per person, since his highest bracket is 20 percent, he will increase his income after taxes by $100. If, instead of raising the exemption, $80 is put into the public schools (on the per capita child in public school basis), his children if they are in public school will get $240 more spent for their education. Which do you think this head of a family would prefer—$240 more spent a year on the education of his children or $100 a year of his own to do with as he pleases? Well, your guess is as good as mine.

From the point of view of the national welfare the choice is clear. The $240 more a year for the better education of the 3 children is more desirable than $100 a year spent or saved beyond the family's present consumer status.

Obviously this is an illustrative generalization, and exceptional cases can be imagined. But the exceptions will fall on both sides around this average, and the balance is clearly in favor of Federal support of the public schools.

We are now in a time of historic change in education. The old traditions are falling apart under the pressure of the new necessities. And in a curious way the new necessities derive from a will to provide for all children the educational opportunities which the old traditions were designed to give the few.

The period from 1929 to 1939 was a period of economic disorder. The institutional pattern was no longer able to support the basic demands of production and distribution. We were confronted for a decade with the paradox of need for goods and need for work in a setting of abundance of raw materials and the highest technical competence the world had at that time known. Later the folly of war revealed the folly of the old economic and financial traditions. The reluctantly adopted palliatives of the early thirties became established as the guides to institutional economic reform.

In 1946, after 15 years that were marked by both depression and war, a national policy was formulated in the simple preamble to the Employment Act of 1946. This policy has become more creative as the years have passed. It declared that the Federal Government has responsibility, consistent with a fundamental belief in free, competitive enterprise to "utilize all its plans, functions and resources for the purpose of creating and maintaining conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work."

At the time the Employment Act was passed, there were misgivings, even fears. The New York Herald Tribune on June 14, 1946, spoke of the act as "perhaps the most serious threat to free enterprise and democracy with which the country has been confronted in the 170 years of its existence." But today the act has bipartisan support at the highest levels, and all sectors of the economy recognize its policy as a necessary element in protecting the national welfare.

The period from 1949 to 1959 is a period of educational disorder. The old institutional structure can no longer contain the urgent demand for general and selective educational opportunity. The public schools in 1956 are in the same position that the banks were in 1931. In a year or two or three, more and more public schools will become educationally insolvent. Unfortunately, or perhaps fortunately, there can be no run on the schools that will force them to close. But the present inadequacies will become more apparent as the needs become more acute, and we can look forward to an Education Act of 195x whose preamble may well be a paraphrase of that of the Employment Act of 1946.

Such a preamble to the Education Act of 195x might read in part as follows: "There is a Federal responsibility, consistent with the constitutional rights, the privileges, and the duties of the States, to utilize all its plans, functions, and resources for the purpose of creating and maintaining conditions under which there will be afforded useful educational opportunities, including self-education, for those able, willing, and seeking to learn."

Statement of Commissioner Thomas E. Murray, United States Atomic Energy Commission, to the Joint Committee on Atomic Energy

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, June 18, 1956

Mr. ANDERSON. Mr. President, I ask unanimous consent that a summary of a statement, as well as the statement itself, of Commissioner Thomas E. Murray, United States Atomic Energy Commission, submitted to the Joint Committee on Atomic Energy on June 18, 1956, be printed in the Appendix of the RECORD.

There being no objection, the summary and statement were ordered to be printed in the RECORD, as follows:

SUMMARY OF STATEMENT OF COMMISSIONER THOMAS E. MURRAY, UNITED STATES ATOMIC ENERGY COMMISSION, SUBMITTED TO THE JOINT COMMITTEE ON ATOMIC ENERGY, JUNE 18, 1956

1. The increasing threat of world destruction compels me to urge again the acceleration of effort on peacetime power reactors.

2. The prospect of getting industrial atomic power in the near future is very gloomy. The Government has prematurely abdicated to private industry the primary responsibility for building large power reactors.

3. Important reactor types have been staked out by individual companies or groups. Yet there is no firm assurance that these and other power reactors will be built in the near future.

4. Repeating a recommendation made last February, I again urge the Government to assume the primary responsibility for large reactor construction.

5. While continuing to support the power demonstration program, I recommend that the Government construct several large power reactors. These reactors should be located at AEC production facilities thus eliminating the issue of public versus private power.

6. A program of large reactor construction would help private industry. It would also enable us to keep our repeated and widely publicized promises to make available the benefit of atomic energy to mankind at an early date.

7. I strongly recommend that Congress enact legislation similar to that proposed by Senator ALBERT GORE and Congressman CHET HOLIFIELD. This legislation should provide for a program of large power reactor construction generally along the lines I have proposed and at the locations I have suggested.

STATEMENT OF COMMISSIONER THOMAS E. MURRAY, UNITED STATES ATOMIC ENERGY COMMISSION, SUBMITTED TO THE JOINT COMMITTEE ON ATOMIC ENERGY, JUNE 18, 1956

My views on a national policy for the development of industrial atomic power are importantly influenced by the ever increas-

ing threat of nuclear weapons to the continued existence of mankind. Echoing a warning which I previously voiced, a recent report by a group of outstanding scientists notes the possibility that the detonation of enough of these weapons could render the entire earth, or a large portion of it, uninhabitable.

I have on prior occasions before your committee endeavored to demonstrate the relationship between this threat and our atomic-power program. Once again, however, the dimensions of this danger were impressed on my conscience as I recently witnessed a nuclear explosion in the far Pacific. The possible implications for man's future, so vividly illustrated, compel me again to urge the acceleration of this Nation's progress in the field of peacetime power reactors.

The present prospect of getting any substantial quantity of industrial atomic power in this country by 1960 is very gloomy—and getting more gloomy every day. At the root of the matter is the fact that the Government has prematurely abdicated to private industry the primary responsibility for building large power reactors. Under our present policies, with one notable exception, the Commission's activities in the field of large power reactors are confined to research and development, small-scale pilot-plant construction, and limited assistance to participants under the power demonstration program.

Our immediate national effort in the field of large scale power reactor construction is limited to this demonstration program as supplemented by other activities under the licensing provisions of the Atomic Energy Act. Thus our progress is in the greater part based upon decisions by either participants or licensees as to what type of reactors to construct and at what time to begin constructing them.

Under these procedures four basically different large-scale reactor types are being explored. Some of these reactor types have now come to be accepted as the domain of an individual company or group of companies. For example, the Detroit Edison group is identified with the fast breeder reactor; North American with the sodium graphite reactor; and Commonwealth Edison and its associates with the boiling reactor. Yet the public is given the impression of a massive attack toward industrial nuclear power carried forward by private industry on each sector of the front. Let us examine the situation more closely to determine how rapidly this massive attack is advancing.

The fast breeder reactor area has been staked out by Detroit Edison and its associates. In addition to the many technical obstacles involved in this project there are other difficulties cited as barriers to progress. Unless the problems relating to third-party liability insurance and exemptions from the Public Utility Holding Company Act are solved in a manner satisfactory to the Detroit Edison group the project is not likely to get beyond the initial stages.

Another technical area that has been staked out is that of the sodium graphite reactor. North American Aviation plans to construct a full-scale reactor of this type rated at 75,000 kilowatts for the Consumers Public Power District of Nebraska. However, this project is contingent upon obtaining satisfactory results from the operation of a small experimental reactor now under construction. In my opinion these results will not be known until 1958. Thus we are faced with a possible delay of 2 years before a decision is made as to whether or not to construct this important type of power reactor. Moreover, there is a serious question whether a public power group can afford to take the financial risks inherent in this project.

Yankee Atomic Electric Co. presently plans to construct a large reactor of the pressurized water type. Under a contract with Yankee the Commission has agreed to provide certain financial and other support for this project. However, the contract does not establish any date for completion; neither does it provide any penalty for withdrawal. It does have a provision that the contract may be modified by the parties to provide for a different reactor or design in the event that estimated power costs substantially exceed the original estimates on which the proposal is based.

In addition to the ractor types represented by these projects there is another class of considerable importance, namely, aqueous homogeneous reactors. Pennsylvania Power & Light has announced its intention to build a reactor of this class for operation in 1962. However, actual construction is contingent on prior proof that construction would be economically justified. This contingency casts grave doubt on the projected completion date of 1962. This project, of such a tentative nature, is the only plan which contemplates constructing a large size homogeneous reactor.

There are those who believe that our present program is an adequate one. In support of this view the argument is advanced that our efforts are sufficient to enable us to remain ahead of the Soviets. To my mind, however, our program should not be paced solely on estimates of what the Soviets and other nations are doing or intend to do in the power reactor field. Nor should we allow ourselves to become embroiled in arguments over estimates that are made of Soviet capabilities, and so permit such arguments to become the basis for delay. What is required is that we recognize the need for action and that we take this action unilaterally and independently of the actions of other nations.

Right action should follow if we recognize the central fact that the development of industrial atomic power is not a matter of choice, but of necessity. Electric power is the very life blood of nations and the hope of the have-not countries. The upward trend in world population, the accelerated industrializatin of underdeveloped areas, and the progressively growing per capita utilization of energy all imply increasing requirements for electric power. On the other hand, there is a limit on the amount of conventional fuels which will be available. Nuclear fuels will be required to meet the increasing demand.

Already in certain areas abroad fuel shortages are beginning to appear, notably among the highly industrialized nations of Western Europe and in Japan. In such countries imported fuels are being used to supplement dwindling fuel reserves. For example, in the case of Western Europe the total net expenditures for fuel imports have been estimated as between 1.5 and 2 billion dollars for 1955, and these are expected to increase to $5 billion by 1975. The problem of fuel shortages in Japan was one of the considerations that led me in 1954 to propose the construction of a large power reactor in Japan.

The United Kingdom has abandoned the idea that coal and oil can meet her expanding requirements for electric energy and has undertaken the active development of atomic-electric power as a matter of national policy. The goal of its program is to develop this new source of power so as to provide a major portion of Britain's electric-energy requirements as soon as possible. Concretely it envisages building a large number of power stations with an installed capacity of 1½ million or more kilowatts by 1965.

We should recognize, of course, that such a program will place the United Kingdom in an excellent position to export large power reactors. Mr. R. N. Millar, manager, atomic-energy department of the General Electric Co., Ltd., puts the case quite forthrightly in these words: "In Britain the emphasis is on large central station. * * * When the export drive gets under way it will be backed by sound practical experience in a large home market, an advantage which will not be shared by America."

What the atomic-power pattern will be in underdeveloped countries is difficult to discern in detail. It will depend in part on our willingness to aid these countries in answer to their pleas for improved standards of living. Yet the needs of these countries for electric power is beyond question. One has only to realize that the present per capita consumption of electricity in the United States is 600 times that in Haiti and 200 times that in Ceylon to understand the differences in the respective standards of living which these figures imply and the serious problems involved.

It is appropriate to ask how the electric energy needs of these countries will be met. Where conventional fuels are inaccessible or otherwise unavailable the clear answer will be through nuclear power. In other cases conventional fuels will present a solution under present economic conditions. But looking beyond the present it will be evident in many cases that conventional fuels alone cannot form a stable basis to meet long-term needs. Nuclear power, however, can furnish long-term solutions. Sound planning indicates that such nations must begin now to integrate nuclear power into their economy. We should be prepared to assist them.

If action is not forthcoming to break the monopoly now enjoyed by private industry in the large industrial reactor program, we will not be prepared. It is evident to me that without such action the only significant amount of electric power that will be available in this country in 1960 will be the kilowatts coming from the Shippingport plant, the construction of which is largely being financed by the Government.

On February 23, 1956, I proposed that we adopt a national policy which treats the development of industrial atomic power as a matter of urgency. I made certain recommendations as to how this policy should be implemented. One of these recommendations was that we establish a goal of 2 million kilowatts for the construction of power reactors, here and abroad, between now and 1960.

It is important to emphasize the significance and importance of goals. Adoption of a goal, simply and forthrightly stated, has, in my experience, been the sure way and the practical way to give direction to a complex program. It has the merit of bringing order into all the diverse efforts involved. It becomes the practical gage against which progress is measured. Intelligently used, it becomes the spur to achievement.

This has been already significantly demonstrated in our own atomic energy program, where I insisted on raising our goals to bring about a revolutionary improvement in ore procurement. This experience encouraged me to attack the industrial nuclear power problem in the same way; that is, by recommending the establishing of goals in terms of kilowatts.

I also recommended last February that the Government assume the primary responsibility for meeting the objectives I suggested for the period between now and 1960. Consistent with this proposal I now urge that the Government undertake to construct several large power reactors.

One of these reactors should be an enlarged and improved version of the pressurized water reactor now being constructed at Shippingport. All the valuable lessons learned and extensive experience acquired in the course of developing and constructing this plant would be incorporated. An expansion of effort of this kind is required if the United States is to take the greatest advantage of its progress in this field. There is, for example, the need to enlarge our capabilities for testing the new and improved core designs for this type of reactor. Since the first core of the Shippingport plant will

last approximately 2 years, the loading of an improved core at Shippingport will not take place until 1959. Another facility would advance the testing of new core concepts.

The Government should build one large size aqueous homogeneous reactor. As I have previously indicated there are at the present no firm plans for constructing a large reactor of this variety. I recommend that the Government step into this gap. Unless such a project is instituted the homogeneous reactor is destined to remain in the research and development stage for many years to come.

There are other areas of reactor technology which have received relatively little attention in our programs. One is the gas cooled reactor; another is the natural uranium reactor. There are several variants of both types. I would propose to build a large scale plant of each of these kinds of reactors along whatever lines hold promise of the greatest contribution to nuclear power.

An important consideration in constructing these reactors is the manner of disposing of the power they produce. My recommendation is that they be placed at the sites of our production facilities, which today require a capacity of about 7 million kilowatts. Such tremendous electric power requirements could well absorb the output of these reactors with only barely discernible effect on the cost of weapons. Moreover, the small contribution of atomic power to the total demand would make it possible to carry out experimental operation of these reactors without affecting production of weapons materials.

Construction of a large-scale sodium-graphite reactor in the near future presents a different problem. To solve it I propose an approach that differs in detail, but not in principle. Concretely I would have the Government assume the responsibility for building a large-scale reactor of this type. It could be located in Nebraska and the power made available to the Consumers Public Power District. North American Aviation would continue to develop and construct the plant. Such a plan would permit research and development to be stepped up from its present inadequate level. This is the only way that I can see to bring this reactor into operation at an early date.

Taken together these proposals for constructing large reactors constitute a well-integrated program with two exceptions. They do not guarantee sufficient progress on the boiling-water reactor and the fast-breeder reactor. Both require more extensive investigation. Without specifying the precise method it suffices to say that the Government must insure that construction of such reactors goes ahead.

It is, of course, easy to conjure up reasons for not undertaking such a program as I propose. There is always the appealing alternate of convening committees and task forces to formulate arguments for inaction. One such argument is that it would result in an unjustifiable drain on the Nation's limited supply of scientific and engineering manpower. I do not subscribe to this argument. Far from decreasing the numbers of those trained in reactor technology a program of building reactors should act to increase them. There is no way of training competent reactor engineers that is comparable to designing and building reactors. A predominant effect of a large and assured program of reactor construction would be an increase in the numbers of those attracted to the reactor engineering field.

There are many reasons why private industry should favor the Government's undertaking the program that I have outlined. A first consequence of such an effort would be that the Government would bring its immense resources to bear in eliminating the technical obstacles that are now impeding private industry's program. This would react to decrease the cost and increase the likelihood of success of private industry's plans to construct large reactors. The resulting progress would assure for American manufacturers a place in the world market for industrial power reactors.

In addition, a Government program of the scope proposed would not only provide an assured base for the construction of large power reactors but would also serve to increase overall industry participation in the atomic energy field. It would, for example, encourage private industry to undertake to provide services such as fabrication and chemical processing of reactor fuels.

Private industry needs the assistance which a Government program of large reactor construction would give. Yet the view prevails that private industry is prepared to undertake the crucial and costly phase of reactor development which large scale construction represents. The prevalence of this view derives from the fact that atomic power has been oversold. Millions of people have been given the impression that electricity from the atom is just around the corner. However, our present knowledge is so meager that, in the absence of an accelerated program, the corner is 10, 15 or more years away. Such an accelerated program will not be forthcoming as long as we rely on our present policies which make the economics of nuclear power in the United States the consideration governing progress.

It is a tragic mistake for this Nation to base its atomic power program primarily on our own economic interests. To do this is to fail to recognize the vast political and humanitarian implications of atomic energy throughout the world. It is to follow a course which is at variance with our own larger interests, and more importantly, with all that this Nation stands for.

The fact that we are taking this course is the result of fear; fear by private industry that Government will enter the power business as a consequence of its accelerating development through power reactor construction. Such fears are unwarranted; they cannot rightly be countenanced as cause for delay.

Acceleration of reactor development by the Government will not jeopardize the role of private industry in power production. Irrespective of who develops it, when industrial atomic power becomes available, the Government can use it to produce electricity, should it so desire. In this respect nuclear power does not differ from power which is produced from conventional fuels.

The traditional role of private industry in the production of electric power must be preserved. But private industry is not helped by an artificial argument which seeks to preserve industrial atomic power as private industry's domain at the expense of the national interest as well as its own particular interests.

It requires no great powers of discernment to understand what the national interest requires in the development of atomic power. One has only to view the problem in the light of already massive and constantly growing proportions of the threat from developments in nuclear weapons. Had representatives of private industry stood with me and watched a recent nuclear explosion, I am confident that they would recognize the nuclear threat to civilization. I am further confident that they would endorse the most urgent measures to accelerate the development of industrial atomic power.

It is the urgent need for action of this type which causes me to submit this statement to your committee. I have read many statements assuring you that our industrial atomic power program is adequate. My responsibility compels me to alert you, as I have on other occasions, to the fact that I can give you no such assurance.

I believe that our present program will not enable us to fulfill our responsibilities with respect to the early development of industrial atomic power. The Commission must continue its basic research and development activities as well as continue its support to private industry under the power demonstration program. However, if we are to keep our repeated and widely publicized promises to make available the benefits of atomic power to mankind at an early date we must do more. The only way I know to discharge our responsibilities and redeem our pledges is for the Government to assume the primary responsibility for large reactor construction. In order to do this I strongly recommend that Congress enact legislation similar to that proposed by Senator ALBERT GORE and Congressman CHET HOLIFIELD. This legislation should provide for a program of large power reactor construction generally along the lines I have proposed and at the location I have suggested.

The Issue of Neutrality

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. McCORMACK. Mr. Speaker, the inconsistent statements recently made by President Eisenhower on the subject of neutrality—his clarification which aggravated the situation, and those made by Vice President NIXON, and later by Secretary Dulles, are very disturbing. They have created suspicion and distrust among our friends.

In connection with these differing statements, particularly those made by President Eisenhower and Secretary Dulles, I enclose an editorial, The Issue of Neutrality, appearing in the New York Times of June 14, 1956:

THE ISSUE OF NEUTRALITY

The fundamental principles of American foreign policy have been stated so often in word and deed as to make it clear that the only one aim we pursue is a just and lasting peace in an atmosphere of expanding freedom. But the application of these principles is a complex and constantly changing world is a task requiring the highest type of statesmanship, especially from a power whose slightest gesture has immediate repercussions around the globe. Taken as a whole, this type of statemanship has been provided by the United States, as demonstrated by its achievements and its sacrifices. Unfortunately, every so often our statesmanship is marred and its task made more difficult by unclear and sometimes unwise statements which convey impressions different from those intended and thereby create confusion with potentially serious consequences.

Such unfortunate statements have been made under both Democratic and Republican administrations. The latest examples are the seemingly conflicting and certainly confusing administration statements on neutrality by President Eisenhower and Secretary Dulles. In their foreshortened form they convey more than mere language differences, and in their general rather than specific application they both go too far in opposite directions.

President Eisenhower rightly rejects a flabby spiritual neutrality between right and wrong, between freedom and slavery. But in view of our own earlier history he expresses sympathetic understanding for the military neutrality of nations which, for

ideological geographical or other reasons, avoid military alliances. Then, however, in his off-the-cuff statement, he emphasizes the risks of military alliances, especially to border nations, and thereby appears to discourage such alliances and to encourage neutralism. In his later clarifying statement he seeks to correct such a possible misconception by emphasizing that our alliances with 42 nations are the bulwarks of world peace and provide not added danger but added security. But the damage has been done and the result is perplexity everywhere and alarm in such border nations as Germany and Pakistan.

Secretary Dulles, on the other hand, seeking to repair the damage, goes overboard on the other side. He makes no distinction between spiritual and military neutrality and, barring "very exceptional circumstances," declares the very principle of neutrality to be "obsolete," "shortsighted" and "immoral." He thereby seems to cast reflections on the policies of such nations as Sweden and Switzerland, not to speak of Indonesia and India, and in so doing he will scarcely earn their approbation.

Yet the basic ideas behind these statements are evident. In principle, the concept of neutrality is, indeed, outlawed for United Nations members by their charter, which calls on all members to assist the organization in any enforcement action against an aggressor, even a nonmember. That is one reason why Switzerland remains out of the U. N. But since the United Nations has been unable to organize forces of its own, free nations valuing their freedom have been compelled to organize thair defenses in their own specific alliances permitted by the charter, and membership in these alliances is a matter for the consideration of each separate nation.

We welcome allies, and the more the better; for by entering into an alliance with us they not only safeguard themselves against being forced into the Communist orbit but also add to free world strength to deter Communist aggression. But their adhesion to such an alliance must be voluntary and in their own best interest. We could and should consider preferential political and economic cooperation with our allies for our mutual benefit, but it would be futile to attempt to buy or to scare other nations into an alliance with us which would fall apart at the first test.

Short of such alliances, the next best thing for the free world is to have truly independent nations determined to safeguard their independence even though neutral militarily. Such nations we should likewise welcome as members of a free world and extend to them whatever aid we can. That is in fact the policy which Secretary Dulles himself proclaimed to the newly independent nations of Asia during his recent Asian tour. As he has said, "our interests will be fully served if other nations maintain their independence and strengthen their free institutions." On that note the debate about our stand on neutrality might well be closed.

Egypt Is Smothered With Political Sympathy

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am including an article which appeared last week in a leading daily newspaper of southern Illinois, the Centralia Sentinel, in which the editor gives some advice to the Democrat candidate for United States Senate, Mr. Stengel:

EGYPT IS SMOTHERED WITH POLITICAL SYMPATHY

Now comes Democratic senatorial candidate Richard Stengel to southern Illinois to shed tears about some "distressed area" that is supposed to lie within the southern region of the State he seeks to represent in Congress.

The advance copy of a speech he plans to deliver at Gillespie Friday paints a horrible picture of life in southern Illinois and he says he would like to be the man to "meet the problems of distressed areas of wide underemployment, unused factories, and stagnant productive resources," at least until he is safely elected.

We didn't know Egypt was so badly off. As a matter of fact we do not think this political candidate knows so either.

We thought people laughed, and cried, and ate, and slept in southern Illinois just as they do elsewhere. We know that a person never has much money, as big a car, as big a house, or as much time to go fishing as he would like to have, but we thought these wants were universal.

Now comes Mr. Stengel to tell us in exchange for misguided votes, that we are a miserable bunch of sharecroppers, without any shares, here in southern Illinois.

"The Republican Senator's heart has never bobbled for southern Illinois and its distresses," says Mr. Stengel.

We weren't aware anyone wanted his, or any other man's heart, to "bobble at our distress," if such there actually is. There certainly isn't any around here. We're pretty well contented with ourselves and our lot around here.

Perhaps someone should tell Mr. Stengel that the days of the WPA are over also in southern Illinois just as they are in Chicago.

Southern Illinois doesn't want WPA projects today. It doesn't want or need his or anyone else's sympathy. It just wants to live down the unjust 'bad labor conditions' tag hung on it years ago by some pundit or other hard up for copy. It wants to go along with the nationwide prosperity that has come into existence under the Republican administration.

Take your tears and your WPA projects to Chicago, Mr. Stengel. Haven't you heard?

People are moving out of Chicago every day. The suburbs are getting crowded. People are moving to the country. Think of the poor distressed folks who still have to live in Chicago because they can't afford to breathe good country air.

Outside of a few political jobholders who never had it so good as when they were supervising a WPA project back in the F. D. R. 1930's, we don't know of anyone in Egypt who is crying for such Federal or State handouts. Egypt has real opportunities to sell. Just help us sell it to those industries who need it, and peddle your political buncombe upstate.

Just give us a chance to continue living in a Nation that is prosperous and southern Illinois will look out for itself.

Her Daddy's Prayer

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. FOGARTY. Mr. Speaker, on May 19, 1956, I had the privilege of joining with the Association for the Help of Retarded Children, Inc., at their seventh annual dinner in New York City. On that occasion the association distributed a dinner journal—the last page of which was devoted to a poem by David Gimbel, of Brooklyn, N. Y.

This poem was entitled "Her Daddy's Prayer" and it was one of the most beautiful and touching things I have ever read. Mr. Gimbel most certainly must have written it with his heart for no pen alone could ever portray such deep feeling.

In fact, Mr. Speaker, I was so much impressed that I thought it should be brought to the attention of all the Members of this House. Under leave to extend my remarks, therefore, I hereby include Mr. Gimbel's poem in the RECORD:

HER DADDY'S PRAYER

(By David Gimbel)

The ticking clock upon the wall
And the approaching night as shadows fall;
Oh heavenly God with Thy worldly powers
I ask Thy help in my lonely hours.

Creator of humanity of nature and words
The moon and sun and flying birds;
Mountains, streams, and a sky so blue
The breaking of dawn and the morning dew.

And yet dear Lord I only have tears
As I think of my child in the coming years;
Her little brain, so injured and weak
When folks pass her by, in whispers they speak.

Endow people with knowledge, so they understand
That they may come forward and these children befriend;
And so, dear God, how I hope and pray
When Thou will grant us that glory day.
So that whispers can cease and action will start
And deeds will start pouring right from the heart;
Then my nightly shadows shall all disappear
I beg Thee oh Lord, that this day may be near.

Textile Mills Curtail Due to Japanese Imports

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. ASHMORE. Mr. Speaker, the textile industry of this country continues to plea for relief from the unfair competition of Japanese fabrics made at an average wage rate of 13½ cents per hour.

When Congress passed H. R. 1, in July 1955, and the GATT agreements were announced in August, American textile executives declared it would soon be impossible for them to operate at a profit if this country was to be flooded with cheaply made foreign textiles. These complaints did not seem to impress the present administration, since both President Eisenhower and Secretary of State Dulles consistently refused to approve quota limitations on low priced Japanese textiles. Consequently, the importation of these goods is increasing by leaps and bounds, and thus, seriously damaging our

entire textile industry. Undisputed evidence of this unfair competition is contained in a recent statement of William F. Sullivan, secretary of the Northern Textile Association. Mr. Sullivan says that imports of cotton clothes from Japan during the first quarter of 1956 "have increased 183 percent over the corresponding quarter a year ago." There are many similar instances of like injury. As a result of this unjust discrimination our domestic textile manufacturers and laborers are suffering badly and soon will suffer much more unless the Government changes its policy and gives a reasonable amount of protection to this vital industry. The President has authority to stop this influx of foreign textiles, made by cheap labor, simply by setting up quota limitations under the provisions of section 22 of the Agriculture Adjustment Act.

Cotton mills throughout the country are curtailing because of cutthroat Japanese goods. J. P. Stevens & Co., one of the largest manufacturers in the business, last month cut its gingham and broadcloth production from a 6-day to a 5-day week; Reigen Textile Mills, Ware Shoals, S. C., recently laid off 82 workers because it was forced to cut back its production of pillow cases; Kendall Mills, in May, cut its broadcloth and poplin production from a 6-day to a 5-day week; Consolidated Textile Co. announced on June 7 from New York that it was shutting down 2 plants—1 in New England and 1 in the South—because of Japanese competition. On June 5, Senator FREDERICK G. PAYNE, Republican, of Maine, whote President Eisenhower that the administration's refusal to protect the American textile industry from foreign textile imports may defeat the administration's national trade policy. Senator PAYNE urged the President to take prompt action due to the distress in our domestic textilé industry.

Not only has production been cut back but huge expansion programs have also been postponed or abandoned. Approximately 1 year ago Col. Elliot W. Springs, president of the Springs Cotton Mills in South Carolina, announced a $10 million expansion program. But under prevailing conditions in the textile industry there will be no expansion by this company, and on the contrary 12,000 persons presently employed by the Springs Mills are now working only 5 days a week, whereas they formerly worked 6 days.

The following news report of an interview with Colonel Springs gives a vivid picture of present conditions in the American textile industry:

JAPANESE THROAT CUTTING BLAMED: SPRINGS CURTAILS WORK, POSTPONES HUGE EXPANSION

COLUMBIA, June 6.—Postponement of a $10 million expansion program at Springs Mills, Chester, and curtailment from a 6-day to a 5-day week in all Springs Mills because of Japanese throat cutting, was announced today by Col. Elliot W. Springs, president of the mills.

The Springs Mills, heretofore, have opened steadily on a 6-day basis and the reduction to a 5-day week, already in effect, amounts actually to a 12-hour per week pay loss to employees because the sixth day carried time and a half wages. More than 12,000 persons are employed by Springs Mills.

The Spring mills are the largest makers of sheeting in the world. The Springs chain is composed of seven mills with 740,000 spindles. There are only about 19 million spindles in the country. The company is now busy covering up 55,000 spindles in the retrenchment program.

The expansion program which has postponed was for $10 million.

Colonel Springs' reasons are outlined in the text of the following letter to W. E. Wrenn, president of the Chester Chamber of Commerce.

"I wrote you on February 24th that, due to Japanese competition, we had to change our balance and this gave us a surplus of yarn. Therefore, we either had to curtaill our production or install additional looms. We don't like to curtail."

WOULD ENLARGE

"After your chamber offered us every cooperation to put the looms in Chester, I wrote you that I would consider enlarging the Eureka plant if I could get permission from the Seaboard to encroach on their property; that I would consider enlarging Springsteen if something could be done about city taxes, and Gayle if something were done about Japanese throat cutting.

"Since that time, the Japanese situation, instead of improving, has deteriorated considerably. They are gaining on us every day. We gave them new machinery as reparations for Pearl Harbor, and the CCC sells them the same cotton I buy at 10 cents a pound less. We have always been able to meet competition without tears, but, we can't lick the State Department, the Secretary of Agriculture, GATT, OTC and the 64 billion dollar give-away-program while Congress twists our arm.

"Therefore, we have been forced to revise our plans and, instead of expanding, we are going to have to curtail. It is with regret that I tell you reluctantly the Springs Cotton Mills' operations will be reduced indefinitely, and that we will have to postpone our plans for installing additional looms. By 'indefinitely,' I mean until my customers find out that all that is yellow is not gold, or the public decides our textile industry is not part of foreign aid. If this meets with the approval of the people of Chester, I suggest they write President Eisenhower and tell him how much they love Secretary Dulles."

A Blow to Security

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 13, 1956:

A BLOW TO SECURITY

Whatever its finer shades of meaning may be, the Supreme Court, in deciding the Kendrick M. Cole case, has dealt a severe blow to the Government's Federal employee security program. It may be that the program was in need of revision anyway, and the Court's opinion will hasten it. At any rate, Congress or the administration itself must now consider the need, and the extent, of revisions to meet the Court's objections.

The opinion of the six majority judges hangs on what they call a "chain of inferences." Its principal effect is substantially to nullify the President's executive order of 1953, which was designed to rid the Government of security risks, including employees of doubtful loyalty.

In simplified form, this is the story: Congress in 1950 enacted the Summary Suspension Act. This law listed as "sensitive" 11 Federal agencies. It provided that the head of any such agency, if he deemed it necessary in the interest of national security, could suspend "any civilian officer or employee" of his agency. And after preferring charges and giving the employee an opportunity to answer, the agency head was authorized to discharge the employee if this was deemed necessary or advisable in the interests of national security. The law also authorized the President to add other agencies to the "sensitive" list if he felt it necessary to do so. Mr. Eisenhower added the agency in which Cole was employed, and based his Executive order of 1953 on the statute.

According to the Court majority, however, the President misinterpreted the intent of Congress. His Executive order was framed to require all Federal employees to meet minimum standards of loyalty. But the Court said that Congress, in using the words "any civilian officer or employee" did not mean to include all employees. The real intent of Congress, according to the Court, was to make the law apply only to employees who actually hold sensitive jobs.

This means that Cole, who refused to answer the charges against him and who refused to seek any agency hearing, must be reinstated because there was no specific finding that his job was a sensitive one.

It probably also means a great deal more than this, although it is difficult to estimate the full consequences of this decision. It certainly means that a great many employees, including employees in the agencies designated as sensitive by Congress, cannot be dismissed under the security risk program. They can be dismissed only if they are in "sensitive" jobs. Who is to determine the definition of a sensitive job? How is the determination to be made? On these points the Court is silent—perhaps because it does not know the answers. The opinion does suggest that it may be possible, under other procedures, to get rid of employees of doubtful loyalty who are in "nonsensitive" jobs. But officials close to the administration of the program are doubtful that this can be done effectively.

In short, the Court has crippled the security risk program through what seems to us to be a strained interpretation of the intent of Congress, which has given no visible evidence that its intent was misinterpreted by the President, and by relying on a "chain of inferences" to strike down the Executive order.

In the belief of the dissenting justices, the Court, in this ruling, has interpreted the intent of Congress in such a way as to "intrude itself into Presidential policymaking. "Further, they said, it has created a situation which "might leave the Government honeycombed with subversive employees." That is an unlikely prospect, in our opinion, for neither Congress nor the administration will permit it to happen. But the next move is now up to them.

Foreign-Aid Cut Was Needed

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I submit the following editorial from the Sioux City, Iowa, Journal of June 13, 1956:

FOREIGN-AID CUT WAS NEEDED

It is not surprising that the United States House of Representatives slashed about a billion dollars from the multi-billion-dollar foreign-aid bill. What is surprising is the fact the House didn't reduce the huge appropriation bill even more.

Our Government has not been niggardly when it comes to helping our allies abroad. Indeed some $50 billion have been poured into countries abroad since World War II ended. As a matter of cold fact, we have been appropriating money so fast for foreign aid that the Government hasn't been able to give it all away.

If Senator RICHARD RUSSELL's figuring is correct, there are $7 billion in previously appropriated foreign-aid funds that have not been spent. Now seven billions represent a fabulous amount of money. And when the $3,800,000,000 contained in the House-passed bill is added to it, the total of unspent foreign-aid funds will be nearly $11 billion.

Nobody figures in the millions in Washington any more. It's always billions, and they're tossed around with gay abandon. Our major objective is to fight the spread of aggressive communism by helping finance the economies and the armies of our friends overseas. We are handing out largesse on a grand scale. And we are told by the great givers that this is absolutely necessary if our national security is to be maintained.

In the meantime, Gen. Curtis LeMay, Chief of the United States Strategic Air Command, testified before a Senate Appropriations Subcommittee that the SAC needs approximately $3,800 million (the amount of the foreign-aid bill) to step up production of B–52 bombers and provide for additional bases and personnel.

Senator RUSSELL said, in that regard, he is toying with the idea of proposing that the foreign-aid money contained in the huge bill be transferred to the Air Force. "I don't think it would wreck the foreign-aid program if Congress didn't authorize any new expenditures or appropriate any new money," the Senator said. "That might necessitate the transfer of some funds, but I believe it could be done." His idea is that the foreign-aid program could be carried out with the $7 billion previously appropriated but still unspent. Not a bad idea, at that.

An ironic angle to the House action cutting more than a billion dollars from the foreign-aid bill was a plea by John B. Hollister, Director of the International Cooperation Administration—which is the successor to the old Marshall plan setup. Mr. Hollister viewed with alarm, warning that unless the billion dollars is restored, the Government will have to reevaluate its plans, especially with respect to NATO.

Actually Mr. Hollister put up a very good argument for the cut, although he meant to argue against it. NATO is eminently unsuccessful. It was created as a military organization among Western European nations to fortify the west against possible Russian aggression. Only trouble is, our allies don't want to ante up, either with their share of the money or the men to man the defenses.

It is time Uncle Sam stopped being softheaded about foreign aid. It is time he became realistic. Rather than dump nearly $4 billion into the already swollen foreign-aid fund, he might be wise to take a look at his own defense picture. It is quite possible we could do the cause of freedom more good by putting that money into our own defense arm.

If we can't buy friendship abroad, we can at least stay strong enough on our own hook to discourage Soviet aggression.

Foreign Aid Unjustified Unless It Helps To Block Communism

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. GROSS. Mr. Speaker, an excellent editorial in the June 8, 1956, issue of the Waterloo (Iowa) Daily Courier deals forcefully with one of the most vital issues in connection with foreign-aid legislation—the unreasonableness of taxing the American people to aid foreign governments which has taken a neutral position with respect to the Communist world conspiracy.

It is utterly ridiculous for the United States to attempt to do for foreign governments and their peoples those fundamental and basic things which they themselves must do if freedom and justice are to be preserved.

The editorial from the Daily Courier follows:

Billions of dollars spent for foreign aid can be justified on only one basis: To strengthen resistance to communism among the free nations of the world.

But President Eisenhower proposes a new approach to foreign aid. He suggests that neutralism is an acceptable position for any nation and that neutral nations should receive American aid.

Basically, this issue resolves itself into a question of how to define neutralism. No American would insist that a nation receiving American aid should surrender its independence and become an American satellite. The purpose of the aid is to build independent governments so responsive to the will of their people that Communist infiltration will not succeed. And such independence can mean disagreement with American policy and even neutralism in the face of some points of conflict between the United States and Russia.

But it would surely be wrong and impractical to tax the American people to aid countries which use neutralism as an excuse for permitting infiltration. The present Government of Egypt, for example, is accepting military aid from the Communist bloc, is allowing Communist agents to enter the country, and is being maneuvered into a position where it cannot act decisively to block Communist subversion. Can the Egyptian policy be called neutralism?

The present Government of India, motivated by passions aroused in colonial days, has also made neutralism an excuse for a soft policy toward Communist infiltration. The recent visit of Khrushchev and Bulganin in India, under Nehru's sponsorship, greatly strengthened the pôsition of Indian Communists. If Russian Reds are friends, Indian Communists are obviously acceptable people.

This neutralism has also resulted in considerable Communist infiltration of countries like Indonesia where memories of European imperialism are so strong that dangers of Russian imperialism are minimized.

Thus the new policy proposed by the President could be disastrous unless neutralism is very carefully defined. The new masters of the Kremlin have stripped the cruel mask of Stalin from the face of communism and are busily strapping on a new mask, bland and smiling. They know that further Communist infiltration in east and west cannot succeed unless communism gains the appearance of a respectable political movement. But the purpose of conquest by subversion and revolution has not changed to the slightest degree.

That being true, an American policy of aiding neutrals which cooperate in their own self-destruction could actually promote the Soviet plan. Congress ought not to accept such a policy merely because the President proposes it. This is one field where the broadest collective judgment is needed.

Un-American Activities Committee Hearings

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of June 6, 1956:

UN-AMERICAN ACTIVITIES COMMITTEE HEARINGS

Twelve St. Louisans thus far have invoked the fifth amendment by refusing to tell the House Subcommittee on Un-American Activities if they have been Communists.

These people are within their rights under the Constitution in refusing to testify. Each person can make up his own mind, however, whether or not these 12 are or have been Communists. There can be very little doubt how most people will interpret their refusal to testify.

For many years, the American people were almost totally misinformed on the true nature of the Communist conspiracy. In the years between the Bolshevik revolution and the recognition of Russia by the Roosevelt administration in 1933, very little was known about the Communists. Only the students who had read Karl Marx were aware of the enormous revolution in the vast Soviet empire.

The political cartoonists of those days contributed to the general lack of clear thinking on the subject. They pictured Communists as little men, with beards, carrying bombs in their hands. It came as a complete surprise to find that clean-cut looking American-born citizens like Alger Hiss could be just as much under Communist domination as the unwashed proletarian.

With the recognition of the Soviet Union and the influx of vast numbers of spies under diplomatic and consular registration, the large body of Americans first began to learn of infiltration tactics. The Communist cells of the earlier days of the New Deal went to the very vitals of the government, and only recently have come to be recognized.

It was somewhat of a shock to many to realize that Communists and fellow travelers are right here in St. Louis, and in many of our own unions and industries. Too many naive people have been inclined to believe that communism was confined to Union Square in New York and a very few other places on the east and west coast.

It just isn't so. There are Communists in St. Louis and in many of the cities and towns in this area, whose mission is to subvert, to cause disunity and division, and to be the hard core of treason and the eyes and cars of the worldwide conspiracy of subversion originating in the Kremlin.

Congressman MOULDER and his associates have been performing a very great public service in their well-conducted inquiry. We hope that they continue with increasing success to the very end.

The Fine Record of REA

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. VURSELL. Mr. Speaker, today I want to talk briefly about REA legislation in which the farmers in my district, and the Nation, have a special interest.

First, may I say at the opening of this session, many farmers being served with REA light and power were fearful that the REA recommendations of the Hoover Report to the Congress might have the support of this body, and the present administration.

Happily, and for the good of REA and the Nation, Ancher Nelsen, then Administrator of REA, after making a close study of the recommendations strongly opposed the proposal and pointed out why it was ill-advised, unworkable, and would, in fact, destroy REA in its future service to the Nation.

Secretary of Agriculture Benson and President Eisenhower agreed with Administrator Nelsen in his opposition. The Congress also is so strongly opposed to the Hoover report on REA, that, in my judgment, if called upon to vote, would defeat it by an overwhelming majority.

REA OFFICIALS MEET IN WASHINGTON

Officials of all the 27 REA cooperatives of Illinois came to Washington and held a dinner meeting here last March 26, which was attended by most Members of Congress from Ilinois, for the purpose of expressing their opposition to the adoption of the Hoover Report.

Attending that meeting from my district were: Mr. Joseph H. Heimann, manager of Clinton County Electric Co-op, of Breese, Ill.; Mr. H. G. Downey, manager, Tri-County Electric, Mount Vernon, Ill.; Mr. Elmo A. Cates, manager, Clay Electric Co-op, Flora, Ill.; Mr. O. J. Chaney, manager, Wayne-White Electric Co-op, Fairfield, Ill.; Mr. V. C. Kallal, manager, Southwestern Electric Co-op, Greenville, Ill.; Mr. Damon Williams, manager, Newton, Ill., and with these managers were one or more directors of each of these cooperatives.

Mr. Speaker, at that meeting the Members of Congress present from Illinois expressed their opposition, and, at that time, both Senator DIRKSEN and I expressed our opposition to the recommendations of the report, and told the officers of REA, in our judgment, "they need not worry because the Congress, which brought REA into being, and had nurtured its growth through the years, was so proud of the great work it had accomplished that they need not have any fear that we will permit its present organization to be handicapped, or changed in any way that would mar its fine record."

Mr. Speaker, may I say now, in my judgment, in view of the fine record of service this organization has made that no administration or Congress in the future will ever change, to any appreciable extent, the present organization setup of REA, which has proven its worth—not only to the farmers but to the entire economy of the Nation.

APPROPRIATIONS FOR THIS YEAR

Mr. Speaker, as a member of the Subcommittee on Appropriations, the officials of REA and all departments of Agriculture came before our committee in request for funds some weeks ago. We approved loan funds in the amount of $214 million for next year for REA, and $100 million for REA telephone loans. I have supported all the loan funds for the continued expansion and extension of REA in every session of the Congress for the past 14 years, which totals about $3 billion, including the amounts we appropriated in this session of the Congress.

All of these loan funds are being paid back by the members of the REA cooperatives, with interest, and I know of no big business in the Nation that has a finer record of business management than does the REA, which has been managed in the field, at the grassroots of every community, by progressive farmers who have given freely of their time in the interest of their communities and the Nation.

When I came to Congress, the REA organization was about 8 years old, and about 47 percent of the farmers had been reached with its service. Today, about 95 percent of the farmers of Illinois and the entire Nation are receiving light and power. Of all the billions of dollars I have helped to appropriate for various departments of Government for the past 14 years, none of it, in my judgment, has done so much to aid the farmers, to lift the drudgery from farm work, and from farm women, and build up the economic welfare of the country as has the money we have loaned to REA cooperatives.

Let me tell you how promptly they have met and paid their obligations, using Illinois as an illustration:

Up to January 1, 1956, the 27 cooperatives in Illinois have borrowed from the Government $84,510,000 upon which they have met the due date on every payment, and have paid back, to date $18,167,359. In addition to paying interest on the amount loaned, of $8,950,834. In fact, they are now $5,147,854 ahead of schedule on their loan payments.

In my congressional district, the five REA cooperatives at the close of 1955 had met every due date interest payment and have paid $6,600,000 on the principal, and have made advance payments on principal, before due date, in the amount of $2,400,000. I submit this is a fine record.

The record of REA throughout the United States is almost on a par with Illinois. At the present time, nationwide, the REA cooperatives, after paying back to the Government all of the payments as they came due with interest, have to their credit advance payments, before due, of over $80 million. About 700 of the 900 cooperatives have made such advance payments to the Government.

NELSEN MAKES FINE RECORD

Early in 1953, Ancher Nelsen, who helped to start REA in Minnesota, was appointed national Administrator of REA. During his tenure of office, he has brought to REA's management his practical experience plus executive ability in adopting sound business policies which accelerated its expansion. The results are that today the REA, through its cooperatives, has reached its greatest output of electric energy to the people served, and, most important, it should not be overlooked that the farmers are buying this power on a national average today of 2.8 cents per kilowatt-hour—which is the cheapest rate they have ever had.

The day that Administrator Ancher Nelsen came into office in 1953, there were backlog applications that had not been approved, or processed, totaling $220 million. By expediting the processing of these applications, and getting the power to the farmers the backlog has been reduced to about $90 million—which is the lowest backlog since 1947.

REA TELEPHONES

While the REA telephone organization is in its infancy, compared with REA light and power, rapid progress is being made in the development of REA telephone cooperatives.

The following figures will indicate the progress being made:

Fiscal year ended—	Number of loans to telephone co-op's	Amount of loans for the period
June 30, 1951	96	$38,000,000
June 30, 1952	53	42,000,000
June 30, 1953	103	43,000,000
First full fiscal year of Nelsen administration ended:		
June 30, 1954	150	74,000,000
June 30, 1955	147	53,000,000
June 30, 1956	[1] 200	[1] 80,000,000

[1] Estimated.

Mr. Speaker, these facts not only pay a tribute to the great benefits the REA has brought to the farmers and the economy of our Nation, but also pay a high tribute to the thousands of progressive farmers who have given freely of their time and ability as directors and officials of the 900 cooperatives in our country. They can depend upon us Members of Congress to continue to safeguard the interest of REA.

Mr. Dulles and the New York Democratic Delegation—The $64,000 Challenge

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. DAVIDSON. Mr. Speaker, under date of March 15, 1956, a letter was sent in the name of the members of the New York State Democratic delegation to Secretary of State John Foster Dulles re-

questing that he meet with the signatories to that letter to discuss the then critical situation in the Middle East. This request was made because each of us felt that the interests of our combined constituencies, numbering over eight million people, demanded that we speak directly to the Secretary on this subject of vital world concern.

Replies to our letter were sent out first on March 19 and then again on March 26, not from the Secretary, but, rather, from the Honorable Robert C. Hill, Assistant Secretary. The latter of those two letters informed us that the Secretary of State regrets that he will be unable to meet with the Democratic members of the New York delegation in the immediate future." The reasons assigned for his inability to meet with us was that the Secretary was leaving for the White Sulphur Springs meeting of the Canadian-Mexican-United States heads of government, a meeting, which, if memory serves me correctly, lasted all of 3 days. The letter of March 26, 1956, ended with the suggestion that we meet with lower echelon officials of the State Department. Mr. Hill was immediately informed both by telephone, and by a letter of confirmation, that the members of the delegation desired to see the Secretary personally.

It is now the 18th day of June, Mr. Speaker, and we have not yet seen the Secretary of State. In our humble opinion, the situation in the Middle East has not as yet been solved, and there are many questions to be answered. We protest the patent discourtesy that has been shown us by the Secretary of State. He has agreed to see but three of our group and is adamant in his refusal to see the entire delegation. For some reason, certainly unknown to us, the Secretary feels that he can more easily ward off the opinions and interrogatories of 3 of our number rather than those of the delegation.

Mr. Dulles has taken a position with regard to the Middle East, one with which, to say the very least, we are not in complete agreement. If he is so sure of the course that he has charted, he should have no fear of discussing his views with the elected representatives of over 8 million people, for these representatives feel that their ideas and opinions are worthy of consideration. As the Secretary well knows, we of the New York Democratic delegation have taken an active interest in the Middle East situation and we are fairly conversant with the problems that exist. We seek merely the opportunity for a face-to-face discussion of this matter with Mr. Dulles. The result of such a meeting can be but twofold: one, the Secretary will be able to persuade us that his program and decisions on policy are in the best interests of our Nation and of the causes of world peace; and, two, that we will be able to bring to light information which will persuade the Secretary that there is merit to our position and that reconsideration of our present policies is called for.

Mr. Speaker, the members of the New York Democratic delegation have repeatedly issued joint statements on this proposed meeting. We have indicated that we would like an explanation, in detail, why arms are shipped to Saudi Arabia and Iraq by the United States, and why Israel is not accorded equal treatment. This is of great concern to us, especially with regard to Saudi Arabia, a country which Mr. Dulles, in testimony before the Senate Foreign Relations Committee earlier this year, included among those in the Middle East having a background of "centuries of antimosities" toward the Jews. We would also like to know why our allies have been given an "all clear" by the State Department on their shipment of arms to Israel while at the same time Mr. Dulles forbids Americans arms shipments to that country. Finally, Mr. Speaker, we would like to know why our representatives in the United Nations acceded to the demands of the Arab states and of the Soviet Union on the resolution offered in that body by Great Britain.

These are some of the questions that require answers. Mr. Dulles is duty bound to inform us and the entire world of his intentions and his position. At the very least, whether we agree or disagree with his views, whether national policy toward the Middle East remains as it is or is reconsidered and reevaluated, the facts will be out in the open for all to see and for everyone to discuss, so that through the process of assimilated, collective wisdom, the proper, the moral, the decent, and the just solution may be chosen and followed. Only then can a decision be reached which will aid the cause of world peace and which will sell the story of the greatness of the democratic way of life. It is shameful for Mr. Dulles to be silent, for his silence, when added to his refusal to see the members of the New York Democratic delegation, can only lead to a concern for his motives and his courage.

Mr. Speaker, I am but 1 of the 16 Congressmen who has expressed this desire to meet with Mr. Dulles. I have set forth the story of what we seek and the shabby treatment that we have received at the Secretary's hands, because over 350,000 people who reside in the 20th Congressional District of New York, which I have the honor to represent, are vitally interested in the situation in the Middle East; they are entitled to know the position that I, as their representative, have taken.

Somerset (Wis.) Centennial To Recall Lumber Days

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, this weekend—from June 22 through 24—the good citizens of Somerset, Wis., will celebrate a triple centennial.

The June 17 issue of the St. Paul Pioneer Press carried an interesting story on the coming centennial celebration of this picturesque community in St. Croix County. Here is the account of the coming celebration as carried in the St. Paul Pioneer Press:

SOMERSET, WIS.—When Gen. Samuel Harriman named a village on the Apple River, Somerset, in 1856, local French lumberjacks didn't object because to them it sounded like St. Morrisette.

Next Friday through Sunday the roaring lumberjack and pioneer days will be relived when Somerset celebrates a triple centennial.

Many activities are planned for the 100th anniversaries of the founding of the Catholic parish of St. Anne, the township of Somerset, and the village of Somerset.

The community that nestles on the banks of the Apple River at Highways 35 and 64 is familiar to St. Paulites, who frequently stop there for dinner during the warm months and in winter enjoy skiing in the area.

French historical background will come to life during the centennial, for it was a Frenchman, David Germain, who on July 18, 1851, bought the first parcel of land from the United States land office in Hudson at 25 cents an acre.

VIRGIN FOREST

Pioneers pushed back the virgin forest and cleared land, built log cabins, farmed, and slowly the area became prosperous as lumber and grist mills mushroomed on the river.

The township of Somerset petition was given the county board at Hudson on September 19, 1856. Chairman of the first township meeting was Thomas J. Chappell and supervisors were Thomas Parnell and Desire Rivard.

St. Anne's parish was the focal point of activities. French missionaries and the populace helped build the first log church. On June 24, groundbreaking ceremonies will be held for St. Anne's Catholic school and gymnasium. Cost is estimated at $300,000.

Festivities will begin at noon Friday when carnival and museums open. A kangaroo court session will follow when men failing to grow beards or mustaches will be "tried" by visiting court dignitaries. An outdoor square dance will cap the day's activities.

PEA SOUP DAY

Saturday will be "pea soup day," the special French dish, and free soup will be offered visitors from 10 a. m. to 6 p. m.

Other events will include a village versus township ball game, a pioneer dinner in St. Anne's Church with French-Canadian food; trick log-rolling acts, girl's water ballet, canoe exhibition, kiddie centennial parade, street dance, and the Saga of Somerset, a historical pageant.

Sunday will be Jean Baptiste day, the patron saint of the French. In addition to the groundbreaking ceremonies at St. Anne's, an old settler's buffet lunch and centennial grand parade will be held.

Pioneer descendants will discuss the powerful figure of General Harriman in Somerset history.

Harriman built a lumber mill on the Apple River and more than 800,000 feet of lumber was sawed each year. He also owned the Apple River Boom Co. Logs were bought from cutters along the St. Croix and Apple Rivers. In 1874, the Stillwater Gazette reported that the Stillwater boom handled 189 million feet of logs. Of these, 4 million came from the Apple River and sold for $13.75 per thousand feet.

Slowly the village and township of Somerset grew. Bridges were built, roads cut through the forests, and farmers hauled their grain to Harriman's grist mills to be ground into flour and feed.

POWER TO ST. PAUL

Dams were built on the Apple and St. Croix and soon power companies supplied power as far away as St. Paul.

A copy of store record books in 1884 show that prices included: barrel of salt, $1.75; cotton flannel, 15 cents a yard; eggs, 20 cents a dozen; beefsteak, 11 cents a pound; butter, 20 cents a pound; corsets, $1; shoes, $1.50 a pair, and overalls, 90 cents.

Beginning in 1887, dairy farming replaced the ebbing lumber business and Grant & Sons founded the first cheese factory in St. Croix County.

Since then, it has been a leading center of the western Wisconsin dairy industry. It is also famed for its frog-raising industries. Many of its leading restaurants feature the delicacy of the "Frog-leg capital of the world."

Many persons across the country became conscious of Somerset when, in 1941, a national picture magazine featured a spread of riding down the Apple River on inner tubes.

Communism's Greatest Victory

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by David Lawrence, entitled "Communism's Greatest Victory," which appeared in the Manchester Union Leader, Manchester, N. H., on June 8, 1956, which I feel will be of interest to everyone.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNISM'S GREATEST VICTORY

(By David Lawrence)

WASHINGTON.—The confusion inside the Supreme Court of the United States seems to grow with each week's decisions. This time the Communist Party can boast of its greatest victory. Three out of the nine Justices have accepted the persistently expressed alibi of the Communists in this country that they are "just another political party."

Congress has repeatedly proclaimed by law that the Communist Party is not a political party but a conspiracy which waits for the opportune moment to overthrow the Government of the United States.

The three Justices of the Supreme Court who have accepted the argument of the Communists that they are just a political party are Chief Justice Warren, Justice Douglas, and Justice Black.

The opinion of the Court in the case held that an employer in California was justified in discharging an employee because of membership in the Communist Party and that it was covered by the contract between the union and the employer, Justices Harlan, Reed, Burton, Clark, Minton, and Frankfurter concurred in the ruling of the Court.

But Justice Douglas, writing a dissenting opinion in behalf of Chief Justice Warren, Justice Black, and himself, said it wasn't a matter of a local contract and that the doctrine expounded by the majority "violates first amendment guaranties of citizens who are workers in our industrial plants." Then Justice Douglas writes:

"I can better illustrate my difficulty by a hypothetical case. A union enters into a collective-bargaining agreement with an employer that allows any employee who is a Republican to be discharged for 'just cause.' Employers can, of course, hire whom they choose, arranging for an all-Democratic labor force if they desire.

"A union has no such liberty if it operates with the sanction of the State or the Federal Government behind it. It is then the agency by which governmental policy is expressed and may not make discriminations that the Government may not make.

"But the courts may not be implicated in such a discriminatory scheme. Once the courts put their imprimatur on such a contract, Government, speaking through the judicial branch, acts. And it is governmental action that the Constitution controls.

"Certainly, neither a State nor the Federal Government could adopt a political test for workers in defense plants or other factories. It is elementary that freedom of political thought is protected by the 14th amendment against interference by the States, and against Federal regimentation by the first amendment.

"Government may not favor one political group over another. Government may not disqualify one political group from employment. And if the courts lend their support to any such discriminatory program, Shelley V. Kraemer teaches that the Government has thrown its weight behind an unconstitutional scheme to discriminate against citizens by reason of their political ideology. * * * The Court today allows belief, not conduct, to be regulated."

This means that Robert Hutchins of the Fund for the Republic, who thinks the Communist Party is just another political party and who is spending Ford's millions to advocate that doctrine in America, has found stanch support in the views of three members of the Supreme Court.

It means also that these same Justices reveal an inconsistency with their refusal last week to review a case in which two workers had appealed against a court decision compelling them to join a union though it was against their religious beliefs as protected under the first amendment of the Constitution.

Justice Douglas offered in support of his view in the California case just decided, that Chief Justice Hughes, in 1937, had ruled that a State couldn't punish Communists for holding a public meeting. But that was long before the true meaning of the Communist conspiracy was exposed, as it has been in the last 10 years, and safeguards written into law by Congress.

Justice Douglas says a defense plan may need to protect itself against sabotage but that the worker wasn't guilty of any acts of sabotage. This means that the doctrine of prevention is being discarded, and, if the argument is fully accepted, Congress and the States must wait till bombs are thrown and complicity of an individual is actually proved before precautions can be taken against the hiring of agents of the Communist espionage and sabotage apparatus. It's all just a "political ideology" to Justices Warren, Douglas, and Black.

From Bucktown to the Blackstone

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint from Editor & Publisher, April 21, 1956:

COWBOY COLUMNIST—NATE GROSS TATTLES AND CHICAGO LISTENS

(By George A. Brandenburg)

CHICAGO.—It has taken Nate Gross, Chicago American's Town Tattler columnist and former reporter and assistant city editor, 25 years to get from Bucktown to the Blackstone.

Bucktown is the name given a Chicago Northwest Side neighborhood in which Gross grew up as a kid. Today, the beefy newsman with a flair for the unusual is proprietor of High Dresser Ranch, his fabulous suite in the Sheraton-Blackstone Hotel, complete with corral, pistol collection, and his own branding iron, plus a worldwide collection of music boxes and whistlers that reflect Nate's global jaunts in recent years.

UNIQUE SPOT

High Dresser Ranch has become a gathering place for movie and stage celebrities, including well-known cowboys of motion picture fame, together with hundreds of Chicagoans from all walks of life. Nate's suite is not the biggest in Chicago, but it certainly ranks among the most unusual. Nate Gross is a bachelor. "High Dresser Ranch" is his home and the place where he taps out his daily column late at night.

William R. Hearst Jr., a longtime friend of the Chicago columnist and a visitor to Nate's hotel/hacienda, wrote his approval of "High Dresser Ranch" in Mr. Gross' "Boots and Saddle" scrapbook as follows: "San Simeon is very lovely, but for real comfort and good company, give me High Dresser every time."

But Nate Gross doesn't hibernate in Suite 419 of the Blackstone. He's a busy newshawk, dating back to his early days as a hard-hitting reporter and continuing up to the present as "Town Tattler." His column is in its 17th year. He describes it as "a little paper within a newspaper," admitting that he snipes on other departments, such as society, sports, politics and occasionally the front page. In the latter instance, however, Nate's page one news usually is lifted out of his column and given front page display, with or without his byline.

HAS TRIED ALL STYLES

Columning doesn't come easy for Nate Gross. He's written all kinds of columns, from the standpoint of style—depending on editors' whims—including the punch line kind, name dropping, and gossip. In recent years, since his doctor has warned him to get away from Chicago during the winter months, Nate has become a worldwide traveler and after starting on his "vacation" he begins his travelogues which have proven to be exceedingly popular with his readers.

A recent letter from a reader, however, probably describes Nate's tattling better than he can himself. "It's a homespun version of a big city column," wrote the reader. "I can always tell who's cutting wood here, or if there's a quilting bee, by reading your column."

Nate says he tries to capture the glamour of Chicago as "seen through the little people." He points out that everything changes. When he began writing his column some 16 years ago, there were a dozen big name night clubs in Chicago. "Today we have one well known night club and a few hotel dining rooms that offer attractions worthy of the attentions of a columnist," he added. "So now you meet the people at their own parties, either at the better restaurants or at their own clubs."

PLAY GAMES WITH READERS

Over the years, he has "played games with his readers," telling about Bucktown, which was Nate's boyhood "hometown" within the big city; Burke's Park (really Grant Park on Chicago's lakefront, but dubbed Burke's Park by Nate Gross in honor of John Burke, former manager of the Congress and Blackstone hotels); and the Randolph Street Post and Paddock Club, namely Henrici's restaurant and gathering spot for Chicago's politicians, race track biggies and stage celebs. In recent years, he has become identified

with "Back of the Yards," having a keen interest in helping the Catholic Back of the Yards Council in its welfare program for people living in the stockyards district.

At the time of the 1952 Democratic national convention in Chicago, Mr. Gross revived an old song, composed by oldtimer Walter Goodwin, entitled, "Back of the Yards." Nate arranged to have the convention orchestra, augmented on that occasion with 50 fiddle players, play Goodwin's tune. It has since become Mayor Daley's "Campaign song" and is played whenever His Honor arrives at public functions. Goodwin, in appreciation for what Nate did in helping to popularize his oldtime song, composed a special tune in honor of the columnist, "Bucktown, U. S. A."

But, as we said earlier, it has taken Nate Gross 25 years to get from Bucktown to the Blackstone. Although he doesn't like to admit it, Nate Gross is today a Chicago celebrity. But it wasn't always that way. He started out to be a lawyer and received his bachelor of laws degree in 1929 from the Chicago Law School.

BECOMES A REPORTER

Before passing the bar examinations, Nate switched to journalism, having been initiated into newspaper work, via the City News Bureau of Chicago, while he was still going to law school. He joined the American as a reporter and made a name for himself as one of the best in Chicago. For 15 years he was content to be a reporter, and later assistant city editor of the American. During this period he got to know as many policemen as he did bankers. He covered every news beat in town, and became acquainted with judges, politicians, socialites, theatrical people, gamblers, gangsters, lawyers, and "lots of little people" who make up a big city.

Dillinger was making arrangements to surrender to the proper authorities through Nate Gross, but was killed first. Testimony on file in the Federal Court bears this out.

When Samuel Insull, the elder, returned to business and started a radio chain, the former utilities magnate, unapproachable to most newspapermen, gave his story to Gross.

When Cyrus Eaton, Cleveland financier and Insull's former enemy, appeared in Federal court as a defense witness for Insull, the American had not only the fact that he was to take the stand, but also what he would say, thanks to Nate Gross.

ARIEL AND CALIBAN

When Elaine Barrier chased John Barrymore across the country in the now famous love marathon, it was Nate Gross who scored a scoop. Caliban and Ariel would have been just characters in Shakespeare's Tempest, if it hadn't been for this. Elaine became Ariel and John, Caliban in a taxicab on Chicago's Outer Drive, as Gross and Elaine Barrie followed another cab, in which the great lover's bags were headed for a California train.

Mr. Gross became a columnist during World War II, at the suggestion of the late Jack Malloy, Herald-American editor. Nate aided in collecting over a quarter of a million dollars for Chicago's servicemen's center. In those years, he worked closely with Mrs. Ed Kelly, wife of Chicago's wartime mayor. Nate not only was active in fund raising, but also prevailed on Chicago food brokers to provide hundreds of Thanksgiving and Christmas turkeys for homesick GI's stranded in Chicago during the holidays.

Today, Nate Gross is not a nighthawk columnist. He stays away from saloons and "joints," preferring to travel in the better circles of Chicago's cafe society.

He's usually back at High Dresser Ranch by midnight, when he sits down to write his column which will appear in the American 2 days hence. He's up about 8:30 a. m., and at the office by 10 o'clock. He revises his column, killing out any duplicates of items appearing in competing Chicago columns, and he answers correspondence until noon. He's a "hound" for the luncheon circuits and manages to keep on the go throughout the afternoon and evening before tackling his next column.

One final word about Chicago's cowboy columnist who gets to Palm Springs, Calif., and Las Vegas each winter season to mingle with the Chicago colony and loop cowboys. His High Dresser branding iron bears the numerals "144." His shirts have the same numbers woven into the pocket. One hundred and forty-four is 12 dozen, or one Gross. It's that simple.

Sixteen Democratic Congressmen Refused Appointment by Dulles—Members Take Vigorous Exception

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. CELLER. Mr. Speaker, Secretary of State John Foster Dulles has refused to see 16 members of the New York State Democratic congressional delegation: Hon. VICTOR L. ANFUSO, Hon. CHARLES A. BUCKLEY, Hon. EMANUEL CELLER, Hon. IRWIN D. DAVIDSON, Hon. JAMES J. DELANEY, Hon. ISIDORE DOLLINGER, Hon. JAMES C. HEALEY, Hon. LESTER HOLTZMAN, Hon. EDNA F. KELLY, Hon EUGENE J. KEOGH, Hon. ARTHUR G. KLEIN, Hon. ABRAHAM J. MULTER, Hon. LEO O'BRIEN, Hon. ADAM C. POWELL, JR., Hon. JOHN J. ROONEY, and Hon. HERBERT ZELENKO. They represent a sizable proportion of the population of the largest State of our Union.

Mr. Dulles is adamant in his refusal to see the delegation and insists that he will only see three of the group. The delegation, speaking as a unit, has requested this interview to discuss with the Secretary of State the grave problems of the Middle East. Mr. Dulles, however, continues in his refusal to grant this request. Obviously, he cannot face the challenge of meeting 16 Members face to face, most particularly when he is well aware that this delegation is thoroughly cognizant of the issues at stake and their relation to the maintenance of peace between Israel and the Arab States.

The 16 members of this congressional unit have together explored this problem and have unanimously arrived at the central conclusion that the most concrete step that can be taken for the maintenance of peace is an equilibrium of arms between the opposing factions. It is, of course, this unanimity of approach that has frightened Mr. Dulles in view of the inconclusive, wavering, timid public appraisal the Department of State has made relative to this crucial situation.

It may well be that Mr. Dulles prides himself upon his diplomatic suavity faced with 1, 2 or 3 Members of Congress but refuses to subject himself to the interrogations and opinions of 16 Representatives. He has given no reason for such refusal but has arbitrarily refused to grant the appointment. If Mr. Dulles is so secure in his position on the Middle East and so certain of what serves the United States interests best, it would appear to us that he would more than welcome this opportunity of addressing himself to this problem before the New York State Democratic congressional Representatives.

If the logic and the facts are on the side of the administration, would he not, therefore, welcome this opportunity to persuade the 16 of the rightness of his course? Would he not welcome this opportunity to explain why United States arms are shipped to Iraq and Saudi Arabia and arms are denied to Israel, and why our allies are given the green light to ship arms to Israel while the United States denies Israel's request? Or is Mr. Dulles so shaky in his own opinion that he dares not expose it to the scrutiny and question of the 16 Members of Congress? Can he face 16 challengers and reply to their request for an explanation why the United States yielded to the Arab States and the Soviet Union in emasculating the resolution in the United Nations offered by Great Britain?

Surely Mr. Dulles must know the answers to these questions, but are the answers of such dubious worth that he does not dare expose them to the critical attention of 16 of New York State's Representatives?

The 16 members of the New York State Democratic congressional delegation, having a unanimity of viewpoint, have agreed to act as a unit in this matter and we resent the discourtesy shown to 16 Members of Congress in Mr. Dulles' refusal to see us. We question his motives.

Deputy Attorney General Rogers Addresses Federal Bar Association

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an address by Deputy Attorney General William P. Rogers which appeared in the May 1956 issue of the Federal Bar News. The speech follows:

DEPUTY ATTORNEY GENERAL ADDRESSES DISTRICT OF COLUMBIA CHAPTER—ROGERS URGES CHIEF JUSTICE REPORT TO CONGRESS

Four hundred members of the District of Columbia Chapter gathered for luncheon April 25 to hear an address by Deputy Attorney General William P. Rogers. The title of Mr. Roger's speech was: "A report to Congress by the Chief Justice of the United States—an important forward step."

Bart Smyth, Chapter President, presided at the luncheon which was held at the Dolly Madison Room of the Madison Arms Building in downtown Washington.

The news of this luncheon is Mr. Roger's address which, in part, is reprinted here:

Most of us here today are lawyers. We have professionally and personally dedicated

our lives to the prompt and effective administration of justice. Here are a few basic facts concerning our Federal judicial system.

Do you know how much of the budget is allocated to the administration of the court system? About one-twentieth of 1 percent—little more than the cost of one destroyer or one light cruiser.

How many persons would you estimate are employed in our judicial system? There are about 300 judges and 4,000 employees. This constitutes the entire manpower of 1 of the 3 branches of Government. Over 40 times this many people are employed in the administration of veteran affairs. The entire Federal judiciary, including the Administrative Office, is operated on a budget half as large as that used in the administration of the Bureau of Indian Affairs.

I use these illustrations, not to suggest that some special significance should be attached to them, but rather to show that speaking relatively the size and cost of the courts are insignificant in terms of service rendered.

In nearly every year since 1942 the civil cases commenced have exceeded those terminated. The continuous yearly increase in the pending caseload is illustrated by the fact that the 1955 caseload is nearly 150 percent greater than the 1941 figure. This, like many other problems of the courts is a continuing one. With the growth and progress of our society, and changes in legislation and economic conditions, the courts are constantly presented with new problems and requirements.

We Americans pride ourselves in our independent and impartial judiciary. We believe in the rule of law and look to the courts to safeguard our rights and to preserve our institutions of freedom. Yet how long does a person have to wait to have his case tried? In many districts litigants must wait from 1 to 4 years to have a case tried. By means of extraordinary effort, the district courts in the southern district of New York, in Washington, and elsewhere, have made valiant strides in decreasing the backlog during the past year. However, in most jurisdictions the problem continues to be most serious. The unfortunate fact is that very few persons know this except the judges, lawyers, and the litigants involved.

The solution of this problem will not be found in one panacea of magical formula. I am convinced, however, that solutions would soon be forthcoming if the spotlight of public opinion, so much a part of our democratic system, were focused on the judicial branch so that both its accomplishments and its operational difficulties, and its weaknesses would be matters of public knowledge. Once the facts and the problems are generally known, I believe corrective action would follow.

As one of the three coequal branches of Government, the judiciary needs a strong and effective spokesman. It must be provided with a voice to make known to the Congress and to the people of the United States its needs and requirements—its accomplishments and its failures. It is my sincere conviction that great value would attend a report by the Chief Justice to each Congress on the condition of the courts.

I publicly recommended such a proposal in 1954 and the rseponse was almost unanimously favorable. Judges, leading members of the bar, Members of Congress, and others, agreed that it was essential that the courts be provided with an effective spokesman to make known objectively and persuasively, their problems, needs, and plans for more effective performance of their vital functions in our society.

Judge Parker of the fourth circuit, in an address to the American Bar Association meeting in Philadelphia last year, said:

"Last year, at the judicial conference of the fourth circuit, Deputy Attorney General W. P. Rogers made a proposal that the Chief Justice be invited * * * to address the two Houses of Congress in joint session as to the needs of the judiciary. His proposal has received the unanimous indorsement of that conference; and, in my opinion, it is one of the most important proposals affecting the judiciary to be made since the foundation of our Government."

Legislation was introduced in Congress and hearings were held in February 1955. I think you would be interested in some of the testimony.

Loyd Wright, then president of the American Bar Association, testified in complete support of the proposal, stating in part:

"The American Bar Association has long felt that there has been a shocking lack of understanding as to the Federal judiciary of the United States. * * * The judiciary was removed, as it should have been, from political influence, and hence it has had no one to constantly champion in the legislative halls its needs and requirements in order to fully meet the obligations of service imposed upon it by our form of government."

The late Judge Stephens, for many years the chief judge of our circuit court here and of whom it has been said that he gave his life by his continuous actvities in promoting the cause of justice, also testified in favor of the proposal. He stated:

"I do not have in mind some dramatic actor-like pressure or presentation by the Chief Justice of the United States. What I have in mind in supporting this resolution is that the Chief Justice could in a dignified manner, once each session or once each Congress, in the first place, tell the whole Congress and, therefore tell the whole people of the importance of the Federal judiciary and what it means to freedom, what it means to our liberties, and what it means to the peaceable settlement of our controversies between man and man and between man and his government in the Federal courts."

Judge Biggs, chief judge of the third circuit, observed that in 33 years that circuit had never been up to date in its work. The late John W. Davis telegraphed his approval of the proposal "provided that it would not prove an undue tax upon his [the Chief Justice's] time and energy." The Chief Justice, in response to an inquiry from the subcommittee, wrote: "If the Congress should be of the opinion that it, and through it, the public might become better informed on the subject through a statement of current conditions and recommendations of the Chief Justice, I would be happy to cooperate."

Despite overwhelming support, a few objections were made to the proposal. First, it was suggested that the plan might be embarrassing to the judiciary by tending to impair its independence and impartiality. Second, it was questioned whether the Chief Justice could have anything of sufficient importance to say to justify an address before a joint session of Congress. Finally, it was said that it had never been done and therefore should not be done. I would like to address myself to these contentions.

The suggestion that a factual report on the conditions of the courts by the Chief Justice might somehow be inappropriate or impair the independence of the judiciary seems to me without foundation.

No one has ever suggested that the doctrine of separation of powers requires that there be watertight compartments with no right of interchange of information. Progress can hardly be accomplished in a vacuum.

In his capacity as head of the Judicial Conference of the United States, the Chief Justice is already required by statute to submit an annual report to Congress. This report by the Chief Justice has nothing to do with the merits of cases or to the judicial as distinguished from the administrative aspects of the courts. The proposal that the Chief Justice personally present factual data to a joint session of Congress does not contemplate any change in this respect. To permit him to present orally to Congress every other year information of immense importance to the conduct of judicial affairs so that proper emphasis could be placed upon those aspects deserving particular attention is only commonsense. It would substitute an effective way to present these views for the present ineffective way.

The contention that the Chief Justice would have nothing of sufficient importance to say to warrant an address before a Joint Sesison of Congress strikes me as being equally without merit. One of the statutory functions of the Judicial Conference of the United States is to make recommendations to the Congress. Undoubtedly this program directly affecting the administration of justice would receive favorable and widespread consideration if it were personally presented by the Chief Justice of the United States who is chairman of the conference. Certainly Congress should be apprised, for example, of the backlog situation, its causes, its effects and possible remedies for it. In the interest of economy and efficiency, Congress should also be fully informed at regular intervals of all fiscal and administrative problems of the courts.

Does information relating to the judicial branch effectively reach Congress? Compared to the executive branch which, as you know, has the benefit of the President's state of the Union message, special messages, testimony of Cabinet and other top level officials, and which is otherwise constantly in touch with Congressmen, it does not.

Prior to 1939, the Attorney General spoke for the courts. While this procedure provided the courts with a spokesman, it had one substantial drawback. It tended to make the judicial branch appear subservient to the executive branch; it was also dependent upon its chief litigant to presents its case for appropriations to Congress, to fix the salaries of its employees and to approve its expenditures for books and travel. This was hardly consonant with our traditional view, as well as constitutional provision, for the complete equality of position between the three branches of government.

Since 1939, the responsibility for the management of the fiscal and administrative affairs of the courts has been lodged in the courts themselves, the Judicial Conferences and the Administrative Office of the Courts. This system has not been too effective because their recommendations do not receive adequate attention.

Each year, as you may know, there is a judicial conference in each circuit where local problems are discussed and assessed and recommendations are made. The chief judge of the circuit presents the recommendations of his circuit to the Judicial Conference of the United States. At the conference material compiled by the administrative office on the status of the courts is presented and discussed.

The result of this process is a printed report which is probably read by very few Members of Congress. No Member of Congress, however diligent, can possibly read all material presented to Congress. After hearings of the Judiciary Committees of the House and Senate, at which court administrative officials and district and circuit judges testify, the subcommittee reports to the committee, the committee reports to the Congress, and Congress considers the recommendations. Because of lack of attention worthwhile recommendations are often pigeonholed.

Over the years failure of Congress to respond to the pressing needs of the courts is a recurring problem. Of the 57 judgeships created between 1945 and 1954 only 6 were created during the year in which the recommendations were first made. Twelve were not created until 3 years later and 3 were not created until 5 years later.

There are presently pending in both Houses of Congress omnibus judgeship bills which propose to carry out the current recommen-

dations of the Judiciary Conference. If enacted, it would create 1 additional circuit judgeship and 20 additional district judgeships. The Department of Justice has strongly urged the enactment of this legislation and it is hoped that favorable congressional action will be forthcoming shortly.

The final objection which has been made to the proposal is that it would result in a break in tradition—that because no Chief Justice of the United States has ever appeared before Congress in person, such an innovation should not be instituted now. Customs and traditions should be continued only so long as they serve a useful purpose. When it can be demonstrated that adherence to obsolete procedures is not productive, it is time to search for new and more effective measures which will bring about sound and desired results. In a matter so important and vital as the preservation of the strength and vitality of our judicial system, the choice is an obvious one. We cannot permit the legitimate needs of the judiciary to go unattented because they are presented in such form and matter that they miss the mark.

Regrettably, Congress, or to emphasize a point, a subcommittee of a committee, despite the support of the chairman and the ranking minority leader, took no action on the proposal in 1955. I am firmly convinced that eventually Congress will approve this proposal which has such general and widespread support. An invitation to the Chief Justice of the United States to address Congress on the conditions of the courts would provide an important steppingstone in the drive to bring justice up to date. I believe that the idea is one which deserves the wholehearted support of the Federal Bar Association.

Foreign Student Inspired by Washington Trip

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. KEATING. Mr. Speaker, in recent years Americans have become increasingly aware of the value of exchange programs for old and young people with our neighbors across the seas. Recently, an example of the value and results of such an exchange came to my attention.

A few years ago a constitutent of mine, Miss Sheila Sparnon, of Wolcott, N. Y., carried on a correspondence for some time with Vid Chang in Thailand. Through the interest generated by this pen pal correspondence, he decided to come to the United States for schooling. This June he graduates from Wolcott High School.

When Vid Chang arrived in this country he knew very little English. Now, 2 years later, we have ample testimony to the great strides he has made in mastering the language. It comes in the form of an eloquent poem inspired by a senior class trip to Washington.

Under leave to extend my remarks, I am including this poem, as it appeared in the Lake Shore News, Wolcott, N. Y., on May 24. I hope that the example of Vid Chang's successes in this country will serve as an inspiration for many others who will follow and thus aid in building up mutual understanding between this Nation and our friends around the world.

The poem, The Glorious One, follows:

THE GLORIOUS ONE
(By Vid Chang)

What a beautiful city it is! Washington.
The gigantic Government buildings and the gracious monuments
Among the fine scenery it stands.
A pale blue river, the light green trees and the various colors of the blossoms
It is beautiful and dignified as its Nation.

Across the Potomac River, opposite the city,
Under the quiet-cool shadows of the green tall trees.
Rest hundreds of men, the heroes, known and unknown.
For the country they served,
For freedom and justice, they found their destiny.
Near the top of the hill, lies an unknown soldier
Who represents the hundreds unknown.
Their fellow countrymen pay respect to them nights and days,
Regardless of rain or snow.

To you, the men who deserve
The gift even richer,
The gentle wind blows from the river.
It carries the fragance of the blossoms from the bank,
Refreshes the one who rests, and cheers the ones who serve.
"Here rests in glory honored an American soldier known only to God."
The gentle wind likely to whisper.

Foreign Aid Reaches a Dead End

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. William Henry Chamberlin which appeared in the Wall Street Journal on Tuesday, May 15. Mr. Chamberlain indicates that the American foreign aid request for winning friends among neutral nations has proved a blind alley.

The article follows:

DEAD END: THE AMERICAN FOREIGN AID ROUTE FOR WINNING FRIENDS AMONG NEUTRAL NATIONS HAS PROVED A BLIND ALLEY
(By William Henry Chamberlin)

So-called lend-lease aid to nations fighting against Germany, Italy, and Japan was advocated as an essential means of winning a war that would usher in an era of peaceful cooperation among peoples. The war was technically won; but the era failed to materialize. Since the end of hostilities against the Axis the United States has disbursed close to $55 billion in relief, economic aid, and military assistance to foreign powers.

The sum is considerable, even in this age of easy spending and currency inflation. Had it not been spent at all, American individual citizens would have had much more money to spend or save. Had it been spent directly on such defense objectives as intercontinental bombers, guided missiles, and scientific teaching and research, there would probably be fewer pessimistic comparisons between American and Soviet accomplishments in these fields.

It would be unfair and unrealistic to write off this whole expenditure as a total loss, although some items, like the subsidization of the French colonial war in Indochina, seem to fall in this category. Had it not been for United States aid, the recovery of Western Europe would not have been so rapid, Japan, Korea, and Formosa would be in much worse shape than they are, and one or more of these Pacific bastions might have fallen.

However, at a time when there is a good deal of agitation for continuing and expanding some of the most debatable aspects of America's giveaway program, it seems worth remembering that in two respects this program has not lived up to the claims and expectations of its advocates. It has not made America or Americans particularly liked. And, what is more important, it has not transformed the beneficiaries into reliable allies or, in some cases, even into friends.

DOLLARS VERSUS EMOTIONS

It should be clear by this time that dollars, even a great many dollars, will often not outweigh stronger political and emotional factors. Take the case of India, for instance.

American aid to that country has been far in excess of Soviet aid. But a red carpet of organized cheering hosts was prepared for Khrushchev and Bulganin, while Secretary of State Dulles, on his visit to New Delhi, was given the chilliest reception compatible with formal correctness. Prime Minister Nehru of India is frequently and sharply critical of American policly, seldom if every critical of Soviet and Red Chinese actions.

There is no reason to believe that this situation, an outgrowth of Indian antagonism to what its leaders like to call Western imperialism and materialism plus Indian resentment toward America's anti-Communist policy, would change if the United States doubled or trebled its giveaway program to that country.

Greece offers another illustration of the same point. The United States poured into Greece for economic reconstruction and military aid over $2 billion, a considerable sum for a small country. But at the present time the Greeks show far more inclination to be resentful over Cyprus and over American failure to induce Great Britain to consent to the union of that island with Greece than to remember the American aid. There are many similar examples.

It should be clear to us by this time, after the expensive education we have received, that favors between nations, like favors between individuals, do not always make for friendship, and sometimes make for the reverse. Such favors, if they are too one-sided, can easily arouse a defensive psychology of envy and a suspicious tendency to seek ulterior motives for the behavior of the bountiful giver.

TARGET OF THE MOBS

The United States Information Agency is sometimes made the scapegoat for these attitudes. And it is an ironical fact that when foreign mobs go on the rampage the first building they seem to attack instinctively, perhaps because it is apt to be large and prominent, is the office of the USIA.

But even if all our Information Agency representatives spoke with the tongues of angels, it is doubtful whether they could succeed in overcoming the psychological reaction of envy and suspicion generated by the spectacle of a country so rich that it is able to give away so much, and perhaps sometimes in rather too lavish and ostentatious fashion. The number of American automobiles with diplomatic immunity in the heyday of the Marshall plan was a subject of some acid comment.

In any case, there is something repelling about government-to-government aid, with its inevitable overlay of bureaucratic procedure. Private undertaking is an entirely different matter, when it is accompanied by

friendly interest and a complete absence of anything savoring of a superiority complex. The American Friends Service Committee has earned widespread international goodwill by sponsoring humanitarian and reconstruction projects in which young men and women work with their hands on local jobs.

INCIDENTAL UNDERSTANDING

American educational enterprises like the American University in Beirut, Robert College in Istanbul and similar institutions in Japan, China (until the bamboo curtain fell) and other Asian countries won much incidental friendship and understanding for America among the native students whom they attracted.

While there are cogent practical reasons for continuing to subsidize reliable allies, in the interest of our own security, no particular benefit is likely to accrue from increasing handouts to uncommitted and sometimes unfriendly neutrals or from channeling American aid through that Tower of Babel, the United Nations. As a means of winning friends and influencing people lavish Government aid has proved a dead-end street, which only the blind would continue to try to travel.

New Look at Neutralism

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. EVINS. Mr. Speaker, there continues a daily concern that our country is continuing to lose the cold war—if we have not already lost it completely. Evidence of this fact appears on every hand. Certainly it is devotedly hoped that our State Department and policymakers in the field of foreign affairs may awaken to the realities of conditions with which this Nation is confronted, reverse the present trend, and, recapture the initiative in the matters of first importance for our country. There never has been a better time for this Nation to take the offensive on the idealogical front for democracy than at present.

The State Department should not scatter its shots but center its efforts and target aims in limited areas needing first consideration. A new look at neutralism for this Nation is certainly indicated.

In this connection, Mr. Speaker, I insert in the Appendix of the RECORD a timely editorial entitled "New Look at Neutralism," which appeared in the Nashville Tennessean, June 12, 1956. This editorial which is deserving of attention and thoughtful consideration, follows:

That there has been a basic change in the United States attitude toward neutralism is evident, and in the light of what is going on around the world, it would be surprising if this were not so.

In Moscow there is the interesting report of Marshal Tito serenely finishing his nap while Kremlin officials wait to confer with him.

In Italy, Italian Communists, shocked by Khrushchev's indictment of the dead Stalin, have worked out an independent strategy of adopting the methods of western democracy to attain their ends. They are cutting loose from Moscow domination. This is more Titoism.

Among the Soviet satellite states in Europe there is the prospect of being forced to apologize and pay indemnities to Tito for past acts which were dictated by the deflated Stalin, whose vileness is now known to all the world.

Before his illness, President Eisenhower made two statements on neutrality which added up to an opinion that though military alliances against communism offered the best security, it is obvious that certain ideological, geographical, or other reasons make military alliance impractical. This being true, neutralism can be tolerable and acceptable.

This is only commonsense, but it is important that such views should not be used to weaken courage and resolve in anti-Communist nations. For it is the democratic opposition which gives uncommitted nations any choice at all.

After his press conference views on neutrality, Mr. Eisenhower issued a clarifying statement, and since that time there has been a further explanation by Mr. Dulles. But the American people, we think, already have a fairly realistic grasp of the situation.

Some neutral nations, such as Indonesia, whose President is Mr. Sukarno, deserve sympathy. On his recent visit to Washington, Mr. Sukarno spoke with exceeding frankness to a joint session of Congress, and was given an enthusiastic reception. He did not profess indifference to the rest of the world, but made it clear that his first consideration was the salvation of his own land.

Less of a welcome will be given Prime Minister Jawaharlal Nehru of India whose visit impends—a leader who does not treat communism with consideration at home but chooses to be a middleman in international affairs. Yet even his type of neutralism offers hope, since the people of India now know the worst horrors of Stalinism. Indian Communists who bowed down before the meglomaniac Russian ruler, like all others have been made to look like dumb dupes, and their cause is bound to suffer thereby.

The policies of free nations cannot be controlled by foreign aid or anything else, and in many cases there is much to be obtained by abandoning the dollar diplomacy which causes natural resentment.

The most important task for Messrs. Bulganin and Khrushchev is to convince thinking people that there has been a clean break with Stalinism and that Russian communism can achieve the decency it professes to desire. Millions of awakened Russians also need such proof.

Not only have free peoples been shocked, but Communists everywhere have been put upon the defensive. There never was a better time for democracy to press its offensive on the ideological front, with especial attention to those who have adopted the course of neutrality. And signs that the administration appreciates its opportunity are distinctly heartening.

Better Watch Our Step

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, for years, the government of Russia brutally oppressed its people. Its government was a blot upon civilization.

After a group of its leaders revolted, which we falsely assumed gave the people at least a degree of freedom, we in 1933 again recognized Russia as a nation, our own Senator Vandenberg casting the only dissenting vote. How right he was in his distrust of those who controlled that country has been proven by time and subsequent experience.

While we sent the "Polar bears" to Siberia in World War I and were allied with Russia against the Kaiser, and subsequently, in World War II, were allied with Russia against Hitler, we now know that Russia was fighting for her own advancement rather than for a common purpose.

Whatever may be the belief and the purpose of Russia's people, those who control her have accepted and relied upon the belief that "there is no God, that religion is a fraud, that ministers and priests are hypocrites."

Since the end of World War II, Russia may accurately be characterized as the enemy of the rest of the world. She seeks world domination.

Through aid given during World War II and subsequently, Russia and communism have spread over much of the world's area—this in spite of the fact that we have spent billions to prevent it.

Are we now about to fall into another trap, just because Stalin—now dead and incapable of retaliation—and his atheistic, immoral, oppressive practices have been denounced by his former asssociates?

Holding out to us what some think is the olive branch of peace, the new regime has invited our Air Force Chief, General Twining, to Moscow.

The President has given his consent, but yesterday from his sick-bed in Walter Reed Hospital, said that other members of the Joint Chiefs of Staff would not now accept a similar invitation.

Common courtesy would require us after Twining's visit—certainly after a visit by other top military men—to issue a return invitation for the Communists to visit us.

We are still spending billions to hold our so-called allies in line against the spread of communism. They are watching us.

Just what will happen to their already extremely weak support of our world position if they see our top military men breaking bread, drinking toasts with the Communist leaders?

It is all very well to hold out the hand of friendship to an enemy, but I never would permit one to get behind me.

If forced to meet one, I would like to first search him for his shoulder-holster gun, the knife in his bootleg, first sip the drink he proffered so I might be sure it was not poisoned.

Most assuredly I would expect a friend who lived in fear of communism to look upon my social visit to those who are oppressing him with not a little misgiving.

Sometimes we are judged by our associates. The nations we hope will resist communism may be confused when they see us acting buddy-like with Russian rulers, their enemies.

Address of Hon. Ralph Harvey, of Indiana, at Muncie, Ind., Saturday, June 16, 1956, at the State Convention of AMVETS

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered on June 16, 1956, at the State Convention of AMVETS, in Muncie, Ind., by my colleague and good friend, the able Representative from the 10th District of Indiana, the Honorable RALPH HARVEY:

It is a real pleasure to be here today. Organizations such as yours, I believe, are more widely admired than some realize.

As war veterans in civilian life, you are properly concerned with the welfare of veterans and their kin; but AMVETS, to their credit, have demonstrated an alert interest in all they share with others—the progress of the home community, the prosperity of State and Nation, and profoundly, the peace of the world.

I am sure I speak for more than one in congratulating you upon the scope of your sympathies, the division of your interests. By word and deed you have made evident the resolve that while veterans are not to be forgotten, a just regard of their fellow Americans shall be maintained. The goals you seek are intelligently conceived to be helpful to some without being hurtful to others.

In considering current veterans' legislation, I should like to read a letter that came to my desk a few days ago. It omits mention of veterans and their programs, but it pointedly touches upon some of the many public problems confronting us all, veterans included.

This letter, whose author might have been your wife or mine, came in response to a public opinion questionnaire. It says:

"DEAR MR. HARVEY: At risk of seeming completely negative, I must vote 'No' to proposals which will spend more money. We must stop somewhere, and I fail to see any benefits received from all the wild spending we have done. Foreign aid? The time should be run out now. Roads and highways? Go a little safer and more slowly on the ones we have. Arms? Yes; but use some sensible spending.

"As for NATO, I believe Congress should assume the duties that NATO wants. I guess I am a contrary female (gentlemen, at this point it is obvious the writer couldn't be your wife or mine) but I am tired of working and taking home less than three-fourths of my pay. Can't we increase the personal exemptions of taxpayers? Thank you. I respect your efforts and service very much. Under Eisenhower, at least we have peace."

The lady, bless her, feels as many do. But I repeat that word "feels" with emphasis, because she is dealing with large orders—foreign aid, highways, NATO, and guided missiles. The real point at issue, as I see it, is not how we feel; it's the more soul-searching challenge of what we know, and if knowing, what we can do about it.

Let's start in again at the beginning and try to think the letter through aloud.

The writer would have us vote "no" on proposals which involve the spending of more money. Assuredly it wil be a happy day when we privately or publicly can have what we want, and all we want, for nothing. More realistically it can be said that the cost of Government to our people is pretty faithfully reflected by the demands of the people.

I am reasonably certain the writer would not choose to deny herself or her neighbors the protection of a policeman, a fireman, or a building inspector. They are but a few of the necessary public servants whose tools and wages must be provided through the collection of local taxes.

Our writer, it may be assumed, would not ask Indiana school teachers to go payless, nor would she leave streets and roads to become impassable, our penal and benevolent institutions to rot away. Their maintenance and improvement represent but a part of the day-to-day functions of state government.

Finally, I am prone to believe that the writer, despite an understandable desire to retain more of her pay, would not subscribe to the proposition that we substantially cut down our Army, Navy, and Air Force. Yet the implementing of these and all they entail by way of national security accounts for the spending of 70 cents of every dollar collected in Federal taxes.

Our correspondent, to be fair, has in mind proposals of new spending, including those she enumerated, so let us strive to take an unbiased view of them.

There shall be no foreign aid, none at all. A few days ago I voted against foreign aid, as did many of my House colleagues, both Democrat and Republican. But I voted, as did most others, in protest to the amount and direction of foreign aid, not to its existence. I could never vote against every dollar of United States foreign aid so long as there remains loose in this world a conspiracy to destroy the very freedoms for which you men fought. And whatever the Russian threat to the future of this country and its principles, I could not in good conscience join those who contend that the way for us to deal with the rest of the world is to withdraw from it. Our withdrawal—unless I misread the doctrines of international communism—would set free in many parts of the earth such a frankenstein of terror, treason, and murder as to wipe out the last trace of mankind's yearning for liberty, decency, and justice.

The letter suggests a passive solution of our highway problems. Just let them multiply. Make all land-bound vehicles travel more slowly; take it easy and our existing roads will suffice. Speed, we must admit, is often a killer, but speed in the movement of food to hungry cities, steel to waiting factories, and to most of us a thousand and one necessities of present-day living—for them, speed can be essential. Our error, it seems more likely, has been that of producing and affording more cars than can be safely accommodated on public thoroughfares, and the remedy for more cars and more trucks is surely more roads. We can debate the number of roads, the type of roads, and the cost of the use of them, but we can scarcely hope to outlaw the manufacture of motor-driven vehicles and put our people back into the safer transportation age of the horse and buggy.

The letter, you will recall, urged sensible spending on arms, commonsense investment in our military might. I certainly am for that, and so are you. There is one hitch. Who, even among the expert, can tell us what constitutes sensible spending for guns, ships, bombers, and rockets? I know of no single authority, and because he, too, cannot be sure of the answer, the President of the United States is a modest and sometimes worried Commander in Chief. Sensible spending by all means, but I can tell the lady in behalf of all officials in Washington: If ahead of us are unbroken years of peace, then we are wasting tax moneys; if war in all its atomic fury should come tomorrow, then the few who survive in this vast land can vouch that we spent too little.

The writer would have Congress assume the duties of NATO. I believe Congress has only the constitutional authority to help govern the American people. It can't legislate for the British, the French, the Scandinavians, or the West Germans. NATO, of course, as some judge the United Nations, may be futile, a waste of our time and substance. Here again, however, I am sure that all in Congress, commended by the President, would vote yet tonight to withdraw from the North Atlantic Treaty Organization, if only we could be assured on two counts:

One, that Russia has no ambitions to rule any but the Russian people, and two, that a Russian pledge can be honored under any circumstances. You may be sure I am not here to preach on communism, but I pray we may all be spared from the day on which those responsible for America's survival are charmed into inertia by the sweetness of the Soviet smile.

The letter's last question deserves an answer: Can't we increase the personal exemptions of taxpayers? Why not? If Congress so votes, it is done. The President might veto such a measure, but even then if taxpayers insist, Congress will oblige. But into the bargain must go some other considerations: An unbalanced budget, deficit spending, the hiking of other taxes, or further increases in the public debt. A personal tax exemption increase of $100 means a Treasury loss of some $2 billion. Vote-seeking candidates may make it sound simple and justified, but those who take their responsibilities more seriously know that tax cutting now is the sure path to more headaches tomorrow, headaches that would multiply for all taxpayers if the present high level of prosperity should slip.

Let us, to conclude with the letter, be honest in advising the writer that she is not a contrary female. It is more pleasant to regard her for what she surely is, a good and worthwhile citizen. She has expressed her opinions and if they should crystalize into the conviction of many citizens, then our Government is such that her wishes will prevail. Whatever faults beset Washington, indifference to the will of the American voter is not one of them.

One week ago yesterday, as many of you know, veterans' legislation began to loom large in the closing days of the 84th Congress. While a few veterans' benefit bills had been passed into law earlier, and attention was divided among many others, the House Committee on Veterans' Affairs took unprecedented action. It voted out H. R. 7886, and the significance of the omnibus bill is becoming apparent. Its fate in Washington is left to your conjecture.

In its main provisions, H. R. 7886, now awaiting the disposition of the House Committee on Rules, calls for the following:

1. The American Legion's plan for $105 in monthly pension to all needy veterans at the age of 65.

2. The disabled American veterans' plan to increase payments for service-connected disabilities by 10 to 15 percent.

3. An increase in Spanish War widows' pensions to $75 a month.

4. An increase in the basic pension rate for widows of both World Wars and of Korea to $75 a month.

5. A Veterans of Foreign Wars proposal for a 20-percent pension premium for those who served overseas.

6. An amendment to give World War II and Korea widows the more liberal compensation now provided widows of World War I veterans.

7. An increase in veterans' burial allowance from $150 to $200.

The estimated first-year cost of the legislation would be $1,400,000,000. In succeeding years, it would rise rapidly.

The proposal, as pending, is subject now to public debate. I trust that you, both as veterans and taxpayers, will make your voice heard in the controversy at hand.

Before concluding, I wish to offer this assurance to veterans and their loved ones: During my time in Congress, it has become unmistakably clear to me that the American people mean to stand by those who have defended them in time of war. They are as one in their belief that the survivors of those lost in battle, as well as those who are themselves disabled in service, should be generously provided for; that those who leave the security of home and livelihood to answer the call of duty shall be afforded every opportunity to readjust to civilian life, retain their job rights and seniority, and receive material assistance in obtaining for themselves and their dependents an education, a business, or a home. They want no man or woman who marched under the colors to be left in his or her declining years destitute, demoralized, discarded. They are not merely prepared to pay their part of the terrible cost of war when it is upon us, but through the years that follow, they want the Nation's defenders to share and share fully in the Nation's progress and prosperity. Their lasting gratitude to those who sacrifice most is the finest guaranty of our future—a guaranty that to Americans young and old, their country, and its flag are worth fighting for.

Thank you.

Theodore Roosevelt Centennial

EXTENSION OF REMARKS
OF

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. KRUEGER. Mr. Speaker, as plans develop for the observance for the centennial of the birth of Theodore Roosevelt, we are naturally interested in our participation contemplated over the Nation. In this connection I would like to call to the attention of the Members the speech given by the Honorable Norman Brunsdale, Governor of North Dakota:

SPEECH GIVEN ON THE THEODORE ROOSEVELT CENTENNIAL, APRIL 8, 1956, BISMARCK, N. DAK., BY HON. NORMAN BRUNSDALE

It has been my privilege on several occasions in the last few years to attend celebrations commemorating community anniversaries in North Dakota. Some of these go back 75 years; some of them, particularly in the western part of the State, 50 years. I have recently been invited to attend the 75th anniversary of the town in which I live, Mayville, N. Dak.

In all these anniversaries I have rejoiced that someone has made it his business to write a history of that community going back to the very beginning. Very often the community has been fortunate that someone of the earliest settlers is still living in the community and has assumed the responsibility to see that a history is written, setting forth the events of the past, many of which would be foregotten except for the labors of such people. Then again, I have been most happy to learn that the files of the local newspaper going back to the first edition in my community are available in our State historical library in microfilm. These files are of great importance to the man in the future who wants to know what conditions were like back perhaps over a century from the time that he seeks that information. I hope many communities in the State have fared as well as mine.

There are, however, other reasons why we observe anniversaries, and particularly is that true when we commemorate the anniversaries of individual people. I think most fittingly the centennial celebration commemorating the birth of Theodore Roosevelt as embodied in the statement of purpose as submitted to Congress in March "recognizes that this is the time less to indulge happy recollections of an earlier age than to summon the resources of the past to help men face the challenge of the present."

I know it will interest you what has been done in the matter of preparation for the hundredth anniversary of the birth of Theodore Roosevelt. Congress passed legislation that was approved by the President on July 28, 1955, which became Public Law 183, chapter 418, establishing a commission for the observance of the hundredth anniversary of the birth of Theodore Roosevelt.

Pursuant to the law, the Commission consists of 15 members. These include the President of the United States of America, the President of the Senate and the Speaker of the House of Representatives, all ex officio; 2 Senators; the Honorable Karl E. Mundt and the Honorable Joseph C. O'Mahoney, appointed by the President of the Senate; 2 Representatives: the Honorable Steven B. Derounian, of New York, and the Honorable Leo W. O'Brien, of New York, appointed by the Speaker of the House; and 8 persons appointed by the President of the United States during November 1955, Mrs. Hazel H. Abel from Nebraska, Gov. C. Norman Brunsdale from North Dakota, Mr. Hal Davies from North Dakota, Mr. Hermann Hagedorn from New York, Mrs. Sherman Post Haight from Connecticut, Judge Herbert Millen from Pennsylvania, Mr. Lowell Stockman from Oregon, and Mr. Oscar S. Strau II from New York.

Theodore Roosevelt had the faculty of calling attention to the dangers confronting our system of government from within—very often in prophetic words, as, for example, in the following: "The fate of the 20th century will in no small degree depend upon the type of citizenship developed on this continent."

The Commission went further on to state: "Mr. Roosevelt's achievements as political leader, statesman, and Chief Executive were epicmaking. The personality which charmed his contemporaries with its gaiety, warmth, and vigor, and dazzled them by the diversity of his interests and his instinct for action, was the very stuff of which legends are made. But richer in meaning to us and to all men struggling to achieve or maintain free institutions is the man who demonstrated in his own life that this basic truth of free government that surpassing public service requires no surpassing gifts of intellect, only ordinary abilities raised to extraordinary power by those personal qualities that constitute character, and by the fire in the heart to give and to serve."

So you see that the observance of the hundredth anniversary of Theodore Roosevelt in the eyes of the Commission and of those who have been concerned with preparations for that anniversary in 1958 is not going to rely so much upon the political events of a great man, upon his accomplishments of his administration as for example in the building of the Panama Canal or in ordering the American Fleet on a voyage around the world or his exploits as a hunter and explorer. Yes, perhaps in the background we may refer to his activity in a great movement today, and one which he started, the conservation of our natural resources. The Commission, however, has felt that, as important as these events were and as these qualities of a great man were, the Commission is convinced, "that Theodore Roosevelt may be fully commemorated only as that commemoration is related to the basic summons of our time which even today asks the question: whether man has the capacity under God to govern himself and to use the liberty that is his to build a civilization that shall endure."

Following the statement of purpose to the Congress the Commission requested in its report that it be permitted to carry out three expressly stated tasks indicated in the resolution establishing the Commission: (1) to prepare a program for symbolizing the hundredth anniversary of the birth of Theodore Roosevelt and to take such steps as may be necessary to coordinate and correlate its plans with those prepared by state or civic bodies; (2) to provide for the completion of the development of Theodore Roosevelt Island in the Potomac River; (3) providing for the completion of the development of the Theodore Roosevelt National Memorial Park in North Dakota. I believe that you are perhaps more interested at this time in what is tentatively contemplated for improvements in the Theodore Roosevelt National Memorial Park in North Dakota.

Two million dollars has been asked for the improvements in this park in both of its sections. The National Park Service is asking for something in the neighborhood of $600,000 for the work in the area for fiscal 1957. Currently, that is over five times as much as the park had appropriated to it for various purposes in the current fiscal year.

Mr. Hal Davies, who attended the last meeting of the Commission and who has been most active in connection with representation on the Commission for North Dakota, the superintendent for the park, Mr. John W. Jay and Mr. Howard W. Baker, regional director of the Park Service from Omaha, Nebr., have conferred with representatives of our State highway department, representatives of the Greater North Dakota Association and the Governor's office in connection with the plans for rebuilding of the National Park headquarters in the city of Medora. This necessitates, in addition to headquarters and park entrance facilities in both park section, also the building of approaches to the highway and roads leading into the park. Eventually, and before 1958, road construction in the park will be a material improvement that has been looked forward to for a long time ever since the park was opened to the public. This includes also highway improvement in the south and north sections.

As Mr. Davies reported, the Commission members took it for granted that the development of the park in North Dakota was a must for the centennial observance. This is because, after all, Theodore Roosevelt did spend 2 of the most worthwhile years of his life in North Dakota. They were the years in which he regained his health, thus giving him a robust physique that stood him in good stead in the years to come because in all his endeavors he expended above average energy in every undertaking that he was concerned with.

Commissioner Davies, when he was in the East attending the meeting in Washington, also stopped off in New York and had an opportunity thus to see the Theodore Roosevelt House and become better acquainted with the activities and plans of the Commission, to meet Mr. Roosevelt's daughter, Mrs. Richard Derby, her husband, and trustees of the Theodore Roosevelt Association.

Then of course to the people in the East and to the Nation as a whole there is going to be another park development on Theodore Roosevelt Island, which was purchased by the Theodore Roosevelt Association in 1931 and presented to the Nation at that time. It is located near Washington in the Potomac River and will be connected to the mainland by a bridge at one end of the island. The plans for the improvement and development of this park has been made by distinguished architects and have the approval of qualified people. I have here in my hand a picture of

an artist's conception of what this memorial shrine will be like when completed. I shall be happy to have you pass it around.

May I also state that Congress has approved the report filed by the Commission. Next we need the appropriations. When the year for the centennial approaches I hope we will be fortunate enough in North Dakota as well as in America to have not only the support of patriotic civic organizations assisting in the commemoration of the hundredth anniversay of Theodore Roosevelt's birth but also that every community will take note of the event and actively take part in commemorating the anniversary programs and functions in connection therewith.

I just want to close with words from his voice uttered some years ago. They are in a sense prophetic, and I hope that they will be proven true in spite of dire predictions: "We know there are dangers ahead, as we know there are evils to fight and overcome, but stout of heart we see across the dangers the great future that lies beyond and we rejoice as a giant refreshed, as a strong man girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. There are in store for our people and for the causes we uphold grander triumphs than have ever yet been scored."

Thank you.

Tito Should Never Have Been Trusted

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 7, 1956

Mr. McDONOUGH. Mr. Speaker, Tito of Yugoslavia, a life-long Communist, has now pledged Yugoslavia's support to Red Russia, and has turned his back upon the United States which, during the last 8 years, supported the Yugoslav nation with United States loans, credits, and outright grants.

Yugoslavia, a Communist nation built and maintained with United States aid in the hope that such aid might set an example and encourage other nations under Soviet domination to break away and turn to the Western democracies, has proved once again that the Communist doctrine of deceit and conspiracy is supreme law to the Communist, and that the nation naive enough to place trust in the pledge of a Communist leader can only expect disillusionment and betrayal as a result of its trust.

I have consistently opposed aid to Tito by the United States, recognizing the fact that a Communist leader could not and should not be trusted. I have warned of the danger in sending military supplies to this Communist nation when such materials might be used at some future time against American boys. But the State Department, then under Dean Acheson, insisted that Tito's friendship was essential to the United States, and the program of aid to Yugoslavia was underway.

In August of 1949 the State Department granted a permit to send an American steel mill to Tito, and at that time I addressed the Members of the House as follows:

An event has occurred within the past 24 hours that we should think seriously about. The State Department has granted a permit to Tito, the communistic dictator of Yugoslavia, to obtain a steel mill from the United States.

I think that Tito, the Communist dictator, is the most dangerous man in the world next to Stalin. Here we are taking a communistic sinner, Tito, and trying to make him into a democratic saint. It was Tito that only 3 short years ago shot down our planes and killed our American flyers, and we are saying to him through our State Department, we think you have reformed, we think you have broken with Stalin.

You can have a permit to obtain an American-made steel mill because we think you are breaking the Iron Curtain for us.

Are we so naive as that? I think we ought to give a lot of thought to what that means in connection with the granting of funds to arm Western Europe, because we will have to use the funds if Tito uses this steel mill to make munitions. And we have no control nor assurance that he will not. We do not know if they are going to use it to make munitions or not.

Tito is playing Stalin's tune and we are dancing to it.

Tito is the most dangerous man in the world and we are baing made to look like puppets by playing along with him.

The State Department now appears sold on what it calls the "reformation of Tito." Only time will tell how honest a reformation this is. If the State Department is wrong we may regret this action which now allows Yugoslavia an American-made steel plant which can be used to produce arms and munitions which may be fired against our own men in the event of world war III, which God forbid.

Today Tito's duplicity stands revealed. As a Communist dictator, he has again joined forces in the plot of Soviet Russia for world domination through Communist conspiracy and aggression.

The whole story of Tito's brief alliance with Western democracy, his return to the Russian orbit, and what it cost the United States in our attempt to hold Yugoslavia as an ally is contained in the following article which appeared in a recent issue of the U. S. News & World Report. It is a story which confirms the opinion that "you cannot do business with Communist nations." Their creed is to confuse, their keynote is expediency, and their method is betrayal of a trust:

BILLION-DOLLAR GAMBLE THAT FAILED?—TITO, WITH UNITED STATES ARMS AND AID, LIKES MOSCOW AGAIN

Tito's mission to Moscow is the latest jolt for the United States.

Communist Yugoslavia has been kept going with United States aid. Now there's a move in Congress to cut off all aid, to consider Tito just another Moscow man.

Tito's game of "neutrality" may be over. If it is, United States has lost a billion-dollar bet.

Marshal Tito is running Yugoslavia as a Communist country built with United States aid. It's the only Communist nation in the world still getting United States help.

You can see modern United States jet fighter planes on any military airport in Yugoslavia. When Tito puts any of the 30 divisions of the Yugoslav Army on parade they march with United States equipment—United States tanks, guns, jeeps, and trucks.

Throughout Yugoslavia you find factories in operation with machinery made in the United States of America. On the plains of Croatia, in the valleys of Slovenia and Serbia, Yugoslav farmers are working their fields with United States farm machinery. For 8 years the Yugoslav economy has depended heavily on United States loans, credits and outright grants to keep going.

All of this represents a billion-dollar gamble for the United States. Since 1948, when he broke with Joseph Stalin's Russia, Tito has received a half-billion dollars' worth of United States military aid. Economic aid, over and above the 300 million dollars' worth of United States relief funds pumped into Yugoslavia at the end of World War II, totals about $400 million in the same period.

United States plans for the year ahead still call for aid to Yugoslavia—$30 million for economic aid, an undisclosed amount for military aid. But Russia now is to be Yugoslavia's biggest partner in trade. And President Eisenhower has said the United States is reassessing its policies toward Tito.

A HERO IN MOSCOW

Question now is what the United States has in return for all this aid to a Communist country and its leader. Tito, the man who broke with the Kremlin in 1948, has gone back to Moscow to be hailed as a Communist hero by Stalin's heirs, the new rulers of Russia.

In Moscow, Tito has told the men in the Kremlin that the break between his country and Soviet Russia is healed. "Nothing of the kind," he told his Russian hosts, "will ever again happen between the two countries. * * *"

Patching up their differences with this one man, as the Moscow Communists see it, can bring Yugoslavia, the only country ever to bolt Moscow's empire, back again, the richer for a billion dollars' worth of United States aid in arms and goods.

Key figure in all this is Josip Broz Tito, a life-long Communist. In 1944, Prime Minister Sir Winston Churchill of Britain and United States leaders picked Tito and his Guerrilla "Partisans" as the force to support against the Germans. Allied aid, much of it from the United States, helped Tito win. Yet, a few months after war ended, Tito's troops shot at United States troops on the Italian frontier.

In the early postwar period Yugoslavia looked like just another Soviet satellite. Tito, to all appearances, took his orders from Stalin in Moscow.

AMERICANS KILLED

One incident particularly aroused the United States. In the summer of 1946 the Yugoisavs shot down an unarmed United States transport plane, killing five United States fliers, and forced down another, jailing its occupants. A storm of protest in the United States and a blunt United States ultimatum to Tito forced him to release the Americans and pay indemnity. But Tito then was considered a cold war enemy of the United States.

Suddenly a blast from Moscow changed all this. On June 28, 1948, the Communist International denounced Tito, in effect, for defying Stalin. Communists the world over soon were calling Tito a "traitor." Out of Moscow came orders to all Communists everywhere, Yugoslavia included, to overthrow Tito.

Inside Yugoslavia, however, Tito remained secure. The Yugoslav army, the Yugoslav Communist Party supported him. A wave of Yugoslav nationalism made him a hero at home. But the country, threatened by famine, desperate for machinery and raw materials, faced economic collapse. And the Yugoslav army, promised arms by Russia, got none, feared a Soviet attack.

The United States gamble on Tito dates from this period. The Yugoslav dictator appealed for western help, though still insisting that he was a Communist.

Calculated risk by the United States was designed to make Yugoslavia an example to the countries still under Soviet rule. Idea was—and still is—to show that the satellites could break with Stalin and survive.

LOOSE TIES WITH WEST

Thanks largely to United States aid over the last 8 years, Yugoslavia has prospered. As the United States sent hundreds of millions of dollars in aid to the country. Tito gradually made his peace with the West through a number of loose alliances.

Through these years, however, Yugoslavia remained a Communist dictotorship. Tito's rule, while more liberal than Moscow's rule, was that of a police state. Yugoslavia never joined the North Atlantic Treaty Organization, often turned up on the Communist side of votes within the United Nations. There was much criticism of United States aid to Communist Yugoslavia within the United States Congress, but the aid continued to flow.

Stalin's death in Moscow brought a sharp change in Russia's policy toward Yugoslavia. A year ago, Nikita Khrushchev and other Soviet leaders went to Belgrade to confess Stalin's errors in breaking with Tito.

ESTEEM FOR RUSSIA

For a year Tito played hard to get. Just last October he received United States Secretary of State John Foster Dulles at Brijoni, his magnificent island estate in the Adriatic, for friendly talks. Now Tito has gone to Moscow to be received as a Communist hero, a friend of the Soviet Union's new leaders. Here is what he has to say about the future of Yugoslav relations with Russia:

"The common struggle of our peoples from 1941 to the end of the war against the common foe testifies to the great truth that our fates are inseparable and that there is much for which we can value and esteem each other. However, dear friends, something unheard of and tragic nevertheless took place, and neither the people of Yugoslavia nor the people of the Soviet Union were responsible for this.

"We were greatly pained, but we believed that the time would come when everything separating us would be overcome and when our friendship would receive a new and still more firm foundation. This time has come, thanks to the Leninist policy of the government and the Central Committee of the Communist Party of the Soviet Union.

"The arrival of Comrades Khrushchev, [Premier Nikolai A.] Bulganin and [Soviet trade boss Anastas I.] Mikoyan and others in Belgrade, the talks with them, the declaration which was drawn up on that occasion, and afterward the courageous and farsighted foreign policy of the collective leadership of the Soviet Union are, in my profound conviction, a guaranty that nothing of the kind will ever happen again between the two countries marching along the path of Marx, Engels, and Lenin."

ALERT IN THE PENTAGON

Tito's game, whatever it is, has shaken the United States. Senators heard Yugoslav exiles testify that Tito has helped Moscow all along. The House banned all aid to Tito unless the President orders that it be continued.

The Pentagon's experts, when United States military aid first went to Yugoslavia, had trouble finding out just how the aid was used. Now, however, several hundred United States military men are moving about in Yugoslavia checking up on United States equipment and providing the United States with valuable intelligence on the whole area.

Yugoslavia's army, these observers report, now has so much United States equipment that it is dependent on a 50-million-dollar flow of parts and supplies from the United States to keep going. Tito, once again, would become completely dependent on Russia if United States aid ended.

Tito himself, in Moscow, coolly said: "Our relations with the United States will not suffer." And Tito's friends say he knows he will be in trouble with his own Yugoslavs if he breaks his United States ties.

In the weeks just ahead, however, American policy makers will be taking another look at Tito. They must decide whether Tito has enough independence left to warrant any United States aid, or whether he is back on Moscow's side after a billion-dollar build-up from the United States.

Supreme Court Bypasses the States

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, my mail indicates that the people at the grassroots evidence great concern over recent decisions by the United States Supreme Court which appear to be in violation of so-called States rights. I am including a timely article on this subject.

People are becoming wary of more and more concentration of Federal power in Washington at the expense of the individual States. In the coming campaign I intend to discuss this as one of the issues confronting the electorate.

The article follows:

SHRINKING STATES: THEIR SIGNIFICANCE DWINDLES AS WASHINGTON BYPASSES THE LANGUAGE AND INTENT OF THE 10TH AMENDMENT

(By William Henry Chamberlin)

Amid the furor of discussion about the use and abuse of the 5th amendment a growing threat to the 10th amendment has been somewhat obscured.

The 10th amendment, commendably brief and clear like many other clauses of the American Constitution, reads as follows: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

In other words, the weight is against the assumption by the Federal Government to powers which are not specifically assigned to it. This was entirely in harmony with the spirit of American revolutionary times.

Now it is the fashion to say that one must always be for something, never merely against something. But the Founding Fathers believed that, if the creative energies of individual liberty under law were to be released, a good many don'ts on the exercise of arbitrary authority had to be spelled out.

Take the wording of the first amendment, perhaps the most important of the 10 articles of the Bill of Rights: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

HANDS OFF

Here Congress is told to keep its legislative hands off such natural rights of free Americans as the profession of religious faith, without favoritism or discrimination, freedom of speech and press, and the right of peaceful assembly and petition for redress of grievances. It is interesting to compare the short, sharp, blunt constitutional assurances of these and other natural rights with the more long-winded wording of the United Nations Covenant on Human Rights, phrased affirmatively, but full of loopholes and evasions.

The 10th amendment is equally clearcut in phrasing and purpose. The United States had won its independence in a war against the abuses of a distant government over which the American colonists exercised no control. There was a strong impulse to erect all possible safeguards against the emergence of a too powerful centralized authority at home. Hence the decision to give the States and the people the benefit of the doubt in regard to powers not specifically assigned to the Federal Government.

However, since the advent of the New Deal the political significance of the State governments and their value as a check on excessive concentration of authority in Washington has been diminishing. A shrewd French political observer, a man old enough to remember the United States as it was at the beginning of the century, reported as one of his impressions on a recent trip that the buildings housing Federal agencies in State capitals often overshadowed the State government offices in size and in the number of persons employed.

One factor in the relative decline of the States has been the growing practice of Federal grants-in-aid to State governments. This is possible, of course, only because the tax intake of the Federal Government has increased in astronomical proportions during the last quarter of a century.

SPEEDING THE DEADLINE

More recently a new factor has contributed further to the decline of the authority, prestige and significance of the States. This is the present trend toward centralism in Supreme Court rulings. The momentous ruling of 1954, forbidding segregation in public schools, overrode a previous assumption that States possess the right to set up such educational systems as are best suited to local conditions.

A recent 6–3 decision of the Supreme Court, upholding the appeal of a Communist organizer named Steve Nelson against conviction under a Pennsylvania State law against sedition, possesses implications that go far beyond the immediate case. Nelson's appeal was based on the contention that the Federal Government, by passing the Smith Act, had preempted the field of antisubservsive legislation, thereby invalidating laws which many States have enacted against sedition.

What the Supreme Court seems to have done by this decision is to stand the 10th amendment on its head. The plain purport of this constitutional provision is that the States and the people possess those powers not specifically vested in the Federal Government. But the Supreme Court, in upholding the Nelson contention, asserts that when "Congress has occupied a field to the exclusion of parallel State legislation • • • the dominant interest of the Federal Government precludes State intervention."

Under this reasoning it would seem that Congress might nullify any State legislation by enacting some Federal law. It might be argued that a Federal subsidy to education would carry with its Federal control of education, which has hitherto always been considered as reserved to the States.

MISUNDERSTOOD INTENTION

It is clear from the wording of the Smith Act that there was no intention on the part of the author to interfere with the execution of State antisedition laws. And Representative SMITH has now introduced a bill designed to reassert the autonomous legislative rights of the States. This bill provides that "no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all States laws on the subject matter, unless such act contains express provision to that effect."

It would be interesting and valuable to have the scope and meaning of the 10th amendment given a thorough legal test. For it embodies a principle of opposition to undue concentration of power in the central government which is worth remembering—and preserving.

Clinch Has Grounds for Protest

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mrs. BLITCH. Mr. Speaker, the people of Georgia are greatly disturbed over the Navy's proposal to convert 32,000 acres of our best pine forest land into a practice bombing range. We realize that the Navy must have a place to test their skill at bombing and to experiment with new bombing methods, but we also think it would be utter folly for them to convert some of the best income property in Georgia for that purpose. Mr. Turner Rockwell, of the Valdosta Times, has expressed the feelings of our people in an editorial which appeared in his paper under the date of June 14, 1956. Under unanimous consent to extend my remarks in the RECORD, I include herein this very fine editorial entitled "Clinch Has Grounds for Protest":

CLINCH HAS GROUNDS FOR PROTEST

It is understandable that the people of Clinch County are up in arms over the proposal by the Navy to acquire 32,000 acres of land in that county for use as a land bombing range. Many residents of the county have protested vigorously over the proposal and Congresswoman IRIS BLITCH, Representative from this district and a resident of Clinch County, has held conferences with Chairman VINSON, of the House Armed Forces Committee, and Senator RUSSELL, chairman of the Senate Armed Forces Committee.

The tract under consideration is on the rim of the Okefenokee Swamp in an area leased from the Superior Pine Products Co. by the St. Regis Paper Co.

State Representative Downing Musgrove made the following comment: "It looks like a shame to take an area that produces a pine tree faster than any other area in the world and convert it into a bombing range when we've got oceans and all throughout the United States deserts, swamps, and other waste land that could be used."

Aside from the loss of production of valuable pine timber that would be involved, there is grave danger that removing this valuable tract from the tax books would seriously lessen the county's income, thereby endangering the schools and other necessary county services.

Of the 510,000 acres in Clinch County, 496,812 are in forest and the great part of the county's tax income must come from timberlands. Undoubtedly the removing of this large acreage would reduce the tax income of the county.

Another protest is based on the ground that the bombing could drive all wild game from the area and would probably drive game from the surrounding land.

Game and conservation officials have already registered a protest in Washington.

A sum of $2,267,000 has been authorized for land purchase for a bombing range. The committees headed by Representative VINSON and Senator RUSSELL must give approval to any site that is purchased for a range.

The committee chairmen have said that there will be public hearings on the proposal before there is any definite action.

The people of Clinch County do not want to interfere with any legitimate plans for making the country's defense adequate. However, they feel that since the Government already owns large acreage in north Florida and elsewhere that could be utilized for a bombing range it would be unfair for their county to take over this acreage.

This seems to be a case of where the Government has not given sufficient study to proposed action. Surely there is other land available which would not seriously cripple the finances of the county where it may be located.

The Clinch County protest is based on pretty solid ground.

Mr. Speaker, at this point I would also like to include two articles which appeared on the front page of the Clinch County News under date of June 15, 1956. The first is entitled "Protests Made Against 32,000-Acre Bomb Range" and the second is an editorial entitled "It's Time To Protest":

PROTEST MADE AGAINST 32,000-ACRE BOMB RANGE

Clinch County officials Tuesday expressed alarm and indignation at a Navy proposal to acquire 32,000 acres of the county's choice pine land for a bombing range.

The tract is on the rim of the great Okefenokee Swamp in an area now leased by the St. Regis Paper Co. from Superior Pine Products Co. It is described as the finest pine land in the world.

"It looks like a shame," said State Representative Downing Musgrove, "to take an area that reproduces a pine tree faster than any other area in the world and convert it into a bombing range when we've got oceans and all throughout the United States deserts, swamps, and other waste land that could be used."

Musgrove and Iverson Huxford, county school superintendent, said they are alarmed that the taking over of the taxable land by a nontaxpaying Government agency might seriously cripple county revenues. Huxford said he particularly feared that the schools might suffer from dwindling funds.

Clinch is second only to neighboring Ware County in timber area. Of its 510,080 acres, 496,812 are in forest.

The Government owns all of the some 700 square miles of the adjacent Okefenokee Swamp as a wildlife refuge.

The Clinch officials declared that the game resources would suffer seriously from the bombing range. They said game would be driven completely from not only the 32,000 acres but from surrounding land.

Plans for an official protest were held in abeyance until more complete details of the Navy proposals are received.

Game and conservation officials already have registered a protest in Washington, where the Navy proposal was first disclosed.

Congresswoman IRIS BLITCH said Tuesday she will oppose the Navy plan.

Mrs. BLITCH said she has conferred with Chairman VINSON, Democrat, of Georgia, of the House Armed Services Committee, and Chairman RUSSELL, Democrat, of Georgia, of the Senate Armed Services Committee, in regard to the proposal.

Both committees will have to approve the site. They have authorized $2,267,000 for land purchase for a range. VINSON said his committee will schedule a public hearing shortly on a site.

IT'S TIME TO PROTEST

There comes a time when everybody should rise up to protest something that is detrimental to the whole community. Such a time is at hand. The United States Navy wants to take over some 52,000 acres of choice Clinch County pine-growing forest land for use—of all things—as a live bombing area.

Mostly involved in this are 32,000 acres of Superior Pine Products Co., W. M. Oettmeier, president; this tract under lease to St. Regis Paper Co. Other lands, probably 20,000 acres to the north, nearer Homerville, are reportedly proposed for navigation purposes.

Mr. Oettmeier says that his company and St. Regis are opposed to the plan. He and Albert Ernest, of St. Regis, have been to Washington. Senator RICHARD RUSSELL and Congressman CARL VINSON, chairmen of Senate and House Armed Services Committees, respectively, along with Congresswoman IRIS BLITCH, are fighting the plan. The county seems 100 percent opposed.

Clinch County cannot afford to lose 52,000 acres of land. Employment, families, timber production, tax support of schools, roads, hospital, etc., will be lost, not to mention the loss of our beloved wildlife.

As Bill Oettmeier says, the Government already owns nearly 1 million acres in this immediate area. As State Representative Downing Musgrove says, there are swamps, deserts, oceans, suitable for live bombing. As the Atlanta Journal says, the Government owns in Nevada alone 46 million acres of the sun-baked desert. It seems fantastic to use Clinch County, the pine center of the South, for such a purpose. We do not know what live bombing holds for us, either now or in the atomic future.

Needed now is the active opposition of Clinch County people and their friends. A few people and officials by themselves cannot stop the United States Navy. Ware and Lowndes citizens, newspapers, wildlife officials oppose it. The Atlanta newspapers oppose it. But most effective could be the letters and telegrams of Clinch County people, sent to Senator RICHARD RUSSELL, Congressman CARL VINSON, Congresswoman IRIS BLITCH, Washington, D. C. Let us express our support of them in their efforts to represent us in this important matter.

Mr. Speaker, also included is an editorial which appeared in the Atlanta Journal under date of June 14, 1956, entitled "Navy Idea Bad for Georgia":

A United States Navy proposal to convert 32,000 acres of choice Clinch County forest land into a bombing range is fantastic. Not another spot in the country can grow a pine tree finer or faster than the verdant area which the Navy seeks to destroy.

Congresswoman IRIS BLITCH, in opposing the Navy's plans, should point out the vast and almost worthless tracts of land which stand vacant and available in the far west.

In Nevada alone, the Government owns more than 46 million acres of desert which do nothing except bake under the sun. New Mexico has more than 13 million public-owned acres which stand empty; Arizona has almost as many.

A bomb is not a discriminating object. It finds a desert as congenial as a forest, and would certainly make no distinction between the far west and Georgia.

The Government reports with alarm every year that forests are rapidly disappearing. The Navy can expect little thanks from anybody for helping to speed the process.

Petition of Residents of Sylacauga, Ala.

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to have the attached statement inserted in the CONGRESSIONAL RECORD. All signers of this petition are bona fide residents of the Fourth District of Alabama, living at Sylacauga, Talladega County, Ala.:

To Our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of States under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic, there should be no encouragement to increase the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

Hugh Bazemore, Jr., Mrs. J. O. Davis, Mrs. Lola Griggle, Mr. and Mrs. J. B. Bentley, Louise Walton, Mrs. Pearl Walton, Agnes Bazemore, French Thompson, Dr. and Mrs. Nancy Slay, Mrs. Audrie Fowler, Mrs. G. W. Carden, Mrs. Arlene Sauls, Mrs. James B. Allen, Rev. Homer M. Sauls, Mrs. Pernie Pearce, Mrs. Madge M. Brewer, J. R. Brewer, Mrs. Jack Livingston, Mrs. Annie Mal Jarrett, Mr. and Mrs. P. H. Bazemore, Mr. Clyde Perkins, Mrs. Betty Perkins, Mr. Willis Moore, Jr., Mr. and Mrs. D. H. Best, Sylacauga, Ala.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. BOW. Mr. Speaker, one of our servicemen has written me a letter which I am proud to read to the House. I think it is an effective reply to those who in their zeal to support the status of forces agreements throw a cloud of suspicion over he morals and activities of our servicemen abroad. It also answers the claim that asserting our rights would mean losing our bases or installations in the country concerned. The letter follows:

DEAR MR. BOW: As a serviceman stationed in an overseas theater, I read with interest an article in the June 1 issue of Stars and Stripes newspaper, dealing with your efforts to end the provision which allows certain foreign governments to prosecute off-base, off-duty servicemen.

I have been at Wheelus Air Force Base for about 6 months and I have talked with many persons, civilian and military, both United States and foreign nationals. Most of these people agree that American servicemen are, on the whole, fine ambassadors of good will. Libyan-American relations are cordial, with few differences. That is the way it should be.

These same people also agree that American servicemen should not be liable to arrest or prosecution by governments in whose countries they serve. After all, we are here not only for our own benefit, but also for the defense of the particular country in which we serve. Furthermore, any idea that, should the United States deny right of arrest to the various countries, we would lose a particular base in said country, is completely wrong.

American servicemen need no iron hand, wielded by a foreign government, to act like respectable citizens from a great nation completing tours of duty abroad.

Here at Wheelus we have strong, frequent character guidance lectures given by chaplains, which lectures are doing a fine job in helping Americans realize their responsibilities on foreign soil. With such lectures and guidance we cannot go wrong.

I hope this will encourage and help you and other broad-minded Congressmen to enact proper legislation regarding American servicemen's rights overseas.

P. S.—I might add that erring United States personnel should be tried, judged, and punished by United States military court system for alleged crimes committed off base during off-duty hours.

The Mystery of a War Hero

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1956

Mr. MULTER. Mr. Speaker, I commend the following item to the attention of our colleagues. It appeared in the May 1956 issue of the ADL Bulletin:

THE MYSTERY OF A WAR HERO

(By Joseph L. Lichten)

Twelve years ago, a 32-year-old businessman departed his native Sweden on a wartime mission. On July 9, 1944, he arrived in Nazi-controlled Budapest. He bore credentials as an attaché of the Swedish embassy. But diplomacy was not his business.

His name was Raoul Wallenberg.

His task was incredible and gigantic; as brazen as it was courageous. He had been selected to rescue as many of Hungary's hapless Jews (there were 300,000 in Budapest alone) as his ingenuity and his immunity as the citizen of a neutral nation could manage.

Raoul Wallenburg had come in haste. The free world was aware that for several months the Nazi movement in Hungary had been planning systematic genocide, the same inhuman plan of forced deportations and mass liquidations that had destroyed the Jewish community of Poland. The horrors and tortures that had befallen Jews in the ghettos of Warsaw, Lodz, and Cracow were now to descend on Hungary.

Each week the list of deportees ran into the hundreds. Many of the victims never reached the concentration camps they were marked for; they died of hunger or dysentery, or frantically killed themselves, on the way. Appeals to Admiral Horthy, the Hungarian regent, that he force a halt to the butchery had little effect. The pleas of the Pope, of Sweden's King Gustav and other neutral leaders, were spurned. A warning from President Franklin D. Roosevelt was ignored. Mass roundups were routine incidents in Hungary on the day Raoul Wallenberg arrived there.

Wallenberg was a Christian gentleman, scion of a distinguished Swedish family. His father was a well-known banker; his grandfather had been an ambassador to Turkey and Japan. Raoul had studied architecture in the United States. But he returned to Sweden after his schooling to establish himself successfully in the export-import field.

He knew little about Jews, less about Jewish affairs. Before the war he had visited Palestine, more as a tourist, however, than as an observer of political or social developments. The rescue of Hungary's Jews had been planned by Swedish and American authorities in Stockholm. Wallenberg had been asked to lead the undertaking; he accepted promptly. He was a bachelor and—to repeat— a Christian in the finest tradition.

Raoul Wallenberg proved his mettle at once. To combat the mass deportation he began rescue operations on an equally wholesale, and completely unheard of, scale. He started by recruiting an embassy staff. But what a staff! It swelled to 660 persons and their families—most of whom were Jews who, for various reasons, had been accorded priority status in his rescue plan. The priority non-Jews whom Wallenberg similarly gathered into his fold were leaders of Hungary's anti-Nazi underground.

As members of a legation, the new "Swedish officials" found immediate safety in their diplomatic status. The success of this happy fraud prompted Wallenberg to play it to the hilt. Within weeks he was issuing Swedish passports to anybody and everybody who could, in the remotest way, show some prior contact with Sweden. These passports saved hundreds more.

But thousands were being deported. So Wallenberg next challenged the Nazi tormentors by designing a "protective passport" which he had printed in Sweden's colors and which bore the embassy's seal and signature. This document bluntly affirmed that its holder was under the protection of the King of Sweden—a broad hint to Hungarian officials that a passport owner was not to be molested in any way!

Hungarian Nazis, frustrated and angry, nonetheless respected the hint. They were fearful to do otherwise. By that time, the war was going badly for Hitler and Wallenberg had a disturbing habit of reminding them of a day of reckoning.

The protective passport trick was used widely. Soon the Swedish Red Cross in Budapest began distributing them, as did the embassies of several neutral nations and the Papal Nuncio. Finally, several underground groups went to work circulating forged copies. Within weeks the number of protective passports mounted of tens of thousands.

The Nazis tried hard to invalidate the forgeries. The Gestapo visited Wallenberg regularly, bringing him obvious forgeries to examine. Wallenberg studied them carefully. But his answer was always the same. "They're authentic," he insisted.

Wallenberg carried his rescue operations inside the councils of the enemy. He planted agents, with both the Hungarian police and the Gestapo. In that way he sometimes got his hands on a copy of the daily list of Jews placed under arrest. Promptly, Wallenberg prepared protective passports for them, personally bringing the documents to deportation headquarters. There he forced the authorities to give up a large part, if not all, of the imprisoned group.

Wallenberg acted with utter fearlessness in his confrontations with the Nazis. His personal heroism was reflected in the peristent ways in which he harassed their rule. But always he maintained the correct, dignified demeanor of the diplomat. Nazi transport commanders, assigned to deliver truckloads of Jews to nearby concentration camps, often were dismayed to find that Wallenberg had attached himself to their motor caravans. He rode in a Red Cross truck which bore food, medicine and clothing for the Jewish victims. With Swiss legation workers and Roman Catholic nuns to assist him on these mercy errands, Wallenberg became a common sight on the dusty roads, leading out of Budapest.

The Nazis were afraid to harm him in public. But they marked him for murder and Wallenberg found himself in all sorts of freak accidents. He was threatened, shot at, run down by army tanks and trucks. He always escaped—to persist with his urgent mission.

When Hungary's pro-Naxi Szalasi government, eager to facilitate the mass deportations, tried thwarting Wallenberg and the underground by ordering a 10-day blockade of Jews, Wallenberg quietly fought back by organizing a Jewish commando group. The commandos successfully infiltrated the blockade to bring food and supplies to the embattled Jewish families. Later, with the assistance of the Swedish Red Cross and underground Zionist groups, Wallenberg established several children's centers which he insisted were Red Cross operations protected by Sweden's international immunity. In that way he saved at least 8,000 children from certain death.

Again, when Budapest Jews were ordered to enter a newly created ghetto, Wallenberg popped up with 32 large houses which he rented and placed under Swedish immunity. He filled the houses with thousands of Jews. Other neutral embassies followed his example, creating among themselves an international ghetto, probably the only one in history.

By December, 6 months after Wallenberg's arrival in the city, Russian troops had begun their siege of Budapest. In frenzied retaliation, the Arrow Cross movement, Hungary's Nazi gang, planned a mass murder of the remaining Jews. Wallenberg learned of it and quickly intervened by reminding the Wehrmacht chief, General Schmidthueber, of the death penalty that would befall a German commander who allowed a pogrom of this sort. The general understood perfectly; he ordered his troops to prevent any possible massacre.

On January 13, 1945, 4 days before Soviet troops were to seize full control of Budapest, Wallenberg, decided to seek out their military chiefs for assistance in rescuing Jews still trapped in the ghetto. He was referred to a Major Demchenko and, to his surprise, was placed under guard. Wallenberg reappeared at his office 4 days later, in the wake of the liberating troops. Three Russian soldiers accompanied him. "I am going to see Marshal Malinovsky (the Soviet commander)," Wallenberg informed his coworkers. He added, somewhat ruefully, "I don't know whether I am going as a prisoner or as a guest."

Raoul Wallenberg left the office, the three armed soldiers with him. He has not been heard of since.

If Wallenberg is still alive he is probably unaware that the thousands of families he rescued and protected, in their gratitude, built a monument in his honor; that a pavilion of Budapest's Jewish Central Hospital is now called Wallenberg Building; that a busy avenue similarly bears his name. Nor is it likely that Wallenberg knows of the petition signed by 1,600,000 Swedish citizens demanding an explanation of his fate, or that Sweden's Prime Minister, on a recent visit to the Kremlin, kept posing an embarrassing question to his Soviet hosts: "What hapenned to Raoul Wallenberg?"

The Communists are uncommunicative about it. Shortly after Wallenberg's sudden disappearance, Russian officials reported that he was "under the protection of the Russian army." Since then, however, they refuse to acknowledge that they ever heard of him.

In 1916, a report filtered through the Iron Curtain that Wallenberg was in a Ukrainian prison camp. Later, he was reported a prisoner in the most dreaded MVD camp in Moscow. And last year, several German prisoners of war, returning from Russia, recalled a "Raoul Wilborg, a Swedish Red Cross officer," as an intern at a camp in Tayshed in central Asia. "This Wilborg," they said, "was a tuberculosis case."

None of these rumors has been corroborated. To all inquiries, the Soviet shrug and say nothing. Thus, the fate of Raoul Wallenberg, one of war's noblest heroes, is yet to be answered for.

The Communist Inquiry

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of June 6, 1956:

THE COMMUNIST INQUIRY

A subcommittee of the House Un-American Activities Committee has been conducting hearings in St. Louis since the first of the week. It is now possible to summarize and appraise its work thus far.

The first thing to recognize is that the investigative powers of Congress are very broad and justifiedly so. Time and again Congress has used its authority to inquire into situations and conditions which urgently needed ventilation in the public interest. There can be no question about the power of a congressional committee to dig into areas of subversive activity. Communist infiltration into defense industry in St. Louis is a proper subject of governmental investigation. Indeed the Government would be grossly derelict if it did not ferret out efforts to undermine the national security.

A second fact to note is that this subcommittee has conducted itself for the most part in a generally quiet and dignified manner. The Tuesday afternoon session did produce a sharp rebuke from the chairman, Representative MOULDER, of Missouri, when Douglas MacLeod, lawyer for one of the summoned witnesses, called for an apology from the subcommittee.

But there has been little to suggest the shouting and recrimination that characterized the McCarthy subcommittee of the Senate. Most of the sessions, held in the courtroom of United States Judge Harper, have been as orderly as a Federal trial. Credit for this goes not only to the chairman, but also to his colleagues, Representatives SCHERER, of Ohio, and FRAZIER, of Tennessee, and the subcommittee counsel, Frank S. Tavenner, Jr.

It might have been expected that a subcommittee so exemplary in its own conduct would enjoy the cooperation of the witnesses subpenaed and questioned. This has not been so. Very few questions have been answered. Witness after witness has refused to reply on the grounds that his answer might incriminate him. Up to now this has handicapped the subcommittee in its effort to elicit information from those summoned to testify.

A witness is within his rights in refusing to answer if he thinks that what he would say would incriminate him. The Bill of Rights protects a person from being forced to present testimony against himself. The reason is the sound one that in trials it is up to the prosecuting officials to gather evidence on which to base their case. Were it otherwise the State would have an enormous power of coercion over the individual; and law in a free society should protect the individual from such excessive power.

Why so many St. Louisans invoked the fifth amendment has not been explained. Pamphlets distributed in advance of the hearings by a group of those subpenaed appealed to all witnesses to defy the subcommittee. This suggests a pattern of organized noncooperation. Yet even if this is the fact, there may be some instances in which the fifth amendment's protection was invoked fairly and not with intent to abuse a historic right of citizens.

It is for this reason that the Bar Association of St. Louis, greatly to its credit, took steps in advance to help any summoned person obtain legal assistance. Chairman MOULDER showed his appreciation of the need for professional legal advice for each witness when he complimented the St. Louis bar for acting voluntarily to arrange for counsel for those summoned but unable to hire counsel. As Mr. MOULDER said, the appearance of any lawyer with a witness who himself could not obtain counsel "should not in itself be taken as any disparagement against the lawyer for doing so."

But even if a pattern of refusing to answer questions impedes the work of the subcommittee, the sessions ought not to be without their gains. From the questioning it is clear that some with Communist sympathies worked their way into labor unions and that others got into defense industries while some obtained employment as teachers.

As so often stated in these columns, the Post-Dispatch sees in communism a worldwide conspiracy in which no loyal American would now have a part, and in which none should have had a part in the postwar era—certainly not since the outbreak of the Korean war. Many persons who entered the Communist Party by honest mistake withdrew long before communism's armed aggression across the 38th parallel.

Among the men who erred in judgment, particular credit goes to those who have openly confessed their mistake and have since led exemplary and patriotic lives. Society has an obligation to be fair with them and not to punish them for their honesty. Mr. MOULDER stated a fact when he said that in the depression years there were "innocent and loyal" Americans who became "frustrated with economic conditions" and "in seeking a solution to national unemployment and economic problems, were misguided into the Communist Party."

The problem of tracking down subversive activities would be greatly simplified if all those who made honest mistakes were to remove the cloud of suspicion and doubt by full and free testimony. It is to be hoped the Moulder subcommittee can still contribute to that desirable end.

Straight Talk About Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Farm and Ranch magazine for June contains an editorial by Tom Anderson entitled "Straight Talk." He discusses the foreign aid program. I commend this editorial to the attention of the House membership:

"We've got billions to give away all over the world—so they can afford to give some to me—charity begins at home."

We've gotten many letters like that—from farmers who think 100 percent parity should come before foreign aid; from veterans who think there should be a lifetime monetary reward for service to country; and from others who claim that, when the Government gravy bowl is running over, why should they have a fork when foreigners are using a spoon?

What is foreign aid? What part charity, what part security, what part defense? It

has been called everything from Marshall plan to putting spats on cannibals.

Cannibals like those in the cartoon in the New Yorker: They were sitting in a circle in a thatched hut. The leader said, "Now, here's the plan. We let word out that we're in a state of political ferment. Russia smells an opportunity and makes overtures. The West gets worried. They make overtures. Russia asks to send cultural ambassadors, and we let them. The West asks for equal representation, and we invite them. Then, when we've got them all here, we eat them."

In 1945 we were stronger than the world combined. Russia was licking her wounds and was no match for us. Since then the Soviet Union and Communist China have gobbled up the largest area of land and the largest number of people ever controlled by one power. And we handed it to 'em.

Since 1945 we have spent, invested, or poured down the international rathole over $55 billion and authorized over $20 billion more which we haven't yet found a way to spend. Thirty-four agencies of the Government have been ladling it out to 55 countries, through 2,000 different projects. And yet we've lost ground. The Communist conspiracy has captured a third of the world and now threatens to break us, enslave us, and exterminate us.

TITO TEETERED BACK, NATURALLY

Tito teetered back. Your leaders gave the Yugoslav Communist butcher over a billion dollars of your money trying to buy him. And new he's back in the Russian camp and some day the weapons we gave him may be killing American boys.

We gave $11 billion to Russia—since the Revolution our greatest enemy. We made her, not a friend, but the second greatest world power. We made her the monster which can possibly destroy us.

Our great and good friend and ally, jolly old England, has—as Senator BYRD pointed out—used our aid to reduce her taxes. But our taxes go up constantly. In Denmark our economic aid was used to pay off the public debt. Our debt, over $275 billion, is at an all-time high.

Are we making friends—or competitors? We've already practically Point-Foured ourselves out of the world cotton market. Now that the backward nations have the know-how, the land and millions of serfs, why should they buy cotton from us? They can produce it cheaper.

It's not that collective defense is wrong. Nor that economic cooperation with other counries is wrong. But it's wrong to pick up nearly all the checks and pay all the tips. It's wrong to be a sucker.

Can we buy security? Are other peoples going to join us if we're attacked because they had a friendly feeling toward us? No. They won't risk atomic annihilation for friendship. If they join America, it'll be because we're strong. Because we're the potential winner. If we waste our substance and go broke through interminable international boondoggling, we'll lose allies, not gain them. If we go broke, Russia will take the world, including the United States.

If we stop this foreign spending we can balance the budget and reduce taxes across the board by 5½ percent. A strong and rich United States of America is a better guaranty of peace. Where, and when, and how do we stop?

Go it alone? No, let's go it together. Dutch treat! Not with any cut-throat we can find, as we did in World War II, and since—but with peoples who understand freedom and democracy, and are willing to spend, work and fight for them, with us.

We should put the lid back on the gravy bowl.

Foreign aid should not be allocated as the President wants, on a 10-year or any other long-range plan. Congress should determine it from year to year, with the knowledge, understanding and approval of the people.

It should not be unconditional aid. We should get value received in return: economic, political, or strategic products or advantages—or harbor rights, air bases.

We should aid friends only. Some Congressmen tried to bar American assistance to any country which ships strategic materials to the Reds. The administration blocked that.

International friendship, like any other friendship, can neither be forced nor bought. It has to be earned. We can't stop communism with dollars. We can stop it with trade, travel and education; with ideals and ideas, written, spoken, and broadcast to the people (not the rulers) of the world.

AUCTIONEER'S CHANT: SOLD TO AMERICAN

What more aid now? Because there's a new deal in Russia.

Russia used to give only to her satellites. Now she's trying to buy friends and allies away from us. It's an auction sale. The "neutrals" are on the block.

Maybe we ought to call the bluff of the neutrals and let 'em go Communist.

The most we've gotten for our billions is not friendship, but neutralism. We're at an all-time low in global goodwill. This is a struggle for the world. A struggle between nations who believe and practice freedom of the individual against those who believe the state is God and the individual is nothing.

Dante said, "The hottest fires of hell are reserved for those who, in a period of moral crisis, remain neutral."

Maybe we ought to let the neutrals go to hell.

Mr. Nehru, Have You Heard This One?

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. DAVIDSON. Mr. Speaker, I should like to direct the attention of this House to an incident that, I believe, sheds considerable light on the problem of our relationships with some nations that claim a neutral status in the present world situation.

This incident involves a movie, With These Hands, produced by the International Ladies' Garment Workers' Union, depicting in semidocumentary form the history and purposes of that union. This movie, translated into 11 languages, has been shown to millions of working people around the world, introducing them to the functioning of an American trade union.

Among the other nations in which this movie was shown was the vast and great country of India, whose Prime Minister, Jawaharlal Nehru, will shortly be visiting our country. Recently, this movie came up for regular review by the censors in India. When it did, the Indian censors insisted that the United States agency showing the film remove a sequence describing the fight of the ILGWU against Communist attempts to dominate that union in the 1920's. The United States Government refused to conform with this request for censorship.

The executive council of the American Federation of Labor–Congress of Industrial Organizations has called upon the Indian Government to act like a free democracy instead of a satellite nation and has called upon the United States State Department to intervene actively to lift the censorship on the ILGWU film.

I wish to go on record as praising our Government for its forthright resistance to censorship in this matter. I also wish to insert in the RECORD the comments of Mr. David Dubinsky, president of the ILGWU, and several newspaper editorials on this matter, with the express hope that the sentiments of our people may be brought to the attention of Mr. Nehru, so he may understand our shock and protest against these attempts to suppress the truth about the history of an American union simply because it may injure the sensitivities of the rulers of the Soviet Union.

The people of India are entitled to know the truth about the way American trade unions view Communists. The Government of India should not conceal this truth because the Communist leaders do not like it.

[From the New York Times of June 3, 1956]

INDIA CENSOR HALTS A UNITED STATES LABOR FILM

NEW DELHI, INDIA, May 30.—The United States has withdrawn a popular labor film from India because of the censor's orders to cut out the story of a union's fight against communism.

The film, With These Hands, was produced by the International Ladies Garment Workers Union. Through the life of one dressmaker it traces the fight against sweatshops and records the growth of the union.

About 5 years ago the United States Information Service (now Information Agency) decided to show the film in India. It was approved by Indian censors and since then has been shown to schools and unions, at conventions and exhibitions and in towns and villages throughout the country.

The censorship board's license for the film expired a couple of months ago and the picture was entered for a new permit. This time the Government-appointed censorship board demanded the deletion of 28 lines, all of them having to do with the union's fight against Communists who tried to take over the ILGWU in the late twenties.

The cuts apparently were ordered because the censors thought the anti-Communist dialogue might be offensive to the Russians. Rather than show a censored version, the United States agency has withdrawn the film from circulation.

STATEMENT BY DAVID DUBINSKY, PRESIDENT, INTERNATIONAL LADIES GARMENT WORKERS UNION, AFL–CIO, JUNE 4, 1956

After 5 years of enthusiastic acclaim by Hindu labor, the ILGWU film With These Hands, has been ordered banned throughout India by the New Delhi government.

With These Hands has been translated into 11 languages. Though some of the scenes depicted in the film have not met with the approval of the American Government, though some of our reactionary legislators have objected to its being shown overseas because it is prolabor, the USIA has never attempted to censor it. Millions of people in the free world have hailed this film.

Hitherto, this film has been outlawed only behind the Iron Curtain. It is unbelievable that the democratic Government of India should now also outlaw a film showing the achievements of the workers in the American

ladies garment industry through their free trade unions and through the democratic process.

We cannot see why the Government of India should now rule that the showing of such a film is "likely to be looked upon as derogatory to itself." We are amazed that any sovereign democratic government can find that such a tribute to democracy will serve to arouse disrespect of another foreign country. We are told that one of the reasons for the ban is that the film depicts Communist efforts to capture our union. This is an unchallengeable fact of history.

We cannot see why the Government of India should after 5 years of approval now decide to ban a film on this score. It is incredible to us that the authorities of India should join the Kremlin in objecting to the facts of history and in rewriting history. No free country can institute censorship at home for fear that it is liable to embarrass relations with any foreign government.

The issues involved in this unfortunate action by the Indian Government are of the highest concern to the American labor movement and to the International Free Trade Union movement.

While I applaud the refusal of the USIA to permit censorship of our film, I strongly urge the State Department to instruct the American Embassy in India to take steps to secure a correction of this unwarranted censorship which is detrimental to the cause of democracy and derogatory to the good name of the freedom-loving people of India.

[From the New York Times of June 6, 1956]

With These Hands, a popular film produced by the International Ladies Garment Workers Union, has been shown through the United States Information Agency in schools, union meetings, conventions, and other gatherings in towns and villages throughout India for the past 5 years. The film pictures the true, and very American, history of the union's successful fight against the sweatshops of earlier days and of its many other activities to improve conditions for its members—a saga told through the life of a typical New York dressmaker. Among its most telling sequences are those which show the struggle of Communists to control the union and how they have been effectively thrown out.

The Government-appointed Indian Censorship Board's license of the film recently expired. It is reported this board will not renew it unless these sequences are cut out. This action is said to be based on a rule against foreign films "likely to arouse disrespect of * * * or liable to embarrass" the Government's "relations with, any foreign government." In one of the sequences communism is called "a Moscow creation."

This action raises several leading questions. What has happened after 5 years of the film's licensed showing, to make this rule suddenly apply? Does this mean that efforts of Indian unions to resist Communist control will now embarrass their own government? This is hard to believe in view of Nehru's tough stand in the past against Communist subversion.

The episode is most unfortunate. It is embarrassing to the United States Government. The USIA has, of course, refused to submit to any such censorship and has withdrawn the film from further circulation. It should also embarrass the Government of India. Only in Iron Curtain countries has this film been outlawed. Finally, it is too bad that the workers of India are to be deprived of so good an example of how free unions function in a free economy. But censors have been known before to make rulings that reffect neither national policy nor enlightened public opinion. We hope this is merely another such—one subject to prompt reversal.

[From the New York Post of June 6, 1956]

KNOW-NOTHINGISM IN INDIA

For 5 years the United States Information Agency has been presenting a film in India (and other places) called With These Hands. It is a dramatic chronicle of the rise and growth of the International Ladies Garment Workers Union, and has won wide popularity among Indian audiences.

Recently the film came up for renewal of its censorship certificate; India's censors thereupon abruptly demanded elimination of a sequence describing the ILG's successful battle against Communist infiltration of the union.

Dispatches from Indian say this action was based on the ground that the sequence might "embarrass relations" between India and Moscow. The excuse is as indefensible as it is foolish. We doubt that Mr. Khrushchev's primary concern at the moment is the treatment accorded American Communists on India's screens.

In any case, such censorship is intolerable. India's leaders have often decried the hysteria and suppression that accompanied the age of McCarythyism here. America has had its bad hours; but surely this performance of India's censors is as grotesque as any manifestation of the American jitters. It is, one might say, McCarythyism in reverse.

When India's censors try to edit American labor history to placate the Kremlin, they discredit themselves, give new ammunition to India's critics in the free world and undermine her status in the world community. This isn't honest "neutralism;" this is spineless submission to Moscow.

The USIA is plainly justified in refusing to accept the censor's decree, and Prime Minister Nehru ought to be heard from on the subject. He would not be reluctant to condemn American censors if they displayed a comparable brand of know-nothingism.

Senior Class at Newark Central School Favors 18-Year-Old Vote

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. KEATING. Mr. Speaker, in the 83d Congress and again in this Congress, I have sponsored the administration's bill which would lower the voting age to 18. I have asked the chairman of the Judiciary Committee for hearings on this vital matter so that we may have some action in this session of Congress. Our 18-year-olds are capable and ready to vote, and I hope this Congress will grant them that precious right and privilege.

Recently I received in the mail a series of letters from members of the senior class of Newark Central School, in Newark, N. Y. As part of their study of American history, they have discussed the possibility of the 18-year-old vote and have written me their opinions.

The letters from these young people, including those who oppose lowering the voting age, are the best argument yet I have seen in favor of that proposition. The maturity, clarity, and cogency of their arguments on both sides indicate they are prepared to assume that crucial weapon of democracy.

The teachers at Newark Central School who encouraged this project are to be commended for their initiative and wise judgment in undertaking this very worthwhile study, and the students are to be congratulated for presenting their opinions in such fine fashion.

I think it would benefit all Members of this body to study what they have written me. Under leave to extend my remarks, I am inserting portions of the letters I have received from members of the senior class of Newark Central School:

I know that my classmates and other 18-year-olds, are capable of voting. The student's education today encompasses more fields and gives him a broader outlook on such subjects as politics. He reads the newspaper, looks at television, and listens to the radio. Each of these vehicles of thought conveys different opinions concerning politics to the observant and ever-questioning 18-year-old.—Yolanda Andrew.

High school seniors and juniors at 18 years of age are generally better equipped to vote intelligently than most people at 21 who have not pursued their education. The people in this latter group have usually been decidedly removed from national issues ever since they were graduated from high school. Eighteen-year-olds are often required to pay taxes to both the State and Federal governments. It seems only natural that they should be represented in the Government by which they are being taxed. I feel certain that were 18-year-olds allowed to vote, they would take a new interest in their government and would accept their new privilege and responsibility with intelligence.—Robert Beales.

The high school graduates today are better informed on current affairs than many older persons. I also believe that the 18-year-old person has become mature enough to accept the responsibilities of the 21-year-old. When we wait until we are 21 to vote we will have forgotten some of the essentials we need to know to become a good voter.—Marie Benne.

Most of those in favor of 18-year-olds voting use the reasoning that if they are old enough to fight for their country they should have the right to vote. This may be true, but just because a boy is physically old enough to fight, it does not mean that he mentally old enough to vote.—Sandra Blair.

I definitely feel that the average 18-year-old is mature and quite capable of taking over the responsibility of voting. It is true that today's voter needs much preparation to vote wisely. I think we are getting this background preparation in our classes at school.—Shirley J. Blankenberg.

The time has now come when teenagers are maturing much faster. I believe this is due to education and world in which we live today. The 18-year-old of today is older than the 18-year-old of yesterday. Therefore, people of this age feel they are mature enough and capable enough to vote. Teenagers of today are taking more responsibility than they have in the past, their education is better, and they start to support themselves at a much earlier age. Through education the teenager learns of his government and its functions and learns what voting really is and what it means to himself and his country.—Patricia A. Boynton.

Eighteen-year-olds should be allowed to vote because by working in class we have kept in close touch with problems of the Nation and the world. Young people would be more interested in government affairs if they knew they could vote at the age of 18. I'm sure 18-year-olds all over would take full responsibility of making wise decisions.—Bernice Bruinix.

I truthfully do not believe that the teenagers want the vote badly enough to work for it. Of course they would accept it as anyone would accept another right. I don't think it would be a drastic disappointment to the average 18-year-old to have wait until 21.—Robert Chamberlin.

The 18-year-old today is mentally fit for voting. He is well informed about world conditions, perhaps even more so than his elders. I also think that any person who is physically fit to fight for his country has also to be mentally fit. If he is mentally fit to safeguard the welfare of his country, why is he not mentally fit to vote?—Diane De Blaese.

It is my personal opinion that we teenagers are capable of voting wisely and enthusiastically and without prejudice. I feel we should be given the power to vote.—Barbara Downey.

I favor having the 18-year-old vote. With the knowledge that we have from study about how our Government runs and how to elect the Government officials, we would be able to vote intelligently. The teenager of today is just as mature as the 21-year-old was when the first voting age law was passed—Diane Franklin.

Eighteen-year-olds should be allowed to vote. We feel certain that because of the great advancement in education we are justly qualified to vote. Since we are well informed and aware of current affairs, political or otherwise, we sense that we are as capable as any person 21 years old or over—Patricia Hines.

I feel that * * * you should vote in favor of the lower age requirement * * * the 18-year-old upon graduating has many responsibilities and duties thrust upon him, but without certain privileges to accompany these, there is a lack of incentive. For instance, he must pay taxes, but he cannot cast a vote concerning the officials regulating the taxes. I have come to the conclusion, through discussion with older friends, that most people are no better qualified to vote at 21 than at 18. I am certain that young people, on the whole, would be so grateful for this privilege that they would not abuse it. In fact, the knowledge that they can vote at 18 would be a great stimulant toward interest in Government and politics in younger high school children—Lorie Houghton.

Just recently in my American History II class the issue of voting for the 18-year-old came up. Personally, I believe that an 18-year-old person cannot accept the responsibility of voting—Ann Humphrey.

I sincerely feel that a great majority of the 18-year-olds of New York State would be intelligent voters. We who are without the right to vote realize what a privilege it is to be able to vote. If this right were given to us, we would use it conscientiously.—Carole Janto.

I am very much interested in having the minimum voting age lowered to include 18-year-olds.—Ronald Keukelaar.

Many of the older people do not pay too much attention to politics and voting. Many of them have other things to think and be concerned about. If the 18-year-olds could vote they would bring about more interest from the older adults. There would be more discussion and debate in many homes. The younger people would urge more of the adults to get out and vote. We would also show them exactly how important it is to vote. Consequently, there would be more voting all over the country.—Beverly A. Lewis.

I do not feel that the voting age should be lowered. Those who oppose me, and there are many, seem to feel that since we draft 18-year-olds, we ought to allow them to vote. However, it is my belief that the draft and enlistment ages are based largely on physical maturity, while the voting age is based on mental maturity. Most young people reach physical maturity quite some time before they reach full mental maturity.—Mary Livingston.

I believe that the 18-year-olds should have the right to vote because the young people of today have as much knowledge or more knowledge of political affairs than they did when the former 21-year-old law was passed.—David C. Lyon.

I firmly believe that the young person of today is more mature due to more education, more responsibility, and having to have jobs. If a young person accepts all this, he is certainly capable of voting at 18.—Marjorie MacLaren.

I believe the 18-year-old deserves the right to vote. Many of them pay taxes, pay dues to labor unions, and fight for the United States. Why shouldn't they have a voice in choosing its leaders and officials?—Mary Mangan.

I am in favor of 18-year-olds voting as I feel that they are just as capable of voting as adults. I base my opinions on the facts that teen-age boys are called upon to protect their country, and that a large percentage of the 18-year-olds have or are receiving training in the working machinery of politics.—Donald Martens.

I hope that, in the near future, the 18-year-old citizens of this Nation will have the right to vote. I appeal to you to vigorously support the growing campaign for this extension of suffrage.—James R. Renick.

I have decided that 18-year-olds are not qualified to vote. They do not have the experience nor the seriousness required to choose good candidates for government offices. Eighteen-year-olds are too easily swayed to be able to make individual decisions.—Jane Reuter.

Nowadays, many 18-year-olds have responsible jobs and many others attend institutions of higher learning. Some of my classmates will be farmers after graduation. I believe that they should be able to vote since they are affected by the giant farm problem and any legislation concerning that matter. Similarly, those in business are and will be affected by legislation. Should they not have a right to elect the men and women who are to make the laws that they must abide by? Those who go to college will certainly be well-informed and conscientious in performing the great task and privilege of voting.—Nancy Robb.

I am a 17-year-old senior in Newark Central School. Many of my friends have an ardent desire to be able to vote. Some of them work part-time as I do myself and a few of the boys are taking part in the Reserves. These things I have just mentioned plus a great many other activities have helped the teenagers in this community to become good citizens. In our school, fine teachers have prepared us to become worthwhile citizens of our community, our State, and our Nation. Times have changed! Just 20 or 30 years ago, a large majority of the denizens of a town never traveled more than a hundred miles away from home. They certainly never got to the Nation's capital as the senior class of Newark Central School did recently. After we had been taught about the problems of urbanization and segregation, we saw first-hand what these problems were like.—Richard Stevenson.

I believe teen-agers are just as capable of voting wisely in elections as people 21 or even 35.—John Stone.

I believe the voting age should be lowered to 18, because at this day and age the teenager is more capable to handle wisely the responsibility of voting. Today high school graduates are better informed about the affairs of the Nation and world; they are earning their own living or entering the military service at that age.—Elaine Taylor.

If 18-year-olds can fight for their country, I think they should be able to vote for the officials of our Government. Also, most 18-year-olds are in school and are studying about political figures and politics, which makes them better qualified to vote at 18.—Willis Tellier.

In my opinion, I think the 18-year-olds should have the right to participate in voting. They are just as capable and intelligent as the 21-year-olds.—Rosanne Trozzo.

We 18-year-olds are allowed the privilege of dying for our country. Why, then, are we not allowed a better privilege of living for our country? * * * We young people * * * need to get into this (voting) fight, along with our best people, to keep our Nation ever strong.—David Van Boxlaere.

The 18-year-olds, right out of high school, have been informed of the problems of our Nation and of the world. Therefore, our future citizens would not lose their interest if they could vote right away after leaving high school.—Shirley Wright.

The Importance of the Civil Air Patrol

EXTENSION OF REMARKS
OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech delivered by me at the Civil Air Patrol congressional dinner recently:

This week the big news splashed in headlines across the country has been the squabble between the Air Force and the Army. Each service has clashed with the other over budgets and appropriations. Army has charged Air Force with demanding more and more from our defense appropriations, and Air Force counters that Army is attacking the established national policy of air-atomic power as our prime deterrent to aggression. Navy, too, has entered the picture through its demands for a larger role in our strategic air power.

This inner-service bickering is a sorry situation and will benefit no one, unless perhaps, the Kremlin. No one blames our Nation's people for their keen interest in such a vital affair, for on the shoulders of our fine services rests the responsibility for safeguarding America's freedom. We in Oklahoma like our rivalry to be friendly, like the rivalry between Oklahoma University and Maryland, Texas, or Notre Dame. I think that the basic concept of air warfare and that of ground warfare clearly indicates the utilization of each force and the scope of their activities. We must recognize that in this air age, our Nation's prime salvation lies in air power. I would call for an end to this arguing, this assassination of morale by charge and countercharge, because all branches are essential. Each branch feels it is the most important. The CAP is important, the Air Force is important. However we must not underestimate the value of the Army, Navy, Marines, and Coast Guard. They are most essential. The national situation is such that it requires the maximum coordinated efforts of the Army, Navy, Air Force, Marines, Coast Guard, and CAP working as a team. I wish to pay tribute to Secretaries Brucker, Thomas, Quarles, Generals Pate, Spaatz, Agee, and Vice Admiral Richmond for the good work they have done. I feel they can work together.

While the conflict between these services has drawn the focus of the news mediums, there is another, a continuing tragic event

taking place within the United States. It is something every bit as dramatic as the daily headlines and if allowed to continue, its ultimate effects will be devastating. You in Civil Air Patrol know all about it. As a matter of fact, everyone does. I am referring to a creeping paralysis which is slowly but surely crippling our military and commercial air potential. This paralysis is the lack of interest shown in aviation and other technical fields by our young people today.

Why then aren't the citizens of this great Nation alarmed at the situation? Are they developing an apathy toward the air age and its problems? Nothing would please the Soviet more than an indifferent attitude on our part toward airpower. Of course, the people I should be talking to about this situation are not here. You are gathered here tonight because you are sincere devotees of airpower and recognize what must be done if we are to survive. And, you are doing it. Of course, I mean educating the young people of our great Nation to this, the air age.

The fact that you undertake this great crusade as volunteers is the marvelous part of your program. Your time and your efforts given so freely to the young members of CAP is truly patriotic—a splendid display of devotion to freedom.

In Russia today, there exists a youth aviation education program quite similar to that of the Civil Air Patrol except for two important facts. Theirs is mandatory. We have freedom. Practically every school in the major cities of Russia includes this program as a part of their curriculum. No volunteers there. In addition, the Soviet makes flight training available to its youth at little or no cost. The result is very clear and alarming to thinking Americans. The U. S. S. R. is far outdistancing us in the number of graduate engineers, technicians, and student pilots. I've been there.

We are told that by 1958 Russia will meet and surpass our Air Force in terms of numbers of aircraft. The race is on for an intercontinental ballistic missile. At this time, there is no indication as to exactly which side will win that race, but in both the aircraft and missile fields we are taking strides to insure an outcome favorable to the United States.

While all of this is taking place, Russia is winning the personnel war, having a lopsided advantage over this country. And let me assure you that the final winner of this race will have all the odds in his favor in any future war. Where, then, does the United States stand in this silent race for survival? All we know is, that in a general sort of a way, we are far behind. Almost all that is being done to maintain any interest in aviation among young people today is being done by CAP and the Active Reserve. While there may be arguments churning up over various phases of Armed Forces activities, there may be no cause for argument over the fact that we must do more to interest the teen-ager in the advantages of a career in aviation.

There was, and not too long ago, a time when a youngster could go to the local airport, walk up to an airplane—touch it and see what it was like, and if he had a dollar saved up he could get the pilot to take him for a ride over his town. Saturdays and Sundays used to find local airports well populated with greasy-faced kids—working on aircraft engines, re-covering wings, and doing the other things necessary to the maintenance of small airplanes. This was their hobby and while they worked at it, they also learned. Most of those lads answered the call when World War II came and served admirably in the war theaters of Europe and the South Pacific. In other words, when the emergency struck, we had a pool of qualified young people who were ready, with a minimum of training, to maintain and fly our planes. We had the advantage of time, too. We were able to train hundreds of thousands of other young men in this relatively new business of flying.

In any future war, we will not be so fortunate. Time will be our enemy rather than our ally. Those who will fly our fighters and bombers will have had previous training, so any victory will be contingent upon having a ready reservoir of trained personnel.

But suppose we do not have a next war to worry about? Why, then, should we bother to develop aviation among our young people? One reason is because the aviation industry is a growing thing. The operation of airlines demands control-tower operators, ramp attendants, stewardesses, weather technicians, mechanics, and hundreds of types of highly specialized personnel. Industry, too, is learning to depend heavily upon the private airplane. Thousands of companies, both large and small, now have their own planes which play a large part in the daily transaction of their business. This trend, too, is demanding an ever-increasing supply of aviation-minded people to fill its needs. It is not enough for us to sit here tonight nodding our heads in agreement that something must be done about the problem. I am very much aware that on the shoulders of CAP rests this staggering burden—this task of motivating our youth, and I say that if any volunteer organization ever earned a "well done," it is the Civil Air Patrol. Your mission is never completed. Your mission grows because the air age plays an increasingly important part in our daily lives through both the commercial and the military airplane.

Even more perplexing is the siphoning off by industry of highly trained technicians from the Armed Forces. Quite literally, the aircraft industry today competes directly with the Air Force, offering attractive salaries and benefits to qualified personnel which no branch of the military can match. This competition will continue until we are able to increase the number of scientists, engineers, and designers available each year at the close of the college term to take responsible positions in industry. When this goal is met, then and only then will our Armed Forces be free from the unhappy position of being in competition with industry. For, as the situation now exists, it is nothing but a vicious circle. Industry draws personnel from the military to produce equipment for the military which is then shorthanded due to a loss of personnel. Besides the work which you members of CAP do in your various assignments let me urge you also to be missionaries. Certainly you contact many young people whose minds are not yet made up about careers which they wish to follow. Here then is an opportunity for you to help in this vital effort. Talk to them—try to make them see the need for more specialized personnel. And, if you are unable to reach them with this appeal, point out the lucrative advantage of such careers, for today specially trained individuals can practically "write their own ticket" as the old cliche goes.

Teen-agers are responsive to leadership. As a result of your efforts to train and orient them in aviation, these young people will grow to understand the importance of both technology and airpower. Never for one moment doubt the value of the work you are doing for these young Americans. The spirit with which you tackle this tremendous task is the same spirit which inspired George Washington at Valley Forge and Gen. Anthony McAuliffe at Bastogne when he responded to the German's surrender demands with the now-famous word "Nuts." This is Americanism at its best.

In this dedicated organization you are dealing with a power more tremendous, more potent than the greatest nuclear device which has been or ever will be perfected—you are directing and developing youth power which today stands as the monumental hope for a bright tomorrow.

Ladies and gentlemen, I am proud of the Civil Air Patrol. I am proud of each and every one of you for your unselfish devotion in helping this great country. You are serving America nobly in your continuing efforts to keep our Nation first in aviation.

The spirit of Civil Air Patrol also represents the finest quality of Americanism.

Flag Day Address Delivered by Mr. August W. Kopke at the Elks Lodge in Oklahoma City, Okla., on June 14, 1956

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 18, 1956

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a Flag Day address which was delivered by Mr. August W. Kopke at the Elks lodge in Oklahoma City, Okla., on June 14, 1956:

Exalted Ruler, member Elks, and fellow Americans, I need not tell you that I'm happy to be with you once again and to have a part in this Flag Day service—a service that is being observed and celebrated in every Elks club in the United States of America and its possessions, and rightly so, for as Elks, we are first of all Americans, with no "ism's" attached.

One hundred and seventy-nine years ago today, nearly two centuries ago, a new flag appeared in the blue of the heavens, and Old Glory became the century plant of human hope in full bloom. It became the full-grown flower of ages fighting for liberty. The gentle breeze with lingering caress kiss the folds of no flag in all the world, that compares with it in beauty or in character. That piece of red, white, and blue bunting represents 5,000 years of struggle upward. Emblazoned on its folds in letters of living light, are the names of our heroic dead, whose wisdom and courage and sacrifices give birth and life to these United States of America, where every citizen is a sovereign, but where no one cares to wear a crown. Its spirit is the spirit of America itself. And so, whatever may be my shortcomings in the direction I'm headed at this moment, there is one thing about which I'm absolutely certain. I may yet become a man without a party or creed, but so long as Old Glory blazes in God's blue firmament, I'll never be a man without a country! I would not exchange my title as a private in the unbroken ranks of America's millions of common men, for all the remaining crowns in Christendom!

And I believe there is room in every patriotic heart that is here tonight, not alone for Old Glory, but for every acre of America's sunny soil, for its every hill on which the morning breaks, for its every vale that cradles the evening shadows, for its every stream whose rippling waters laugh back the enchanting image of a midnight moon!

As an American I am proud of every man of whatever calling or vocation, who by the nobility of his nature or the majesty of his intellect, or who by faithful endeavors and honest toil, has added a single jot or tittle to the fame of this fair land, or who has in any way contributed a single spark that has added new power to the great oar of human progress.

Ever since I first came to the age of understanding at my mother's knee, there has always been something about Old Glory that somehow prompts me to throw aside all reserve, and in the enthusiasm of these patriotic occasions to exclaim with poetic fervor—

"Oh blessed land of America
I pray, God guard thee until time shall cease.
His blessings scatter o'er Thy ways,
And crown thee with His perfect peace."

And well may we call upon God, for my friends, God and this great Nation are and must remain inseparable.

And so tonight, as we celebrate once again the birth of our country's flag, I shall assume that it is not unfitting this presence or this occasion, if we recall briefly the story of our country's life. Let us recount for a moment the lofty deeds of vanished years, the toil and the suffering, the defeats and the victories of heroic men—men who made America great and grand.

First, the story of the great struggle between king and colonists should again be told. A struggle that was waged first for justice, then for freedom. England was then the most powerful of nations—mistress of every sea, and yet our forefathers poor and few, defied that mighty power. Today let us recall the weary marches, the suffering, the defeats, and the victories, but above all, the glories of the Revolution.

We remember all from Concord and Bunker Hill to the frightful winter at Valley Forge, where the infantry of snow and the cavalry of the wild blasts, scattered our meager legions like winter's withered leaves. Then on to the surrender of Cornwallis and Yorktown, cloudless and victorious day. Of the thousands who marched with Washington and Old Glory through those 7 sacred years, not one remains.

Long ago the last have mingled with the earth and nearly all are sleeping now in unmarked graves. Some along New England's rugged hillsides—some beneath the towering pines and weeping willows of the Southland. Some beneath the crumbling marble from which their names have been effaced by the relentless hand of time. But the Nation they builded remains a temple of liberty that no storms may shake—a monument to freedom that passion must never destroy.

Let us remember too, the gallant men who carried Old Glory in the War of 1812, in which we fought for the freedom of the seas—a struggle that was crowned with the victory of New Orleans.

We remember too the heroic men who carried the Flag across the Rio Grande in our war with Mexico—when our great Southwest became united with us, under the protecting folds of the Stars and Stripes.

Peace came again, and the Nation hoped and thought that strife at last was at an end. Our resources were becoming boundless, the future seemed secure. Hardy pioneers had moved to the great West, beneath their ringing strokes the forest disappeared, while on the prairies waved the billowed seas of wheat and corn. Rivers were crossed, the mountains conquered, until the foot of victorious adventure pressed at last the golden sands of the majestic Pacific.

Then came the bitter Civil War. Whatever may be your opinion or mine as to the justice or injustice of either the Union or the southern cause, this fact remains unchallenged.

For centuries Puritan had hated Cavalier. This rank infectious weed took root, not on American soil, but across the sea and develped into the Revolution that sent King Charles to the block and invested Cromwell with more than regal power. Together Puritan and Cavalier had crossed the billowy deep to seek fame and fortune in the New World. Together they had suffered untold hardships that they might have freedom to worship God. Together they fought with Washington through the long years of blood and tears, out of which human liberty was born. Together they laid broad and deep the foundations of this Republic and reared thereon this wondrous super structure we call America. Together they shed their blood in one instinted tide upon its sacred shrine.

But the Puritan was still a Puritan, the Cavalier was still a lord. One had his hard-headed convictions, the other his aristocratic institutions, and neither would yield the right-of-way. This friction was evident even in the early days of the Republic and grew and gathered fire, until it burst at last into a mighty conflagration whose pathetic ashes repose in a million sepulchers.

Let us thank God that fierce baptism of fire is in the past and not yet to come; that the bitter cup can never be pressed to our children's lips; that never again will American meet American in battle shock, for the Civil War removed the last stumbling block from our path of progress, and since that time we have been moving forward with a giant's stride to that high destiny for which the hand fo God has fitted us—the beacon light in a troubled world casting its gleaming rays of hope to all mankind, everywhere.

Let us remember too the brave men who carried the flag in the Spanish-American War. For the first time we seen an army fighting, not to destroy, but to save, not for ourselves but for the others, followed by independence and freedom for both Cuba and the Philippine Islands.

Then came World War I, the memory of which still haunts humanity everywhere. When stricken Liberty called from afar America answered the call and fought as we thought to make the world safe for democracy. When the struggle ended, the now immortal Woodrow Wilson at the almost frantic solicitation of our allies, went to the Paris Peace Conference with a program, worldwide, humanity deep, and heaven high, calling for a thousand years of peace. But these same allies, flushed with a victory that we alone had made possible, seeking only the spoils of conquest, they rejected his major proposals, just as a selfish and materialistic world rejected the plea for a universal brotherthood made by the Prince of Peace, 2,000 years ago. Their answer was Calvary's cross. Woodrow Wilson, too, reached both his Gethsemane and his Calvary. Had we gone into the original League of Nations wholeheartedly, with the position we occupied in the estimation of the world at that time, insisted on, and enforced the provisions it contained, World War II would, in my humble judgment, never have taken place.

As a result of our folly and indifference we have fought two other and far costlier wars, and after more than 10 years of bickering with a ruthless traitor, we are still awaiting the outcome of negotiations, on which will depend the future security, and the very destiny of the entire human race. So we must remain firm—we must remain strong, ready for any emergency, for whether we like it or not, the cold, hard fact remains that world leadership has been conferred on us by the ceaseless march of destiny. The door of lesser responsibility has been closed to us. We cannot sail by old and easier charts. We have to play this part in sheer defense of our own self interest, until the curse of every revolutionary "ism" has been forever lifted from the brow of mankind.

After all, my fellow countrymen, the difference between our America and the rest of the world is really this: America is seeing visions not alone of material wealth but of spiritual instinct—visions of men who know that higher than wealth, higher than the profits of private opportunity is the distinction that comes from serving mankind; and as loyal Americans, as loyal Elks, we will fight for our country and die for this flag so long as reason primes the rifle—while honor draws the sword—and justice breathes its blessings on the standards they uphold.

A husband and wife, long estranged, met one day at the grave of their first born—the child of their youthful strength. Their strife had been biter—love had turned to hate and they had elected to tread life's path apart. They stood, one on either side and looked coldly at each other. And they they looked down upon the little mound that held the broken link with which God had joined their hearts. They knelt down on the cold sod that covered the sacred dust of their dead. They stretched forth their hands across the little grave, each to the other, and the Angel of God washed away all the bitterness of the years with a rain of penitential tears and sent them down life's pathway hand in hand, as in the olden days, when love was Lord of their two lives and their sweet babe was cradled on its mother's breast.

And so on this Flag Day, whatever may have been, or may be our differences, social, political, religious, economic or what not, let us as loyal Americans, kneel beneath the protecting folds of Old Glory, let us stretch forth our hands across the now invisible barriers of a forgotten past, and let the benediction of Almighty God fall upon a people forever reunited, over which the Stars and Stripes shall wave, until time shall be no more. Rise up then glorious freedom's banner and send out these messages of thing: Tell the air not a spot ever sullied thy whiteness. Thy red is not the blush of shame, but the flush of joy. That they blue stands for loyalty and constancy. Tell the dews that wash thee that thou art as pure as they. Say to the night thy stars lead to the morning, and say to the morning, a brighter dawn will arise with healing on its wings. And then, O Glorious Flag, bid the sun pour light on all they folds with double brightness, while thou art bearing round and round a weary and war-torn world, the eternal message of peace—of brotherhood and democracy—with the Fatherhaad of God and the brotherhood of man enthroned and triumphant. And finally, my friends, we have too many empty flag poles in Oklahoma City and in all America as well. I would urge all of you, who can, to display Old Glory not only on Flag Day, but every day and if you cannot display the physical emblem, then wear its image in your hearts, and if you do, the great heart of America, will one day, interpret the heart of the world.

AUGUST W. KOPKE.

Vote, It Is Your Patriotic Duty

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. WICKERSHAM. Mr. Speaker, we should make a start in taking an earnest interest in self-rule, and thereby insure for the future generations the implanting of a mighty good habit—that of being a real good citizen. It is a serious responsibility to be a citizen. Your first ethical duty in the field of public service is your duty as a voter. Use, protect, and cherish this right.

If we are to maintain a government of the people, by the people, and for the

people, we must vote. Democracy depends upon it. A democracy is a group of people who get together in a common enterprise for the purpose of governing themselves.

Registered adult citizens, regardless of property or poverty, may vote. Our wishes can be best expressed through the ballot. You do not have to be a king or of nobility to have a part in our Government.

We, as American voters, should not be derelict in our duty, and we must not be negligent about taking part in our elections. Under a democratic system of government like ours, the character of the Government is largely what the voters make it. Every voter is a part of the Government. As such, he has a distinct moral duty to exercise his franchise in such a manner as to bring about the best welfare of the Nation as a whole.

As a result of 50 years of agitation by those who felt that the discrimination against women was unjust and unreasonable the 19th amendment to the Constitution was adopted, giving women equal suffrage with men. Since then women have taken a deep interest in elections.

You mothers, fathers, wives, sweethearts, and relatives of veterans, should remember that the ballot is just as essential to the maintenance of good government in time of war and peace as arms and a willing soldier in time of war, especially when our servicemen have been sacrificing their lives for the freedoms we enjoy.

There should be no difference on our part. If popular government is to be a success, we must have an electorate, not only intelligent and honest but also wide awake and vigilant at all times.

Among the greatest dangers of popular government are indifference and neglect on the part of voters. We should be greatly concerned about the failure of our friends to vote. You should contribute your share by going to the polls and voting and urging your neighbors to do likewise.

We have no right to criticize unless we do take part in elections. To fully participate in the official activities of our Government is a patriotic duty, privilege, and opportunity no citizen can afford to shirk because the majority rule is determined by the will of the people.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Observations on Russia

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, June 18, 1956

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the first of two articles appearing currently in the Cleveland News, and written by one of its feature staff writers, Miss Doris O'Donnell.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DORIS O'DONNELL IN RUSSIA—FINDS "NEW LOOK" GIVES FREEDOM TO TRAVEL, BUT CLOUD OF FEAR REMAINS

(EDITOR'S NOTE.—News Reporter Doris O'Donnell, first Cleveland journalist to visit Russia since World War II, is back in Cleveland. The News today begins the exciting story of her adventures and observations, written without restriction from the exhaustive personal diary kept by Miss O'Donnell during her tour of cities and rural areas of the Soviet Union.)

(By Doris O'Donnell)

Moscow, U. S. S. R.—From Cleveland's Public Square to Moscow's Red Square is about 5,600 air miles. But in a way of life there is no greater distance on the face of the earth.

I have been in the Soviet Union a month. It is a land which to me has always been shrouded in mystery. But like most terrifying closets when you look inside, the awful fears give way to nervous and monumental curiosity.

Russia frightened me.

Outwardly here in Russia, I have not been restricted. But I must point out this is a peculiar new world, even to the Russians. This is post-Stalin Russia.

It did not have this freedom 6 months ago. It may not have it 6 months from now.

I have gone where I pleased within reason, traveled to Stalingrad, Rostov, Kiev. I have flown in Russian and Czech airplanes, and drifted down the Volga and Don Rivers in a steamer loaded with potatoes and peasants.

I took copious notes wherever I went. I have taken snapshots openly and without hindrance except in Kiev, where I was stopped from photographing the bustling industrial harbor on the Dnieper River.

The mere thought of purges, liquidations, MVD police, Siberian prisons—petrified me.

Yet I was driven on by insatiable curiosity and the challenge of the assignment to see as much as I possibly could of this strange country.

Imagine! Moscow! And an American woman alone behind the Iron Curtain.

I longed many times for the precious land of the free world, as corny as that sounds. I don't think I'll soon recover from the tensions and from the fear that unseen eyes watch every movement.

For the first time in the violent history of this vast and impenetrable country, the Iron Curtain was lifted for a girl reporter from Cleveland, Ohio, to see what she wanted to see, talk with the little people, eat their food, and share unfamiliar heartbeats.

I met some big people, too, Bulganin, a wolf by American standards, but a man of compelling charm and gripping fascination.

I was frustrated by Russian Communist bureaucracy, by the difficulties of language, by the problems of coping with a philosophy completely alien to me.

Yet I sincerely like the Russian people. I found them warm, affectionate, and incredibly curious, though in so short a time and with an impossible language barrier, I could not hope to understand them or hope they could understand me.

The journey from Cleveland into the Soviet Union and my midnight arrival in Moscow is an experience indelibly printed in my memory.

As my Swissair ship skimmed over the neat Swiss countryside toward Prague, Czechoslovakia, on the first lap of the adventure into the Communist world, I felt lonely and shriveled inside.

I had read so much about the Soviet Union that I did not know what was reality and what was fiction. I decided to erase the preconceptions in my mind. It was a good thing I did. Because I found a completely new face on Russia, a new face, which today baffles the old Russian experts and sends them off with puzzled, skeptical brows.

My flight companions, all sturdy, overfed-looking Czechs, chatted away in a holiday mood, no doubt recounting successes of their business trip to Zurich. All were laden with bulging briefcases and sacks and bags full of packages of all sizes, including toys and dolls.

Their Slavic faces were in sharp contrast to the Swiss faces, but the Czech faces have a reassuring familiarity. They looked like the Czech faces back in Cleveland—rosy, round cheeks and sky-blue eyes.

On this flight I got my first taste of the big, open stare. I could feel pairs of eyes looking me over, from my hat down to my shoes. It finally got so that I simply stared back, giving them the big wondering gaze and looking over their clothes which were not stylish by American terms, but solid and adequate-looking.

The Iron Curtain began at Prague airport where I had a 4-hour wait before taking off to Moscow.

The airport is located in the countryside, and there is nothing to see for miles around. It was modern, sizable, and clean, with a comfortable lounge, continuous movies, a bare restaurant, and showcases filled with such Czech-made products as glassware and vacuum cleaners.

I hauled out my typewriter and started pecking away at my diary, and almost fell off my chair when the background music came on. Billy Eckstine sang "Bitter with the Sweet," and the announcement was in English, too. Will wonders ever cease?

Without Czech money, I was unable to buy lunch, but I had brought along Swiss candy bars.

My real lunch was a cheese sandwich donated by an Italian woman, who with her husband and two teen-age daughters were en route to Warsaw, Poland. The man was with the Italian Embassy there. The woman had had the foresight to pack a lunch, and had saved cheese and meat from the meal served aboard the Swiss airship.

We picnicked on a bench within a fenced-off area outside the airport where we watched several airplanes land and take off.

Traffic was light there, and the only other Western airship was from Belgium.

A Hungarian airship landed with a handful of people, including two tall, bearded Orthodox priests in their long flowing black robes, high headgear and huge breast medallions.

As flight time grew near, my passport was returned to me, and then I discovered the two priests and their civilian companions were getting the VIP treatment. They were speeded off in the Russian Aeroflot plane on which I had been scheduled. The priests were being whisked in for the Orthodox Easter celebration.

A group of Hungarians—a labor delegation—protested mildly, but were quickly placated. All of us would take the second section, a Czech airliner, of the exact construction of the Russian one.

From what I could see, all the satellite countries use Russian-made twin-engined ships, old and weatherworn, but sturdy and plodding. The airplanes have the same kind of personality as the people at the airport handling passports, luggage, fuel, etc.

A French girl, young, breezy, and attractive with yellow shoes and matching handbag, and I were the only two women on the Moscow-bound flight, with the exception of the stewardess. She reminded us to buckle the seat belts, and at 2025 or 8:15 p. m. we would land at Vilnius, on the Lithuanian-Russo border.

My first taste of the Soviet world was at the customs office at the Vilnius airport. The airport was a monstrous white stucco building, surrounded by farmyards, and small unpainted farmhouses.

The customs official handled the passports of all the men before he came to me. He was dressed in a shiny blue serge suit with red piping around the neckband. His peaked cap was also trimmed in red.

"Who asked you to Moscow?"

His English wasn't bad, but self-conscious.

"No one," I said.

Then again in slow, halting, measured English, he asked:

"Who asked you to Moscow?"

Bulganin's name came mischeviously to mind, but a chill was already moving around my heart.

"No one."

Lack of vocabulary or sheer bewilderment ended the conversation. He, as most Russians are, familiar with large delegations of Czechs, Poles, Hungarians, Chinese, and others from Soviet satellite countries. A single American—and a lone American woman—was too much for him. His brow never unwrinkled and he avoided looking me directly in the face.

While my fellow-passengers disappeared in the vast building, I was detained to fill out a form about furs, jewelry, pieces of luggage, and the amount of my foreign currency. Rubles cannot be purchased in the United States, and I had left home with travelers' checks and a book of coupons purchased

from the official Soviet Government agency, Intourist.

A silver chain bracelet was the only item which interested the customs official other than my money.

"Gold?" he asked several times.

"Nyet," I said. Here was the first opportunity to test-run my limited Russian vocabulary.

He did not go through my luggage which included one suitcase, a small flight bag with tissues, etc., a typewriter, and a German-made camera.

Business concluded, the official waved me off to a restaurant on the second floor. Here the huge hallways and staircases were covered with yards of red carpeting, and the walls were hung with portraits of Lenin and Stalin. A huge white bust of Stalin was planted on the balcony near the entrance to the paneled eating room.

After cold cuts aboard the plane, my appetite had disappeared. I was pretty nervous, anyway. I sat down at a table set for 4 with 2 Hungarians, 1 a huge red-haired man; the other a thin dark-haired man, both of whom wore sweaters under their suitcoats. They had finished the soup course, and were on the veal plate.

Neither spoke English, and here began the adventure with the Russian-English dictionary.

By shaking my head "no," the waitress was convinced I did not want the meat after the big bowl of chicken noodle soup.

The red-headed man offered me some lemon carbonated water which tasted terrible—watery but sweet.

Both tried to converse, using a few French words. However, we managed better before boarding time when the French girl who spoke English, understood and translated their French. The girl, I learned, was going to Bandung as an interpreter at a youth conference.

During the flight from Vilnius to Moscow, a holiday air pervaded the plane. Before Vilnius, everyone had slept or read. Now the conversation was livelier, men strode up and down the aisle, and there was an intense interest over when the first lights of Moscow would dot the inky-black landscape.

A young Russian man pulled a pack of American cigarettes from his small suitcase and offered me one. I was amazed. He explained he was returning from an international meteorological conference in Geneva. The No. 1 American weather expert had given him the cigarettes.

The Russian weatherman spoke good English. Although the cut of his suit was foreign, he wore a white shirt. This was in contrast to the other men aboard, who wore dark blues, browns, blacks. To the French girl, he raved about Paris; to me, he said he hoped to come to America. He had been in Canada.

Soon the lights appeared, first a dot here, and there, then a whole blanket of twinkling lights.

One huge building was covered with red lights. It looked like a giant Christmas tree. I thought it was the Kremlin, but it was Moscow University. We circled the field several times, and within minutes landed smoothly at Vnukova Airport.

This is Moscow's big landing field, a 30–35 minute drive from the city. Here is the airport where a few days after my arrival the Soviet chiefs of state gave a military salute to French Premier Guy Mollet.

But on this late, windy and rain-swept night, there was no one—no band or honor guard—to meet me.

A Russian woman doctor looked us over as we deplaned. The few Russian men aboard were swallowed in the darkness outside the airport, although later I saw two of them giving their wives and children bear hugs.

It was now 12:15 a. m.

I followed the Hungarians into a brightly lighted waiting room. A huge library table was covered with big picture magazines in Russian, Chinese, and other languages.

On the wall was a king-size portrait of Stalin in a white tunic uniform. His figure was disproportionately large against a wheatfield, a farmer, and tractor.

Several Chinese men sat opposite me on straight-backed chairs. I was so nervous I didn't know what to think. Finally, a uniformed guard showed us into a smaller room, the luggage-weighing-in place.

A tall blond young man who looked exactly like Edgar Bergen's Mortimer Snerd seemed to be in control.

"Do you speak English?" I asked.

"Yes; and who are you?"

Now began the bureaucracy.

"Your name is not on my list," he said, looking over a paper notebook similar to the kind American children use in the second grade.

I explained a delay caused me to arrive a night late.

"We have no hotel for you, and no taxi to take you into Moscow," he said.

I looked helpless.

I had no idea what to do. The American Embassy, the newspaper friends I was to contact in Moscow—everything seemed remote. I hadn't the faintest idea how to telephone them, and this seemed impossible at that time of night.

Old Mortimer, as I started thinking of him, already had told the French girl she could not telephone her Moscow friends. Her plane for China would not leave for nearly 12 hours, and he suggested she sleep in a hostel on the second floor of the airport.

I peeked into the high-ceiling waiting room. The benches were nearly filled with shawled and babushkaed women, bundled in padded coats and wearing knee-high boots. Besides, each wore string bags bulging with packages. I could see myself cuddling up on one of the wooden benches.

Finally old Mortimer said I could drive into Moscow with a Czech.

"You don't mind?" Mort asked.

"Mind? Goodness, no." I was elated.

While waiting for the taxi which the Czech had ordered, Old Mortimer took me to the telegraph office, where I cabled home.

I had to exchange dollars for roubles—$10 for which I got 40 pink-papered roubles. The cable costs took half. For Mortimer's kindness I gave him an American penny. You would have thought it was a million dollars. He was delighted and slowly read the words on the coin—"In God we trust." He made no comment.

It was 3 a. m. before I saw the first red illuminated stars on the spires over the Kremlin. I couldn't believe my eyes. It was like a fairy tale—this huge old fortress looming before us as we drove over one of the Moscow River bridges.

My companion and I had tried to communicate, even using my small pocketbook flashlight to pick out phrases in my Russian-English book. I learned he was an engineer, and he learned I was a journalist. We said goodby in our respective tongues in front of the National Hotel, guarded by a husky militiaman.

Within minutes I was ushered up to room 227, with a large sitting room, alcove bedroom, and bath. Dawn—pink, blue, and silvery—was coming up over the Kremlin towers as I pulled the red plush curtains across my alcove doorway and tumbled into a small clean-smelling bed.

So this is Moscow. I was too tired to think, to worry, to wonder. I was safely in Moscow. Part of my mission was over.

Address by Hon. Robert C. Hendrickson, Ambassador to New Zealand, Before the Tin Hat Club

EXTENSION OF REMARKS
OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 19, 1956

Mr. CASE of New Jersey. Mr. President, in yesterday's RECORD I inserted in the Appendix a speech by my esteemed predecessor, Senator Robert C. Hendrickson. I would like the Senate to have an opportunity to read some additional remarks by our Ambassador to New Zealand, delivered during a tour of the Islands where he represents the Government of the United States. Since we are all so interested in his efforts to bring about greater understanding between the people of our two countries, I ask unanimous consent that an address by Bob Hendrickson delivered on April 24, 1956, before the Tin Hat Club, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the first quarter of the 19th century the new Government in America produced some very unique and brilliant characters. Among these we find one Daniel Webster. His brilliant oratory still echoes through those time-honored walls of my Nation's Capitol Building. About the time that Senator Webster had reached his dramatic heights there came to the House of Representatives from Tennessee another character—his name was David Crockett. He was unschooled in any of the formalities of education, but he was a frontiersman, a hunter, a trapper and a guide who led our people of that time through Indian entrappments which would have cost them their lives. The story goes that shortly after he entered upon his congressional duties he wandered over to the Senate to hear the great Daniel Webster in one of his challenging debates. When the then famous Senator from Massachusetts had concluded his remarks, Davey Crockett was heard to say: "Well, now I have been told that Webster is a brilliant man, but it ain't so—I could understand everything he said."

My comrades, I try to pioneer—I stand with Crockett. I hope you will understand everything I say. To be with you, my comrades of the Tin Hat Club, on this the eve of Anzac Day is like being with my comrades of the 40 and 8 back home just before an American Legion convention.

As prospective ambassadors, we are pretty thoroughly briefed at home on the background of the country where we will serve. Despite the briefing, however, until an ambassador is on his own steam he doesn't get the true course he should follow. In my case it has not been too difficult because I was with New Zealand troops in Italy and so I came to feel there—more than a decade past—our mutual dedication to the purposes of free men.

Your Anzacs began their great exploits on April 25, 1915, when they landed at a point in the Near East called Gallipoli Peninsula. The name was "Greek" to many in America, but though only in my early teens it was not "Greek" to me.

I suppose that the nearest word to Gallipoli in the jargon of my country would be

our now famous Gallop Poll which has to do with sounding out public sentiment, chiefly about our politicians. This poll might be best remembered for its inaccurate selection of Mr. Dewey over Mr. Truman in 1948.

I must confess that upon my arrival here one of the things which impressed me most were your campaign hats. They are so much like those we wore in 1918—floppy but serviceable.

Though my new neighbors in New Zealand may have had some trouble with the language which I speak, I could understand them quite well—particularly when they spoke up with enthusiasm. May I say at this point that if you have a fault in the expression of the finest language yet unveiled by man, it is that you do not turn your throats loose. You must speak up and with vigor.

I remember so well those wonderful 6 years I spent in the United States Senate—and though I confess to being a Southerner at heart there were times when I wondered whether some of my beloved colleagues had not been dropped from the outer spaces of the world, linguistically.

Well, the language barrier has presented no difficulties in the New England * * * we curse in precisely the same tongues.

This reminds me of the story of the Spanish gentleman visiting Great Britain who was terribly upset by the English pronounciation. As you well know, the Spanish people pronounce virtually all the letters in any word. This is not so in England nor in America. Thus, our Spanish friend could not for example, see why the British pronounce t-h-r-o-u-g-h- as "through." He studied very hard, however, and slowly mastered the new pronunciation. Then one day he met a sudden and unhappy end. He was walking along and spotted a movie billboard depicting an advertisement of that splendid film, Cavalcade. The billboard said: "Cavalcade pronounced success"—so our Spanish friend proceeded to a mission of self-destruction.

Such are the tribulations of visitors to strange shores.

Happily for us tonight it is always true that whenever the chips are down, the English-speaking peoples rally together and come to the aid of their neighbors whenever any of us are threatened with the overthrow of our free way of life. This was the basis of our union in two World Wars.

The examples of bravery, heroism, and valor by our Allies in the first great World War are legion and it is truly difficult to single out particular acts of bravery above others.

I have already referred to the courageous exploits of the Anzacs which had their start on April 25, 1915, when they landed on the beach at Gaba Tepe (which later became known as Anzac Cove) on Gallipoli Peninsula. The purpose of this operation was to clear the Dardanelles, control Constantinople, cut the Turkish communications from her German partners, and open up the Black Sea, which would allow Russia to send needed stores of wheat to the Allies, and, in turn, allow the Allies to send war materials back to Russia.

It has been stated that if the Dardanelles could have been forced by the unaided fleet and Constantinople taken, the war would have been shortened by years. I have no doubt at all that Russia might have been saved from communism.

Although the Anzac landing was accomplished with heavy losses in dead and wounded, the major objective, the conquest of the Gallipoli Peninsula, was not attained.

After months of fighting, in which your Anzacs proved their valor by a performance above and beyond the call of duty in the face of a well-entrenched enemy, the decision was finally made to evacuate the forces.

In December (1915) 80,000 men with their equipment, were transferred from the peninsula. Those evacuated left behind 35,000 of their brave comrades—dead and buried on the war-torn battlefield.

From Gallipoli, the Anzacs moved on to other theaters of operations, leaving a glorious record of achievements behind them.

I am sure that it will be carrying coals to Newcastle, but it is always of interest to me to hear again the origin of the word "Anzac."

Before the Gallipoli campaign was initiated, the forces of Australia and New Zealand were training in Egypt with headquarters in Cairo. The clerical work was done by some of the men detailed from the divisions. It was here in the headquarters that the history of the term "Anzac" began.

Can't you visualize the corridors outside the clerks' offices with the many cases of stationery lined against the wall with the large black letters in stencil "A and NZ Army Corps," which in abbreviated form represented the Australians and New Zealand Army Corps. Well, the name was too cumbersome and above all, a code was needed for telegraphic communications.

Most of the stories on the subject report that when the question was put, Lt. A. T. White, of the English Army Service Corps, replied: "How about 'Anzac'?" The name was proposed to the commanding officer, General Birdwood, who immediately approved the use of the term. So, it was not long after the adoption of the code name, that the term was carved into its place—high and for all free men to see in their record of history for all time to come. The word "Anzac" today is a symbol of the greatest sacrifice brave men can make for their God and country.

The commemoration of Anzac Day in both New Zealand and Australia will be perpetuated as long as these two great peoples survive—that should always be among the prayers of all free nations of the world.

As we in obedience to a wisely written law of the land today make our contribution to a never-ending recognition of those heroic deeds of an age now past, it is only right and proper that we should remember these words: "These are our martyrs, and their blood the seed of noble futures. 'Twas for us they died. Keep their memory green."

It is not difficult to understand why these words were in the minds and hearts of those men who stood on the beach an Anzac Cove in Gallipoli on the 25th day of April 1922 in a just and fitting tribute to the comrades who came to their final resting place there 7 years earlier.

I am quite sure that it was from the unselfish sacrifice of those men who gave their all in the first great world cataclysm of war that we of the English-speaking peoples took courage, united, and in a full spirit of cooperation joined forces to once more preserve our precious freedoms in the onslaught which confronted us in those dark days which followed on the heels of Munich and all the nightmares which were ever there within the mind of the madman of the ages.

In this needless and frightful calamity the Anzacs again wrote a brilliant record of heroic effort. Many of them were sons and nephews of the fabulous fighters of 1915.

I am sure that the statement made by your Prime Minister Peter Fraser in 1941 sums up the courageous spirit of "do or die" which fired every son and daughter of New Zealand in those dark and tragic days. Said this distinguished statesman: "There is nothing too much for us to day, and if there is anything more we can do within our resources, then it will be done." The new Anzacs (with some help of the old) made good the assurances of their able Prime Minister.

These young men—a few I met in Italy, as we traveled up the boot together—wrote a chapter of their own in the annals of that conflict—and today as we salute them, we know that their worth to the free world was quite equal to the exploits of their fathers, their uncles, and other heroic relatives.

The new crop of Anzacs fought on three continents and everywhere achieved recognition for their military prowess. Should I mention the theaters of war? Yes, of course, I shall. They were in all the theaters where the lives and fortunes of free men were at stake—among them, Dunkirk, the Battle of Britain, the African desert, Italy, the Pacific, and most recently in Korea. I remember them most particularly in Italy.

But an editorial which appeared at the time of the Battle for Britain had this to say:

"The year 1940 and the Battle of Britain are as sure of a place in history as 1066 and the Norman Conquest, 1588 and the Spanish Armada, 1815 and the Battle of Waterloo. Your children and your children's children will read of those incredible days when only a strip of blue water and a few hundred pilots stood between a slightly mad 'living room' decorator and the Empire of the World. They will read with pride that in a place of honor, ready to meet the Nazi hordes, were the soldiers of New Zealand."

In the traditions of their fathers, the Anzacs of the Second World War "carried on" to win the highest honors for all who participated with them.

No one knew the temper of their steel more than did the enemy.

"A ball of fire" was Sir Winston Churchill's description of the New Zealand Division. He was discussing the Alamein victory on the floor of the House of Commons at the time.

Now I have talked of war at some length but only because of the impacts which our wars together of the past can have upon the peaceful existence of the world for the future.

In the suggesting of an appropriate subject to your able secretary last December for this occasion, I offered the title "American and British Commonwealth Relations in War and Peace."

So, in the interest of that just and last peace for the world for which all free peoples are searching daily, I conclude with these positive and specific observations.

Anzac Day calls us to our better selves. It is a day and time for consecration. Actually it belongs to those who died that we might inherit the greatest blessings that may flow from human endeavors.

If this devotion should ever call us to the uniform again in unavoidable war, I am convinced that our patriotism will vindicate their sacrifice. But in this modern age, when war will be allout with the possible destruction of all the precious institutions this civilization has established—war, ugly, bloody, and futile war, with all the maiming, crippling, and devastating wake it leaves behind—it really has no proper place in our pattern of peace under well-ordered law. The challenge then to us today, to the American and British Commonwealth relationship in war and peace, is to pursue the ways and means to preserve an honorable peace by peaceful means—yet, never to surrender at any price the ideals and institutions that have made us what we are as free nations working in a common and noble cause.

When the Parliament of a country gives due recogniation to its soldiers, sailors, and airmen, you can be sure that it speaks for the people. So when in 1949 the Parliament of this land of wonderful people and delightful countryside dedicated Anzac Day to those who gave their last full measure of devotion to the end that your cause shall not perish from the earth, they sealed a firm commitment under God: That your

government of your people by your people, and for your people shall endure as long as men speak the tongue of that old Mother Country—God bless and keep her always—and her gracious Queen.

Citation to George Meany for Combating World Communism and Assisting the American Legion

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. MARTIN of Pennsylvania. Mr. President, as a part of the Flag Day program of the American Legion of Allegheny County, Pa., there was dedicated on June 14, in the city of Pittsburgh, a bronze plaque containing the pledge of allegiance to the flag.

As a feature of the impressive ceremonies, a citation was awarded to George Meany, the distinguished president of the AFL–CIO, for his outstanding work in combatting world communism and his assistance to the American Legion in patriotic support of Americanism and an adequate national defense.

The citation was accepted by Peter M. McGavin, assistant to Mr. Meany, in a speech which is worthy of national attention as a vigorous and forthright attack on the menace of communism.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the citation awarded to Mr. Meany and also the remarks of Mr. McGavin in accepting the citation on behalf of Mr. Meany.

There being no objection, the citation and address were ordered to be printed in the RECORD, as follows:

THE AMERICAN LEGION CITATION TO GEORGE MEANY

President of the American Federation of Labor-Congress of Industrial Organizations, for his extraordinary thoughtfulness, profound understanding, and unusual ability to analyze the danger of communism to free labor and to the principles of American democracy, as promulgated by the American Legion, for all free men, coupled with his fighting spirit and clear exposition of the myth and fraud of communism, requiring definite concentration and the awareness of communism which is a challenge to free men everywhere. He has vividly pointed out to all true liberals the false doctrine with which the Russian imperialists would dupe them.

He earnestly and zealously portrayed the tasks that must be met by all of us. First: Military forces must be strong enough to deter and defeat aggression wherever it arises. Second: Social, economic, and political superiority of the democratic order must be developed throughout the world, and, finally, our own freedom must be vigorously defended against the fifth column here at home.

Because of his keen intellect, industry, and personal integrity, and with the help of God combined with personal courage of the highest order, he has won the admiration and respect of the American Legion, and we take great pride in recognizing the vitally important task of giving us a firm foundation on which to uphold the integrity of man as an individual creature of God, without regard to race, color, or creed.

Awarded by the American Legion, Department of Pennsylvania, Allegheny County committee, June 14, 1956.

JOHN C. GONGAS,
Commander.

Attest:

SIDNEY J. SABLE,
Adjutant.

ADDRESS BY PETER M. MCGAVIN

It is a sincere pleasure to accept this award from the American Legion of Allegheny County on behalf of President Meany. Mr. Meany asked me to extend his deep regrets that circumstances did not permit him to accept in person this great honor.

In a real sense, it is an honor to the American labor movement which, like the American Legion, is dedicated to keeping alive the great traditions of personal liberty upon which our beloved Nation has been built.

Men and wmen, many of them members of the Legion, gave their lives to protect these cherished freedoms and to establish our government of laws, not of men. But these freedoms are not automatically inviolate. They must be protected and cherished. We must be eternally vigilant to detect and to halt all—at home and abroad—who would undermine the foundations upon which our way of life is built.

The American labor movement is clearly a child of democracy. It could not exist in a land where men were not free. It abhors and rejects every antidemocratic regime; it is the unrelenting foe of totalitarianism of every stripe. That is the key to our continuing fight against communism and all its evils.

The Communist brand of dictatorship is—in many respects the most subtle, sinister and dangerous enemy of freedom. It demagogically poses as a higher form of democracy. It poses as a political movement, though it is anything but a political party in the normal democratic sense as we know it and live it. Furthermore, it operates as a worldwide conspiracy, as a fifth column, in every free country—with its head and heart in Moscow.

The only patriotism communism knows is loyalty to the clique or despot who happens to be at the helm of the Russian dictatorship at any particular moment.

That is why we of American Labor have always said; There are no American Communists—there are only Communists in America. These subversives are fanatical believers in the doctrine that their end—Soviet world domination—justifies any and every means.

In view of the illusions some people who specialize in wishful thinking now have about the Soviet orbit moving toward democracy; it is most urgent that we take a sober and realistic look at the Communist New Look and Big Smile tactics. You need no agitation or explanation from me on this score. The Communist criminals, like other dangerous criminals, are no less dangerous when they are well masked. In fact, when they are well masked they are even more dangerous. Political subversives who seek to rob the American people of their liberties, are not good citizens or gentlemen merely because they say they are for freedom, or merely because they wear kid gloves in the process of their criminal operations. Well masked, fully camouflaged Communists, do not make the face of communism less ugly or its aim less sinister.

Any system of government in which a party is the government—particularly when there is only one party with absolute power over every walk of life—cannot be government by law. And without government by law, there can be no freedom.

We have refused and will continue to refuse to lend respectability or provide democratic friendship and approval to any regime which has destroyed democracy at home and is dedicated to the destruction of democracy abroad. We did not send delegations to Fascist Italy, Nazi Germany or Falangist Spain, and we won't send any to Russia, Mao-Tung China, or to any other paradise behind the Iron Curtain. We were militantly anti-Nazi and not just non-Nazi. We are militantly anti-Communist and not merely non-Communist.

We of American labor approach this Communist problem and fact in the Communist menace as citizens and as trade unionists. We fight this enemy unrelentingly, without a letup. We don't fall for any of the Communist maneuvers, because we do not believe in doing business with them—on a partnership or any other basis. We fight this enemy with the philosophy of democracy. We fight communism with practical deeds as well as hard-hitting publications in many tongues. We expose their fallacies and frauds and put communism in its proper and ugly light by comparing its Soviet paradise with our human American institutions and achievements. These are not always perfect—but they are always getting better.

If you will take a look at the Communist press in our country or in any other country, on either side of the Iron Curtain, you will see that we are under constant bitter attack. This obviously because our policies and activities really hurt the enemies of freedom everywhere.

Our philosophy as American citizens is that democracy and dictatorship cannot mix. The one is the very opposite of the other. They have nothing in common. They negate each other.

Our philosophy as trade unionists is that without democracy there can be no free trade unions and without free trade unions there can be no democracy.

And we do not intend to change our mind because of any Kremlin face-lifting or teeth-flashing smiles.

Thank you again for this honor. On behalf of President Meany and on behalf of the American Federation of Labor and Congress of Industrial Organizations, let me express our deep appreciation for this tribute you have paid to the free, democratic American labor movement.

Public Opinion Survey—11th Illinois Congressional District

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. SHEEHAN. Mr. Speaker, each of the 6 years that I have been in Congress I have conducted a public-opinion survey among my constituents. This year I mailed out 46,500 questionnaires, making an equal distribution into every single precinct in the 11th Congressional District in an effort to obtain the views of a representative cross section of the people whom I represent. To date, 6,976 questionnaires have been tabulated, which is a return of 15 percent.

Five of the questions on this year's questionnaire have been repeated in a similarly worded fashion in each year's survey since 1953. A comparison of these results over the 4 years is interesting in establishing either a constancy or a changing trend in the thinking of the people of the 11th Illinois District.

The results of the 1956 survey are as follows:

	Yes	Percent	No	Percent	No answer	Percent
1. Are you in favor of the United States continuing as a member of the United Nations?	5,107	73.2	1,671	24.0	198	2.8
2. Do you favor the proposed $4.9 billion foreign-aid bill?	1,556	22.3	5,053	72.4	367	5.3
3. Do you approve of the Republican foreign policy in general?	4,344	62.3	2,064	29.6	568	8.1
4. Do you approve of the Eisenhower administration to date?	5,328	76.4	1,122	16.1	526	7.5
5. Are you in favor of a basic pension plan for veterans of World War I?	4,096	58.7	2,312	33.1	568	8.2
6. Do you favor Federal aid to education?	4,359	62.5	2,378	34.1	239	3.4
7. Do you favor H. R. 627, which proposes the establishment of a bipartisan civil rights commission and the creation of a civil rights division in the Department of Justice?	3,542	50.8	2,068	29.6	1,366	19.6
8. Do you favor continuation of the Federal Government's low-rent public housing program, which in H. R. 10157 provides for 50,000 public housing units in each of the next 3 years?	3,383	48.5	3,286	47.1	307	4.4
9. Do you favor postal rate increases to help cut down the present postal deficit?	4,570	65.5	2,172	31.1	234	3.4
10. Do you favor the discharge of Government employees who invoke the 5th amendment in order not to disclose Communist connections?	6,301	90.3	521	7.5	154	2.2
11. Are you in favor of a constitutional amendment which would set a percentage limit on the amount of income tax the Federal Government could levy against individuals in peacetime?	5,003	71.7	1,631	23.4	342	4.9
12. Do you approve of permitting labor unions to use membership dues for political purposes?	681	9.8	6,134	87.9	161	2.3
13. Do you favor retention of the principles of the national origins quota system which has been in effect since 1929, and which regulates immigration so as to maintain the historic population pattern of the United States?	5,274	75.6	1,188	17.0	514	7.4
14. Do you approve of President Eisenhower's and Secretary Benson's farm program for flexible price supports and a soil-bank program?	4,872	69.9	1,537	22.0	567	8.1
15. If there is a surplus due to greater Federal income than Federal expenses this year, should it be used to: (A) reduce taxes, or (B) reduce the national debt?	(A) 3,094	44.4	(B) 3,636	52.1	246	3.5

The comparison for repeated questions in 1953, 1954, 1955, and 1956 is shown below:

	Percentages										
	1956			1955			1954			1953 [1]	
	Yes	No	No answer	Yes	No	No answer	Yes	No	No answer	Yes	No
Are you in favor of the United States continuing as a member of the United Nations?	73.2	24.0	2.8	69.5	28.3	2.2	67.0	29.9	3.1	64.1	35.9
Do you favor further arms and military aid for foreign nations? [2]				44.9	49.8	5.3	45.7	46.4	7.9	44.7	55.3
Do you favor continued economic aid (Point 4 program) to foreign nations for development of backward areas? [2]				50.0	46.0	4.0	54.4	38.8	6.8	43.3	56.7
Do you favor the proposed $4.9 billion foreign aid bill? [3]	22.3	72.4	5.3								
Do you approve of the Republican foreign policy in general?	62.3	29.6	8.1	56.9	30.3	12.8	52.9	36.6	10.5	78.5	21.5
Do you approve of the Eisenhower administration to date?	76.4	16.1	7.5	65.3	23.9	10.8	58.0	25.9	16.1	84.2	15.8

[1] It is to be noted that in the 1953 questionnaire, the "no answers" were not included in the percentage breakdown.

[2] In the 1953, 1954, and 1955 questionnaires, the foreign aid subject was broken down into separate questions, that is, arms and military aid, and economic aid.

[3] In 1956, all foreign aid was treated as 1 question.

The Atomic Race for Peace

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, June 19, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Atomic Race for Peace," published in the Knoxville News-Sentinel.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ATOMIC RACE FOR PEACE

We are a country rich in conventional fuels—oils, gas, and coal—with which to generate electricity. We have power available, too, from falling water.

So generally speaking, there would seem to be no pressing economic reason to rush headlong at this time into big-scale production of electricity from the energy of the split atom.

Yet there are other factors when we consider our atomic-power program.

Primarily this: As the Nation which first used the atom for wartime destruction, we must be the leading nation in using the atom for peaceful constructive purposes.

The United States Atomic Energy Commission, or at least its Chairman, Lewis Strauss, believes we are achieving this leadership. The Commission is satisfied with its partnership, chiefly with private utilities, which is expected to create in 5 to 10 years a series of atomic powerplants. The Government will contribute, directly and indirectly, to these plants.

AEC's Chairman also is satisfied we are ahead of the Russians in this field. We wish the AEC didn't sound so complacent.

There are well-informed Congressmen who differ with AEC.

Some think the Government immediately should start a "crash" program, building atomic furnaces of the best possible design (some not now a part of AEC's program) to produce power, especially in remote areas not fed with adequate supplies of conventional fuels.

Another group thinks we should make big propaganda abroad by building atomic power reactors in underdeveloped, power—starved, friendly countries. They would be ready for our use, after adequate testing, when our conventional fuels begin to dwindle, as one day they will.

We don't want to see Congress set up an atomic TVA. We don't think the atom should be dedicated now to a wide-scale Government-financed public power program.

But we are convinced the United States must do all within its power to stay ahead of the world in the peaceful atomic power race.

If this requires some selective building by the Government of atomic power reactors here at home; if it requires Government building of atomic reactors abroad, we would favor this means of really implementing President Eisenhower's atoms-for-peace plan.

We believe that with the world in its present shape, confronted by the Russians' smiling duplicity—and remembering that they produced atomic and hydrogen weapons before our "experts" thought they would—we cannot take a chance with complacency.

This is a world-wide race we dare not lose.

National Library of Medicine

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 19, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Inheritance in Danger," published in the Boston (Mass.) Globe, of June 10, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INHERITANCE IN DANGER

Ever since man began to communicate with his fellows he has had a legacy to hand down to those who came after him more vital than the changing physical and mental characteristics of the body in which he dwelt.

This legacy was the library, the repository of human thought and recorded deeds of every generation. Whether it was left in grave or cave, in temple or monastery cell or university hall, on tablets of stone or scrolls of papyrus or on the vegetable pages that

take movable type, the library has been man's shortcut to achievement by inheritance.

For no idea ever sprang full blown from any brow, even that of genius. Nor does any man pass on what he has learned, no matter how painfully, in genes or chromosomes. It is the papers and books and pamphlets in which he records his trials and errors, his successes and failures and discoveries, his thoughts and opinions and guesses, that save each new generation the need to start all over at the beginning and retrace the steps their fathers have taken.

No one recognized earlier than New Englanders that this legacy must be kept safe and accessible, lest as on the neglected farm there be nothing left to share but a few crumbling bricks and the fragrance in spring of forgotten lilacs. Though many cities would wait until the 20th century for a coal baron to build them libraries, Boston was having its first public library almost as early as its first public school.

People from this part of the country, therefore, should have special interest in legislation which will be considered shortly by the Congress—Senate bill 3430. Introduced in March by Senators LISTER HILL, of Alabama, and JOHN F. KENNEDY, of Massachusetts, it is a bill to "promote the progress of medicine and to advance the national health and welfare by creating a National Library of Medicine."

It calls for the establishment of a library "decently housed, efficiently staffed, properly located, and adequately financed," to take over the functions and collections the Armed Forces Medical Library ineptly left for a century as the responsibility of a branch of government whose proper function is the defense of the Nation.

The bill was referred to the Committee on Labor and Public Welfare, after an eloquent speech by Senator HILL, himself son of a physician, with the able support of Senator KENNEDY. It is regarded practically as emergency legislation, and its support was urged on physicians who gathered here from all over the country for Harvard's Medical School alumni meeting the other day by eminent graduates.

For as the Hoover Commission's task force on Federal medical services stated, this is "the most important medical library in the world. * * * No other medical agency of the Federal Government serves the future of medical research so intimately and so widely as does this unequaled collection of books, journals and bibliographic services."

The Boston Medical Library already was 31 years old when the Armed Forces Medical Library was organized in 1836 for the Surgeon General. Boston's is one of the great medical libraries of the world, with 225,000 books and journals, 160,000 pamphlets, and yearly accessions of more than 2,000 books, 3,000 journals and 1,500 pamphlets. Its incunabula are zealously guarded but available to every physician in the area.

But greater than the sum of this and many other medical libraries over the country is that of the Armed Forces, the library which Senators HILL and KENNEDY so properly feel should be a first charge on the Nation, rather than a poor relation that happened to come and just has stayed for 120 years with one branch of Government. For it contains today more than 650,000 bound volumes with well over 1,000,000 titles. It is adding 25,000 volumes a year, and currently receives 5,000 medical periodicals. It should be protected but accessible to everyone in the Nation concerned with health.

Yet this "priceless treasure of medical literature" which, if it were once destroyed, not all the gold in Fort Knox could recreate," as Senator HILL told the Senators, has been so neglected that it is in constant danger. Books and charts and magazines of incalculable value are housed in a warehouse in Cleveland and in a structure in Washington built in 1887, condemned 30 years ago, as inadequate, and now in such condition that its iron columns have buckled.

This current Congress, like others in 1919, 1938, and 1941, authorized the expenditure of money for plans for a proper building, and committed itself to appropriation of necessary funds for construction of the medical library building. Nothing came of it. Nor is it especially surprising that the Secretary of Defense should decide not to ask for the apportionment of the money authorized by Congress in the face of the pressing demands of military budgets, though like other branches of government, the military have been reluctant to let anything go.

The solution, obviously, is to give the Medical Library separate status. The terms of the bill suggest a board of regents made up of the Surgeons General of the Army, Navy, Air Force, and Public Health Service, the Librarian of Congress, and 12 individuals appointed by the President wtih the advice and consent of the Senate. This board would name the director of the library without regard to civil service.

Medicine is moving far and fast. But the speed with which better health can be achieved depends on what men of medicine can learn from each other and from the experience of the past.

Surely no medical man can find fault with this legislation—in itself a refreshing experience for those charged with making the laws. But there should be more than tacit support for it, not only from doctors, but from a public forewarned of the dangers in the present situation.

Future generations could, with reason, class an indifference which permitted destruction of such an inheritance with the vandalism which sacked Rome and lost many of its treasures for all time.

UNCLE DUDLEY.

Convention of American Library Association and Citation of Merit to Judge Eugene A. Burdick

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release just issued by the North Dakota State Library Commission, relative to the convention of the American Library Association at Miami Beach on June 16 to 23. Mrs. Hazel Webster Byrnes, the director of the North Dakota State Library Commission, will represent my State at the convention; and I am very sure she will make as capable a delegate there as she has been an outstanding and devoted worker for the improvement and expansion of library facilities throughout North Dakota.

Let me also call attention to the fact that this convention at Miami will confer one of two 1956 trustee citations of merit upon Judge Eugene A. Burdick, of Williston, N. Dak. Judge Burdick is the son of the Honorable USHER L. BURDICK, long a Member of the House of Representatives from my State.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

North Dakota will be greatly honored at the convention of the American Library Association, Miami Beach, June 16–23. One of the two 1956 trustee citations of merit in the United States will come to North Dakota. Judge Eugene A. Burdick, of Williston, N. Dak., will be the recipient.

Recent word coming to Mrs. Hazel Webster Byrnes, director of the State library commission from Eleanor Plain, the chairman of the ALA jury on citation of trustees read: "It is my privilege to notify you that the ALA jury on citation of trustees has unanimously voted to award one of the 1956 citations of merit to Judge Eugene A. Burdick."

This citation will be given Tuesday, June 19, at 2 p. m. at the general session of the American Library Association held in the Municipal Auditorium at Miami Beach.

Mr. Burdick is president of the board of directors of the James Memorial Library, Williston, N. Dak., and his active participation has seen that library reopened and developed into a thriving institution. He is also a member of the State library planning board and his efforts are a continuous help in library promotion in the State.

Judge Burdick is a native of North Dakota, the son of the Honorable USHER L. BURDICK, a Member of Congress from North Dakota. In connection with his active interest in his profession which he has served as president of the State bar association, he has also taken a leading part in fraternal, service clubs and community affairs, and a special interest in library activities, local and State.

Letters of commendation for Mr. Burdick and his work represented many fields, law, research, journalism, civic affairs, banking, industry, as well as the library field. The State library commission has been very pleased and proud to submit his name for this award, and is also honored to have this recognition for North Dakota.

Judge Burdick has been invited by the American Library Association to attend and personally receive this citation. However, due to the press of trial work, it is impossible for him to be present.

Mrs. Byrnes will represent North Dakota at this meeting which is the 75th annual conference of the American Library Association and one of the Nation's largest professional gatherings. More than 4,000 librarians from all parts of the country will participate. The conference will have more than 250 business and program meetings covering all phases of librarianship.

Mrs. Byrnes is council member for North Dakota and coordinator of Federal Legislation. She will also take part in a workshop in adult education. Previous to the Conference of the American Library Association, Mrs. Byrnes will attend the convention of the National Association of State Libraries, which will be held June 16–17, also at Miami Beach.

Political Charges Regarding Voting on the Harris-Fulbright Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Grand Forks Herald,

published at Grand Forks, N. Dak., under date of May 31, 1956; another, appearing in the Minot Daily News, published at Minot, N. Dak., under date of May 26, 1956; and still another, appearing in the Bismarck Tribune, published at Bismarck, N. Dak., under date of May 26, 1956. The editors of these newspapers state in an effective way what they think of recent charges leveled at me by a political publication in North Dakota known as the Leader, published at Bismarck, N. Dak.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Grand Forks (N. Dak.) Herald of May 31, 1956]

LEADER LEADS WITH ITS NOSE

Blatant and unsupported charges of sell-out made against Senator MILTON R. YOUNG by the Leader, weekly publication of the Nonpartisan League, have boomeranged in the face of its irresponsible editor and his advisory board.

Called before a special committee of the United States Senate to support its inferential charges of bribetaking by the Senator, the publication's author-editor of the charges made an abject disclaimer of any intention to suggest the Senator had taken bribe money.

One K. W. Simons, weekday schoolteacher and weekend volunteer editor of the Leader, told the Senate committee he did not intend to imply in any way that Senator YOUNG had taken a bribe at any time.

The Leader's wild, though characteristic, charge against Senator YOUNG grew out of Mr. YOUNG's vote in favor of the Harris-Fulbright natural-gas regulatory bill, which later was vetoed by President Eisenhower.

"YOUNG Sells Out Again," read a front-page top headline, with a one-column subhead saying "CASE Bribe Recalls $5,000 MILT YOUNG Got From Dutchman."

Senator YOUNG asked the Senate's Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions to look into the publication's charges, and the Washington hearing was the result.

The Senate committee consisted of Senators MCCLELLAN, Democrat, of Arkansas, chairman; ANDERSON, Democrat, of New Mexico; KENNEDY, Democrat, of Massachusetts; BRIDGES, Republican, of New Hampshire; THYE, Republican, of Minnesota; PURTELL, Republican, of Connecticut; and GOLDWATER, Republican, of Arizona.

The committee, meeting May 24, heard Senator Young, Simons, and R. C. Nathan, of Jamestown, N. Dak., a member of the board of the Leader Publishing Co.

Excerpts from the Leader's article charging YOUNG with selling out again were read by members of the committee, including the following sentence:

"But facts like this never bother MILT, who is certain that the public memory is so short and the integrity of the North Dakota press so rotten that he is not likely to be tripped up on his contradictions, misrepresentations, and outright lies."

Here is an unreliable embryo journalist, drooling over his own words, calling the legitimate press of North Dakota rotten while his own nose was stuffed with the stench of the filth of yellow journalism that he himself was so ineptly trying to practice.

The daily press of North Dakota has always given small heed to the puppy-dog yelping of most of the so-called editors of the league's organ of personal abuse and misrepresentation.

Its meager circulation and known partisanship has marked it always for what this episode has again proven: That it is merely an organ of political venom, without responsibility and judgment, and steeped in the conviction that a sought-for end warrants any means, however disreputable.

Chairman MCCLELLAN, a Democrat, and, therefore no political partisan of Senator YOUNG, directed this blast at the Leader and its cringing editor:

"The article in the Leader charging Senator YOUNG with selling out again is that sordid and irresponsible type of journalism that resorts to a poisoned pen to contaminate the news and pollute the stream of public information through the medium of a free press.

"Now that it has been exposed for what it really is, it deserves no further attention by the committee."

The incident may be closed for the United States Senate with this vindication of Senator YOUNG, but it can hardly be closed for the many honorable and honest members of the Nonpartisan League, whose political partisanship does not make them forget honor and integrity.

This newspaper and every honorable citizen admires a good, clean political fight, in which principles are weighed honestly, and the outcome is not determined by lying, unsupported charges and the filth of gutter politics. We are sure the real league membership does not support such tactics.

[From the Minot (N. Dak.) Daily News of May 26, 1956]

THEY EAT CROW

If a couple of North Dakotans have stomach pains, it is due to eating crow—lots of it.

The dish was served up to them—Kenneth Simons and Robert Nathan—of the Nonpartisan League newspaper, the Leader, at a congressional hearing in Washington this week to air some irresponsible charges they had made through the paper against United States Senator MILTON R. YOUNG.

It was in the Leader issue of February 9 that a headline was carried: "YOUNG Sells Out Again." And underneath was a subhead: "Case Bribe Recalls $5,000 MILT YOUNG Got From Dutchman."

The accompanying story didn't say so, but it was obvious to many readers that the Leader was trying to get across the idea that Senator YOUNG had taken money for his vote on the natural gas bill.

Understandably, Senator YOUNG was incensed, and demanded the facts be aired, and as was expected when the lippy Mr. Simons and Mr. Nathan got to Washington they were revealed, by their testimony, as being eligible for the nonelective office of flannelmouth.

The charges were exposed, as was expected, to be lacking in all substance and leaking like a soup fork.

"Completely unsupported by any evidence whatsoever" was the label the Senate Lobby Investigating Committee put on the accusations made in the newspaper, and it added that both Simons and Nathan had testified that they "knew no facts or of any evidence that would show that Senator YOUNG was influenced improperly on any vote during his tenure in the Senate."

Thus, Mr. Simons and Mr. Nathan and the Leader are flattened like a bottom wheat cake on a 6-cake stack.

Senator YOUNG should be happy—he is completely vindicated, and while he talked for a time about collecting reparations through a lawsuit, it would be surprising if he doesn't forget about it because Mr. Simons and Mr. Nathan, under oath, seem to have made a round turn like a country haircut. Their testimony sounded like the last wheeze coming out of an accordion.

It would be surprising, however, inasmuch as history has no record of a satisfied loser, that the Washington hearing revelations will put a damper on the silly capers of the threesome.

[From the Bismarck (N. Dak.) Tribune of May 26, 1956]

ACCUSERS BACK DOWN ON CHARGES

A committee of the United States Senate has cleared Senator MILTON R. YOUNG of any implication of improper influence in his vote on the Harris-Fulbright gas price decontrol bill.

Witnesses associated with the Leader, political publication of the Nonpartisan League, admitted to the committee that they have no evidence to support insinuations there was anything shady about Senator YOUNG's support of the bill.

Confronted with a Senate committee's demand that they give, under oath, any reasons which might support such an insinuation, those who raised the cry of bribe backed water ignominiously and hastily.

Really, they hadn't meant any such thing at all, they said. All they had meant was that, in their opinion, some of YOUNG's votes in the Senate weren't in the public interest. They hadn't intended to imply anything immoral or illegal.

Oh, no. Not at all.

The close association of YOUNG's name with the word "bribe" was strictly accidental.

Actually, in their eyes, not only YOUNG but a clear majority of United States Senators are stooges who vote against the public interest. As a matter of fact, anybody who doesn't see eye to eye with these self-appointed protectors of the public interest is a stooge.

And, of course, if what you say for 50 or 100 people to hear embarrasses you afterwards, you deny your ever said it. That, friends, is guts; in reverse.

One of the most revealing exchanges at the Senate hearing went as follows:

Question: "Were you trying to destroy Senator YOUNG's character and reputation by this article?"

Answer: "Well, the newspaper is not favorably disposed toward Senator YOUNG."

In other words, however, base and unjustified, all is fair in war and politics, and if to score a political point on a political enemy character assassination by smear and association is expedient, go right ahead.

It brings back to mind the antics of two characters name Cohn and Schine who used the same technique when they were in the news a couple of years ago.

This should be the end of this matter insofar as the 1956 political campaigns in North Dakota are concerned.

Atomic Power and the Coal Industry

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. VAN ZANDT. Mr. Speaker, in the June 21, 1956, issue of the Public Utilities Fortnightly magazine, published by the Public Utility Reports, Inc., Baltimore, Md., there appears the following article in which I discuss atomic power and its effect on the coal industry:

ATOMIC POWER AND THE COAL INDUSTRY

(By the Honorable JAMES E. VAN ZANDT)

A new era of robust prosperity lies ahead for the United States coal industry. Our rapidly developing atoms-for-peace program is today one of America's largest coal-consuming industries, using approximately 20,200,000 tons a year for its own heat and

power requirements. And this vast atomic program already is expanding faster than United States coal production.

At present our atomic experimental plants are using 1 car of coal every 80 seconds, night and day, the year around. Experts in the Atomic Energy Commission estimate this demand likely will double over the next 5 years. Instead of replacing coal as a basic energy source, atomic power promises to test the entire coal industry, over the next decade, in its ability to keep abreast of the still unmeasured demands of atomic experiment and development.

From studies presented before the Congressional Joint Committee on Atomic Energy, of which I have the honor to be a member, I am convinced that we face, not the displacement of coal by the new A-power program, but rather the question, "Can coal keep up with the call to be made upon it over the next 50 years?"

Electric-generating capacity installed in the United States today measures 116 million kilowatts. By 1970 our demand will be 320 million kilowatts; and by 1980, 600 million. Only 18 percent—less than one-fifth—of our power today is supplied by hydro energy. With America's need for electric power expanding so fast, the ultimate problem is not which fuel may be crowded out of the market, but rather, what new energy sources may be developed to help carry the load?

Nothing could be farther from the fact than the suggestion that atomic energy eventually might close down our mines. The truth is that by 1980 (only 25 years forward) our atomic power production will be, at best, about 175 million kilowatts, against about 425 million kilowatts from fossil fuels. With our power requirements multiplied by 5 by 1980, today's conventional fuels in various forms still will supply approximately 71 percent, and atomic plants only about 29 percent of our total energy. Even after allowance for increased efficiency in coal consumption at steam plants, our coal requirements for power alone by 1980 would call for 5 tons for every 1 consumed today for electric power.

Neither shall we fear exhaustion of our fossil fuels. The Interior Department assures us that our potential supply of these fuels * * * is literally beyond the realm of accurate estimate * * * our resources are so vast as to apparently insure an adequate supply for any reasonable foreseeable period of time. Some official estimates say we have plenty of these fuels in reserve for at least a thousand years.

Recent history attests the ever-increasing efficiency of coal as our basic energy source. The Federal Power Commission tells us that in 1926 we required 3 pounds of coal to produce 1 kilowatt-hour of electricity. Today, less than 1 pound of coal produces the same energy for the transmission system—and engineers already are designing new boilers to give us 1 kilowatt-hour of electricity for only six-tenths of a pound of coal. When the productive energy obtained from a pound of coal thus can be multiplied by 5 over a period of only 30 years it is utterly unrealistic to harbor fears that the industry may be pushed out of the fuel market.

It is likely, too, that we cannot long continue to consume natural gas at our present prodigious rate. As these naturally limited supplies tend toward exhaustion, the replacement demand will fall first on coal. The Atomic Energy Commission calculates that by 2000 A. D. only about 1 percent of our electricity will come from oil and natural gas fuels—as against approximately 50 percent from those fuels today.

Production of gas and liquid fuels from coal also is progressing in giant strides. This new form of coal fuel is not yet competitive with direct-consumption coal, but easily could become so over the next 2 decades. The Atomic Energy Commission estimates that by 2000 A. D. as much as 76 percent of our electricity might come from such converted coal fuels. This is a fourth compelling reason why coal faces a future of sustained prosperity.

A second argument heard occasionally against atomic electric power programs is that, with Government investing heavily in every A-power project, the way is being paved for the eventual nationalization of the entire electric industry.

This argument neglects utterly the fact that private investments in A-power projects in the United States at the end of 1956 will total more than $175 million. Are these people investing in eventually state socialism.

We must not forget that until 1954, when the new Atomic Energy Act became effective, A-power remained a complete, airtight Government monopoly. Not only was it illegal for private enterprise to experiment in atomic research save under rigid Government tutelage; all atom research and development were under almost crippling security protection, which forbade even the theoretical discussion of scientific probabilities in normal public speaking and writing. During those 14 years (1941–54) atomic energy was a total state secret. It was as if the first automobile had been impounded by the Government, and no private experiment or development permitted until about 1905.

The problem of protecting our A-power defense systems still remains. That area of nuclear development necessarily must continue a stoutly protected Government monopoly, at least until international control treaties may be perfected. Meanwhile, the AEC has made great progress since 1954 in releasing research data not related basically to defense programs. This has been accomplished through the Eisenhower concept of active partnership between Government and industry, as outlined in the 1954 act.

Today there are 15 electric power plans under construction, in design, or proposed in pending AEC contracts, all for completion during the next 5 years. These plants will cost in excess of $1.5 billion, of which private enterprise will pay approximately half. Surely it is untenable to suggest that such companies as Commonwealth Edison, Pacific Gas & Electric, Duquesne Light & Power, Yankee Atomic Electric Co., Detroit Edison, General Electric, and North American Aviation are parties to a gigantic conspiracy to socialize the electric power industry.

To my mind, this type of planning on the part of our large cooperating companies refutes conclusively all arguments that Government participation in the nuclear energy program imperils private development of A-power electricity. To provide effective legal safeguards against such a takeover by Government, Congress in the 1954 act specifically and categorically forbade the AEC to engage in "the sale or distribution of energy for commercial use" save where such energy became available as a byproduct of Government research and development programs.

Through all human history timorous philosophical fears have argued against progress. The railroad was resisted in the first half of the 19th century because it might run over the farmers' cattle, sheep, and horses. In every generation there has emerged a small fringe of sabotage against mechanical and scientific equipment—even to the resistance offered by our own horse breeders early in the present century against development of the automobile; or the more recent campaign against the dial telephone, on the ground that it surely would displace and impoverish all manual operators.

Yet, in every case, the new industry came on, only to broaden the productive base of the entire economy, provide more jobs, bigger payrolls, more leisure for all. We know today, for example, that without the automatic dial phone there would not be available in the entire country enough capable telephone centrals to handle our present volume of local traffic.

Similarly, nuclear power is here to stay. It will not make us poorer, but richer. So long as the Government must continue to spend large sums every year in development of the atomic defense program, it is logical and sound to carry on the collateral studies for peacetime applications of the same power. The cost of these peace studies is relatively small, yet they promise to contribute magnificently to national development clear across the economic horizon. Indeed, they already have yielded vast benefits in medicine, agriculture, food preservation, electronics, and heat machines. Should all these fabulous byproducts of the defense program be neglected merely because they entail a degree of partnership and cooperation between Government and private enterprise?

Secondly, there are large areas of the earth which have no conventional fuels. Atomic power is the only hope of those regions for industrial progress. We have much to gain from industrial progress among the sandal-and-loincloth peoples of Asia, Africa, and Oceania.

England already is pressing her nuclear-power program under forced draft, chiefly because her coal resources are vanishing rapidly.

Russia is fully abreast of America and England in A-power technology. Shall we stand by to see communism take the lead in peacetime application of the atom?

Third, many areas of the United States are far removed from today's conventional fuels. Smaller unit package reactors, now well along in development, promise adequate power for those areas long before A-power electricity becomes truly competitive in our great industrial areas closer to fuel deposits.

True, A-power electricity today is perhaps 10 times more costly than power from conventional fuels, but this cost is coming down every month. At some point in the future A-power electricity must become competitive in our great metropolitan markets. Meanwhile, however, our power demands are increasing much faster than our generating capacity.

Government has a definite place in the development of new industries and new energy resources through all the experimental phases, for the entire national economy benefits from such progress. But our Government's support of scientific research and development in aviation during World War I did not entail nationalization or socialization of the aviation industry after 1918. Nor did Federal aid to wireless research in the early years of this century entail socialization of the radio and electronics industries.

Free enterprise has its own great strengths and values. Government research in new fields of technology, as a function of national defense, does not weaken or destroy the ultimate values of freedom.

Perhaps the most convincing answer to the charge that the atom may bankrupt our coal industry has been given by the National Coal Association. This organization, which represents most of the bituminous-coal tonnage produced in 26 States, certainly has as great a stake in the Nation's energy program as any individual company or other association.

The following two paragraphs are from a resolution adopted by the National Coal Association and submitted formally to the Congressional Joint Committee on Atomic Energy:

"I. In the progression of humanity, in furthering world trade, in advancing the cause of peace, and in maintaining the world leadership of the United States, there is a need to continue Government sponsorship of the development of nuclear energy. To this end,

the National Coal Association recognizes the need for the Government to support the national laboratories and to carry out the basic as well as applied research in the field of atomic energy.

"II. Future development of economically feasible nuclear power is necessary to provide power for underdeveloped areas of the world, to assist nations which have power shortages, and to protect the future of the United States in the power field. The National Coal Association therefore recognizes the need for the Government to continue the power demonstration program to optimize the conditions under which atomic power is generated."

Tom Pickett, executive vice president of the National Coal Association, came before the Joint Committee on Atomic Energy and stated unequivocally that the coal industry has no fear about the development of the atom for peacetime uses. He submitted his own studies showing that the Nation will need at least twice as much coal by 1980 as was produced in 1955. Mr. Pickett, like other coal industry spokesmen from whom we have heard, asks only that cost figures and other unclassified information pertaining to the reactor program be made public.

Speaking for myself, I can assure the American people that we of the Congressional Joint Committee will not permit the peacetime application of atomic power to undermine in any way our private enterprise system. I intend to make certain that—as implicit in the new atomic energy law—there shall be no permanent subsidies once the research and development stage is past.

We will do whatever is possible to bring about competitive nuclear power to the benefit of all the people of the world, but there will be no subsidization beyond the research area.

My one intent is to support the program to the extent necessary for the betterment of mankind. If in the process of carrying out this program any Federal official or other participant attempts to advance the cause of state socialism in the electric power industry, I shall vigorously oppose such action, and shall, without hesitation, make my suspicions known to the American people.

National Library of Medicine

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "National Medical Library," written by Dr. Sara Jordan, of the Lahey Clinic, Boston, Mass., for Gastroenterology, a national and international journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL MEDICAL LIBRARY

The medical profession has an opportunity at the present time to indicate to Senator LISTER HILL, of Alabama, and Senator JOHN F. KENNEDY, of Massachusetts, their enthusiastic approval of a bill (S. 3430) sponsored by these gentlemen, to create a National Library of Medicine to "promote the progress of medicine and to advance the national health and welfare." The Medical Task Force of the Hoover Commission recommended the establishment of such an institution, and this bill was devised and is now under consideration to bring it into existence. By the terms of this bill, this library is to replace the present Armed Forces Medical Library (formerly the Surgeon General's Library), part of which is now precariously housed in a condemned building in Washington, the rest being stored in Cleveland. The National Library of Medicine is intended by this bill to be an entirely new institution, separated from the Department of Defense. It is to have autonomy under the direction of a Board of Regents to be composed of the Surgeons General of the Army, Navy, Air Force, and Public Health Service, the Librarian of Congress, who shall be ex officio members, and 12 individuals appointed by the President by and with the advice and consent of the Senate and without regard to political affiliation. These 12 members are to be chosen from all fields of medicine and its allied branches. This Board is to be authorized to construct a suitable building and to organize and administer the new library to house and safely preserve the volumes (almost a million), collections, records, and equipment presently constituting the Armed Services Library, and to organize, catalog, and make available to the profession this material, as well as to acquire new material and provide reference and research assistance. As an autonomous institution, it will be authorized to hold and administer gifts and bequests which might very well become a lucrative source for medical research. The necessary funds for the construction and development of this library are to be appropriated by Congress under the provisions of this bill, and with the addition of independent gifts and bequests this medical library, now one of the largest in the world, might become, like the National Art Gallery, one of the Nation's great institutions. The American Gastroenterological Association has already indicated its approval of this bill by a communication to Senator KENNEDY, but the individual support of all physicians should be given to these Senators who have so effectively planned this great opportunity to serve medicine and mankind.

House Revolt on Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "House Revolt on Foreign Aid," written by Constantine Brown and published in the Washington Evening Star of June 11, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSE REVOLT ON FOREIGN AID—SENATOR ALSO EXPECTED TO BACK SLASH DESPITE EISENHOWER'S AND DULLES' PLEAS

(By Constantine Brown)

Neither the colored charts and graphs presented to Members of Congress to prove how essential economic help is and how carefully it is being dispensed nor the personal intervention of President Eisenhower could forestall the House cuts of more than a billion in foreign aid.

The reason for the ineffectiveness of the intervention of the highly popular Chief Executive was the sentiment of the country's grassroots which the legislators could not ignore, particularly in this election year.

Many of the congressional leaders have taken swings, especially through the Middle West. They found an overwhelming opposition to indiscriminate support to foreign nations—some of whom are only fair-weather friends of ours.

The large volume of mail reaching Senators and Representatives from their States and districts also has put them on guard. These letters, except those obviously inspired by the usual pressure groups, are strongly against full acceptance of the administration's figure for foreign economic and military assistance.

To these considerations must be added the fact that the representatives of the executive branch have not made a very convincing case. Moreover, many Congress Members have now a firsthand knowledge of conditions abroad and do not believe that the approval of aid amounting to nearly $5 billion is justified.

They also know from their own personal investigations that while the governments in Western Europe, for instance, have not fallen completely into the Red propaganda trap that war is now unthinkable, the people themselves have become convinced that the war clouds have completely dispersed. And in the constitutional countries the people hold the fate of the governments in their hands.

The people abroad see no reason for any kind of military preparedness even if this means only a relatively small outlay of the European taxpayers' money. They would rather have their young men work in remunerative jobs in industry, commerce, and on farms than serve in the military services for 18 or 24 months.

They see in our mild flirtation with the U. S. S. R. a confirmation of their optimistic beliefs that there will be no wars during this or the next generation.

These facts were laid frankly before President Eisenhower last week when congressional leaders representing both parties and Houses spent hours with him explaining why his plea to restore at least $600 million to the military-assistance program will not be heeded.

The expectation of some of Mr. Eisenhower's lieutenants that the Senate may be less obdurate than the House is likely to be wrong. Normally this is the case. There are only 96 Senators and it is rare when more than 84 are present for the vote on a major bill.

The White House and the State Department have done a good lobbying job.

A number of the opponents of giveaway programs from the Middle West have softened up already. Some are running for reelection. They either want full White House support or do not want to bear the stigma of having voted against the wishes of the Commander in Chief.

Others have waited for a long time to obtain patronage in the form of judgeships for important constituents. Their requests have been kept on ice and they have been given to understand that if they vote on a somewhat watered-down measure dear to the hearts of the administration, their candidates' names will be sent to the Judiciary Committee for confirmation.

Despite these maneuvers an informal poll taken by the majority and minority leaders has shown that under the best circumstances only a pittance may be added to the revised foreign aid bill as passed by the House. It was explained to the President last Tuesday that the token sum would save the administration's face and would be accepted by the Senate and House conferees.

The approval of the $600 million increase asked by the White House would only produce a deadlock which might kill the whole bill.

Secretary Dulles, whose prestige stands much higher than that of some presidential advisers such as Mr. Eisenhower's secretary for disarmament, Harold Stassen, has worked hard to convince Senators in both camps of

the necessity to bolster the administration's foreign policy.

But he has no satisfactory reply when he is asked by legislators in private conversations how he could explain, if he were a candidate for elected office, our response to the smiling policies of the Kremlin team and still expect our allies in Europe to continue to arm.

And if the armament question is pushed in the background by our allies, how could the American taxpayers be persuaded to continue to give until it hurts?

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Must Make a Choice," from the Indianapolis Star of June 14, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE MUST MAKE A CHOICE

Why does American foreign policy often seem so indecisive—to move in two directions at once?

Why has our foreign-aid program failed in its avowed objective of making our Allies stronger and weakening the Communist bloc?

Why do so many formerly friendly nations, nations that looked to us for inspiration and leadership in their search for national independence and individual liberty now regard us with suspicion and distrust?

The answer seems to be that the United States is now trying to follow two contradictory foreign policies at once. One is a wholly new approach for Americans. The other is our traditional national foreign policy.

Our new policy is to try to build, with economic and military aid programs "positions of strength" among our allies to make a bulwark against Communist advances. This is no new tactic. Great nations from Rome to Britain have successfully followed this course for long periods. Why were they successful and why are we not? They were successful because when they gave "foreign aid" they expected and got a specific return for it. They bought Allies. They financed entrenched regimes and kept them in power. They imposed conditions on every farthing of aid and every piece of military equipment they sent out.

We have not done this. We have given aid without strings attached. We have not used our aid as bribes, as lures to cooperate. We have not forced upon our Allies policies and actions subordinate to our own. Why not?

Here we come to the other fundamental American policy or principle, which is in conflict with the above imperialistic design. Americans have never—except in part in recent years—tried to be an imperialistic nation. We have always supported the rights of all peoples and all nations to self-determination and self-government. When we have aided others, it was always from generous, humanitarian impulses, and never with the hope of a quid pro quo. We have not sought to buy allies or buy off enemies. We have consistently encouraged the nationalistic aspirations of colonial peoples because of our own anticolonial history.

So, when we try to give foreign aid in the hope that other countries will join us in common cause against the Communist enemy, it runs counter to our national character to demand a quid pro quo to impose conditions. So we don't do it. But you cannot make an imperialistic policy work unless you are willing to go all out and be an imperialist.

A good case can, of course, be made for such a policy for Americans. We no doubt could impose by our material and military strength a Pax Americana. We could tell the British to quit trudging off to Moscow for trade and cultural deals or we give no more help and demand our loans be repaid. We could tell India to cooperate or else lose any hope of economic aid from us. We could impose conditions on every cent we spend in allied countries and force them to toe the line or be left without a protector. We might very well be able to impose that Pax Americana which could last for generations.

But, as Jesus Christ once put it, "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" What shall it profit Americans if we gain a Pax Americana in the world by force and bribery and lose the precious heritage of liberty, humanity, and respect for others that compose our own national soul? If we adopt the methods of imperialism in order to combat imperialism, will we not be surrendering to the very principles of tyranny and force which our fathers and brothers fought to eliminate in our own land and in other parts of the world?

It is senseless to continue our present foreign-aid program on such a scale unless we adopt imperialistic methods. It will not work, as it has not worked after 10 years and $65 billion. We must choose another course. We must choose a course that embodies our own American traditions and the principles that led up to greatness as a country and as a people.

Unfortunately Americans will, this year, have a difficult time making such a choice. The national leaderships of both major political parties are still committed to the dual policy—half imperialism, half self-determination. At the top our people cannot, it seems, force this choice upon our leaders. But they can do so in local elections and with local candidates. They can demand that they be given a choice to vote for either a policy of frank imperialism or a policy based on respect for the rights of other nations, support for the liberation of all people wherever they are dominated by foreign countries, and the maintenance of enough military power here in America to protect ourselves and our allies.

It is our belief that if that choice is offered to Americans today, they will reject imperialism and choose the traditional American way. This does not mean a return to isolationism. Americans have always been willing to give aid and support—without strings—to people suffering from catastrophe or threatened by conquest. They will continue to be willing to do so on a selective basis. Americans have always believed that this country leads best of example, by inspiration to others, by generous understanding of the aspirations of all for national independence and personal freedom. They wil continue to believe that and act upon it. Americans have always believed in "talking softly and carrying a big stick." And it is part of our heritage to cry out "Millions for defense but not one cent for tribute."

By keeping strong, by sticking firmly to our American principles, by supporting the hope of freedom for all peoples behind and in front of the Iron Curtain, Americans can do more to preserve freedom and peace than we can by bribes, threats, or cajolery.

If this is not true, then all is lost. If we must adopt the methods of imperialists to defeat imperialists, then there is no hope for free men. If the ideals and dreams of Americans—and of all people yearning to be free—are now dust and ashes, we can only look forward to the eventual replacement of one tyranny by another and it matters little which wins.

This defeatism about liberty Americans must reject if they are to save their own souls. In making their choice they will certainly nobly save or meanly lose the last, best hope on earth.

The Philippine Scouts

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present a letter I have received from the American Legion commending the members of Subcommittee No. 1 of the House Armed Service Committee for action in approving H. R. 11787, the Philippine Scout bill. I am sure the members of the subcommittee will appreciate this commendation as I do, and I feel it will be of interest to all the Members of Congress:

THE AMERICAN LEGION,
NATIONAL LEGISLATIVE COMMISSION,
Washington, D. C., June 19, 1956.

Re H. R. 11787, Philippine Scouts.

Hon. OVERTON BROOKS,
Chairman, Subcommittee No. 1, House Armed Services Committee, House Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: The contractual obligation of the United States Government to pay its soldiers cannot be lightly brushed aside and forgotten, as it was in the case of the Army's refusal to pay a small part of the Regular Army known as the Philippine Scouts, because one day the truth will be known and justice will prevail.

It is, therefore, with a deep sense of gratitude that I address you and the members of your subcommittee today, following your stamp of disapproval upon the arbitrary action referred to above. It is even more significant that you have, after considered judgment, initiated H. R. 11787 to mandate payment of "soldier's pay" to the approximately 5,000 surviving Philippine Scouts or their widows that was denied them more than 10 years ago.

The gross injustice has been keenly felt by the Scouts who had been a part of our Army for 40 years, and who had served with loyalty and heroism worthy of emulation. Further aggravating the deplorable situation was the fact that the Navy, using the same law as the Army used to deny pay to Philippine Scouts, paid their Filipino naval personnel who had been in identical status with the Scouts and, in addition thereto, the Navy also paid its civilian employees in the Philippines. Moreover, the Congress of the United States authorized compensatory pay to American civilians caught behind the Japanese curtain and who remained in the Philippines during the occupation. Presumably this was done because the United States Goevrnment was powerless to do anything to bring aid or relief to these persons.

Our Government also saw fit to reimburse certain welfare agencies and religious groups

for the losses sustained or for services rendered. Can we do less for our soldiers who fought for us, and suffered for us, so long as they remained loyal to the United States? We believe the answer is obvious, and that your subcommittee's bill, H. R. 11787, will be approved by the Congress.

In behalf of the American Legion I hereby express to you and each member of the subcommittee our sincere appreciation for your recognition of our Nation's contractual obligation to our soldiers, and for your action to the end that simple justice may prevail.

Sincerely yours,

MILES D. KENNEDY,
Director.

Health Service Is a Basic Right of All the People

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. BERRY. Mr. Speaker, one of the major responsibilities of Congress today is to take an increasing interest in the human factors as well as the economic aspects of American life.

For this reason, I want to call the attention of my colleagues to a new study which has just been published, dealing with the general health situation of the American people. And surely national health is a foremost human factor which deserves the consideration of Congress today.

Only recently off the presses, the study entitled "Health Service Is a Basic Right of All the People" is one of the most competent which I have noted in this field in recent years. It brings together the latest facts on the state of the people's health and the facilities available to keep us well. This study was done under sponsorship of the Public Affairs Institute, Washington, D. C. The institute is a nonpartisan, nonprofit research organization.

It is especially significant, I think, that the words in the title of this new study are the same words used as the guiding premise for the President's Commission on the Health Needs of the Nation.

It is equally significant that this institute, which seeks to promote wide public knowledge and appreciation of currently important problems, chose to deal with the topic of America's health needs at this time.

Dewey Anderson, doctor of philosophy, director of the institute, drew on the findings of a large number of research specialists in compiling the data used in this publication.

My colleagues will be especially interested, I know, in the general approach to one aspect of the national health situation. In the foreword to his publication, Dr. Anderson wrote:

The author holds the view that all the professional health services should be licensed strictly by the State and each should be policed by its own professional organization to insure the satisfactory and ethical performance of its tasks. That this is the surest way to protect the public from unprofessional conduct. The author is not frightened by charges and countercharges leveled by one group of practitioners at another. For he has given considerable time to the objective study of the merits of such attacks, and seeks in his summaries, handicapped as they are by necessary limitation of wordage, to present reasoned conclusions. The final judgment naturally rests with the reader.

I would certainly say to my colleagues here today that this is a most concise and fair-minded way to begin such an exhaustive summary study by a man who has been trained in the social sciences and has had long experience in examining data and writing his findings in this and related fields.

The purpose of this new booklet, I should point out, is "to present in condensed form for ready reading and reference the main points made by the President's commission" in its recent 5-volume survey of the health needs of the Nation, according to Dr. Anderson.

In a review of this new survey, Glenn E. Long writes in Healthways magazine that—

From all that is presented in the booklet, it is obvious that the national health level is not as high as it should be. It is equally obvious that there are not enough doctors in the recognized branches of healing, and not enough hospitals and other facilities to provide the required care to maintain national health at a maximum level.

That is one reviewer's summary, but I encourage my colleagues to read for themselves the facts as summarized in this new Public Affairs Institute booklet so that they may draw their own conclusions.

Considering it true that a shortage of doctors exists to provide maximum national health, I think it is especially noteworthy that Dr. Anderson included in his study a review of the Doctor of Chiropractic as an integral part of America's health personnel.

It is the intention of the author to treat the various professions separately in order to more fully cover the contribution of each to the Nation's health. One of these has now appeared as The Present Day Doctor of Chiropractic. Here we have a penetrating unbiased study of a comparatively new arrival on the American health scene.

Dr. L. M. Rogers, executive secretary of the National Chiropractic Association, says "there is no doubt that this current study is providing a fine, factual basis for constructive nationwide discussion of our profession and its progress."

Science Sidelights comments that "since every profession is built upon a body of knowledge which has developed over a period of years, Dr. Anderson correctly appraises chiropractic in the light of certain concepts which are regarded as well accepted by the public at large."

And, in one phase of the study on chiropractic, Dr. Anderson says:

From a handful of patients somewhat more than half a century ago who came to D. D. Palmer (chiropractic's discoverer), and got relief, those being cared for by today's chiropractors number many millions. And every year the number swells as chiropractors become more proficient and as their satisfied and healthy patients spread the word. Here is the best and final test of an emerging profession seriously serving the public.

Here, I believe, lies an important fact. In an era when there is a shortage of doctors and of health facilities, we find the fastest growing branch of the healing profession. In its 60-year history, chiropractic has grown to become the second largest branch of the healing arts with over 25,000 doctors now licensed to practice this important healing profession, dedicated to public health and welfare.

The importance of Dr. Anderson's study is seen in this opinion from Science Sidelights that—

Since this is the first time that an independent and unbiased study of the chiropractic profession has been published, the author's findings are of great interest not only to chiropractors but to the public at large.

The author himself writes:

In these modern days of our high-speed, nerve exhausting living, chiropractic is fast becoming an indispensable element in helping people maintain good health.

And he says:

Add to the foregoing the fact that the doctor of chiropractic is striving to build his profession, to meet his social responsibilities, to take his place as a leader in the community.

Insofar as America's national health is concerned, it is vitally important that more and more people turn to the art and science of healing so that we may, as a Nation, cope with the increasing problems and responsibilities, in this area of human living.

Therefore it is of interest that Dr. Anderson concludes his special study on chiropractic by saying that "the profession itself is so ardent about its future that nothing can stop doctors of chiropractic from being devoted public servants and becoming better ones with the passage of time."

Mr. Speaker, I call attention to these studies of Dr. Anderson because I believe they both contribute much to the knowledge that is needed in America today so that we may better meet and solve our problems of human living for the benefit and betterment of all our citizens.

The Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Star of June 10, 1956.

It is time, as this splendid editorial says, to recognize that our foreign aid program cannot be patched up. It has never worked, and it never will.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT CAN NEVER WORK

The foreign aid program should not be cut by $1 billion, as proposed by the House Foreign Affairs Committee. It should be completely abolished.

The big push is on to restore cuts in the foreign aid program and all the influence of the Eisenhower administration is being brought to bear to keep the program going as before. But more and more opposition to foreign aid is appearing in Congress. There is a reason. Congressmen up for election have been hearing from home.

Look what happened to Senator GEORGE, of Georgia, a supporter in the past of foreign aid. He was ousted without even a fight by Herman Talmadge, who opposes continuance of the foreign aid program.

Look what happened to Senator WILEY, of Wisconsin. He failed to receive the backing of the Republican organization and was replaced on their ticket by a vigorous opponent of foreign aid.

The American people have got more common sense than their leaders in Washington. They have watched the Government spend $65 billion in economic and military aid abroad, and what did they get for it? The NATO alliance is virtually defunct. Countries like Yugoslavia, India, and Egypt, which have received our aid, have turned their backs on us. Britain and France, while taking our help, have begun wooing Moscow for trade and cultural relations. The Soviet Union could take all of Europe within a matter of days because our allies have refused to build their own defenses and depend instead on us to defend them.

Suppose you had a neighbor who for 10 straight years spent thousands and thousands giving away money to people who promised to help protect him from bandits. And suppose these people kept on taking his money and spending it for high living instead of guns and barricades. Suppose they began to visit the bandits and make deals with them for an exchange of food and materials. Suppose that at the end of 10 years the bandits were more dangerous and stronger than ever, the people your neighbor paid were weaker and less united, and it looked as though they were going to treat the bandits even better than they treat your neighbor. Yet he still keeps on paying them at the same rate in the hope that maybe next year they will change.

Wouldn't you call your neighbor a plain damn fool?

Well, that is just what our Government has been doing with foreign aid.

We are told, "The world is a sick patient kept alive by foreign aid." Nuts. The world is a sick patient because we give him sedatives and keep him in bed. If we made him get up and walk, he would. If we made our allies face their own problems, economic and military instead of shielding them from having to do so, they would get well mighty quickly.

We are told that we have had 10 years of foreign aid and that has produced 10 years of peace. Again, nuts. We have had two wars—in Korea and Indochina—in those 10 years. And even if we had had peace, the fact that we have been giving away American taxpayers' money during that period isn't necessarily responsible.

It makes just as much sense to say that we have had 10 years of record automobile production in the United States. And we have had 10 years of peace. So that means that if we keep on having record automobile production we will continue to have peace? What kind of ridiculous logic is this?

The truth is that none of our aid programs has been responsible for peace. Does NATO keep peace in Europe? The Soviets have a 10-to-1 advantage over NATO forces and could take Europe in a few weeks. Why don't they? Only because they fear the retaliatory military power of the United States. It is our power, and our power alone, that has kept the peace—such as it is. Foreign aid has brought us nothing but bigger deficits, lost friends, and the disrespect of our allies. In the 10 years we gave away $65 billion the Soviets have grown stronger, our allies have grown less united and militarily weaker, and several of our beneficiaries have virtually abandoned us.

Why keep on spending money which does us no good when we could be spending it on planes and ships and bombs that would assure our own safety—and at the same time assure the safety of our allies?

Foreign aid cannot work as present and past administrations have hoped it would work because the whole program is based on foreign policy that is schizophrenic, as Dorothy Thompson calls it. It can only work if the United States becomes frankly imperialist and demands, as a return for our aid, actions by those receiving it that support our policies. We must use foreign aid to impose a Pax Americana, or else abandon the whole idea that peace can be won by this method. It is against America's traditional principles to impose conditions for aid, to force allies to follow our direction. Our belife in self-determination conflicts directly with our attempts to buy allies. If we are true to these traditional American principles, we can never make a foreign-aid program work for America.

We will have more to say on this subject in the next few days.

Jim Hagerty's Job

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. SCOTT. Mr. Speaker, all of us have followed with close attention the reports on the President's condition during his stay at Walter Reed Hospital. I am sure that we will all agree that the public and the press have been kept fully informed of all developments. This is as it should be, and I feel that the man chiefly responsible for keeping the public informed has done a magnificent job. James C. Hagerty, the President's press secretary has received numerous commendations in the press for his forthright handling of the situation. In this connection I would like to insert in the RECORD an editorial from the Washington Evening Star, June 11, 1956, and the John M. Cummings column in the Philadelphia Inquirer, June 14, 1956:

[From the Washington Evening Star of June 11, 1956]

JIM HAGERTY'S JOB

This morning's bulletin from Walter Reed Hospital reflects the President's steady progress toward recovery from his operation Saturday morning. And now that the crisis atmosphere has passed, the bulletin also serves to remind one of the splendid job which has been done by Jim Hagerty, the President's press secretary.

Mr. Hagerty is getting to be an old hand at this sort of thing. During the long weeks after the September heart attack he manned the information post in Denver and kept the Nation posted on Mr. Eisenhower's condition. That ordeal is not likely to be repeated this time, for the President seems to be out of the woods and well on his way to a resumption of the quieter White House routine. Nevertheless, it was a rugged weekend for Jim Hagerty—14 press conferences on Friday and Saturday, 37 hours without sleep, etc.

This, of course, is his job. It is what he is supposed to do when the need arises. Still, this country has never seen anything quite like the handling of the news of Mr. Eisenhower's two illnesses. Never before have the people been kept so fully informed on a matter of such vital importance to them. To be sure, this was both the right thing and the smart thing to do. But it also was a job that could have been badly botched had it been entrusted to less competent hands.

[From the Philadelphia Inquirer of June 14, 1956]

"CANDOR" A GOOD NAME FOR JAMES "C." HAGERTY

(By John M. Cummings)

There are times when we feel the initial "C" in the name James C. Hagerty stands for candor. Jim is the White House Press officer. He is the public-relations man who sees to it that the reporters, the television and radio blokes on the White House beat are kept well and truthfully informed on the activities of President Eisenhower.

In the present emergency springing from the operation on the President to remove an intestinal obstruction Jim Hagerty has been every bit as frank as he was last year in handling the news of Mr. Eisenhower's heart attack in Denver. And in this policy of laying everything on the line he has the full approval of Mr. Eisenhower.

Candor pays off in confidence. Now, if Jim Hagerty had resorted to the technique of beating around the bush, of trying to conceal what should be fully exposed, suspicion would have crept into the public mind. Lincoln it was who said something about the futility of trying to fool the American people. You may get away with it for a time but eventually the truth will out, generally to the embarrassment of the fakers.

The whole world knows exactly the nature of the operation performed on the President at Walter Reed Hospital. It was explained in detail by the operating surgeon. For the benefit of the press he drew on a blackboard a diagram showing exactly what was done to relieve his distress.

It was conceded the President's condition called for an emergency operation. It was major surgery. There was no pretending that what was to be done was something on the order of removing a wart from the little finger of the left hand. It was not an unusual type of surgery. As Governor Harriman of New York remarked, it was the sort of emergency that might come into the life of any person.

Jim Hagerty deserves a lion's share of the credit for frankness and candor in White House press relations. It was not always so. Jim is a chip of the old block. His father, James A. Hagerty, was for many years the top political writer of the New York Times. Young Jim himself started out as a political reporter, but gave it up to become the press relations officer of Gov. Thomas E. Dewey when he first went to Albany.

Americans of every political complexion are concerned for the health of the President. But they are no longer worried. They have learned they can accept as gospel the bulletins on his recovery issued through Jim Hagerty. They received their first lesson in this refreshing candor following the Denver heart attack. Now their faith is reaffirmed in the handling of the present illness.

The attending physicians tell you that Ike's recovery will be more rapid than in the Denver case. This was emphasized by the fact that within 48 hours after the operation he was permitted to walk.

While it may be distasteful to make comparisons, it is difficult to avoid recalling the far different attitude of the men close to President Roosevelt in the final months of his life. He was renominated in Chicago in

the face of the knowledge on the part of Democratic leaders that he could not reasonably be expected to last another year. He died a few months after taking the oath for the fourth time. There was no candor in his case; no effort truthfully to advise the people on his condition.

Politicians, labor leaders, yes, so-called public-relations experts, would be well advised to observe carefully the work of Jim Hagerty in Washington.

Coming to the Aid of Cotton

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. HAGEN. Mr. Speaker, for some time it has been apparent to me that the attempt to bring prosperity to cotton growers by establishing a guaranteed profitable price is comparable to attempting to cure cancer by the administration of opium. The patient receives some temporary relief from pain but the favorable prognosis of this disease is hindered. Moreover, the acceptance of pain relief as a cure is a deterrent to the development of a kind of program which will effect cures. It was for this reason that I voted against a return to rigid 90 percent of parity for cotton and other basic crops, and it is for this reason that I have introduced legislation which I feel is a better solution to the cotton problem. The legislation I refer to is my bill, H. R. 11478, which would provide for a referendum among cotton growers and if two-thirds of their number or producers of two-thirds of the volume of cotton approved such a program, $1 per bale assessment would be levied to provide a fund for the establishment of expanded research and promotion programs in connection with cotton fiber production, usage, and sale. This legislation has been very favorably received in various parts of the Cotton Belt. Among other comments to date, I include herewith an editorial from the Hanford Sentinel, dated June 6, an article from the June 12 Fresno Bee, an editorial from the Memphis Cotton Trade Journal, dated June 1, and an editorial from the June 16, Fresno Bee:

[From the Hanford Sentinel of June 6, 1956]

COMING TO THE AID OF COTTON

Congressman HARLAN HAGEN's proposal to finance cotton research on a massive scale through collecting a fee on each bale of cotton sold rings true with reason.

HAGEN has introduced legislation to put this proposal to the farmers in a referendum. It deserves industrywide support.

The main problem with cotton today is overproduction. The demand cannot keep up with the supply. Consequently the Government must buy the surplus in order to keep the farmers from going broke. This oversimplication of the cotton difficulties does not present all the aspects, but that's the general idea.

To complicate the demand-supply squeeze is the constant improvement of the synthetic fiber industry. Textile material is being built up from wood pulp, petroleum, coal and other common substances to offer real competition to cotton. This reduces demand, and increases the surplus.

What is obviously needed are ways to use cotton more. Create more uses, broaden the market, sell the surplus for manufacturing in the wider field, and the cotton problem dissolves.

The ideal situation, from the farmer's standpoint, is grow crops that enjoy such a high market demand that the need is never quite met. Then prices are stable at a high level.

HAGEN'S proposal was suggested to him by cotton growers of the San Joaquin Valley. It makes good sense.

The idea is to have the Secretary of Agriculture collect a sum of money on each bale of cotton marketed, possibly $1 per bale. The money would then be paid to the National Cotton Council to supervise and conduct research on a nonprofit basis.

To be most effective the research should not be restricted. Perhaps physicists would be able to find ways to improve cotton strains, making it more adaptive to manufacturing needs. Perhaps important gains could be made in methods of harvesting and ginning.

Perhaps the research would find new uses for cotton fibers, in chemical treating, blending with other fibers, improved ways of weaving and spinning.

Perhaps some completely new use could be found. The printing industry, for example, is sore-pressed with shortages of newsprint, the paper on which newspapers are printed. A ready market would be clamoring for a cheap, strong, cotton paper.

There is no way to tell where such research might stop, when one thinks of all the products that have been developed from common coal, for example.

There are several precedents for this cotton-research idea. One is the wool program. Another is the California beef promotion levy. Citrus growers of this State have long realized the values of pooling efforts to improve the product and its distribution.

Cotton is still king. But the kingdom is under threat from many powerful quarters. It needs this basic, strengthening research program.

[From the Fresno Bee of June 12, 1956]

TEXAS COTTON LEADER PROPOSES FARMERS START RESEARCH FUND

DALLAS, TEX.—If cotton is to insure its long-range future, cotton farmers should begin thinking about paying from $1 to $1.50 a bale into an industry fund for research and promotion.

This proposal was advanced here today by W. T. Wynn, a Greenville, Miss., cotton leader, in an address to the Texas Cottonseed Crushers Association. Emphasizing cotton must choose between research or recession, he pointed out that with an average 12-million-bale crop the collection of from $1 to $1.50 a bale would yield $12 million to $18 million annually for work on cotton and cottonseed probems.

Wynn, the chairman of the board of directors of the National Cotton Council, said, "In no other way can I envision that over the long pull we will be able to give cotton a truly adequate research program."

MUST ALWAYS PLAN

"I make this proposal knowing we have made great progress and that fine work is being done in Government and private research laboratories, and in our textile schools and textile mills. I make it, too, knowing we must continually plan for the future."

The $12 million fund admittedly is but a start, he said, toward matching the money which is being spent by producers of man-made fibers, but is enough to get into a really effective program of research and promotion.

The idea of farmers assessing themselves for their own protection is not a new one, Wynn declared, noting that in the Mississippi Delta cotton producers for 50 years paid $1 a bale each year for levees to protect their lands from floods. In many of these years the price of cotton was less than 10 cents a pound.

"The threat to the cotton industry by the Mississippi River was no more real," he warned, "and not nearly so permanent in nature as the threat now facing the cotton farmer—the threat his livelihood will be swept away by the flood of synthetic fiber production."

COMPARES FUND

Wynn pointed out about $14 million annually is being spent by all agencies on cotton research as compared with $60 million for synthetic-fiber research and development.

The speaker said cottonseeed has lost to soybeans in the vegetable-oil market much as cotton fiber has lost to synthetics. Research has improved the quality of soybean oil as well as lard, another cottonseed oil competitor. Major work is needed, he said, on such problems as improving the color of cottonseed oil.

Among many research needs for cotton fiber he listed, increased efficiency toward lower prices, staple length uniformity, greater strength, better insect and disease control, and improvements in marketing, ginning, and manufacturing. There is need, he said, for research to give cotton greater resilience, and resistance to heat, acids, and weathering.

If the research gap is not closed, he warned, the industry can expect too an annual decline in cotton production.

[From the Memphis Cotton Trade Journal of June 1, 1956]

LET'S GO TO WORK

Too many people in the cotton industry—from farmers to spinners—have allowed themselves to be depressed by the problems created by surplus stocks, relatively high support prices, unsatisfactory disposal program, the competition of synthetics—and related irritants, major and minor. Actually, there is no cause for despair. More than that—there is every reason for hope, for faith in the future—and even for confidence, if that confidence is based on hard work.

True, we are going through a crisis in our cotton economy. We are not alone in this. All those interested in producing, processing and merchandizing other farm commodities are sharing our tough experiences. They are unavoidable as part of the agricultural revolution now going on in the United States. Economic revolutions—like their political counterparts—are painful. But it will be a successful revolution in cotton—provided we roll up our sleeves and go to work.

Blaming our mess on politics won't get the job done—although undoubtedly politics played a major role in bringing about the present situation. Cussing the Government won't do it, either—although Government agencies at times have adopted policies which have seemed to us unreasonable and unwarranted. What will get the job done is an energetic effort to make cotton competitive in quality, end uses and in price with synthetics. That's our major chore.

An example of an effective approach is the bill introduced this week by Congressman HAGEN, Democrat, California, providing for a $1 a bale tax in order to finance a cotton research campaign, based upon acceptance by cotton farmers in a referendum. This is sound thinking. One fact is apparent. The members of the cotton industry will

have to work to save themselves—no one else is going to do the job for them—certainly not a welfare state government.

Free enterprise is still the best social system devised by man. We still retain a measure of freedom. Let's be more enterprising so that we may regain what we have lost.

[From the Fresno Bee of June 16, 1956]

COTTON INDUSTRY CHOICE

W. T. Wynn, of Greenville, Miss., chairman of the National Cotton Council board of directors, pointedly says the cotton industry must choose between research or recession.

This is challenging advice and there should be no question about which of the alternatives will be chosen. An increasingly competitive market demands intensified research to create expanded outlets for cotton products.

In an address before the Texas Cottonseed Crushers Association, Wynn suggested the payment by growers of a $1 to $1.50 a bale assessment into a fund for research and sale promotion. On the basis of a 12-million-bale crop year, say, this would provide $12 to $18 million.

Such an amount, along with the approximately $14 million already being spent yearly by all agencies in cotton research, would go a long way toward an effective remedy and maybe a solution for the industry's marketing problem.

Moreover, the outlay still would be far less than the $60 million annual expenditure for competitive synthetic-fiber research and development.

To enjoy its rightful role in the economic picture the cotton industry will have to face the fact that what once was good enough to hold its own no longer fills the bill.

It has an essential product to offer. But more acceptance thereof will depend upon the measure in which the cotton industry itself encourages demand.

Abandonment of the Income Tax

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Shelbyville (Ind.) News.

I fully agree with the editorial's indictment of the income tax, and its recommendation for a Hoover-type commission to give Congress the means to make a full study of the subject and arrive at a remedy.

Our ancestors fought against taxation, because they knew taxation is the enemy of liberty. We shall be able to destroy the monstrous taxation of the present day, when we realize that in our time, as in 1776, the struggle is really a fight for liberty.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABANDONMENT OF THE INCOME TAX

"Let's get rid of the income tax."

That has been said by many a beleaguered citizen, after sweating his way through the tax forms and dredging deep to find the money to pay the bill. Usually it is amplified with unprintable adjectives.

But now that very thing has been said, in all seriousness, by a top authority—T. Coleman Andrews, the former Commissioner of Internal Revenue. It is the title to a strong article which Mr. Andrews recently contributed to the American Weekly.

Mr. Andrews denounces the income tax, as it is now constituted, on just about every conceivable ground. Here, in summary, are some of the things he has to say.

The tax amounts to legalized confiscation. It begins at 20 percent and goes up to 91 percent. A man with a $40,000 income pays far out of proportion in the amount of his tax compared with the man with a $10,000 income, and people receiving income from dividends get even a worse deal—the corporation tax takes about half of corporation profits before they are divided among the shareholders, where they are taxed again.

Mr. Andrews said: "We have failed to realize, it seems to me, that through out tax system we have been playing right into the hands of the Marxists, who gleefully hail the income tax as the one sure instrument that will bring capitalism to its knees."

The tax is too complicated. Comparatively few people can accurately figure their tax without help. In this connection, it is significant that Members of Congress commonly call on Revenue Service experts to prepare their returns.

Few people, if any, really understand the tax. As an example, 20 months after the Income Tax Code of 1954 became law, the official Treasury Department interpretations had not been issued. The difficulty lies in trying to figure out what Congress meant in wording the law, and then trying to plainly express Congress' intentions.

It costs the Government too much to collect. Mr. Andrews has high praise for Internal Revenue Service personnel. But even the more than 50,000 people in the Service cannot assure adequate enforcement. It also costs the taxpayers too much. Huge sums of money go to lawyers and accountants to fill out and to defend tax returns.

It is unstable. As Mr. Andrews puts it: "Being based upon income, it's a low producer in slack times and a high producer in good times. Thus, theoretically, rates must be raised when people are least able to pay, and they may be lowered when everybody is most able to pay."

It is destroying the middle class. This is among Mr. Andrews' most serious indictments: "The middle class is being taxed out of existence and the Nation, thereby, is being robbed of its surest guarantee of continued sound economic development and growth and its staunchest bulwark against the ascendancy of socialism."

Mr. Andrews proposes the appointment of a Hoover Commission type of group to completely study the income tax and the whole tax system. Then a program can be adopted, he believes, for starting afresh. We're sure that a great many American taxpayers would agree that it's about time.

Panama Canal Company

SPEECH
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. CUNNINGHAM. Reserving the right to object, Mr. Speaker, may I inquire of the author of this bill or some member of the committee as to who owns the Panama Canal Company?

Mr. BONNER. The United States Government.

Mr. CUNNINGHAM. Is the United States Government the sole stockholder?

Mr. BONNER. I know of no one else.

Mr. CUNNINGHAM. I have been advised it is a private corporation authorized by the Congress, but the Government is not necessarily the stockholder.

Mr. BONNER. The Government owns the entire investment in the Panama Canal Company.

Mr. CUNNINGHAM. Is it an arm of the Government?

Mr. BONNER. It is.

Mr. CUNNINGHAM. Then any expenditure by the Panama Canal Company would be equivalent to an expenditure by the United States Government?

Mr. BONNER. Of course it would.

Mr. CUNNINGHAM. I withdraw my reservation of objection, Mr. Speaker.

Presentation of Congressional Franklin Medal to the Pennsylvania State University, June 16, 1956

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to present the Congressional Franklin Medal to the Pennsylvania State University, University Park, Pa., during the alumni institute June 16, 1956, in commemoration of the 250th anniversary of the birth of Benjamin Franklin.

The address I delivered in connection with the presentation of the Congressional Franklin Medal follows:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, ON THE OCCASION OF THE PRESENTATION OF THE CONGRESSIONAL FRANKLIN MEDAL TO PENNSYLVANIA STATE UNIVERSITY, UNIVERSITY PARK, PA., DURING THE ALUMNI INSTITUTE JUNE 16, 1956, IN COMMEMORATION OF THE 250TH ANNIVERSARY OF THE BIRTH OF BENJAMIN FRANKLIN

It is a special privilege to speak to you today about Benjamin Franklin and to bring you a message of deep appreciation from the Congress of the United States.

When the plan was made originally to honor the 250th anniversary of the birth of Benjamin Franklin the committee thought of only a small celebration.

They expected to limit it to an exchange of ideas among the societies and institutions of which Franklin was once a member or which he founded or helped.

But such is the stature of the man that the original and limited plan soon developed into a great outpouring of voluntary cooperation in 51 countries of the world.

Franklin's spirit and philosophy were never more alive and vital than it proved to be in this year—2½ centuries after he was born.

Nearly a thousand organizations, with hundreds of thousands of members, seized upon this opportunity to do one of the things Benjamin Franklin believed was necessary to help bring enduring peace to the world.

They will cooperate, all during the year 1956, in a free and voluntary communication of ideas to help improve international understanding.

Each group plans its own program in its own country, in its own way.

Ideas are exchanged through addresses, papers, books, and broadcasts through the generous cooperation of many thousand publishers and broadcasters.

Already the Franklin Institute, which organized this plan, estimates that upward of 500 million people have been reached in the 51 cooperating countries.

This is the kind of plan that Franklin himself once developed for the young United States.

He was elected to membership in 28 of the most famous learned societies of his day—in England, France, Scotland, Holland, Russia, Germany, Italy, Spain, and America.

Through the transactions of these societies and the free press he helped so much to develop, he took part in the exchange of ideas which helped our young country to grow in the technological world we know today.

Twenty-one of these famous old societies that helped Benjamin Franklin are still in existence and cooperating in the current program.

They have been joined by many others in South America, Asia, and Europe in this modern exchange of ideas.

Franklin believed that it was necessary for the peoples of all countries to communicate with each other—in addition to their governments.

He thought that in this way, mankind could hasten the day when peace and understanding would replace wars and threats of war.

The Congress of the United States thought of this objective when they met to consider the most fitting tribute they could pay to Benjamin Franklin on the 250th anniversary of his birth.

They felt, as they believe Franklin would have felt, that honor should be paid to those groups which did so much to help make his success in this field possible.

The Franklin commemorative medal for distinguished service was designed for this purpose.

On it appears these words of Franklin's: "Wise and good men are the strength of a nation." The complete quotation adds the words: "Far more than riches or arms."

Someday, the world will come to recognize the truth of that statement.

The position of a country in the council of nations will be determined not by its material wealth or power of its armaments alone, but even more by the contributions of its great men and women to the welfare and progress of all mankind.

Benjamin Franklin believed this more than 200 years ago.

He knew and said that the road would be long and difficult.

But he never lost faith in the belief that "wise and good men" would be recognized as the "strength of a nation far more than riches or arms."

And that this day would be speeded by the free and open communications between the peoples of all countries.

The United States honors that philosophy in the creation of the Franklin medal.

Dean Stevenson Fletcher, of your university, in a delightful paper read at the Franklin Institute, listed Benjamin Franklin as one of the great leaders of Pennsylvania agriculture.

Dean Fletcher did not accord him this honor because of any great success he had made on his Chester County farm, where he was mostly an absentee owner.

But he did include Franklin because of his great services in helping to found and promote the idea of agricultural education for the young farmers of America.

Benjamin Franklin was one of the early members in founding the Philadelphia society for promoting agriculture.

He was a tireless advocate, as you know, of practical education as opposed to the more limited and ornamental education of his time.

In pursuit of this objective, he helped to found the University of Pennsylvania and brought into it, for the first time in America, the teaching of scientific and technical subjects.

He wrote the Rules Respecting a Medical Education and Degree, which were adopted by the college of physicians for the training of young doctors.

He assisted in developing Franklin and Marshall College at Lancaster as a school especially for young Germans.

So it was only to be expected that he would lend his influence and ability to the development of a school for students of agriculture.

Actually, the first farmers' high school was not opened until after Franklin's death, but the idea of its beginning may be traced directly back to Poor Richard.

This Farmers' High School filled such an obvious and important need that it grew into your great university of today.

The Congress of the United States is especially proud that the institutions which Benjamin Franklin helped to start have been developed in succeeding years far beyond his fondest expectations.

That is why this Franklin medal is presented not only to honor Benjamin Franklin but also to honor the many wise and good men of your institution who have made the reality greater than the founder's dream.

Perhaps a true measure of greatness is to build so well that the foundations will carry forward into the future without danger of weakness.

Benjamin Franklin built that way.

It is part of the measure of the man that he helped to found our first scientific and technical education, our first medical college, our first school for young people speaking another language, and our first agricultural school—all of which have come to greater service than even he could have dreamed.

It is a very special privilege for me today, Dr. Eisenhower, to present you this medal in the name of the Congress of the United States, in memory of Benjamin Franklin, and to honor also the many wise and good men of Pennsylvania State University who have built and are building so well upon the foundations he laid.

Strengthening the Family Farm, and Opposition to Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 19, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Bedford (Ind.) Daily Times-Mail for June 6 and 7, 1956.

These editorials vigorously support our historic national policy of strengthening the family farm, as the basis of our political, economic, and social system. They also point out how our so-called foreign aid actually involves the subsidizing of foreign agriculture with American taxes, in the case of the very products which we are trying to dispose of, because of the vast surpluses.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bedford (Ind.) Daily Times-Mail of June 6, 1956]

JENNER WOULD HELP FAMILY FARMERS

Separation of the Nation's emergency farm measures from the long-term proposals with a goal of strengthening the family farms is proposed by United States Senator WILLIAM JENNER, of Bedford, who recently sought unsuccessfully to put a limit on the amount of Government aid any one farm could receive.

In a speech before the United States Senate a short time ago, JENNER called for reexamination of our farm policies and declared that socialistic trends of the 1930's were responsible for the farm programs of the past 24 years which he said have not solved the problem.

In his demand for a limit on the amount of Federal tax money that would be paid to any one landowner or farm corporation, JENNER obviously saw the need for help for the small farmer, the farmers who actually face hardship and a lower standard of living unless given some assistance and reassurance that he would be paid a living wage for his efforts.

The Senator cannot see the necessity of paying thousands of dollars to the big farm corporations simply to increase their profits at the expense of taxpayers.

In his recent Senate speech, JENNER said that he understands that under present farm legislation great landowners in the West can obtain more than a million dollars from the Nation's taxpayers without lifting a hand.

"Our policies," JENNER declared, "exert constant pressure toward corporation farming and the hated 'latifundia,' the huge estates owned by absentee capital and operated by farmers turned into hired hands.

"Government payments have greatly increased the tendency toward the purchase of farmland by financial, nonfarm interests. During the potato scandal, we heard how farms in Maine were being sold by farmers to interests in Boston which had never seen a plow."

The Senator said that he had lost hope that manipulation of the so-called parity prices will be of any permanent benefit to the American farmers because parity price is price control and price control means price-controllers. Beyond that, price control machinery must, in the nature of the case, fall into the hands of the planners, the collectivists, the supernationalist, he said.

"The first step on that slippery road brings us inevitably to the last step," he said, "where we are enmeshed in a web of controls, visible and invisible, which is designed to destroy the superiority of the United States in agriculture, in industry and in war."

JENNER said that the purpose of a farm program should be to save the American family farm which he said is the social basis for our free enterprise system, our political liberty, our biological heritage and our military strength. He recalled that the real military strength of the Romans lay in their independent farmers more than in their legions. But when the farms decayed, Rome was dependent on mercenary armies recruited from barbarian tribes.

"It should not be the purpose of Congress to help corporation farming," JENNER asserted, "or the spread of factory methods to farming. It should not be our purpose to help the city owner who buys farmland to help him avoid taxes. It should not be our

purpose to do one single thing to increase the price of farmland."

JENNER described the price of farmland as a cost to the farmer-operator which reduces the net income he receives for his work. He declared that maturing societies must distinguish between the share of farm income which goes for enterprise and the share which is paid for land because land ownership and land use inevitably grow more and more apart.

The Senator called for the establishment of a congressional advisory commission which would gather the best ideas in the Nation on how to restore the family farms as the foundation of our society, on helping them maintain themselves without Government aid and by their productive arts, by constant cost cutting, by skill in marketing, and by raising the real income of those domestic producers in nonfarm industries who should buy most of their products.

Tomorrow this column will discuss Senator JENNER'S views on the relationship of the farm problem with the State Department.

[From the Bedford (Ind.) Daily Times-Mail of June 7, 1956]

FOREIGN AID CONTRIBUTES TO FARMERS' PLIGHT

Our Government is doing everything possible to increase agricultural production across the face of the globe while groping with the problem of how to reduce it at home.

That statement was made by Senator WILLIAM E. JENNER, of Bedford, recently in a speech on reexamination of our farm policies on the floor of the Senate.

We are, JENNER said in effect, promoting competition for our farmers by strengthening foreign agriculture to the point that it is competing with this country in the world markets.

Our Government is spending a substantial portion of its foreign-aid appropriations for agricultural promotion abroad, and through these programs we taxpayers, including the farmers, are paying to supply competitor nations with seed, farm machinery of every description, and hundreds of agricultural experts to increase their farm output.

While our own farmers have to pay dearly for such equipment and other factors, foreign farmers are getting it all free from the United States.

In addition, this country is also spending vast sums of money to provide irrigation and other soil improvements abroad—again free of charge—which will continue to skyrocket competitive farm production.

"We hear the Secretary of Agriculture complain about the surplus of cotton in the United States," JENNER declared. "What has the administration done about it? It has made it possible through United States money for Mexico to double its cotton production. It has made it possible for India to increase its cotton production by 50 percent. It has made it possible for cotton-growing Egypt to add 2 million irrigated farm acres when the Aswan Dam is finished.

"All this cotton growing is being encouraged by the State Department at a time when world production in the past 4-year period for which figures are available has already increased by more than 5 million bales, all of which competes with American cotton."

JENNER said that as result, this country's cotton exports dropped nearly 40 percent in 3 years, while exports by other cotton-growing countries rose 46 percent.

United States exports of wheat were cut approximately in half since 1948–49, while production and exports of countries receiving United States aid went up.

We had an opportunity to sell wheat in South America, JENNER said, and our Department of Agriculture wanted to sell it, but the State Department said "No, we must take it up with our friendly allies."

Canada was tipped off and the Canadian Minister of Agriculture went to South America and made the wheat deal. "Yet we talk about farm legislation for an emergency," JENNER declared.

"We hear the Secretary of Agriculture complain even more bitterly that there is a surplus of dairy products," he continued, "yet the action of the administration in helping foreign dairy production to increase rapidly has forced a drop of nearly 90 percent in United States exports.

"This is only the beginning. Money to build up foreign farm competition is flowing as freely as the Mississippi River."

The legislator said that there are nearly 750 United States farm experts abroad, helping spend the money, helping foreign nations build up their farm production. This must stop, he said, if we are going to help American farmers realize an American standard of living.

"If we want to beggar them to the level of the Asiatic peasant, then the program so diligently pursued by our State Department is well on its way to doing the job," JENNER asserted.

Regarding foreign-aid expenditures, JENNER said:

"I have already mentioned the extent to which our Government is helping to increase farm production abroad." The actual figures are even more striking. In the 7 years beginning April 1948, the United States foreign-aid program provided, for the promotion of foreign agricultural production, a total of $984,159,436—nearly a billion dollars.

A half billion dollars went for the purchase of agricultural machinery and equipment—all as a gift to foreign farmers who are now able to compete with American farmers, who find no overgenerous Uncle Sam to give them tractors, or reapers, or trucks, or seed, or fertilizer, but who, on the contrary, in addition to the cost of operation of their farm machinery, have to pay the tax bill.

One reason why the cost of farm machinery and other things that the farmer buys is so high is the unbearable tax burden to pay for foreign gifts.

In addition to this billion dollars, the United States has set up over $700 million in counterpart funds, also to help agricultural production.

This direct aid is only a part of the total picture. The Government has given tax privileges and other forms of incentives to encourage private investments abroad. Also, the policy of keeping American goods off world markets has, in effect, encouraged private investors to expand production abroad without fear of having any real competition from American farm products.

The 1 million acres of farmlands added to Mexican farm production were financed largely by American money. The story is the same all the way across Latin America.

Strong Words, Good Advice

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. SMITH of Kansas. Mr. Speaker, as the final chapter of the foreign aid program will soon be written, it might be well for some, who so often and so loudly proclaim what Teddy Roosevelt would have said and how he would have acted in these troublesome times, to read again what Teddy said about the professional internationalist.

Recently Mr. Warren Zimmerman, of Lawrence, Kans., in a letter to the editor, quoted Teddy Roosevelt and made some very pointed, well chosen remarks about the futility of foreign aid.

Mr. Zimmerman simply points out what some of us here in Congress felt for a long time. The greatest asset there is for world peace is for a strong America in her own internal affairs, and about the surest road to defeat for the free world would be to have a bankrupt America. Is there anyone who does not believe that there can be no security or freedom for anyone in a bankrupt America? Is it not asking quite a lot of the Congress, in view of our present debt of $278 billion, to give away another $4,900,000,000 to peoples of foreign nations for the fiscal year of 1957?

Here is Mr. Zimmerman's letter to the editor:

STRONG WORDS, GOOD ADVICE

EDITOR, JOURNAL-WORLD: "The professed internationalist usually sneers at nationalism, at patriotism, and at what we call Americanism. He bids us forswear our love of country in the name of love of the world at large. We nationalists answer that he has begun at the wrong end; we say that as the world is now, it is only the man who ardently loves his country first who in actual practice can help any other country at all." (Theodore Roosevelt.)

Those prophetic words by the above illustrious 26th President, a real and patriotic American if there ever was one, are more significant today than at any time since he uttered them.

The salvation of the world depends upon a strong America; strong from a religious, moral, patriotic, and never-to-be-forgotten financial standpoint, for a worthless government financially can accomplish no more in its sphere than the commonest lout of the racetrack or gambling den.

And if we continue financing the foreigners via the income-tax route; try to educate the underprivileged of the world while we wonder how to handle our own educational problems (and that's just one of the new and bold concepts of a vital social conscience); try to buy the gangster Tito or the Moscow sympathizer Nehru's friendship; try to support the poor people of the world whom "ye have with you always" (one able authority once put it) that they may realize their aspirations in life while your own can go to Sheol, for the one-worlders, you understand, must be kept happy; if we continue to support the mendicant nations of the world who have warred since creation's dawn and always will, for they have never learned the meaning of the word "honor"; then we will wind up finally just where every nation in Europe and Asia has ultimately landed, with poverty and wretchedness abounding with us on every hand. We've blithely traveled that route $280 billion to date.

We will give our all and take off our shirt finally for our country, but supporting foreigners financially forever is something else, a task we've long been fed up on. We trust that God in His infinite wisdom, loving kindness, and tender mercy, points out a route to the electorate this fall for defeating the organized financial brigands of both parties, commonly called bipartisan foreign-policy makers, that there may remain in this weary old world one nation still strong in all the essentials which make a country and keep it great. In other words, we are sick and tired to death of voting "ja."

Visits to Red Russia

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting editorial entitled "Visits to Red Russia," which appeared in the Catholic Standard, Washington's archdiocesan newspaper, on June 15, 1956. The editorial contains some very pointed and pertinent observations that are worthy of deep consideration. There are millions of Americans who are greatly concerned with the increasing fraternization that is going on now between our Government and the Soviet Union.

VISITS TO RED RUSSIA

The decision of the President not to permit all the military chiefs to visit Russia at one time is good news. It is not only a sound decision in itself but it is particularly opportune for snuffing out the conflagration of speculation about visits to and from Red Russia.

In fact, the presence of Adenauer in this country should provide a good incentive for caution. His trip to Moscow gained little or nothing while the extent of his substantial loss is not yet precisely assessed.

There is no reason for inordinate haste in this delicate and potentially explosive matter. Haste can only aid the Reds. It was fortunate that the President, according to reports, stated that any further visits would depend on the "circumstances at the time and the report of General Twinning at the time." Certainly, it would be fantastically foolhardy to risk the prestige of the United States in one impulsive gamble.

It seems to us that there is very grave reason to consider the following points in accepting invitations to visit the Reds:

1. Every acceptance implies at least an invitation to the Americans' counterpart in the Soviet Union. We shall put ourselves in a grossly unfavorable light if we do not extend at least reciprocal invitations.

2. Every acceptance increases their hopes for expecting an eventual invitation to their highest authorities. This would be only a natural expectation and it could be incessantly and cleverly exploited by their propaganda instruments. We shall not be able to drop the invitations at our choice without paying a heavy price in vilification and possible loss of prestige. We are not engaged in an exchange with a nation which acts according to a code of civility—this is a propaganda battle with an avowedly ruthless enemy.

3. No step should be made without considering its implications and repercusions on the millions of oppressed but potentially helpful allies behind the Iron Curtain. As the President and our Secretary of State (even recently) have stated, we have a moral obligation to these people, as well as an obligation toward our own defense to foster all possible allies. We are the only hope of millions of enslaved peoples. The only fuel for their hope is the conviction that the United States does not approve the policy of the Soviet Union and that some day our opposition will effect somehow their liberation, as promised by our President. It would possibly crush their hope and their present moral resistance to the Communist propaganda if we are pictured as becoming friendly with the Reds and therefore approving the Reds' policy.

This is an established fact, not supposition. We know this on the most trustworthy evidence of very reliable persons who are in contact with these people. In fact, the hesitation and vacillation by our Government in this matter has already caused considerable disappointment and has shaken the morale of these people. Probably this fact can be adequately appreciated only by those Americans who have actually lived in contact with these peoples.

The reaction of the ensalved peoples is roughly equivalent to that of the peoples enslaved by the Nazis during the past World War. The spirit of resistance was maintained, as everyone knows who was in contact with these people, by the constant promises of help by the Allies. Any dashing of those hopes would have been a huge blow to our effort in liberating Europe.

The resistance of these ensalved peoples is not a minor matter either to the United States or to the Reds. The Reds in Poland revealed their concern and the extent of this threat to their security by stating that 30,000 lives were lost in combating the guerrilla fighters since the war. This is a far higher number than was ever expected and certainly represents a minimum since it is to the advantage of the Reds to minimize the efforts of the guerrillas.

4. The accounts of these visits will be published in the Communist and satellite world only by the Reds, not by the United States. It should be remembered that even the British account of the arrival of Bulganin and Khrushchev in England was jammed and thus eliminated by the Reds. They would permit only their account of the whole visit.

Obviously, the account of their visits to this country as well as the visit of Americans to Russia will be slanted, altered or omitted in accordance with their designs. We have made no provisions for impartial reporting and could not enforce them even if they were made. If the visits are favorable to our cause, we can only expect that the reports will be silenced or distorted. It is not a contest in which we can win—only one in which we can lose in varying degrees.

Let us have a long, careful appraisal of the results of General Twinning's visit (the wisdom of which is not yet demonstrated) before we make another move.

A Vote on School Aid

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. POLK. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the lead editorial in today's New York Times on the subject of A Vote on School Aid:

A VOTE ON SCHOOL AID

The welfare of many hundreds of thousands of school children in cities, towns, and villages throughout the United States may be directly affected during the next few years by what the Rules Committee of the House of Representatives does today. All year long this powerful committee of 12 Congressmen has had before it a bill to grant Federal aid for school construction, and at last there is a good chance that it may vote on whether or not to allow the measure to come to the floor. If the vote is taken and, as seems likely, the decision is favorable, the House itself may be passing upon this important measure next week, not quite too late for the Senate to act before adjournment.

The delay has been unconscionably long already, due to political maneuvering rather than any lack of merit in the legislation. One of the major stumbling blocks in recent months has been the threat of the Powell amendment, which would deny Federal school aid to districts failing to comply with the Supreme Court's antisegregation decision. Integrated education is a necessary and desirable goal for our democracy; but the Supreme Court itself has laid down the general lines along which it will be accomplished. Irrelevant and punitive measures such as the Powell plan have no place in such a program. It now appears as though the Powell amendment can be beaten on the floor, and this prospect gives some hope for ultimate success for the bill.

The matter is one of genuine urgency. The enormous population growth of this country since the war has created an undeniable crisis in local school systems throughout the country. This crisis takes many forms; but the one that the Federal Government can do most about, and in complete conformity with the American tradition, is the desperate shortage of schoolrooms and school buildings. At the present rate of construction it is estimated that our country may be 150,000 (or more) classrooms short when schools open 3 years from this September, meaning that in round figures some 4,500,000 children would not have adequate facilities.

Congress recently found it possible and politically expedient to pass a bill to help the States with highway construction. Has our civilization become so grossly material that Congress thinks this is more important than passing a bill to help the States with school construction? We refuse to accept such a conclusion. Without such aid we will be depriving our children of even the basic physical plant in which to acquire the education and culture that ought to be the birthright of every American.

Investigating a Union Treasury

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under permission to extend my remarks, I include the following editorial, from the New York Herald Tribune of June 16, 1956:

INVESTIGATING A UNION TREASURY

In the vast and still largely unexplored terrain of funds that unions collect for the supposed benefit of their members, consider the case of the Distillery, Rectifying Wine and Allied Workers International Union of America.

This is the union which District Attorney Hogan has been investigating since 1953. He finally obtained an indictment against three union officials charging bribery in the sum of $299,000 for welfare-fund kickbacks. The indictment, however, was dismissed on the ground that those accused had been acting as trustees of the fund and could not properly be tried for shortcomings as union officials. Mr. Hogan is contesting this on appeal.

Now the district attorney has gone a little further. Another indictment against one of these former self-same officials charges $16,125 grand larceny from the union treasury, the money being paid to a woman friend who posed as a clerk but appeared at the office only on the occasion of Christmas

parties. Furthermore, the prosecutor has reason to think that a lot more money was being shifted around, for which reason he would like to have a good look at the union books. But these records are in Chicago, where Mr. Hogan cannot get at them, and the union president declines to cooperate. The district attorney's only recourse, at least so far, is to appeal to the AFL-CIO ethical practices committee.

What the 30,000 distillery workers think does not appear on the record. Neither has anything been heard from the AFL-CIO. But the money involved belongs to the rank and file, and certainly there ought to be a sense of responsibility. It shouldn't be wholly up to the district attorney to enforce that trust.

NATO and What's Ahead

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Hanson W. Baldwin is a well-known military expert. In the New York Times of last Sunday he analyzes the issues that face the NATO organization in a changing world situation. The article follows:

NATO AND WHAT'S AHEAD—AN ANALYSIS OF ISSUES THE ALLIANCE FACES IN RELATION TO CHANGING WORLD SITUATION

(By Hanson W. Baldwin)

The era of agonizing reappraisal is starting for the North Atlantic Alliances.

Last week's events, superimposed on the cumulative evidence of months indicated strongly that the alliance's present level of forces and probably its strategic concepts, as well as its basic political policies, would have to be changed.

The clearest indication of the shape of things to come was the forecast from London that in a few years Britain's new military look would mean the end of conscription and a sharp reduction in the strength of British forces in West Germany.

These plans follow a whole sequence of events that make the handwriting on the wall apparent. In itself the announced retirement of Gen. Alfred M. Gruenther as Supreme Allied Commander, Europe, in the fall implies the end of an era. The French military preoccupation with Algeria, which has resulted in stripping the Atlantic pact defense system of nearly all French regular land forces; the troubles in Cyprus, a divisive factor between Greece and Turkey; and Iceland's request that United States troops leave are other weakening factors.

An even more important factor is that the West German contribution to the Atlantic Pact forces still is largely on paper. The recent action of the North Atlantic Council in appointing three wise men to study ways and means of strengthening the alliance by emphasizing political and economic measures indicates the underlying worry in the West about the future NATO.

Fundamentally, the problem of the alliance is the problem of military contradictions, psychological frustration, and economic stresses.

ECONOMICS HELD VITAL

The economic factors have been important since the beginning of the Atlantic alliance. However, the sense of urgency stemming from the Korean and Indochina wars reduced the impact of the economic factors for the first few years of the life of the alliance. But in recent years, particularly since the new peaceful policy of Moscow, the sense of urgency has been reduced.

There is sharp competition for foreign markets, with both West Germany and the Soviet Union adding to Britain's export-or-die difficulties. Above all, there is an unresolved psychological conflict in the Atlantic alliance induced by the military policies the organization has followed.

The strategy of the Atlantic alliance has been based on a nuclear concept. So-called tactical atomic weapons will be used to defend West Europe against any Soviet attack. According to this strategy implied in this concept, but not explicitly stated, is the corollary that so-called strategic targets in the Soviet Union would be attacked with thermonuclear weapons.

According to this theory, the superiority in numbers and conventional arms of the Soviet bloc would be neutralized and defeated by the West's present superiority in nuclear arms, and the means of delivering them.

This nuclear strategy is primarily responsible for the military contradictions that now exist in the Atlantic alliance and for some of the psychological frustration. Very few experts believe that it would be possible to fight a tactical or limited nuclear war in West Europe without extensive devastation and hundreds of thousands of civilian deaths. Very few experts believe that such a war could be kept limited.

EFFECT ON WEST EUROPE

This prospect of becoming a radioactive desert, quite understandably does not fill West Europe with enthusiasm. It has had a two-pronged effect: reduced European support for the Atlantic alliance and developed greater military dependence on the United States, which is the principal Western atomic power. It has led to a rather widely prevalent belief that if West Europe's shield is to be a United States atomic one, there is not much use for conventional forces.

According to this belief, small ground forces would serve merely as a plate-glass window. Under the same line of reasoning, if the ground forces were attacked, the breaking of the window automatically would trigger the nuclear defense of the West.

These fears and these beliefs have influenced greatly the future of the Atlantic Alliance. Britain's decision to end conscription at some future date and to reduce her ground forces in West Germany by at least one-half is in part the product of the West's increasing reliance on the nuclear deterrent. Inevitably this policy undermines West German conventional armament, and must lead, in time, to a reduction of United States ground forces on the continent of Europe.

This nuclear strategy sells the Atlantic alliance down the river. It offers no alternative to nuclear devastation or Communist conquest.

A new strategy, as well as a new political policy, for the Atlantic alliance is the need of tomorrow.

We Must Not Forget the Enslaved Peoples of the Baltic States

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, under leave granted to extend my remarks, I insert in the RECORD the text of my broadcast over station WHK, Cleveland, on June 16, 1956, on the subject of the Soviet enslavement of Lithuania, Latvia, and Estonia:

BROADCAST BY HON. FRANCES P. BOLTON, REPRESENTATIVE (REPUBLICAN) 22D DISTRICT, OHIO, ON STATION WHK, CLEVELAND, JUNE 16, 1956

We Americans are deeply grateful for the freedoms that are ours. They have cost us blood and sorrow, which give us a certain understanding of the anguish of those who have lost their freedom. We remember the sadness in the hearts of all who have so suffered. We know that in the past decade alone more than 700 million people have fallen under the despotism of the Soviet Union. We have not forgotten that even more than 10 years ago Soviet armies enslaved the people of the Baltic States of Lithuania, Latvia, and Estonia.

All this week Americans of Baltic descent and their friends have been holding memorial services that mark the Soviet occupation of June 1940, and the mass deportations that started the following year. Tonight in Cleveland many of our fellow citizens are gathered in St. George's Hall to observe those sad chapters in the history of civilization.

Since there is much talk these days of changed attitudes in the Soviet Union, we Americans must take note of those who remain in the enslaved lands. Let me say to all who think Moscow has changed its strategy, read the speech by First Party Secretary Khrushchev before the 20th Party Congress of the Soviet Union. Our Department of State released copies of the speech last week.

Read how cruel Stalin was in deporting Russian people from their home areas. But does Khrushchev have a single word of regret for the mass deportations of men, women and children from Latvia, Lithuania, and Estonia? No; not once in his 6-hour address.

The new collective leaders of Soviet Russia say that Stalin was bad, but Lenin was good. But the people in St. George's Hall tonight know that in 1920 and 1921 it was Lenin himself who renounced the Soviet rights to the Baltic States. But in spite of that they were taken over. Do the collective leaders plan to return those lands to the people who have lived there for centuries?

The Soviets say they have stopped the reign of terror in the enslaved lands. But still the people of Baltic descent cannot get their parents, brothers, or sisters out of enslavement, for the Communists will permit no one to leave.

What can we in America do—so many miles away from the Baltic—to be of help to those brave people? Let me read a portion from one of their underground appeals to the free world:

"We wonder whether the world knows about our sufferings, and our difficult and heroic struggle for the right and freedom of mankind to democratic ideals which the leaders of Western democracies have proclaimed."

We must tell them that we do know and we hear their appeals—just as they tell us that they hear our voices speaking out in anger. We must give them the encouragement to continue their battle against seemingly impossible odds. For they have to know that we are still determined that the Baltic States will some day return to their rightful owners. If we ever forsake these fighters for freedom, we will destroy their last thread of hope.

Tomorrow our fellow Clevelanders will attend mass in St. George's Church in memory of those who are still enslaved. We all join in their pleas for the deliverance of their loved ones. Let us also urge them to include in their service a prayer for the continued strength of America and for the never wavering determination to spread the principles of freedom throughout the world.

Salute to Frank Gannett

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. OSTERTAG. Mr. Speaker, the newspaper trade journal, Editor and Publisher, this weeks pays a well-deserved tribute to Frank E. Gannett, of Rochester, who began his career as a newspaper publisher just 50 years ago this month. Under leave to extend my remarks, I include in the RECORD a column by Robert U. Brown describing Mr. Gannett's initial venture as publisher of the Elmira (N. Y.) Gazette, and his long and fruitful association in the years that followed, with Frank E. Tripp, now chairman of the board of Gannett newspapers.

SHOP TALK AT 30

(By Robert U. Brown)

"Fifty years ago this Wednesday, a date easy to remember, 6-6-'06, Frank Gannett, 6 years an editor, took over the 6-man staff of the Elmira Gazette, at 106 Lake Street, as half owner of his first newspaper. Six was to prove his magic number."

So reports Frank Tripp who sort of went with the deal at that time and is now chairman of the board of the Gannett Newspapers after many years as general manager.

Mr. Gannett is president of the organization which started 50 years ago with that 1 paper and a claimed 12,000 circulation. Today there are 23 newspapers in the group with total weekday circulation of 784,000 and 385,000 on Sunday.

Mr. Gannett, born September 15, 1876, had 6 years of newspaper experience under his belt when he moved into Elmira—as editor of the Cornell Alumni News, managing editor of the Ithaca (N. Y.) Daily News, and editor of the Pittsburgh (Pa.) Index.

Mr. Tripp, only 5 years his junior, born February 21, 1882, had almost as many years experience as a reporter in Elmira, having started there in 1901. It wasn't long before he switched to the advertising and management side of the newspaper business although F. E. T. never lost his first love for the news side. In fact, he has returned to it lately by writing a reminiscence column syndicated by General Features Corp.

It is from one of these columns that we quote now.

Mr. Tripp recalls that in 1905 Edwin R. Davenport from the Omaha Bee had bought the other half of the Elmira Gazette. When Mr. Gannett (F. E. G.) entered the field, Mr. Tripp says he expected it to be his last day on the already 78-year-old Democratic mouthpiece. Instead it was the beginning of a half-century association.

Quoting Mr. Tripp:

"To look at Frank Gannett that first day no one would have guessed his destiny. He was 29, frail, narrow faced and pale, eager but scared.

"Perhaps he was regretting that he had just risked the $3,000 savings and $17,000 of borrowed money for half of a decrepit political newspaper kept for years by David B. Hill, its undercover lawyer, and by the Democratic Party.

"Political sheets were gasping everywhere, or reforming. The Evening Star had been beating the daylights out of the Gazette for 10 years. Gannett and Davenport had bought into a tough job.

"But they knew how. It took only a year for the old-timers on the Star to conclude it smart to join up with the two youngsters on the Gazette, rather than buck them. Elmira couldn't support two evening papers. The Star and the Gazette became the Star-Gazette."

The march of progress in the last 50 years has not been all milk and honey, F. E. T. reports. "The first expansion was no aim toward a group of newspapers. It was necessity. Consolidation of the Star and the Gazette put five families of owners among the paper's dependents. The Star-Gazette was going good, but not that good. Come wartime 1917, something had to be done about it.

"This predicament was to change American newspaper history. By 1917 the owner of the Akron Beacon-Journal had two sons, one in Cornell, one age 8. This year he made a decision that brought about two important newspaper groups.

"The harassed Elmira owners heard that the Ohio paper might be bought. There were negotiations, but finally Charles L. Knight decided to keep the Beacon-Journal for his boys. Those boys are John S. and James L. Knight. (Now of the Knight Newspapers in Akron, Chicago, Detroit, Miami, and Charlotte.)

"Disappointed, the Elmira shoppers were led to Rochester by their national representative, J. P. McKinney. He knew Rochester, came from there; was born in a hotel along the old Erie Canal, on the very spot where now stands Gannett newspapers headquarters in Times Square.

"Frank and Davvy moved to Rochester. The other three original owners, who had owned the Elmira Star, died early, I. S. Copeland, Woodford J. Copeland, and James F. Woodford. I bought Mr. Woodford's share. All interests and acquisitions by 1925 had merged into Gannett Co., Inc., Frank Gannett the mortgaged owner."

Mr. Tripp wishes that "Frank Gannett had strength to reenact with Davvy and me the scenes of his Elmira beginning." We wish so too.

Unfortunately, F. E. G., approaching his 80th birthday, has not been in good health in recent years. We join others in saluting him on this 50th birthday of the founding of the Gannett newspapers.

Petition Opposing Alcoholic Beverage Advertising in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks, it is my pleasure to submit herewith, for the RECORD, a petition which I have received from a group of my constituents:

PETITION

To our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of States under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic, there should be no encouragement to increase the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

Mrs. H. E. White, Mrs. W. E. Stewart, Mrs. A. M. Clark, Mrs. Roy Smith, Mrs. Owen Raines, Mrs. Cora New, Mrs. E. M. Sutter, Mrs. A. J. Robins, Mrs. H. C. Weldon, Mr. H. C. Weldon, Mrs. Emma Sanderson, Mrs. J. P. Lawson, Mrs. C. L. Autry, Mr. and Mrs. J. H. Reames, Miss Donnie Gay Vance, Mr. S. E. Crawford, Mrs. Katie McWilliams, Mr. Roger G. Mitchell, Mrs. Horace Wilson, Mrs. Louis A. Wilmat, Mr. John Chadbourne, Birmingham, Ala.; Miss Marjorie Crockett, Miss Shirley Crockett, Miss Ruth Crockett, Miss Jerrelyn Crockett, Sayreton, Ala.; Mr. J. L. Davis, Mrs. John Chadbourne, Birmingham, Ala.

How Long Will Americans Stand for the Tax Grab?

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. BOW. Mr. Speaker, the Town Journal for June contains an excellent editorial on the Hoover Commission reports and the opportunity for reducing Government expenditures. Under leave to extend my remarks, I offer the editorial:

HOW LONG WILL AMERICANS STAND FOR THE TAX GRAB?

This month the second installment of the 1956 Federal income tax is due, and millions of Americans will have to dig deep to pay their share of the Government's spending spree. Other millions, who are subject only to the withholding tax, may not be so conscious of the relentless drain on their earnings because their share is "withheld" before they get it. But they're paying for wasteful Government spending just the same.

How do you feel about today's excessive income taxes? Do you pass them off with a shrug and a complacent "It can't be helped"? Or do you burn with anger that such a large part of your earnings is taken from you to pay for unnecessary Government functions, unneeded Federal employees, unsound Government projects that compete unfairly with private business, unintelligent purchasing methods?

For it can be helped. Federal income taxes could be lowered without sacrificing a single essential function or necessary defense appropriation. Had you realized that the recommendations of the first Hoover Commission have already saved the taxpayers about $7 billion since 1949? But there is still staggering waste. If the recommendations of the second Hoover Commission were followed, an additional $7.5 billions yearly could be saved.

Such a saving could mean a reduction of 25 percent in every taxpayer's personal income tax. Isn't that worth trying to get?

Such a saving could be made merely by getting rid of the incredible waste and inefficiency that are costing all of us so dearly. Our tax rates are so high they have been aptly called "outrageous confiscation in action."

For example, among the fantastic revelations of the Hoover Commission were these: new Federal hospitals being built while existing hospitals have a billion dollars worth of unused beds; the Army with enough women's wool serge taupe uniforms to last

more than 10 years; the Navy with enough canned hamburger to last almost 60 years; 1 Government agency selling—at a few cents on the dollar—something another Government agency is buying at full price.

Americans have always been known for their refusal to submit meekly to injustice. Yet, strangely enough, they do little or nothing about the exorbitant and increasing income tax rates that rob a man of his ambition and initiative as well as a big part of his earnings, and put a brake on industry's effort to expand.

The common assumption is that nothing can be done about it. But something can be done about it. If Congressmen and Senators get enough letters of protest from their constituents, they'll realize the people's patience is wearing thin and something had better be done. For Congress is still subject to the will of the voters.

If you want to help put an end to unnecessary Government spending and waste, so that you may keep more of your hard-earned tax dollars for yourself and your family, write to your Senators and Congressmen and tell them so. Have your friends, neighbors and civic organizations do likewise. The more the better—and the sooner you'll get long-needed action.

GRAHAM PATTERSON,
Publisher.

Armed Forces Day Means What?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a column by George Todt which appeared May 19, 1956, in the Valley Times, of North Hollywood, Calif.

In the column Mr. Todt predicts that when a showdown finally occurs between nationalism and internationalism, that our Armed Forces will be found to be a tower of patriotic strength for the Republic against her world-government enemies.

ARMED FORCES DAY MEANS WHAT?

"The essence of war is violence. Moderation in war is imbecility." (Lord Fisher.)

Armed Forces Day is a day to celebrate. Our young men and women in uniform have it coming to them. They are the sinew and muscle upon which the Nation must depend if attacked by an aggressor. Better to honor them now before they may be sent away to fight someone else's war. The service people are often the forgotten ones in peacetime—but oh, how they are lionized when war has been declared. So give them a break before it happens. But Armed Forces Day is really more than just a day to celebrate. It is also a day on which to think about the preparedness of our country to defend this citadel of modern freedom against the fanatical Marxist gangsters—domestic and international—who would sell the birthright of the Republic and chain the United States to the hideous bondage of a future socialist world government. This would destroy our inspired Constitution and its Bill of Rights overnight. Every officer of the Armed Forces, as well as every officer of the United States Government, has taken a mighty oath to defend our Constitution against all her enemies—foreign and domestic—and from whatever quarter or direction such a threat might arise. It would be nothing less than treason to do otherwise.

Today there are a great many persons who flirt with treason and subversion without, perhaps, being entirely aware of what they are doing. Ignorance is no legitimate excuse in such a case, however. Since the balmiest days of the slaphappy New Deal, loyalty to the United States has steadily given ground to the bitter rantings of false prophets who have counseled rank, undisguised disloyalty among our people. This has been done skillfully under the vague guise of brotherhood, universal peace, and world government. They are the inevitable carrots which must accompany the Marxist stick. In the self-interest of those political-action hatchmen who exploit such cure-alls, we are told to discard our old-fashioned Constitution and American traditions for a confused, unworkable mess of socialist pottage.

This is outright subversion, pure and simple, and we should do well to mark such people who counsel thus for future reference. The day of reckoning will not be too far hence. For a great reaction against the Marxist conspiracy to sell American Joe Doakes to a self-appointed world government oligarchy has already commenced. Those who cannot even now perceive its tremendous and growing power in the grassroots of the Nation are either blind—or fools.

I predict that when the nationalism, versus internationalism chips are really down in this case, our Armed Forces will be found to be a tower of partiotic strength for the Republic against her world government enemies. For Marxism of all shades is hated by the officers and men of our combat services—and this includes radical, anti-American internationalism. Just ask the boy who formerly fought in Korea. Or perhaps the one who may be later shipped to the Midde East. Ask one of them the name of the only flag they might ever wish to fight for—and you will quickly learn it is old glory, and none other. There motto is just this one: "America first, last, and always."

Finally, on Armed Forces Day, we should all dedicate ourselves to the proposition that the American fighting man must have the most advanced weapons and tactics that this richest of all nations can provide for him. Our theory of warfare must be the most advanced in all the world—because we have the most to defend. We can take no chances on defeat. We must forget the adolescent strategy of the previous world wars, and of history before our time. We must concentrate on perfecting our research and development along military lines for futuristic war as long as we are threatened by aggressors. We must achieve qualitative superiority over any combination of enemies which might be brought to bear against us.

Public Sour on Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the whole country is ahead of the Congress in this matter of foreign aid. I am inserting at this point an editorial that appeared recently in the Janesville (Wis.) Gazette. It expresses the general view of my constituents, I am sure.

PUBLIC SOUR ON FOREIGN AID

Senator ALLEN ELLENDER, of Louisiana, put it straight in a radio forum Monday when he opposed the $5 billion foreign aid bill because, he said, "the American people are sour on foreign aid."

Representative WALTER JUDD, of Minnesota, was arguing for restoration of the billion-dollar cut made by the House in the President's gigantic proposal. He added, however, that there is a billion dollars of appropriated foreign aid still unspent and still uncommitted.

This fact is seen, also, in the new lower pressures in the Senate. The foreign aid proponents now want at least $600 million restored. Thus they infer that the tremendous giveaway is actually not needed and that half the cut might do.

At last the men in Congress are aware of the growing and active opposition of the people to digging up billions which cannot be controlled in foreign spending. Neither are the people convinced that this huge spending is producing the desired results.

Senator ELLENDER commented that the United States Government has already spent millions in establishing manufacturing plants, such as one for making starch in South Korea. These are wholly owned by the Government. In this country we call Government operation of business pure socialism.

On the other hand, Representative JUDD urged that some millions are needed to operate these plants, or they would be closed, and the Koreans would suffer.

The supposition seems to be that the United States must save the world by building Government-owned factories everywhere, and then we are obligated to pour more billions into those countries to keep the plants operating.

If this is not an endless circle of big spending, we have never seen it.

The only answer to this tremendous waste is the pressure of public opinion. If enough citizens tell their Congressmen and Senators that they object to this run-around, the gentlemen in Washington will begin to clamp down. Then we can start to pay off our unconscionable public debt and cut taxes.

Shipwreck and Rescue on the North Carolina Outer Banks

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. BONNER. Mr. Speaker, at Rodanthe, N. C., on June 16 I had the privilege to speak at an exercise honoring the remaining few members of the former Lifesaving Service which service was taken over by the Coast Guard many years ago.

In addition to my address, Mr. Speaker, Mr. David Stick, of Kill Devil Hills, N. C., delivered an interesting and historical talk on the feats of heroism performed by members of the Lifesaving Service on the North Carolina coast. I include a copy of Mr. Stick's address in my remarks:

SHIPWRECK AND RESCUE ON THE NORTH CAROLINA OUTER BANKS

(A talk, delivered at Chicamacomico celebration, Rodanthe, N. C., June 16, 1956, by David Stick, author of Graveyard of the Atlantic)

I am a writer, and not a public speaker. Therefore, I have written my talk today, and with your permission I shall read it.

For a number of years I have attempted to find and preserve factual information about shipwrecks on the North Carolina coast. In the process of this search it was not long before I realized that there was one period when the activities of those whose job it was to save the lives of shipwrecked mariners overshadowed in drama and human interest the very shipwrecks themselves. This was the period from the late 1870's until 1914—the period when the United States Lifesaving Service was active on our coast.

The Lifesaving Service was, of course, succeeded by the United States Coast Guard, and most people today consider them as one and the same. Certainly, there were a large number of individuals—including many of you here today—who were active in the Lifesaving Service, and continued that activity in the early days of the Coast Guard.

But I would not be honest if I did not point out that the great and glorious period of continual human sacrifice which characterized the Lifesaving Service began to wane soon after the amalgamation with the Cutter Service to form the Coast Guard. It was due partly to the changeover from sail to steam—and partly to the introduction of more modern lifesaving devices following World War I. As a result, there is no more resemblance between the old Lifesaving Service and the present-day Coast Guard, than there is between the three-masted schooner, and an atomic submarine.

For a few minutes I'd like you to go back with me to those days of the three-masted schooners—to the days of the original Lifesaving Service—and relive some of the shipwrecks and rescues on this coast.

Do you remember the August hurricane of 1899? When it struck the outer banks in the middle of the month it was already a full-scale hurricane, for in Puerto Rico alone, some three thousand people were left dead in its wake. It caught up with more than a dozen vessels off the banks, and six of them disappeared without a trace. Seven others were sunk, or piled up on the beach, total wrecks. It broke loose the moorings of Diamond Shoals Lightship No. 69, and drove her ashore at Creeda Hill. It flooded most of the homes on the banks, and at Diamond City near Cape Lookout it caused such concern that the entire population picked up what was left of their houses and moved away—to Harkers Island, and The Promised Land—and some of them live there still, and may even be here today.

On this section of the banks that the August huricane of 1899 kept the crews of Chicamacomico, and Gull Shoal, and Little Kinnakeet, and Big Kinnakeet stations busy for 3 days and 3 nights, and left the beach littered with wreckage—and bodies.

It began shortly after noon, Wednesday, August 16, when Surfman W. G. Midgett, of Gull Shoal station, on south patrol, saw a three-mast schooner dangerously near the beach. Midgett was on horseback, and hurried back to the station to report to Keeper D. M. Pugh, who immediately assembled his own crew and called Keeper E. O. Hooper, of Little Kinnakeet, and Keeper Bannister Midgett, of Chicamacomico, asking both to meet him at the scene, 2½ miles south of Gull Shoal.

Horses belonging to G. L. Midgett and D. L. Gray were hitched to the beach apparatus cart at Gull Shoal station, and the crew reached the scene less than an hour after the vessel—the *Aaron Reppard*—had been sighted. By then she was on the edge of the outer reef, five to six hundred yards from shore. The surfmen from Chicamacomico and Little Kinnakeet arrived in short order, and helped set up the Lyle gun.

Keeper Pugh's first attempted shot, using a 6-ounce cartridge of powder and a No. 7 Whitten line, and with an elevation of 23 degrees, burned off the line and the shot was lost. The second fell short. The third, elevation increased to 25 degrees, and using a No. 4 shot line, put the shot over the head stays. But by then, as Keeper Hooper of Little Kinnakeet reported later, "it was impossible for the men on the wreck to do anything, only to hold on for life to the rigging to keep from being swept overboard." One man was swept overboard; then, as the lifesavers watched helplessly the vessel went to pieces.

There were eight men on board the *Aaron Reppard*. Four more downed as she broke up. The remaining three, clinging to wreckage, drifted closer to shore—close enough for the lifesavers to go into the surf after them. Despite the danger from floating spars and planks thrown against them by the high breakers, they managed to save the three sailors. One of the lifesavers, Keeper Hooper, needed to be saved himself, for he was knocked down by a wave and pummelled by wreckage, and in the process his leg was broken.

Surfman W. G. Midgett had first sighted the *Aaron Reppard* at approximately 12:40 that afternoon; by a little after 5 p. m. the crews had returned to their stations, with the three survivors and the injured keeper, Hooper. At almost that exact same time the day watch at Big Kinnakeet station sighted another three-masted schooner close in to shore, abreast of the station. Keeper A. L. Gray, of Big Kinnakeet, aware of what had been going on immediately to the north of him, called Cape Hatteras station for assistance, and mustered his own crew, and started down the beach after the vessel which was drifting toward the south.

This was the three-master *Florence Randell*, with 10 people on board, and within half an hour she had struck the beach, approximately 2 miles south of Big Kinnakeet station. This time the luck turned, a line was fired across the vessel, the breeches buoy was set up, and with the assistance of residents of Big Kinnakeet, and lifesavers from Cape Hatteras and Creeds Hill stations, keeper Gray and his men succeeded in landing all nine of the crewmen, including the captain, as well as the captain's wife, before dark that evening.

By then, however, the hurricane was reaching full intensity, the horses could not pull the beach cart back to the station against the wind, and for more than 24 hours afterwards it was impossible for regular patrols to be maintained by any of the stations.

That was Wednesday, August 16. Not until the early morning of the 18th were patrols resumed, and at 4:45 that morning, surfman C. O. Miller, of Litlte Kinnakeet station, discovered a vessel ashore, about three-quarters of a mile south of the station. He immediately reported back to Acting Keeper N. W. Dailey, who had taken over when Keeper Hooper's leg was broken. All telephone lines were down, and Dailey and his crew hitched O. J. Gray's horse and another to the apparatus cart and tried to go down the beach to the wreck. But the sand was so soft, almost like quicksand, that the horses soon mired to their bellies, and fell time after time, and the cartwheels buried up to the hubs. Somehow they got through to the wreck, found it to be the three-masted schooner *Robert W. Dasey*, her bow so close to the beach that her jibstays were hanging down, within reach from the shore. Again the rescue was accomplished without loss, this time 7 men, including the captain; and despite the soft beach the job was done a little over 2 hours after she had first been sighted. At a vendue, or auction, 12 days later, the vessel was sold for $30; what remained of her cargo of coal, for 50 cents.

Meanwhile, up here at Chicamacomico, Keeper L. Bannister Midgett had sighted still another three-masted schooner in distress at break of day. This was the schooner *Minnie Bergen*, loaded with railroad iron, coal oil, and coal, with a crew of seven. When Keeper Midgett first sighted her she was anchored about 3 miles offshore with a distress signal in her forerigging; at about 7 o'clock the captain slipped his chains, and at 8:30 the *Minnie Bergen* struck the beach a mile and a half north of Chicamacomico station. The Chicamacomico crew was on the beach, opposite, waiting and ready, when she struck. One shot was fired to the vessel, 300 yards offshore, the breeches buoy was rigged up, and by 10:30 the Chicamacomico crew and the 7 rescued marines were safely back at the station.

Once again, as in the three previous wrecks, the survivors were supplied with clothing which had been collected and sent to the station by the Woman's National Relief Association.

This had been a busy morning for the crew of Little Kinnakeet, at the wreck of the *Robert W. Dasey*; and for the crew of Chicamacomico at the wreck of the *Minnie Bergen*. It was busier still for one man in between these two—Rasmus S. Midgett, of Gull Shoal. For shortly before dawn that morning Rasmus Midgett, on south patrol from Gull Shoal, had found the barkentine *Priscilla* on the beach, 3 miles from the station. There had not been time to return for assistance, so Rasmus Midgett had done what he could by himself. It was enough to earn him the gold lifesaving medal of honor, highest award for lifesaving; for Rasmus Midgett had rescued 10 men from the wreck of the *Priscilla* singlehanded, running into that terrible pounding, churning surf time after time after time. Seven of the men slid off the deck and into his arms, and were carried through the surf to safety; the remaining three, too weak to help themselves, remained on deck. But Rasmus Midgett scrambled up the side of that wrecked vessel three times and rescued each of them, without assistance.

Certainly that August hurricane of 1899—when the three-masted schooners *Aaron Reppard, Florence Randell, Robert W. Dasey*, and *Minnie Bergen*, and the barkentine *Priscilla* were piled up on the beach between New Inlet and Cape Hatteras—could not be called a typical 3-day period in the activities of the men of the Lifesaving Service. But the response of the lifesavers, at each of the five wrecks, was typical of the way the men reacted to the call of duty at the risk of their own lives.

The breeches-buoy operation—attempted three times, and successful twice on this beach in that August hurricane of 1899—has continued to be one of the basic methods for rescuing shipwrecked mariners. Since the breeches buoy is effective only when a vessel is close up on the beach, an entirely different type of rescue operation is called for when a vessel founders at sea, or is stranded on an offshore shoal—this is the rescue by surfboat.

The records of the Lifesaving Service contain a great number of surfboat rescues by North Carolina men operating from North Carolina lifeboat stations. One of the earliest and most famous occurred on December 22, 1884, when the crew of Cape Hatteras station, under command of Keeper Benjamin B. Dailey, and with Keeper Patrick H. Etheridge, of Creeds Hill filling in for an absent surfman, rowed through what was described by the investigating officer as "the most tumultuous sea that any boat within the memory of living men had ever attempted" on this coast, to save the crew of the barkentine *Ephraim Williams*. For that feat the two keepers, and Isaac L. Jennett, Thomas Gray, John H. Midgett, J. N. Jennett, and Charles Fulcher, received gold life saving medals of honor.

Another of special note was the rescue of six men from the schooner *Sarah D. J. Rawson* by the crew of Cape Lookout station, February 9 and 10, 1905. The vessel was sighted aground on the shoals around noon on the ninth during a break in the fog which had shrouded the area all morning. An epidemic of influenza had swept through the station crew that week, and every man

in the outfit was sick. But they launched their surfboat, rowed out to sea on that cold and bleak February afternoon, and after 4 hours reached the vessel, aground off there on the shoals. She was surrounded by breakers, her boat had been smashed to pieces, her bowsprit, foremast, maintopmast, deckhouses, and rigging were gone, and the lumber from her deck load literally filled the surf around her.

Already one of her crew had been washed overboard; the six remaining were huddled together on the canted deck of the wreck. Keeper William H. Gaskill attempted to guide his boat through the mass of wreckage, came within 200 yards, but was beaten back. Again he tried, and again and again and again, but when darkness came he was forced to pull away, and the surfboat was anchored there on the shoal, downwind from the *Sarah D. J. Rawson*, in the very path of the spars and lumber floating away from the wreck—for the lifesavers wanted to be near at hand if sailors were washed overboard.

The 15 of them survived the night somehow—9 lifesavers in their little boat, 6 shipwrecked sailors on the remnants of their schooner. And when the wind shifted shortly after dawn the surfboat moved in closer than before—close enough to get a line on board the wreck. One of the sailors tied it around his waist, jumped into the cold and angry sea, was pulled safely on board the rescue craft. Back went the line, 6 times in all, 6 men rescued; and as each sailor was pulled out of the water a lifesaver would remove his precious oilskin, wrap it around the man whose life he had helped save. And then the return trip, 9 miles of rowing through a sea too rough for the safe passage of larger boats. They made it, finally, back to Cape Lookout station, 24 hours after they had gotten out of sick beds to launch their boat. For this feat gold lifesaving medals were awarded to keeper Gaskill, and to surfmen Kilby Guthrie, Walter M. Yeomans, Tyre Moore, John A. Guthrie, James M. Fulcher, John E. Kirkman, Calupt T. Jarvis, and Joseph L. Lewis.

There is time for only one more recollection, and it seems appropriate that it should be of a memorable rescue by the crew of Chicamacomico station.

The United States was at war in August of 1918, and German submarines had laid minefields in the sealanes off our coast. In the early afternoon of August 16, the 6,679-ton British tanker *Mirlo*, manned by a crew of 52, and carrying a full load of gasoline from New Orleans to Norfolk, struck one of those German mines opposite Wimble Shoals light buoy. A terrific explosion rocked the ship, wrecking the engineroom and putting the lights and wireless out of commission. This was followed shortly after by a second explosion, which set fire to the gasoline, the British captain ordered his lifeboats lowered away.

The port lifeboat, first to be lowered, fouled the stays and capsized, but the 16 men on board, thrown into the sea, all managed to reach the overturned boat. The other two boats got away safely, just as a third explosion took place, cutting the ship in half and spewing its cargo of highly inflamable gasoline over the water in all directions.

One boat, the captain's, with 17 men on board, was soon clear of the sea of fire; the second, without oars, drifted before the wind, which was steadily increasing in velocity. The third—the one that had capsized—remained near the sinking vessel, bottom side up, in the very path of the burning fuel still gushing from the sinking ship. The men clinging to this lifeboat were themselves covered with gasoline, their clothes and their hair and even their bodies on fire. Only by remaining under water for as long as breath would hold out, then coming up again for a hurried breath of air and submerging once more, were they able to remain alive; even so, in short order 10 of them disappeared from view, leaving only 6 still clinging to the overturned boat.

Here at Chicamacomico, meanwhile, the lifesavers, under Keeper John Allen Midgett, had heard the first explosion and immediately prepared to launch their motor surfboat. Keeper Midgett and his six-man crew came through the breakers without accident and headed for the towering cloud of smoke and flames rising from the sea of Wimble Shoals. En route they met the lifeboat carrying the captain of the *Mirlo*, and gave instruction for him to proceed in close to shore and wait until the lifesavers could return.

The Chicamacomico boat then moved to within a few hundred yards of the *Mirlo*, which by now was on the verge of disappearing beneath the surface. There they were confronted by a veritable sea of fire. The entire surface of the ocean seemed to be covered with burning gasoline. Flames shot up in patches, and above them the great cloud of black smoke rose skyward. The lifesavers circled the cloud, finding at last an opening in the blazing surface of the sea. And down this opening they saw the overturned lifeboat, with figures still clinging to it.

Keeper Midgett turned the wooden boat toward that blazing sea, the men manned their oars, and they skillfully maneuvered her down that narrow open passage, moving directly through great sheets of fire at times, constantly enveloped in black smoke, hardly able to see for the darkness around them. The overturned lifeboat was reached at last; the six men, exhausted, burned and blackened, hysterical and unbelieving, were pulled into the surfboat.

The Chicamacomico boat headed, then, for the open sea, searched for the third lifeboat, found her finally, drifting aimlessly, so crowded her gunwales were almost level with the water, the men inside, singed and blackened. A line was passed aboard, and the Chicamacomico surfboat headed back toward the beach to pick up the captain's lifeboat, towing the second one behind, carrying the six survivors of the third. They landed through the surf, delivered the six survivors of the capsized boat into ready hands, then pushed out through the surf again, and brought in the other boats.

They, too, were awarded gold lifesaving medals of honor—Keeper John Allen Midgett, Surfmen Zion S. Midgett, A. V. Midgett, P. L. O'Neal, L. S. Midgett, and C. E. Midgett.

Already the Coast Guard has suceeded the Lifesaving Service, but their feat was in the glorious tradition of their predecessors.

It is a tradition we should never let the world forget.

Transpolar Route Via Seattle

EXTENSION OF REMARKS
OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1956

Mr. PELLY. Mr. Speaker, recently I had occasion to obtain information concerning the Military Air Transport Service operation in the Pacific area. In this connection, I was given a comparison of air transport operations over the Central Pacific as against North Pacific. For example, the difference in mileages showed a round trip via the Central Pacific is 13,450 miles, while the short circle route with an origin at McChord Field in the Pacific Northwest is only 9,748 miles. This means an average saving in operating a cargo, passenger or convertible airplane, based upon current rates for equipment, of $10,000 per round trip flight.

That is why the postal service is making tremendous savings by sending A. P. O. mail to the Orient and Far East via Seattle. Where the cost to the Post Office Department is on a per ton per mile basis the economy of the short circle route is obvious.

So, on western area air mail to Western Europe, will there be a huge saving by use of the polar route via Seattle.

To emphasize the taxpayers' interest in the Civil Aeronautics Board's hearing for transpolar air service, I include an editorial from the Seattle Times favoring more frequent service over the Arctic, and especially regular service from the west coast with Seattle as a coterminal:

SEATTLE DESERVES MORE FREQUENT SERVICE OVER THE ARCTIC ROUTE

Seattle and this area today are represented at a Civil Aeronautics Board examiner's hearing in San Francisco on applications of two American airlines for transpolar air service between the Pacific coast and European destinations. The applicants are Pan American World Airways and Trans World Airlines.

Seattle—meaning the area served by the Seattle-Tacoma International Airport—has two principal petitions to make in connection with the proposed transpolar service. One is that the CAB authorize at least one or both of the domestic airlines to operate over the transarctic route from the west coast, with Seattle as a coterminal.

The other is that the Seattle gateway be given more frequent service than is contemplated by either of the applicant domestic airlines. If the applications are granted as now stated, both Los Angeles and San Francisco would have the benefit of 4 or 5 flights a week on the transarctic route. The most Seattle or Portland could expect would be a single flight a week in this European service.

There are ample reasons why Seattle should be given greater consideration in these plans. This is the closest west coast city for European businessmen and tourists traveling by air to the United States. In the large Scandinavian population resident in this immediate vicinity there is an impressive potential business for travel to the Scandinavian countries.

This area already transacts a big volume of business with north European centers, which are markets for products of Pacific Northwest agriculture, notably fruits from this State's orchards, and for timber from the region's forests. The Boeing Airplane Co. has substantial orders to supply jet transport planes for a number of German, Belgian, and French airlines.

All this commercial interchange requires travel back and forth, providing business for airlines operating between Seattle and the European countries. There also is a considerable volume of military travel—servicemen and their dependents—from military installations in this immediate area to European stations.

Moreover, the Seattle-Tacoma International Airport has been selected by the Government for the second largest airmail facility in the country, destined eventually to handle the bulk of the foreign airmail of the entire Western United States.

This area's interests in this matter are being presented at the San Francisco hearing by J. D. Paul, as spokesman for the Seattle

Traffic Association of which he is secretary-manager, the Seattle Chamber of Commerce, the Port of Seattle, and the Tacoma Chamber of Commerce. These agencies have the full support of the community in their efforts in this behalf.

Medical Literature on Ileitis

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. DINGELL. Mr. Speaker, I found an article in last night's Washington (D. C.) Star by Doris Fleeson to be most interesting. I hope the Members of this Congress and the public at large will carefully consider the sobering facts contained therein.

MEDICAL LITERATURE ON ILEITIS—PESSIMISTIC OPINIONS ARE MARSHALED TO COUNTER ATTITUDE OF WHITE HOUSE

(By Doris Fleeson)

As every doctor knows, the authority in medicine is the literature.

It takes precedence over any one man's opinion, be he doctor, reporter, politician or White House press secretary.

One of the great medical libraries of the world is the Armed Forces Medical Library in Washington. Its collection of texts, surgical manuals and medical reports on ileitis is distinctly bearish in tone.

At practically every point it contradicts the "think-nothing-of-it" mood which the White House seeks to induce regarding President Eisenhower's operation for ileitis 10 days ago.

Instead, it depicts a chronic, debilitating, often progressive, disease for which the cause is unknown. Therapy for ileitis is repeatedly described as "supportive, not curative."

Dr. Burrill B. Crohn, who gave ileitis his name, is quoted optimistically by White House Press Secretary Hagerty. Hagerty argues that since ileitis is usually a disease of young adults, the grim figures about its recurrence do not apply to persons in the President's age group. The President is 65.

Dr. Crohn is certainly somewhat sunnier in his view of ileitis than most. But in the Journal of the American Medical Association for November 27, 1954, Dr. Crohn and Henry D. Janowitz, under the title, Reflections on Regional Ileitis, 20 Years Later, wrote:

"The cause of this disease remains unknown. * * *

"Clinical aspects. The disease occurs in persons of all ages and both sexes and it appears to have worldwide incidence. * * *

"There is no specific therapy for regional enteritis and all available measures are strictly supportive. With the increasing length of follow-up studies, it has become evident from all carefully studied series of patients treated surgically that the rate of recurrence of ileitis is increasing. * * *

"The high rate of recurrence of ileitis following the short circuiting or the resection type of operation is leading to reevaluation as a criteria for operation. * * *

"The reoperating of all the cases of terminal ileitis as they recur led to more recurrence and more operations. I prefer nowadays to handle my patients as a medical problem rather than a surgical one.

"My attitude is much more conservative today than it was."

The newest text on regional enteritis seems to be by Frederick F. Boyce, professor of clinical surgery, Tulane University of Louisiana School of Medicine, New Orleans, La., January 1955. Dr. Boyce states:

"Personal and collected therapeutic experiences (in regional enteritis) are sufficiently discouraging to produce the conviction that, as Kiefer has well expressed it, there are few diseases which should leave the physician with a greater sense of humility. * * *

"Unfortunately, any method of treatment used in regional enteritis is empiric and will remain so until the etiologic factor is discovered and the pathogenesis of the disease clarified.

"The beginning of therapy, therefore, is to make the patient understand the tentative nature of his treatment and to emphasize to him that he is suffering from a condition which will require observation, if not active treatment, the rest of his life. * * *

"This is a disease in which psychologic factors are important, even if they are not responsible for it. * * *

"I * * * regard sidetracking procedures simply as preliminary to subsequent resection. * * *

"The most discouraging feature of regional enteritis is the realization that no matter how expert the therapy and how gratifying the immediate results, there is no assurance whatever that the patient has been cured. * * *

"There seems no justification for the statement that one sometimes hears that recurrent disease is less serious than the primary disease. If anything, the contrary is true. Moreover, recurrent disease frequently presents major therapeutic problems. Recurrence of recurrent disease is not infrequent. * * *

"In the face of figures * * * from two of the most expert groups of surgeons in the country, it is clear why, before any treatment is undertaken, the patient or some responsible member of the family must clearly understand the nature of the disease, the limitations of treatment, and the chances of recurrence after any regimen that is employed."

The famous Dr. Charles W. (Chuck) Mayo, in his book, Surgery of the Small and Large Intestine, 1955, says:

"With regard to surgical treatment, the situation is rendered difficult because of the high rate of recurrence. * * * This rate is high regardless of the surgical technic used."

Anent Special Session

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ABBITT. Mr. Speaker, time is fast approaching in Virginia when the people of that great Commonwealth must take a stand. They must choose up sides; they must decide once and for all, whether or not they shall give up the fight to retain constitutional government in this great country of ours or whether they will sit idly by and watch the so-called Supreme Court of the United States, which has arrogated unto itself the task of regulating the thoughts, the minds, and sociological developments of the people of this country.

I thank God that three are people in Virginia who are willing to stand on principle in this great fight. They are not willing to see the octopus-like court take over by judicial fiat the amending of the Constitution of America. There is no middle ground in this fight; we are either for retaining our constitutional government or we are for giving in and taking the easy course out.

There are those in Virginia today who are advocates of a so-called assignment plan in answer to the Supreme Court's opinion of May 1954, declaring segregation in the public schools unconstitutional. The assignment plan standing alone and by itself simply legalizes integration, as well as implementing the Supreme Court's decision. I am not willing for this plan to be fostered upon the people of Virginia unless and until the people know and understand what is happening to them under such a plan. I am convinced that there are many others in Virginia who feel exactly as I do.

We are fortunate to have in southside Virginia a man of outstanding leadership, intellectual ability, and the intestinal fortitude to bring forcefully unto the people of Virginia the true facts and consequences that they are now facing. He is the Honorable J. Barrye Wall, editor of the Farmville Herald. He reveals the assignment plan for what it really is, legalized integration. Mr. Wall has writpeared in the Farmville Herald on Friday, June 15, and under leave to extend my remarks, I include the editorial herewith:

ANENT SPECIAL SESSION

Governor Stanley will call a special session of the Virginia Legislature before the middle of September to consider the school problem in Virginia. The action was taken after a recommendation by the school study commission in a 1-day session Monday, June 4. The governor asked and, we presume, expected the commission to restudy its former report in the light of developments. Since it took the commission only 1 day to formulate its report it may be presumed that it did not do much studying, nor did it make public any new proposals. It is logical to presume that the commission has completed its work. If so it might be dissolved with thanks and let a full discussion of its November report be had.

The rank and file citizen has more or less depended upon the school study commission for leadership. The average citizen has given little thought toward a solution so implicitly did he depend upon the members of the commission. It is high time that each citizen, not in favor of integrated schools, do some thinking for himself, and if we dare to be so bold, educators, newspaper editors, and others begin a study of this report in the light of developments.

The most important question is: Do you believe the United States Supreme Court had the right under the Constitution to decree the end of segregated public schools in Virginia?

If your answer is "Yes," then you will favor the school study commission's report which provides for legalized racial integration in Virginia's public school system. The Court's decision would nullify section 140 of the Virginia Constitution requiring separation of the races in public schools. The assignment of pupils to schools on bases other than race definitely accepts the principle of racial integration of the schools. You may expect as a result racial bickering, indetermin-

able law suits, deterioration of public edution, and tense racial tension.

Having established the principle of racial integration in schools the NAACP will take one of the subsequent steps in its "Target for 1963": (1) Integration in employment by law through FEPC, decreed by the United States Supreme Court; (2) integration in housing, "abolition of ghettos which now deface the American cities"; (3) registration and voting; (4) integration in education; (5) integration in transportation; (6) integration in public accommodations, hotels, restaurants, theaters, parks, and playgrounds; (7) integration in hospitals and health services; (8) repeal Senate rule 22, to prevent filibuster (which is a must in the NAACP program; (9) integration of voluntary associations, churches, clubs, etc. It is indicated in the "Target for 1963" published by NAACP that these objectives except No. 9 would be attempted by law. If not curbed the Supreme Court could well effect them by decree.

If your answer is "No," you will join hands with millions of Americans, the majority of the lawyers, and legislators in six States, who believe in government by the Constitution, the rights and powers of States, and the individual liberties of the individual. The overwhelming majority of the southern people have been jolted out their lethargy by the integration decision of the Supreme Court and for the first time realize the constant and consistent trends away from the principles of constitutional government. The Court has made bold to usurp the powers of the States in other decisions of not so widespread effect in recent months which begin to awaken the people in other areas of the Nation.

The Virginia Legislature took a stand through the interposition resolution. Six other States followed suit. By this procedure, constitutionally compatible, the issue of contested power can be forced. Until it is decided by a clear-cut amendment to the Constitution, there is nothing to be done. Governor Stanley and the board of education have the power and, as we see it, the obligation to proclaim the fact that Virginia schools will be operated according to the Virginia Constitution (racially separated).

For this good reason the Herald has not seen the need for a special session. Of course if those in authority fail to enforce the letter and spirit of interposition, it is conceivable that a special session of the legislature may be needed to do it.

However, this action is not indicated by the May report of the Governor's school study commission. It could have shared the responsibility with the Governor by recommending a firm policy, but instead it recommended a special session. The attorney general and lawyers representing the Prince Edward School Board want a special session and new legislation. So far as we can determine the only proposals now made public are contained in the Gray report, the assignment portion of which legalizes integration.

Therefore, unless the legislature and the people repudiate the interposition stand made February 1, thereby breaking faith with sister States who have followed our lead, it would be inconsistent to enact the assignment program.

May we ask what proposals the Gray Commission has for the special session? What legislation the attorney general and counsel for the school boards desire?

Senator Edward O. McCue, of Charlottesville, has made a proposal that the State assume responsibility for the public school system and finance the operation through a sales tax, thereby transferring the responsibility solely to the State.

Are there any other proposals?

Summary of the Major Provisions of the Rees Bill To Prevent Employment of Disloyal Persons by the United States

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. REES of Kansas. Mr. Speaker, the bill I have introduced today establishes a top-level, independent, three-member Loyalty Review Board responsible for determining the loyalty of Government employees and applicants for Government service. Members will be appointed by the President, with the advice and consent of the Senate. Not more than two members can be of one political party. The President will designate the Chairman. Terms of members will be 6 years, on a staggered basis to assure continuity of policy and administration. Members may be removed by the President for inefficiency, neglect of duty, or malfeasance. The salary of each member will be equal to that of assistant secretaries of executive departments, except the Chairman will receive $1,000 more. Membership on the Board will be a full-time job, with no outside employment permitted. Board headquarters will be in Washington, but the Board will have subordinate boards as needed for its work.

The Rees bill provides a comprehensive and effective procedure for investigation and development of information with respect to loyalty of present or prospective Government employees. Maximum use will be made of existing investigative facilities.

After the bill becomes effective, no person can be appointed in a Government Department until his absolute loyalty has been determined under these procedures—except in case of urgent necessity for a new appointment, certified by the agency head concerned and approved by the Board, where prompt investigation will be made after appointment. Any agency head may initiate the loyalty procedure on evidence of disloyalty of an employee of his agency.

The Civil Service Commission will conduct a preliminary investigation of every applicant being considered for appointment, using all pertinent sources of information, including files of the FBI, military intelligence units, the House Committee on Un-American Activities, local law enforcement agencies, other Government investigative and intelligence agencies, and employment and school records.

If the Commission finds no derogatory information relating to loyalty, it will so advise the department. That closes the loyalty procedure. Of course, if there is any other question of suitability for employment the Commission will take proper action.

If the Civil Service Commission finds indication that any employee or applicant for employment is of questionable loyalty, it will immediately terminate its investigation, refer the matter to the FBI for a full field loyalty investigation, and notify the department concerned. The FBI will report the results of its investigation to the Loyalty Review Board. The President may, in the national interest, require an FBI investigation without a preliminary investigation by the Commission and, in his discretion, notify the department concerned.

On receipt of notice from the Commission or the President of a full field loyalty investigation of any employee, the head of the department concerned may, in his discretion and if national security requires, suspend the employee pending final determination of his loyalty. Any suspended employee restored to duty because of a final determination that he is not disloyal will receive compensation for the period of suspension at the rate provided for the position from which suspended, less any earnings in other employment during such period.

The Loyalty Review Board will refer each FBI report to a subordinate board for review and preliminary findings on the evidence. A unanimous finding that there is no question of loyalty will become the decision of the full Board, which will notify the agency concerned that in its judgment there is no reasonable doubt of loyalty. If the favorable finding is not unanimous, the full Board will review it and, if in agreement, will take the same action.

If the finding of the subordinate board is adverse, or if the full Board agrees with a minority adverse opinion of the subordinate board, the person concerned will be notified in writing and may appeal to the Board within 15 days.

The Board may, if in its judgment justice requires, disclose its sources of information, but any finding and statement to the person involved will be held confidential by the Board.

Upon appeal the Board will consider any additional evidence submitted in writing or at a hearing and make a final decision, with immediate notice to the appellant and the agency head concerned.

If there is no appeal from an adverse decision, or if the decision on appeal is adverse to the appellant, the Board will certify to the agency that the loyalty of the individual is doubtful after allowing him 30 days to file a complaint with the appropriate United States court, with copies to the Board and the agency head. The court then will have exclusive jurisdiction to dismiss the complaint or to set aside the Board's decision if satisfied that it is arbitrary, capricious, or otherwise contrary to law. The court may order suspension of any employee during the consideration of his complaint if the Board shows that continuance on duty might be dangerous to the United States. No employee or applicant who files a timely complaint with the court will be discharged or rejected for disloyalty until his complaint is decided by the court.

If there is no complaint to the courts and the Board certifies that there is reasonable doubt of the loyalty of any em-

ployee or applicant, or if the court dismisses the complaint, the employee will be discharged or the applicant will be rejected, as the case may be.

The Loyalty Review Board will make rules and regulations to carry out its functions and publish them in the Federal Register. All statements before the Board by an appellant must be under oath. The appellant will have the right to be represented by legal counsel, to produce evidence and witnesses, and to furnish competent affidavits or other written statements. No decision of the Board will be made except with the concurrence of at least three members, and the Board must maintain a permanent record of each member's vote.

The Loyalty Review Board and its subordinate boards may subpena witnesses and books, records, and documents as deemed necessary, and may administer oaths or affirmations to witnesses. Witnesses will be paid fees and mileage as paid to witnesses in United States district courts.

In case of contumancy or refusal to obey a subpena the Board may invoke the aid of the appropriate United States court. Failure to obey a court order may be punished as contempt, under penalty of a $1,000 fine or 1 year imprisonment, or both.

The Rees bill sets forth basic standards for use by the Board in determining the need for removal of an employee or refusal of employment. These include evidence of sabotage, espionage, association with spies or saboteurs, treason or sedition—or advocacy thereof—advocacy or revolution or altering the form of Government by force or violence, disclosure of government by force or violence, disclosure of confidential or nonpublic documents or information under circumstances which may indicate disloyalty, performing or acting to serve foreign interests in preference to those of the United States, membership or association with any person, group, or party known to the Loyalty Review Board or designated by the Attorney General as Communist, totalitarian, or subversive, or as advocating force or violence to deny rights under our Constitution or to alter our form of government by unconstitutional means. The Attorney General is required to publish a list of any such group, party, organization, or combination of persons and upon request will furnish the Board his reasons.

The Board will report to the President and to the Congress each year on the performance of its responsibilities under this legislation.

Every agency will submit to the Board the name and fingerprints of any employee not already submitted.

The functions, records, and personnel information of the present Loyalty Review Board in the Civil Service Commission—called the Old Board—are transferred to the Loyalty Review Board created by the bill. This legislation in general will replace Public Law 298, 82d Congress, authorizing certain preliminary investigations by the Civil Service Commission, except for pending cases. All inconsistent laws or regulations are repealed or rescinded to the extent of any inconsistency with this legislation.

The Rees bill also closes a gap in existing laws by spelling out in affirmative language a prohibition against any person holding or accepting, Government employment or payment for any Government service if he, first, knows, or has been notified in writing of a determination by an appropriate authority, that he is of doubtful loyalty; second, engages in any activity which, under any law or Executive order, reflects adversely on his loyalty; or, third, belongs to or is sympathetically associated with any group, party, organization, or movement in which membership reflects adversely on the loyalty of members to the United States.

Violation of this prohibition will be a criminal offense, under penalty of $10,000 fine or 5 years imprisonment, or both.

Any Government officer or employee who knowingly appoints or pays, or refuses to discharge, any person found disloyal by the Loyalty Review Board or otherwise prohibited by this bill from Government employment or pay will be subject to dismissal from his office or position and a $2,000 fine or 2 years imprisonment, or both.

The bill does not apply to the President or Vice President of the United States or to Presidential appointees by and with the advice and consent of the Senate. The President may exempt certain specified persons as he deems necessary in the national interest.

The provisions of the bill relating to the Loyalty Review Board will become effective 60 days after not less than 3 members of the Board are in office. The other provisions will be effective upon enactment.

Question of President's Health

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. DINGELL. Mr. Speaker, there are a number of things about the recent attack of ileitis suffered by the President which have been obscured by the great burst of press agentry which followed it by members of the President's staff and even apparently reputable members of the medical profession. While members of the President's staff are politicians and can be to some extent excused their misstatements both from basic ignorance of medical subjects and from their desperate dependence on one man to hold their jobs for them, I think that there are certain facts which have been beclouded and which should be clarified.

I intend to treat this matter further, but I think that an excellent study of the true state of the President's health has been critically reviewed by Doris Fleeson, a newspaper woman of more than ordinary ability.

I here insert into the RECORD an excellent article from the Washington (D. C.) Star of June 14, 1956, by that splendid journalist, and hope that all will read it who have not already done so. It goes far to dispel much of the foggy thinking, some of which has been deliberately fostered by desperate men, with regard to Ike's health.

QUESTION OF PRESIDENT'S HEALTH—INSURANCE AND MEDICAL STATISTICS ON ILEITIS PATIENTS ARE QUOTED

(By Doris Fleeson)

An excess of propaganda is beginning to get in the way of the public dialog about President Eisenhower's health. That dialog is necessary and proper because the health of the President is an affair of state with grave consequences to this country and the world.

The psychological warfare over the President's new illness was begun by his Army doctors almost before he was out of the ether. His aides are continuing it.

The Democrats are starting to fight back. These attempted manipulations of public opinion can be expected to continue until they cease to have a point.

Even the medical profession outside the Government is joining in. Dr. David Allman, a candidate for president of the American Medical Association, for example, told reporters in Chicago that "when President Eisenhower recovers he will be in better physical condition than any of his opponents, Republican or Democrat, have been at any time in their lives." Dr. Allman never attended any of these men. As the Milwaukee Journal points out, such silly stuff tends to degrade the medical profession.

History shows that this is the way people are. Such is the stuff of the power and advantage to be derived from the office of the Presidency.

Yet whatever is or is not true in the propaganda war, the disease which required surgery for the President is a fact for which ample literature exists. That literature is available. In at least two cases of unquestioned respectability and authority it cuts across the optimism dispensed at Walter Reed last Saturday afternoon by Maj. Gen. Leonard D. Heaton, the Army surgeon who operated on the President.

Dr. Heaton said he thought the President's life expectancy might have been improved because he would almost certainly not again suffer with the disease. He thought there was nothing in the picture to prevent the President's running again.

Both the insurance underwriters' bible, Risk Appraisal, by Dr. Harry W. Dingman, and the current issue of the New England Journal of Medicine, May 31, 1956, suggest that Dr. Heaton drew a long bow.

The Risk Appraisal comments (p. 248, 1954 ed.) begin:

"Ileitis, regional—Crohn's disease. Serious. Always serious."

Details of the disorder follow and then this comment:

"Slowly, progressively, the ailment becomes chronic, about 10 percent. Resulting in obstruction of various degree. Short-circuiting operations offer hope, but not much. Prognosis always dubious.

"Recurrence is distressingly high, 1 in 3 within 2 years. In Mayo Clinic record of 42 recurrent cases, 5 were dead, 10 invalided, 27 arrested but 1 had continued diarrhea of severe nature, 5 had nutritional disturbances, 19 had continued diarrhea of mild degree. Fact is, recurrence must be expected within 2 years. (Lahey Clinic Bulletin 8:149, 1953.)"

A second grim study was cited and the point then made that "bowel resection often

necessary because of abscess, fissure, or obstructions, in which event 50 percent may appear to be well, 50 percent will probably have recurrence in some degree or other. Trouble is, affected persons are subpar in general health.

"Life insurance possibly acceptable on 10-year endowment plan rated for 300 percent mortality.

"Disability coverage no, positively no."

Walter Reed doctors, after extensive tests, recently certified the President as in excellent health. Their glowing diagnostic findings did not mention the President's intestinal pathology for which surgery was performed last weekend.

The New England Journal of Medicine, page 1031, describes surgery as "palliative rather than curative" in a complete review of regional enteritis which is Crohn's disease. The review discusses all of the treatment included in ileocolostomy. Its conclusion:

"It is this high recurrence rate, even in the hands of the most enthusiastic sponsor of any one form of operation that has relegated surgery to the role of a palliative rather than curative measure. This disappointing aspect is usually found within a year of operation, at the proximal point of the new anastomosis—the 'new terminal ileum.'

"There is pessimism and disillusionment about the effectiveness of any regimen of providing more than palliation and control of symptoms.

"They all suffer from the disappointing sequel of recurrence and persistence of the disease."

That doctors disagree is a truism, but the foregoing accounts hardly fall within its scope.

They are not the whole story. Patients often surprise their doctors and confound the body of research. And it also has been a very long time since the great Winston Churchill could pass a medical examination. But the above is part of the story, too.

Resistance All the Way

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ABBITT. Mr. Speaker, as I have stated on the floor of this House a number of times, we in Virginia are fortunate indeed to have people who are willing to put principle above personal fortune; to have people who believe in the constitutional precepts of their Founding Fathers; to have people who regardless of the consequences are willing to point out to the people of Virginia the pitfalls that are surrounding them, and to tear away the camouflage that has been thrown up by certain people in an endeavor to get the people in Virginia to swallow the Supreme Court's decision of May 17, 1954.

I have in mind one of the outstanding Virginians of today, an editor who has done much to enlighten the people of Virginia, a man who stands upon the constitutional principles of our Founding Fathers; I refer to the editor of the Richmond News Leader, James J. Kilpatrick. On Tuesday, June 5, 1956, there appeared an editorial in the Richmond News Leader entitled "Resistance All the Way."

Mr. Speaker, under leave to extend my remarks, I desire to include herewith that editorial and I commend it to the people of this great country, and in particular to the citizens of the Commonwealth of Virginia:

RESISTANCE ALL THE WAY

There is mighty little to be gained, for for the people of Virginia or for the Byrd political organization, by the unwarranted exchange of acerbities between Attorney General Almond and Speaker E. Blackburn Moore on the matter of school legislation. These gentlemen are too valuable to this State for their energies to be wasted in public feuding with each other.

The dispute between them, if we read it correctly, stems largely from the different backgrounds that each brings to this problem: Mr. Almond is a lawyer, a former judge, an experienced student of the law. Mr. Moore is a farmer and businessman, whose distinguished public service has been concerned with making laws, not defending clients. That each is equally dedicated to preserving segregated schools scarcely need be argued. Their end is the same; and if reasonably minded men may differ on the best course toward attaining that end, at least it may be suggested that, within the family, these differences be kept at the level of rational debate.

This newspaper would like to join the Gray commission in recommending that a special session of the assembly be called. Perhaps a session in Virginia advantageously could be timed to coincide with the July meeting of the North Carolina Assembly in Raleigh, the better to preserve a common front in this part of the old South. But in any event, at some time during the summer, Judge Almond and other defense counsel must be equipped with new legal weapons, designed not for compliance with the Supreme Court's mandate, but for more effective resistance.

For the past 2 years, Virginia has been pursuing what John Randolph, of Roanoke, once described as a course of "wise and masterly inactivity." Virginia has not panicked or rushed off halfcocked. We have made one desirable change in the State constitution; we have, on February 1, forcefully expressed those principles of fundamental law which Virginia conceives to lie against the Supreme Court's decision, and we have asked other States to resolve a stated question of contested powers. Beyond that Virginia has not stepped.

Now it is time, in our view, to consider further measures consistent with Virginia's expressed determination to resist the Court's illegal encroachment by every legal, honorable, and constitutional means.

Toward that end, two steps might usefully be taken.

The first would be a declaration of State policy, whether by the assembly or by the Governor in conjunction with the State board of education, that no school, anywhere in Virginia, shall be integrated without specific court order, and then only after the people immediately affected shall have had an opportunity to vote upon integrating the particular school, or abandoning it.

The second would be for the assembly, after mature debate, to enact whatever new laws may be found desirable, consistent with the stated intentions of February 1—that is to say, consistent not with compliance, but with resistance.

On the first point, it may be suggested that such a declaration of State policy would settle many uncertainties at the local level. Virginia's position, as a State, is that section 140 of our State constitution, which requires separate schools, ought as a matter of right to be treated as still binding upon the localities. Virginia has recognized, as a matter of superior force in the Court's hands, that the Court has undertaken to render section 140 void. But Virginia has denied the Court's authority thus to trespass upon the reserved powers of this State, and we have called upon all other States in the Union to decide the issue.

Until the issue is so decided, Virginia may have a duty to abide by specific court orders directed to specific local cases, but we need recognize no duty voluntarily to comply anywhere else. And let it be suggested that such a declaration of policy be directed to individual schools, and not to whole counties or cities. There is some doubt even in the Prince Edward case, as we read the pleadings, whether the suit goes to secondary schols only, or to all Prince Edward schools. In this connection, it may be noted that the NAACP now has suits pending in 2 counties and 3 cities; but the other side of that coin is that no suits are pending in 96 counties and 29 cities.

On the second point, it may be suggested that a number of new laws may be considered, entirely within the State's authority to enact, which would not acknowledge the concept of voluntary integration. A bill already has been drafted to provide for tuition grants. Another bill is ready for introduction by which compulsory school laws would be amended. A third measure would protect retirement benefits of public school teachers who may be employed by private educational corporations.

More basically, bills could be drawn with the aim of shifting the battle from local school-board members to the Governor and the assembly. Or in another direction, bills could be devised with the object of so multiplying litigation as to frustrate the NAACP for years to come; for example, once a county had been ordered to integrate a particular school, and its people had approved, that county could be authorized to assign each particular prospective student upon qualifications having nothing to do with race. Thereafter, separate suits might be required challenging a locality's decision as to each individual student.

The important thing is not to despair, and not to retreat. Let us recall that Northern States, over a period of 30 years, deliberately and willfully—and successfully—defied both the Constitution and the Supreme Court in the matter of "personal liberty laws." Between 1830 and 1860, more than a dozen States above the Potomac, in the very teeth of a clear and unambigious requirement of the Constitution, enacted laws by which the return of fugitive slaves was prevented. Surely Virginia and the South, in seeking not to defy the Constitution but to preserve it, can exercise an equal ingenuity now. Surely we can defend our institutions with a vigor at least equal to the enthusiasm of those antagonists who would destroy them.

Not long back, the Roanoke World News summed up the basic choice of policy that must soon be expressed by the assembly: It is whether to proceed in a spirit of compliance, and attempt to minimize the impact of integration; or whether to proceed in a spirit of resistance, and attempt to prevent any integration, anywhere, for as long as possible.

Our own choice, and to judge from the January referendum, it is the overwhelming choice of the people, would be the latter: Resistance now, resistance later, steadfast, unrelenting, massive resistance, stopping short only of local violence or civil war. The South can win this fight for State sovereignty and the constitutional structure of the Union, provided the South establishes one consistent course and holds unswervingly to it.

Statement Regarding the St. Vladimir Russian-Orthodox Youth Organization

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BOSCH. Mr. Speaker, much is being said and written about the visiting Russian delegation of churchmen in the United States—is this just another facet in the propaganda program of the Soviet Union aimed at making us believe that there has really been a change in Soviet policy?

Under leave to extend my remarks, I include a statement regarding the St. Vladimir Russian-Orthodox Youth Organization and a press release from this organization regarding the above-mentioned delegation. I commend this release to the careful study of my colleagues.

The St. Vladimir Russian-Orthodox Youth Organization is an organization composed of young people of the Russian Orthodox Church outside of Russia. There are chapters in every Russian orthodox parish in the United States.

Most of our members are recently naturalized citizens who came to this country after World War II. Quite a number of them came from behind the Iron Curtain and therefore know what communism is.

We have chosen to become citizens of this country and would like to be useful as such. Our organization has set as one of its purposes a constant fight against communism wherever and whenever it is possible. Many of our members have proved their patriotism when they fought against Communists in Korea.

Since the Geneva Conference the free world has been facing a new Soviet psychological offensive more dangerous than any so far experienced. The goal of the offensive is to undermine the morale of the citizens of the free world and confuse their minds as to the true aims of Soviet policy.

Christian churches of the Western World have long been a great deterrent to the spread of communism; therefore, if the Soviet Government can succeed in softening the attitude of these church groups and win their confidence and friendship, it will win the psychological war. With this in view Soviet leaders have given their blessings to the current visit of their churchmen to the United States.

For subtle reasons of strategy the arrival of these Soviet churchmen to the United States has been planned in two sections. The first section, comprised of Protestant churchmen, headed by Mr. Jacob Zhidkov, of the All Union Council of Evangelical Christian Baptists, was welcomed in this country on May 18. Mr. Zhidkov's role could be likened to that of Mr. Malenkov's when he preceded Mr. Bulganin and Mr. Khrushchev on their visit to England. Mr. Zhidkov is paving the way in much the same manner, for the arrival on June 2, of the head of the delegation, Metropolitan Nicholas Krutitzky. The nature of the visit is in no sense less political in spite of its being made by churchmen instead of Government officials. Mr. Zhidkov's mission is to ingratiate himself to the large groups of Baptists in the United States and by this association to win the good will of these groups toward the Soviet Union.

The Baptists are a very small minority in Russia. Mr. Zhidkov is not likely to encounter many refugees from Communist Russia among the Baptists in America—consequently he can sow his seeds of friendship without much fear of being challenged by Christians who know the true face of the powers he is representing. If Mr. Zhidkov and his companions can charm the native American Baptists and recruit supporters among these unsuspecting groups, in advance of any controversy which the more conspicuous figure of Metropolitan Nicholas may arouse upon his arrival in this country, the success of this campaign is assured.

Mr. Zhidkov has cheered the Baptist World Alliance by announcing that Russian Baptists are converting 12,000 new members every year and that the Russian Baptist Church has grown from "100,000 since prerevolutionary times to 500,000 in the Soviet era." These figures are fantasy and Mr. Zhidkov conveniently forgot about the more than 600,000 German Baptists of the Volga German Republic, who disappeared together with their Lutheran brothers, somewhere in Siberia in the late 1930's and early 1940's.

Not much is known about the career of Mr. Zhidkov excepting that he was always a trusted friend of the Soviet Government. In his speech at the Conference in Defense of Peace of All Churches and Religious Associations in the U. S. S. R., held in Troitse-Sergiyeva Monastery, Zagorsk, May 9–12, 1952, Mr. Zhidkov made the following statement: "Our country and her people, led by I. V. Stalin, the standard bearer of peace, unswervingly march at the head of all peace supporters." (Published patriarchate documents and materials, p. 150.) This meeting at Zagorsk was taking place at the very time when the United States Army together with armies of several members of the United Nations were fighting in Korea against Chinese and Korean Communists, armed and sustained by this same "peace-loving" leader.

On many occasions Metropolitan Nicholas too has paid high tribute to Stalin, praising his love for mankind and peace, at the same time denouncing by inference, Americans, as warmongers, alleging and protesting the use of "germ warfare" by Americans in Korea and attributing all the unrest in the world to capitalist greed.

Some examples of the type of speech made by Metropolitan Nicholas are as follows (March 13, 1952, to the workers of Moscow, Journal of Moscow Patriarchate, No. 4, 1952): "The American aggressors in Korea have covered themselves with dishonor in bombing the defenseless, peace-loving Koreans."

In his speech at the second world congress of Friends of Peace published in the Journal of the Moscow Patriarchate, No. 12, 1950, Metropolitan Nicholas spoke not only as a citizen of the Soviets but also as a bishop of the Russian Orthodox Church, in the name of the church, recognizing his responsibility in the face of God, the Orthodox Church, and history. After that introduction, Metropolitan Nicholas spoke of Americans in Korea as using, "Gallows, firing squads, atrocious tortures—not only of prisoners of war but of children, old people, women, and sick people."

In December 1951, as recorded in the Journal of the Moscow Patriarchate, Nicolai declared: "American aggressors continue to wage a war of extermination in Korea. * * * The ideas of hatred of humanity are inoculated in children and young people on a broad scale in the U. S. A. * * * It is thus that the American kindlers of war try to raise murderers from their tender years."

He called us American criminals and also civilized savages. In a speech delivered in Berlin, February 23, 1951, before the first session of the World Council of Peace, also reported in the Journal of the Moscow Patriarchate, Nicolai said:

"For the purpose of annihilating the population, the American criminals first of all fanatically killed political prisoners (from 200,000 to 400,000 persons) forcing them first to dig their own graves; they threw the bodies of patriots who had been hung, shot, or who died from typhus into a precipice and, to conceal the traces, blew up a cliff above it. * * *

"These civilized savages arranged shooting matches with living targets, binding peasants to posts with barbed wire and shooting each of them over the heart of the target. Reviving the customs of the young Fascists, young Yankees photographed these scenes for their family albums and sent them home to their fiances and wives."

These and other statements were brought to the attention of Metropolitan Nicholas at the last meeting with American clergymen, in Moscow, but in the reports they have published no mention is made of any words of repentance on his part. If Metropolitan Nicholas believes he spoke the truth, how then can he visit a country guilty of such crimes? If Metropolitan Nicholas does not believe his own statements express the truth why does he not make a public statement to that end and apologize?

In 1945, Metropolitan Nicholas was an "impartial" member of a commission which investigated the massacre of some thousands of Polish officers at Katyn, in Poland. Metropolitan Nicholas signed a statement exonerating the Soviet Government and attributing this massacre to the Germans. A congressional committee has recently come to the conclusion that the Katyn executions were carried out by order of the Soviet Government.

Metropolitan Nicholas began his association with the Russian Orthodox Church as a youth, before the Communist revolution. He distinguished himself as a brilliant student in a theological seminary. His rise to an influential position in the church in Soviet Russia, however, took place at a time when thousands of monks, priests, and bishops, were being martyred, executed, or deported, by the Soviet Government. During those years of persecution the hierarchy of the Russian Church opposed all the attempts of the Soviets to gain its obedience. After the death of Patriarch Tikhon no successor to his see could be elected and a number of Locum-Tenere's were subsequently arrested until in 1927 Metropolitan (later patriarch) Sergey agreed to pledge loyalty of the hierarchy to the Soviets. The majority of bishops did not agree with him and were arrested. By 1939 the only prerevolutionary bishops still active were Patriarch Sergey and the present Patriarch Alexy. His right hand is Metropolitan Nicholas.

Metropolitan Nicholas made a compromise with Communist rulers, set aside considerations of principle and conscience, and placed his ability at the service of the Soviet Government. He became the political force within a church subjugated by Communist rulers—an arm of the Soviet Government. Church and religion were used to extol godless Soviet Communist rulers and their aims, sanctioning the atrocities committed by them while denouncing and vilifying their opponents and victims in the free world.

Unable to destroy religion in Soviet Russia through persecution and the demolition of churches the Soviet rulers have taken up a new weapon and tactic; to gather the church into their fold, to give it their official recognition, to use it for propaganda purposes in the free world and ultimately for its own self-destruction through complete submission.

On the death of Stalin, Metropolitan Nicholas stood guard at his bier. On the day of Stalin's burial, Patriarch Alexis, the primate of the Russian Orthodox Church recognized in Soviet Russia, celebrated a requiem service. Speaking on that occasion he praised Stalin as a great moral and social force. He called him a genius and said, "And we, having come to pray for him, cannot omit proclaiming his ever-benevolent and sympathetic stand toward the needs of the church.

No appeal addressed to him was ever turned down; he fulfilled all our requests." (Sermon, March 9, 1953.)

If Stalin was so sympathetic toward the needs of the Orthodox Church, why were so many churches closed? In Leningrad alone 145 churches have been closed since 1929, and only 10 are reported open now. In Moscow there are only from 50 to 55 churches compared with 657 which were functioning in 1917, at the same time the population of Moscow has quadrupled.

Psychological warfare is a term used to designate various stratagems and activities of propaganda such as the dissemination of false information and rumors within the ranks of the enemy and on his home front designed to dissuade the enemy from continuing his resistance.

It can concentrate on various means for achieving this end. For instance, by creating panic it can spread defeatism and a sense of the futility of continued resistance in the face of a stronger adversary. Or, the enemy can be persuaded that he would be better off if he joined his lot with his adversary instead of fighting him. Psychological warfare can sow dissension within the ranks of the enemy and turn the people against their rulers, or their military against their civilian authorities, etc. The main task of psychological warfare is to conquer the enemy from within; make him fold his arms; make him change the concept he has of his adversary. In short, the most successful psychological warfare is that which so changes the convictions of the enemy's population that in the end a good portion of this population will fight the battles of the adversary.

Such results are in the process of achievement by the Soviet political machine under our very eyes and in our own front yard. Through a sort of agile somersault the Communist leaders pretend to have turned from ruthless persecutors of religion into benevolent protectors of churches, churchmen, churchgoers, and clergymen of all faiths—from prophets of hatred into angels of peace. Whereas a few years ago a lone Red Dean of Canterbury fought the battle for the Communist conquerors in the free world, many innocent and sincere American churchmen today have taken up the arms of the enemy and are opening the way for Communist aggressors and enemies of religion, in the blind belief that they are fighting for righteousness, Christianity, and peace.

Status of Forces Agreement

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. BOW. Mr. Speaker, my esteemed colleague from Indiana [Mr. HALLECK], in his remarks in debate on the amendment which I offered to the Mutual Security Act on June 8 said this:

> While it is only the sense of Congress, knowing the President as I do, if this were to become law he would feel himself compelled to take the steps here advocated.

I heartily concur in this expression of confidence. In my appearances before the Foreign Affairs Committee I said I firmly believed that if my resolution was adopted that the President would recognize the will of the people and would fulfill his constitutional duty to take care that the laws be faithfully executed.

My colleague expressed his conviction that if the operation of any of these agreements should be demonstrated to be harmful to our men in the service, the first man to move as the Chief Executive, the Commander in Chief, would be the President. I like to believe that too.

Unfortunately I do not believe the President has been fully informed of the cases in which there has been a miscarriage of justice in foreign courts. Does he know there is a marine now serving a sentence of imprisonment in Japan whose conviction was described by official observers as manifestly unfair and unwarranted? Has he heard the reports of observers of the trials of any other of the more than 80 servicemen still in prison?

Does the President know that the Army commander in France said that the French procedure of combining trial of criminal and civil actions is a persistent source of irritation and dissatisfaction? That the French have tried servicemen for alleged offenses and found them guilty so that civil damages could be assessed, when our own court-martial board did not consider the evidence warranted prosecution?

Does the President know the Judge Advocate General has said there are certain basic constitutional rights which an accused may be denied in French courts? And, the same is true of all NATO countries?

Last July I requested the Secretary of the Army to furnish copies of the observers' reports in all cases of criminal prosecution of our servicemen by foreign authorities resulting in sentences of imprisonment. It was told the Defense Department had not required these reports to be forwarded to Washington, except in cases which had attracted particular notice in the press, or which had been the subject of congressional inquiry, or in which the Senate resolution procedure was involved. I understand this has now been remedied. But has it been remedied to the extent that the President is informed of the real situation?

With the same conviction expressed by my colleague from Indiana I am obliged to conclude that the full facts have not been presented to the President.

Representative Hosmer's Feather River Solution

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. HILLINGS. Mr. Speaker, our colleague, the gentleman from California [Mr. HOSMER], is recognized as an authority on water problems. He has performed outstanding service for our State as a member on the Committee on Interior and Insular Affairs.

I wish to place in the RECORD an editorial which appeared in the Los Angeles Times of Tuesday, June 5, 1956, which describes our colleague's proposal for settlement of the Feather River controversy. The editorial follows:

REPRESENTATIVE HOSMER'S FEATHER RIVER SOLUTION

Representative CRAIG HOSMER, of Long Beach, has submitted a bill to the House which contains a solid basis for settlement of the long drawn out San Luis Dam-Feather River controversy.

HOSMER's suggested solution comes just after the announcement in Washington that the prospective new Secretary of the Interior, Fred Seaton, of Nebraska, is strong for State rights in water matters. Inasmuch as the San Luis struggle has been a Federal versus State issue, and the Secretary of Interior carries a great deal of weight in such matters, the position of Seaton is of vital importance.

HOSMER's bill would provide for State ownership, construction and operation of the San Luis Dam and Reservoir. The financing would be with money borrowed from the Federal Government and guaranteed by the credit of the State.

It is to be hoped that at last Governor Knight will cease his baffling and inexplicable opposition to the State San Luis project and accept the solution embodied in Representative HOSMER's bill. The governor has stubbornly supported Federal domination of the San Luis unit—which is the controlling project of the whole Feather River system.

The Hosmer bill requires that the State build the San Luis Dam expeditiously; there is a proviso that if it does not do so the Federal Government may step in. This stifles the oft-used argument that "the Federal Government could do it quicker."

Only Governor Knight's opposition prevents the State from getting started.

The legislature has appropriated the money for buying both the Oroville and San Luis Dam sites. It has passed a resolution urging immediate acquisition so the work can get under way.

State Engineer Harvey Banks has been named head of the new, unified, streamlined California Water Department created by the legislature to carry out the Feather River program and the State water plan.

So far, Governor Knight has blocked the necessary forward steps on San Luis.

The Administration's Foreign Policy Wins Tremendous Victory in Egypt (Serendip-style)

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, on June 12, 1956, James Reston's article in the New York Times on "Serendipity in Capital" advised us of the cure-all the administration has discovered. A remarkable elixir originally found by the English writer, Horace Walpole, it gets its name from his fairy tale, The Three Princes of Serendip. The three princes were never dismayed by misfortune, but always managed to discover the most wonderful things.

In the prevailing fashion in Washington these days of always creating the impression that all is well in the world I have come to the startling conclusion

that our foreign policy has just won for us a tremendous victory in Egypt.

Mr. Speaker, for reasons of state it is not likely that the future American historian will take special note of the 5-day celebration that began in Cairo last Wednesday, June 13. This is a period of rejoicing in Egypt where they are celebrating the most glorious event in their modern history. That event is the departure of the last British soldier from the Suez Canal base and the transfer of the canal to Egyptian hands. To mark the end of 74 years of British guardianship, the Egyptians climaxed their celebration on Monday by naming it Evacuation Day.

This day should be marked in our own diplomatic history as a milestone in American Middle East policy, for we were primarily responsible for persuading our British allies to give up this life line of empire. Apparently we also insisted that no conditions were to be attached to this generous gift of a powerfully equipped military base and a critically important international waterway.

At the same time the American people were assured that a new day was dawning in the Middle East. Egypt was going to be made safe for democracy and freedom, and we could believe her claim of being an enemy of Communism. Egypt could not be any other than our everlasting, grateful friend. With our help, living standards would go up and American technical know-how would speed the modernization of Egypt. We were told that under Naguib and Nasser a grateful Egypt would surely be a cooperative Egypt and that as a result tensions in the Middle East would disappear.

The author of this profound policy was our former Assistant Secretary of State for the Near East and present Ambassador to Egypt, Mr. Henry Byroade. To him must go the applause for inspiring this spectacular change, and its execution should have earned him at least the eternal gratitude of Egypt. Mr. Byroade is now in Cairo. And no doubt the Egyptians planned to honor somebody on Evacuation Day. But these Egyptians are a strange people. They did not respond the way Mr. Byroade said they would. The guns they fired during the celebration were Communist guns, and the jet planes that flew overhead were Soviet MIG fighters. Furthermore, the man they invited to help them celebrate Evacuation Day was not Mr. Byroade, but Mr. Dmitri Shepilov, the new Foreign Minister of Soviet Russia. Perhaps Mr. Shepilov will suggest to his new Egyptian friends that they rename Monday, June 18, Byroade Day.

No doubt there is some logical explanation for Egypt's choice of Mr. Shepilov in place of Mr. Byroade. It may have something to do with the mercurial nature of the Egyptian rulers who find such extraordinary ways to show their devotion to freedom and democracy. No doubt Mr. Byroade has an explanation.

But if he has, he should come home to enlighten us. And if he has not, he should come home to tell us why he has not. Either way, it is high time that Mr. Byroade, who started the administration's last agonizing appraisal of our Near East policy, step aside to let someone devise a program, more appreciative of the danger and more faithful to America's own best interests.

Speech Delivered by Hon. Estes Kefauver, of Tennessee, Before the 1956 Wisconsin Democratic Party Convention at Superior, Wis., Saturday Evening, June 16, 1956

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to have included in the CONGRESSIONAL RECORD the speech given by Senator ESTES KEFAUVER, of Tennessee, at the 1956 Wisconsin Democratic Party Convention at Superior, on June 16.

I am in full accord with the views expressed by the distinguished Senator and the delegates at the convention enthusiastically received the speech. On the basis of the vote in the Wisconsin Democratic primary this April, Wisconsin's 26 votes at the National Democratic Convention are pledged to Senator KEFAUVER for the Presidency. I found the Wisconsin delegates unified in their support of Senator KEFAUVER and determined to fight for him at the coming convention.

The Senator's speech follows:

Wisconsin is at the heart of what may well be the principal battleground between the Democratic and Republican parties in 1956. If anything is true in our politics it is that the Republican Party must win the support of the great agricultural heartland of America in order to win national elections.

The Democratic prescription for victory, on the other hand, calls for us to win here in these important farming states. We will win if we have a platform which deals forthrightly with the issues. We will win if we have the will to win and truly represent the spirit of progress which has characterized the Democratic Party in the past, and will in the future.

There may be some who believe that we can win on a negative basis. They count on President Eisenhower not running again. They count on the support of farmers because of the failures of Secretary Benson either to understand the gravity of the farm problem or to do anything substantial to help the farmers retrieve a fair share of the Nation's income. In my judgment this is not enough. We must take a positive and affirmative position and we must win on our own merits and not on Republican failures.

I do not know whether President Eisenhower will consider himself able to run for another term of office or not. I hope that for his sake and the Nation's sake that he soon will be well enough to exert the actual leadership that the Nation and the world so greatly need. Whether or not he is again a candidate will depend on questions beyond any man's control, and whatever his final decision is I do not intend to question it. This I know, however, that we Democrats are inviting defeat if in our thinking, our planning, and our strategy, we are not ready to run—and run to win—against the strongest ticket the Republicans can put up.

As individuals and as a party we must rise to meet the great challenges of our time.

Of overriding importance, of course, is the absolute necessity of reaching peaceful solutions to the questions and anxieties which plague the world. Here is where failure of Republican leadership has counted most against us. We must be ready to substitute diplomacy for threats. Without the loss of a single value, or a single iota of power, we can make much greater use of simple and firm courtesy in our international relations. We lose prestige and respect when we brush off too quickly proposals from other nations, including the Soviet. In dealing with the neutral nations, we can rewin much of the friendship and respect which we have so painfully lost by using the methods of peace and diplomacy.

We must return to our traditional position of sympathy and aid to all people who desire freedom and self-government and are capable of exercising it. In giving aid we can offer it not as bait or bribe, but as a means of strengthening free nations so as to keep them free. As Dr. Sukarno, of Indonesia, pointed out in Washington the other day, gifts alone will not win us the friendship of the world—we must also have respect.

Most of all, we must once again learn to assess our strengths and our weaknesses with honest realism. We can once again use truth and nothing but the truth as a means and a method of discussing foreign problems with both our own people and the world.

Finally, we share with most of the peoples of the world a belief in a Supreme Being. This is a point of similarity between us and one that we even share with many of the peoples of the Soviet—who long for the days when they, too, may worship their God. We must not forget this.

We must push forward to that day which will come, since it must come, when no super bombs will be dropped in either anger or anguish.

This is the greatest challenge of our time and we must meet it with resolution and courage, with imagination and with daring. We must place its solution above party and partisanship. We must move toward this solution as an undivided people whose only cause and only purpose is rightness and justice.

Our next great challenge is to prepare our economy for the era of peace. Even with our economy booming in many areas because of the tremendous outpouring of billions of dollars in the defense effort, there are many inequalities. Any recession resulting from a slowing down of this effort would immediately show the distress in many of our farm areas in its stark reality. Industries dependent on the farmer, small-town businesses, churches, and institutions of many kinds in the rural areas are suffering.

We can have a farm program which will reverse the downward trend of farm prices. We can have a farm program which will seek to give the farmer a fair income without building up surpluses. We can have a farm program which will effectively liquidate the farm surpluses we already have to the national advantage. And we can have a farm program which will give a fair break to the small farmer with limited land and limited capital. I have outlined such a program, and you have shown, by the votes which I appreciate so much that you approve of it.

Congress tried to improve the farm program, but our effort was vetoed. Under threat of a veto we tried again but the result bears no resemblance to a real farm program.

Today, despite near record employment for the Nation as a whole, there is serious unemployment in many so-called soft areas. Many of these areas fall in this category precisely because the farmers have lost so much of their purchasing power, and more than that, have lost confidence that they ever will have much more purchasing power under a Republican administration. If we can reverse this fact and this state of mind, it will do as much as anything to relieve the unemployment which exists here and in many other States of this region.

But what has the Republican administration done about it? A generation ago when anybody in a family got sick, mother was likely to turn up with the bottle of castor oil. Today when anything about our economy seems to need fixing, the Republicans have one remedy. They turn on the hard-money policy. At the very outset of the administration the new hard-money policy pushed us into a recession. I hope that some of the businessmen and industrialists who are now so loud in their praises of this administration will remember that. A few months ago they turned the hard-money policy on again. They raised the rate at which banks themselves borrow money. Then all the rates went up all along the line. The administration has seen to it from the start that farmers would have to pay more for the money they need. Now it costs more to finance a house. It costs more to own an automobile or a television set—or anything bought on time.

According to the Federal Reserve Board this was deflationary. Yet inflation occurs when there is more money than there are products to buy with it, and eager purchasers bid prices upward. No such situation exists with us. Prices of many things, as every housewife knows, are high—often too high—but this has not come from a lack of production. Currently we can make more automobiles and radios and automatic washers and shoes than the market can absorb. Yet the hard-money policy being pursued by the administration makes it more costly to buy them. Demand slows down and workers are laid off. And eventual cost to the consumer goes even higher because of higher financing charges. I doubt if even the bankers benefit from a hard-money policy under such conditions as those which exist at present. Perhaps there is a contest between Secretary Benson and the Federal Reserve Board as to which can be more stubborn. How else can it be explained?

These are not the most difficult problems we have to solve at home. With sound thinking, with good will, with the determination to give the farmer, the worker, the consumer an even break they can be solved promptly. The great challenge to our economy will come when we prepare to keep business booming under peacetime conditions.

So far the Republicans have taken not a step to prepare our economy for peace. Perhaps that is why they work for peace in such a haphazard way.

We can have peace in the world. And we can keep our national income up, employment high, and enrich the lives of us all at the same time.

The future offers the greatest hope that has ever lain before the eyes of mankind.

We can begin again to control and develop our rivers and all the vast resources of our national heritage.

We can bring our school system, which each year becomes more and more inadequate, up to adequate standards. Not long ago in Florida I talked to the mayor of a relatively small town in the central part of the State. He told me that his community needed a new schoolroom every 3 days. All over America our towns and cities are growing and stretching out. The Federal Government can and must help the schools to meet these increasing needs. And the need is not just for schoolrooms and equipment, we must have better paid teachers to help our children get the better education which will fit them for the complex world of tomorrow.

We ought to be moving into the peacetime uses of atomic energy with more decision and purpose. This energy added to mankind's own plus the many other sources available to us, will open up unimagined areas of speed and power. In order to provide the leadership needed, Government itself must build reactors.

Housing is our largest industry. Yet we have failed to adequately meet the needs both of the industry and the consumer. Here, above all, we need imaginative research and planning. We know the advantage of slum clearance in building better cities and better citizens. We must press forward with low-cost public housing and veteran's housing. Particularly now, when the cost of housing and of rentals have mounted so high, do we need to press forward on this front.

Great cities all over the United States are dying from an inward rot and we must encourage our cities to undertake plans for redevelopment of rotten areas.

We can, and we should, make it simpler and cheaper to buy decent housing—or to rent it. And it seems to me that we have done less research on how to build good housing at more reasonable costs than we should have.

If we strike out purposefully and eagerly and with hope, I know that this country can live in a peaceful world, in a world in which people find it easy to communicate with each other and trade with each other, and still have a bustling economy at home.

As a party we must give the leadership and the drive to get this done.

Finally, in addition to preparing for peace and securing peace, we need to keep America the kind of nation we will want to live in in peace. We want to keep America a nation which appreciates the fact that ideas are important, that the Constitution and Bill of Rights are not only pillars of strength here at home but are also recognized as symbols of American freedom around the world. We must not abuse them.

Recently the Supreme Court once again has moved in to correct a situation which was beginning to intolerably affect our basic liberties. In its decision that security measures had no place in relationship to persons in nonsensitive jobs the Supreme Court took a long step toward forcing the administration to improve a security program which had become intolerable because of its mistakes and its inhumanity—and, as the Supreme Court now declares, its legality in part.

We must have security in sensitive places. Yet in obtaining it we must never forget those basic rights and liberties which the Constitution grants us all and which are the most precious things for which we fight. By screening everyone in the United States we might turn up 1 or 2 bad eggs, but it wouldn't be worth it, for in the process we would have destroyed that which we seek to protect—our freedom. All those of us who truly believe in our great Constitution will applaud and uphold the Court. What we must regret, however, is that the leadership in these matters must come from the Court because leadership does not come from the White House.

We need an administration that is sensitive to the Constitution—an administration that knows it and believes in it, all of it.

So let us move forward confidently to peaceful solutions in the world, to a vibrant economy in a peaceful United States. And in doing so let us determine to keep our rights and those of others intact, and even in a crowded and a complex world to keep our humanity.

As Democrats, let us speak to America with the authentic voice of America. With God's help, let us keep our aims and purposes as high as they can go—as high as the stars in the heavens above us.

Thank you.

Proposed Amendments to the Clayton Act

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. ROOSEVELT. Mr. Speaker, several months ago I introduced H. R. 8395 in which I proposed certain amendments to sections 3 and 4 of the Clayton Act. Hearings were held before the Antitrust Subcommittee of the Committee on the Judiciary of the House of Representatives.

I am now introducing two new and separate bills which I believe would obviate certain objections that were raised to the original measure.

The first of these bills proposes to amend section 3 of the Clayton Act in order to strengthen it to insure free competition and efficient antitrust enforcement.

Investigations which have been made by the Select Committee on Small Business of the House, as well as by the Antitrust Subcommittee of the Committee on the Judiciary, have disclosed widespread denial of freedom of choice in trade by many large suppliers which has resulted in the suppression of competition and the creation of conditions favoring the growth of monopolies.

This new bill makes no substantial change in section 3 of the Clayton Act except that "services or facilities" are added which is further enlarged by making illegal, not only those acts which prevent a lessee or purchaser from using or dealing in merchandise of the lessor or seller but also makes it unlawful to make any threat to prevent or hinder the lessee or purchaser from dealing in the commodities and goods of a competitor of the lessor or seller, or to take or withhold any action in retaliation of such lessee or purchaser dealing in the commodities, including services and facilities of a competitor, when the effect may be to prevent or to substantially lessen competition or tend to create a monopoly in any line of commerce.

This bill is designed to make illegal any conduct which prevents a dealer exercising his freedom of choice in respect to the goods he may wish to handle or display and is designed to prevent the suppression of competition through indirect means.

I feel that it is essential to write this provision into statutory law in order to implement the Supreme Court's interpretation of section 3 in the Standard Oil of California case, because that decision has been under attack by the advocates of monopoly who are the natural

antagonists and opponents of all antitrust legislation.

During the hearings held on April 19, 1956, by the Antitrust Subcommittee of the Committee on the Judiciary, Judge Stanley N. Barnes, Assistant Attorney General, in charge of the Antitrust Division of the United States Department of Justice, in testifying in regard to H. R. 8395, said:

On the one hand, some portions of H. R. 8395 this Department supports. I approve, for example, making explicit Clayton Act, section 3, coverage of service or facilities. Restraints on services or facilities have been held to transgress the Sherman Act. And exclusive dealing arrangements involving services or facilities have been struck down, not only under Sherman Act, section 1, but also under Federal Trade Commission Act, section 5. But present Clayton Act, section 3, coverage is of goods, wares, merchandise, machinery, supplies, or other commodities, and hence probably does not include services. In any event, no reason appears why coverage of services and facilities should not be made explicit.

Thus, we have the unequivocal statement of the head of the Antitrust Division of the United States Department of Justice in which he approves the inclusion of services and facilities in section 3 of the Clayton Act.

I, therefore, submit that this new bill is eminently desirable in order to strengthen that section of the Clayton Act.

Study Asked on Effects of Insecticides, Herbicides, and Fungicides on Fish and Wildlife

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. METCALF. Mr. Speaker, I have just introduced a bill directing the Secretary of the Interior to undertake continuing studies of the effects of insecticides, herbicides, and fungicides upon fish and wildlife.

I did so in an attempt to prevent the loss of these invaluable natural resources following spraying.

Last year, 65 million acres, just a little over one-sixth of the cropland of the United States, were sprayed. Even so, crop losses on untreated areas were estimated at $7.5 billion. Over 3.4 million acres of forest were sprayed last year and more will be sprayed this year. A total of 3 billion pounds of formulated pesticides were applied in the United States last year. The cost of applying this quantity of pesticides amounted to $256 million.

The Civil Aeronautics Administration estimates that 31 million acres of land were sprayed by airplane in 1954 and that 541,000 hours were flown by the more than 6,000 airplanes devoted to this job.

What are garden sprays and airplane spraying of forests and farmlands doing to our fish and wildlife resources? Sportsmen, conservationists, foresters, and farmers are equally concerned over the tremendous increase in spraying to eliminate insects, weeds, diseases, and other pests. Each succeeding year finds more acreage being sprayed and better and more efficient pesticides being used. More reports are made each year of fish and wildlife being killed by this spraying.

Everyone appreciates the need for minimizing the damage to forests and agricultural crops. Both are vitally needed. All of us must also be concerned about the potentially destructive effects of these pesticides and herbicides on fish and wildlife.

Despite the enormous good that is wrought by chemical controls, they must be considered in the category of mixed blessings. Being poisons they can be harmful to birds, mammals, and fish. Considerable damage to valuable fish and wildlife resources has occurred unnecessarily because the application was made without sufficient knowledge of accepted procedures or without full regard to the consequences. The toxicity of many pesticides to man, bird, mammal, or fish simply is not known. For others, it is known that they are toxic to the animals and plants required as food.

A multibillion dollar recreation and commercial fishery industry of interest to at least 40 million Americans is involved. All reasonable precautions must be taken to safeguard their interests. Research on the effects of pesticides and herbicides to fish and wildlife has not kept pace with the development of these powerful controls and the increased spraying of our crops, forests, and marshes.

The appropriation authorized by this bill will be sufficient to obtain the data necessary to protect our valuable fish and wildlife resources while at the same time allowing the proper treatment for forest and agricultural areas.

The President's Illness

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. REED of New York. Mr. Speaker, the recent illness of President Eisenhower was a cause of sincere concern to all Americans regardless of party. His rapid recovery makes us all very grateful. The following editorial which appeared on June 12 in the Evening Observer, Dunkirk, N. Y., and the article by Mr. David Lawrence, which appeared in the Washington Evening Star on June 18, should be of widespread interest:

[From the Dunkirk (N. Y.) Evening Observer of June 12, 1956]

BEYOND POPULAR AUTHORITY

The President of the United States has had two serious illnesses in the last year, a possibility which all men face at all times.

Decent employers have to consider this frailty of themselves and their employees and, in the latter case, make due allowances. The longer the affiliation of the employee the greater the consideration.

The President has been in public service a long time, that is, in your service. You are the employer. His two misfortunes have not been permanently disabling. Indeed they seem to have cleared the way for a healthier and more enduring old age.

Mr. Eisenhower has made it abundantly clear that he will be entirely frank about his condition. He will keep the American people fully informed. If a situation arises in which Mr. Eisenhower comes to the conclusion that he is no longer able to serve the American people fully and competently, he will so advise his employer, the people. The American people can rely on that for Ike's long services have completely demonstrated his honesty and the weight of his conscience.

This policy of frankness is shared by the Republican Party and its leaders. The people will not again be misinformed about the health of the Chief Executive, not in this administration.

Men do not ordinarily ascend to the Presidency until their late fifties or sixties. Consequently, there is a little more health hazard than if we elected men in their thirties or forties. Human life being subject to higher authority, the Nation must always take a gamble on the lives of its leaders. Some of our great statesmen have served well into their eighties, others have gone to an untimely end at a far earlier age. Few men get through life without occasional serious illnesses.

In the President's case, his two illnesses seem to have resulted in correctional treatments which should, in the ordinary course of events, assure him better health than he has enjoyed and over a considerable period in the future.

Taking into account the uncertainty of human life, any life, our Constitution provides for the transmission of authority without interruption in the ordinary flow of government. Such Presidents as Theodore Roosevelt, Calvin Coolidge, and Harry Truman came to power through this process of transmission. Other men such as Willkie and Taft would not have completed their terms had they been elected.

The longevity of a President, being entirely out of the voters hands, is, therefore, not an issue for them. It is beyond the authority of the people.

[From the Washington Evening Star of June 18, 1956]

POLITICS AND THE PRESIDENT'S ILLNESS—DOCTOR'S SIMPLE STATEMENT DISTORTED IN BUILDUP OF PROPAGANDA CHARGE

(By David Lawrence)

Did the doctors attending President Eisenhower at his recent operation deliberately engage in a "propaganda for the Republicans" in commenting on the President's illness?

The charge that they did has been made by certain large newspapers in Britain and by some Democratic Party politicians and their stooges in this country.

Fortunately, there is a stenographic record available which tells exactly what the doctors were asked and what they answered. A careful study of it will reveal that there has been misrepresentation and a distortion of fact.

The physicians who attended the President didn't bring up the subject of whether or not he might run again. They didn't initiate any propaganda. They didn't ask for the press conference. The newspapermen covering the story did. Here is the only question which was asked of Dr. Heaton, who performed the operation and spoke for the group of doctors assembled:

"On the 14th of February, during the winding up of the coronary, you might say, a panel of doctors who had been treating

him for his heart trouble said they saw no reason that he should not run for reelection medically. I would like to ask him (Dr. Heaton) and Dr. Ravdin, having treated him, do you see any reason, based on this, why he can't run for reelection?"

Dr. HEATON: "I certainly do not."

That's literally all that was said about it in the course of a lengthy conference with the press which covered several thousands of words entirely on other phases of the President's illness. Yet many headlines and news articles indicated that the President's attending physicians went out of their way to instigate a discussion of a political nature and that they, indeed, passed judgment on whether or not he ought to run.

Actually the only question asked was confined to the medical aspects. It was solely an inquiry as to whether the kind of illness the President encountered was in itself a deterrent factor to the acceptance of a second nomination. Plainly the doctors were not asked to answer whether it was wise for the President to take a chance or whether the strain of the job might be dangerous to him or to resolve any of the collateral issues which Mr. Eisenhower alone can decide.

The one question asked of the doctors, in effect, was whether this type of illness incapacitated any man from further service in his occupation. If the doctors had said they couldn't answer the question at all, it would have implied a gravity which the physicians didn't feel was justified. So they replied as hundreds of other physicians would have answered if the same question had been asked immediately after a surgical operation on anybody else with the same illness.

The truth is that medical data cited by doctors most skilled in handling this type of illness in thousands of cases show that the vast majority of patients have no unfavorable after-effects and the illness is not in itself related at all to the heart condition of a patient.

Two medical studies made for the benefit of the American Heart Association and just announced at Boston show that surgery for other ailments is not dangerous for heart patients. Out of 5,778 patients surveyed at the New England Center Hospital it was found that only eight-tenths of 1 percent died of cardiac trouble while undergoing surgery and that the use of anesthetics was really no more damaging for heart patients than for those with no previous heart trouble.

It is significant to note the expression of confidence and faith in the President's physicians which came last Friday from Dr. David Allman, president-elect of the American Medical Association. He said at Chicago, when asked about it by the press, that he saw "no medical reason" why President Eisenhower shouldn't run for reelection. He added pointedly that he based his comment on what the attending physicians—the best in their field—had reported.

Actually, the most interested man in the country in all this is the President himself. A few weeks ago at a press conference, when newspapermen told him that the Democrats were suggesting that a different panel of doctors be appointed to examine him to see if he had really recovered from his heart attack, the President replied that if there was anything wrong with him, he more than anybody else wanted to know it.

Honesty is one of the principal traits of Mr. Eisenhower's character and if the doctors who attended him have been political in their reports and have forgotten their ethics as medical men, the President would be the first to insist on knowing why he was being misled. Merely to state the problem is to reveal its absurdity.

It is difficult, therefore, to explain the ghoulish skepticism which some of the leading British newspapers and certain politicians in America seem to have generated about the integrity of the very fine medical men who attended the President.

A New Defeat in the Mediterranean

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ROOSEVELT. Mr. Speaker, yesterday was an unpleasant day for the Western World, for the West has suffered a new defeat in the Mediterranean.

Yesterday, Mr. Dmitri T. Shepilov, the Foreign Minister of the U. S. S. R., was in Cairo to join with the Egyptian Government in celebrating a national holiday—Evacuation Day—marking the end of Britain's 74-year control of the Suez Canal Zone.

All British troops are now out of Egypt. This fact in itself would not be ominous to the free world if we had any assurance that those who were taking control of that base were solidly on the side of democracy and were succeeding the British in the maintenance of a base dedicated and devoted to the support of Western freedom. However, the presence of the Foreign Minister of the U. S. S. R. makes it clear that the change in military command at the Suez is not a consolidation of Western power. On the contrary, Mr. Shepilov is not the only Russian export in the vicinity of the Suez at this moment. There are Communist submarines and Communist warships and Communist jet planes sent there by the Czechoslovakian Government as a result of its arms deal with Prime Minister Nasser of Egypt.

We must ask whether our own Ambassador to Egypt, Mr. Henry Byroade, will stand with the Foreign Minister of the U. S. S. R. in celebration of this retreat for Western prestige and power in the Mediterranean. For if anyone merits the credit—a dubious word under the circumstances—it is Mr. Byroade, who as our Ambassador to Egypt and previously as our Assistant Secretary of State for Near Eastern Affairs, supported by the campaign to organize the evacuation of the British from the Canal Zone and the transfer of that base to Egyptian authority. It was Mr. Byroade who insisted that we must do everything possible to facilitate the departure of the British, and that we must do nothing to request any quid pro quo from the Egyptian Government. It was his bland assumption that if we were to help the Egyptians in the achievement of this long-sought goal, an achievement which they considered so crucial for their sovereignty and independence, the Egyptian Government would automatically and gratefully adhere to the West and remain our firm and fast friend.

The record shows, Mr. Speaker, that others did not share Mr. Byroade's naivity. I quote from a column which appeared in the New York Times on July 18, 1954, written by Mr. Hanson Baldwin. He predicted:

The basic strategic fact about the impending withdrawal of British power is that it will create another vacuum of power in an area—the Middle East—already distinguished for its lack of power.

He continued:

It is clear, therefore, that the impending withdrawal is an undesirable military expedient undertaken partly because of the decline of British power, partly in the hopes of political and psychological gains in the Arab world. The last named is likely to be an evanescent hope; retreat, particularly under pressure, does not breed respect but more pressure.

Events of the last few months have shown that Mr. Byroade miscalculated in Egypt as he did elsewhere in the Middle East. Egypt has given no sign of friendship for the West. It has organized a coalition of Arab countries in an effort to breakdown Western influence and to frustrate the efforts of our Government to establish a defense system to secure the region against the threat of Communist subversion and imperialism.

One is moved to ask, Mr. Speaker, how many more such diplomatic defeats we shall suffer in the Near East until we come to appreciate the fundamental principle that democracy will not be able to organize the defense of freedom in the Near East if it continues to capitulate to the pressures and intrigue of rulers who have no interest in democracy and who are concerned primarily with the search for power.

Affable Simmons Enjoys Rolling Out Red Carpet

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article about the Honorable John F. Simmons, written by Mary McGrory, which appeared in the Sunday Star, Washington, D. C., on June 10, 1956. Mr. Simmons, our Chief of Protocol in the Department of State, is doing an outstanding job in this difficult post and is making a great contribution to the smooth functioning of our relations with other countries, especially through their representatives in the United States. The following article explains some of the reasons for Mr. Simmons' success in his exacting position:

AFFABLE SIMMONS ENJOYS ROLLING OUT RED CARPET

(By Mary McGrory)

In the person-to-person diplomacy so favored by the present administration, a key man on our side is the State Department's John F. Simmons. In the coutrship of nations which we are conducting all over the globe, this beaming tower of amiability is the go-between.

Mr. Simmons' job description reads "Chief of Protocol." His office must give aid and comfort to members of the 70 diplomatic missions now in the Capital. They meet them on arrival, present them at the White House, help them through the intricacies of how to get license plates and what to do if their dogs bite American citizens.

But the affable Mr. Simmons' most important work in these days of Soviet-American competition in the red-carpet department is to be nice to visiting dignitaries. He must

be Johnny-on-the-spot with the soothing words when the luggage gets lost, when the limousine is late, when the visiting VIP, nerves frayed from hours on public display, blows his top, puts his foot down, and absolutely balks at going to the next occasion on the schedule.

ADENAUER HIS FRIEND

As it happens, when Mr. Simmons meets Chancellor Adenauer of Germany tomorrow at the Military Air Transport Services Terminal he will be greeting an old and cherished friend. He has known the grand old man of Germany since 1932–33, when he was our Consul-General in Cologne and Chancellor Adenauer was mayor of that city.

"It was an official relationship that ripened into friendship," Mr. Simmons says. The two had many a pleasant Sunday morning visit before Mr. Adenauer, for his action in removing Nazi flags from one of the main bridges of the city was deprived of his office, and driven into retirement.

He enjoys meeting strangers, too—or at least always appears to, which is almost as important. Around the department, he is affectionately known as the "smiling boy." Nothing seems to bother him, at least not for long. On those rare occasions when matters get out of hand, the most protest Mr. Simmons ever gives vent to is a muttered side to an aid. Almost at once, he resumes the flow of pleasantries and small talk which are the coin of social exchange. In the way of a diplomat (he used to be an ambassador himself), he brushes aside such incidents.

While others fret and strain over the awesome repercussions of a fancied slight to the head of a touchy and uncommitted new republic, Mr. Simmons, who at 64, with thinning blond hair and ruddy cheeks, does not look his age, proceeds serenely on the theory that good humor and good manners are contagious.

Mr. Simmons' memory is not so good (he is in fact, notoriously absent-minded) and his office draws up the most meticulous schedule. His aplomb is remarkable.

The most celebrated instance of this came during the visit of the Crown Prince of Japan in 1953. All those expected to be in contact with this exalted personage were carefully instructed to address him as "your royal highness." Everything proceeded smoothly until a ranchhand who was to take the young royalty on a fishing trip said briskly, "C'mon, junior, let's get going."

The chief of protocol never turned a hair. "He probably thought it was a perfectly proper local form of address, if he noticed it at all," Mr. Simmons says imperturbably.

Mr. Simmons has had his job since July 17, 1950. He says there is no formula for it. A man who prides himself on ordering a different brand every time he buys cigarettes, he always tries to vary the greeting he extends as the visitor descends the ramp at a plane or steps from a train. He speaks four languages: French, German, Spanish, and Portuguese. He is most proficient in German, and is looking forward to chatting with Chancellor Adenauer in his native tongue.

Bill Under Consideration To Stop Military Landgrabs

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. ENGLE. Mr. Speaker, on June 18, 1956, the Washington Daily News carried front-page headlines regarding the landgrabs by the Military Establishments in the western part of the United States. Mr. Jim Lucas, Scripps-Howard staff writer, is the author of an excellent article in that issue on the subject which is backed up in the same issue by an editorial, all of which I desire to make a part of the RECORD. Hearings have been going on in the House Committee on Interior and Insular Affairs for some months on this subject; and a bill, I think, will be voted out shortly to require the military departments to get approval from Congress for any withdrawal of public lands in excess of 5,000 acres.

The article and editorial follow:

LANDGRABBING ROW HAS SERVICES FUMING

(By Jim G. Lucas)

The military is engaged in a confused grab for public lands of a total area larger than the States of Connecticut, Delaware, Maryland, Massachusetts, New Hampshire, New Jersey, Rhode Island, and Vermont combined.

Much of this greedy scramble stems from the services' aversion to sharing with each other. Each wants its own firing ranges and testing grounds. And each wants to put its own particular bailiwick off limits to the others.

Military landholdings in the United States now total 26 million acres—an area equal to the State of Ohio. As of January 1, applications for another 9 million acres were on file. If all Defense and Atomic Energy Commission requests are granted, roughly 41,500,000 acres of public domain will be taken out of circulation.

DEVELOPMENTS

In this weird competition for public land, there have been these developments:

The Air Force has suddenly declared surplus to Air Force's needs two-thirds of a 3,500,000-acre guided-missile range in Nevada which it repeatedly has refused to share with the Navy during the past 3 years.

Almost immediately, however, it found another 800,000-acre tract—only a few miles away—it says it simply can't live without.

The Navy—its long fight for joint usage apparently won—turns out to be no longer interested. The reason: It's busily wheedling Congress out of $21 million to buy a second—exclusively naval—3,100,000-acre gunnery range 135 miles away.

The Army, meanwhile, wants Congress to give it 10,700 acres of the Wichita Mountain wildlife refuge near Fort Sill, Okla., to train GI's to fire the Corporal guided missile. This, despite the fact that it already owns a firing range the size of the State of Connecticut at Fort Bliss, Tex., where Corporal gunners now are trained. The men to be trained in Oklahoma would have to be shipped back to Fort Bliss for actual firing.

The Defense Department—which is supposed to ride herd on the services—has concurred in each proposal.

The full story of the military's 1956 land rush has unfolded during the last few weeks before subcommittees of the House Interior and Appropriations Committees.

Involved are the Air Force's Nellis-Tonapah gunnery range—a 100,000-square-mile chunk of desert near Las Vegas, Nev.—and the naval auxiliary air station at Fallon, Nebr. Also involved is the AEC's Nevada test site, which has been carved out of Nellis-Tonapah.

In 1953, the Navy first asked to share Nellis-Tonopah with the Air Force. It wanted to test air-to-air missiles from carrier planes.

ANSWER

The request was renewed last August. The Navy still got the same answer.

In March, however, the Air Force notified Congress it could do without 1 million acres at Nellis-Tonapah. Since then, it has decided to turn back another 1 million acres of public domain.

Meanwhile, however, the Navy had "looked elsewhere." In December 1954, it took over 1 million acres between Death Valley and Owens Valley in the Saline-Panamint region of California.

Early in 1955, it applied for exclusive entry to 3,100,000 acres near Fallon.

The Air Force apparently took the Navy by surprise when it gave up most of the Nellis-Tonapah range. Assistant Navy Secretary R. H. Fogler said he "could not even guess" what it meant.

"It would not only be unwise but impossible to answer 'Yes' or 'No'," he replied when asked if the Navy still wanted to move in. "I can only share with you my confusion."

Capt. William H. Dawson, head of the Navy's shore establishments branch, was more specific. Nellis-Tonapah—which once seemed so attractive—suddenly had serious drawbacks. For one thing, he said, "there is nothing there and we would have to start from scratch." It was too remote. It would add another 50 miles to his fuel and supply lines.

"We simply couldn't do it," Capt. Dawson told a House Appropriations Subcommittee. "It would take about 2 or 3 years. * * * Our need is so urgent we just cannot accept (that) delay."

THE LAND GRABBERS

No American, in these dangerous days, would stint our Armed Forces on anything necessary to their adequate strength.

The military services are our insurance against war, and our protection if war should come.

Whatever they need for training or testing and developing equipment the taxpayers willingly supply.

But need is not the same as reckless desire. Or petty obstinacy about sharing facilities.

The military forces, as much as any other part of the Government, should maintain a healthy respect for the taxpayer's dollar, and the useful and efficient spending of that dollar.

This healthy respect is not always apparent. For a glaring example, we cite an article by Jim Lucas, Scripps-Howard's well-known war correspondent and military reporter.

Mr. Lucas reports how the Army, Navy, and Air Force are competing in a huge land grab involving total acreage larger than eight of our States. They already hold 26 million acres—as much as the whole State of Ohio—and they, along with the Atomic Energy Commission, are after more than 15 million additional acres.

The Hoover Commission last year reported that the Government now owns land equal to a fourth of continental United States. Besides all that, it leases more than 2 million acres.

It was only recently that the Government even had an inventory of its holdings.

While some agencies have surplus property, other agencies are out looking for new sites. The Hoover Commission said there was "little" in the way of up-to-date property management.

We think Congress ought to take a good, hard look at this whole land-grabbing business. The armed services, for instance, ought to have necessary ranges for their new weapons, but if these programs keep up the way they are headed, there won't be much land left for taxpayers.

At least, Congress should be able to instill a little sense of proportion in the continued acquisition of land by the Government.

Ileitis Is Chronic, Often Recurs

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. DINGELL. Mr. Speaker, I have been as amazed as other citizens of this great country at the remarkable political pronouncements of the doctors who have handled the President's health during his two recent severe illnesses.

I refer more specifically to the statements that he is "fit to run again." Such statements were obviously politically inspired and not the product of careful, logical consideration of the true physical condition of their distinguished patient.

In the interest of a clear evaluation of the real state of health of the President I am inserting into the CONGRESSIONAL RECORD an article appearing in yesterday's issue of the Washington (D. C.) Post and Times Herald by Mr. Drew Pearson, who analyzes the whole problem as clearly as I have seen the subject treated.

The article follows:

ILEITIS IS CHRONIC, OFTEN RECURS

(By Drew Pearson)

Len Hall, the astute and genial chairman of the Republican National Committee, held a night meeting with part of his GOP staff 3 days after President Eisenhower's operation.

"Listen," he told them, pounding his fist on the table. "It's still Eisenhower all the way."

Chairman Hall obviously was not interested in the wishes of the man who had just undergone a serious, sudden major operation, nor in the views of Ike's wife, or his son John. Nor did he seem to care that the medical facts about the President's latest illness as given by other eminent specialists do not seem to jibe with the rush verdict, announced a few minutes after he was off the operating table, by Maj. Gen. Leonard D. Heaton.

And unpleasant as it is to discuss the man who the American people hope and pray will recover quickly and permanently, it is imperative that the public know the absolute truth, not merely know what Chairman Len Hall thinks they should know.

The voting electorate either made a mistake or else was not given all the facts regarding Franklin Roosevelt in 1944, and the deception by Democratic politicians at that time should not condone similar deception by Republican politicians.

Accordingly, here are the facts as explained by two eminent specialists and as taken from the medical journal Gastroenterology of March 1954, official publication of the American Gastroenterological Association.

Dr. David Rutstein, head of the department of preventive medicine at the Harvard School of Medicine, is authority for the opinion that the President's ileitis is a chronic disease and that statistics prove it often recurs within 1 year.

DOCTORS VERSUS POLITICS

Dr. Rutstein stated this on an educational television program in cooperation with Harvard University in Boston on June 11. When I phoned him to confirm the quotes, I also asked whether the President would be able to recover sufficiently to run again.

"It's not a doctor's business to answer political questions," he replied, "and I don't think any other physician should, either," obviously referring to the amazingly quick statement of General Heaton that Ike was fit to run again.

Dr. Samuel Gaines, of the Polyclinic Hospital in New York also emphasized the probable recurrence of the intestinal disease and the distinct possibility that another operation would be necessary.

"The percentage of recurrence is up to 50 percent," Dr. Gaines explained. "Some fecal material is certain to pass through the bypassed portion of the intestine, which may entail another operation."

Dr. Gaines, who said he voted for Eisenhower and had previously planned to do so again, has performed the same operation many times and pointed out that the doctors must have known the President had this condition or they would not have been able to diagnose and operate so quickly.

"If this is so," Dr. Gaines pointed out, "then all the facts regarding the President's physical condition were not given to the public."

MAYO STUDY OF ILEITIS

Dr. Rutstein suggested that the best study of the President's disease had been written by Dr. Ward van Patter, of the Mayo Clinic in Gastroenterology of March 1954. Reference to this medical journal disclosed that recurrence of the disease is found to be as high as 65 percent, with a series of repeated operations sometimes necessary to remove additional sections of the intestine.

Dr. Van Patter states that the causes of the disease are unknown and no cure has yet been found.

It chiefly occurs in young adults and "is characterized clinically by abdominal cramps, diarrhea, fever, lost weight, anemia, peritoneal abscesses, and fistulas," he reported.

"The terms are characterized by a granulomatous necrotizing (putrefying) ulcerating and cicatrizing process frequently accompanied by fistulas and extending either to neighboring viscera or to the abdominal wall."

Dr. Van Patter presented a study of 237 Mayo patients who were followed up more than 2 years after operation on or partial removal of the lower bowel. In 190 cases the disease recurred again, or a percentage of 64, the deaths in this group numbered 22.

Dr. Van Patter also reported that numerous complications may follow, including abscesses, obstructions, anemia, and arthritis.

Though the facts were suppressed by Maj-Gen. Howard Snyder, his personal physician, it is known that he had one attack in the spring of 1949 and went to Key West for 2 months to recuperate. He also had a severe attack of stomach trouble which was never really diagnosed, in Paris in May 1952. He suffered another attack during the American Society of Newspaper Editors meeting in April 1953, and had a seizure after a stag dinner in the White House last March shortly after he announced that he would run again. News of most of these was suppressed.

However, it would appear that the President had suffered intermittently for at least 7 or 8 years. He was in fact the only general officer during the war who had a full-time doctor detailed to him.

Teague Praised for Stand on Vets Pension Bill

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ENGLE. Mr. Speaker, the Washington Post of Sunday, June 17, carried an editorial commending Congressman OLIN E. TEAGUE, chairman of the House Veterans' Committee, for his vigorous fight against the treasury-raiding benefits added by his committee to the veterans' pension bill. The editorial correctly points out that the measure coming before the House makes it almost impossible to obtain needed adjustment in service-connected disability pensions which many of us support and would like to vote for. I make the editorial a part of the RECORD at this point:

BONUS GRAB-BAG

Chairman OLIN E. TEAGUE, of the House Veterans' Committee—himself a disabled veteran—deserves exceptional praise for his vigorous fight against the treasury-raiding benefits added by his committee to the veterans' pension bill. So many objectionable amendments were piled onto the measure that the President can have no alternative but to apply an emphatic veto if it ever reaches his desk. Estimates place the extra cost of the bill at $1.4 billion in the first year after passage and at a staggering $100 billion eventually.

The American Legion was behind the most dubious amendment to give all veterans of World Wars I and II and the Korean war a $105-a-month pension if their annual incomes did not exceed $1,400 for single men and $2,700 for married men. Other amendments supported by various veteran groups would boost pensions for widows of war veterans, remove the requirement that veterans of World War II and Korea must have had a service-connected disability to make their widows eligible, and increase the pensions for all veterans over 65 years of ago who served overseas.

When the Veterans' Committee attempted to satisfy every pressure organization with a grab-bag, it doomed the bill to death. The pity is that this approach makes it almost impossible to obtain needed adjustment in service-connected disability pensions as recommended by the Bradley Commission. President Eisenhower has already conveyed his objection clearly to the House committee. These ought to be made public so that the House and Senate may have the full story when they vote.

The World Patiently Awaits Announcement of a Firm Effective Foreign Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the New York Herald Tribune of June 18, 1956, is important. Coming from an avowedly Republican paper, it cannot be accused of partisanship. I urge our colleagues to read it and then join me in asking our President when he will get a Secretary of State who has imagination and sympathetic understanding and will give us vigorous, effective action and when will we move with unity and with speed:

It is perfectly easy for any objective observer to recognize the ironies—to put no finer point on the matter—of Mr. Shepilov's statement on his arrival in Cairo. The new Soviet Foreign Minister said that he came from "the country that has totally repudiated colonial expansion," that "has no place

for oil monopolies or any other kind of imperialist monopoly," that bases its relations with other states "on noninterference in internal affairs."

It so happened that Mr. Shepilov arrived in Cairo and delivered his pronouncement to his hosts on the anniversary of that day, 3 years ago, when a chain of events began that was to disprove every one of his characterizations of the Soviet Union. On June 16, 1953, a group of workers in East Berlin—working on a government construction monopoly imposed on the East Germans by Soviet imperialism—went on strike and touched off strikes throughout the portion of Germany under Russian domination.

The authority of the East German puppet government collapsed. It was restored by Russian tanks; German workers were shot down by Russian troops; the system of brutal exploitation whereby East Germany was milked for the benefit of Soviet policies was again put into operation. And the flicker of hope that had set up sympathetic demonstrations in other satellite States, such as Hungary and Czechoslovakia, was speedily quenched. This, be it noted, was not the work of Josef Stalin, but of the Soviet Union's collective leadership.

All of this could well be pointed out to those middle eastern peoples whom Mr. Shepilov is trying to convince of the Soviet Union's purity of purpose and zeal for freedom. But the fact remains that in Egypt, as elsewhere in the Middle East and Asia, Communist imperialism seems a distant thing, or a different thing, than the colonialism which those regions have come to regard as their first enemy. They look with greater concern on the vanishing garrisons of the West than on the technicians and salesmen and diplomats who are the vanguard of the new imperialism of the East.

There is little point, so far as western policy is concerned, in becoming angry with this state of mind, or in trying to dispel it by argument alone. It is necessary to prove, by deeds, that the path of the Western States leads to freedom for all, and the broader prosperity that a free society can produce. No one will deny that the task is both difficult and delicate; that it needs imagination, sympathetic understanding, and vigorous, effective action. But the task must be undertaken with unity and with speed—and with the firm determination of every member of the free world to demonstrate that liberty has resources, in things of the spirit as well as in material well-being, that no system of slavery however well intrenched, however shrewdly led, can match.

Counterpart Control Legislation

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. REUSS. Mr. Speaker, I have today introduced a bill to make certain improvements in the congressional budgetary procedure with respect to the use of local currency counterpart by committees in official work abroad. I would like briefly to explain the purposes of this bill and the improvements it proposes.

At the present time, local currency set aside under the provisions of our aid programs abroad is available, in limited amounts, for the use of the United States Government. Congressional committees engaged in official business in these countries are authorized to use these counterpart funds to defray their local expenses. This is a sound procedure, which results in savings to the American taxpayer. My bill in no way changes or limits this procedure.

However, the funds that are used in this way by committees are not subject to the regular budgeting and accounting procedures by which the Congress controls the expenditures of its committees. The appropriate committees—in the case of this House, the Rules and the Administration Committees—go through a careful and conscientious procedure each year in recommending authorization and apropriation of funds for committee use. I believe I speak for all members in saying that our respect for the judgment of these committees is so great that we rarely question their decisions in passing on their recommendations. By this procedure the activities of committees are controlled and supervised by the Congress.

These facts are, of course, well known. What is not so well known is that, by exclusion of counterpart funds from this budgetary process, we have in fact reduced the process, in many cases, to a nullity. Any committee which travels abroad and usese counterpart funds is in fact operating on an entirely different budget than the one approved—operating on a budget which has not been fully examined, authorized, or appropriated. Let us take the case of a committee which brings in a budget for $60,000 for the year, itemized to justify the various expenditures that make it up. This is examined by two committees of the House, approved by the entire body—and then made meaningless when the committee proceeds to spend $100,000, by using an additional $40,000 of counterpart.

Now I know that there has been a great deal of public comment and newspaper rumor about the use or misuse of counterpart funds by congressional committees. But it seems to me that such criticism and the facts that may or may not underlie it are a secondary consideration here. What is really at stake is this: Is this House to control its own affairs by the careful and prudent procedures it has created, or are those procedures and the labors of the committees that carry them out to be rendered meaningless by leaving a substantial part of the funds actually used outside the budgetary control system?

I do not think I am overstating the case. The figures show clearly just how meaningless the budgetary process becomes.

Just in the 3 months following the close of Congress last year, 151 Members of the Congress had begun or were preparing for official trips abroad. Of 14 House committees planning to travel, 8 were authorized to visit countries where counterpart funds were available. In fiscal 1955, I am told, $135,000 in counterpart was spent by such committees. In fiscal 1954, $157,000 was spent. Although I have not been able to ascertain the figures, it is reasonable to suppose that the eight committees traveling abroad last fall spent a comparable amount. In other words, committees authorized to spent $1.05 million by this House, probably spent well over another $100,000. Let me repeat, I am not objecting; that was a hundred thousand saved for the American taxpayer. But what sense does a budgeting procedure make when, after the budget is carefully drawn up for $1,050,000, these committees can and do spend another $100,000 to $150,000? Over a fourth of the Members of the Congress, half or more of its committees, travel abroad yearly in pursuit of congressional business, spending several millions of dollars of funds allocated to them by the Congress. In an operation of such magnitude, should we not maintain some control and accountability, by the means Congress has created for that very purpose?

It seems to me that there should be no controversy about this proposal. If elimination of this budgetary loophole were difficult or cumbersome; or if we were in any way handicapping the committees of Congress in pursuing their activities; or if we were in any way discouraging the economical and desirable practice of utilizing counterpart funds—if any of these things were so, I would hesitate to suggest a change. But, in fact, there is no such problem. All that is necessary is to require that committees include all their proposed activities and expenditures in their budgets, so that the supervising budgetary committees and the Congress may scrutinize and pass on all of the expenditures that, in fact, they propose to make whether from contingent fund or counterpart. This can be accomplished very simply by requiring that counterpart funds, when used, be used in lieu of and under the same limitations and conditions as contingent fund appropriations. In other words, use of counterpart should be charged against a committee's contingent fund balance and accounted for in precisely the same manner as though it were drawn from the contingent fund. That is all my bill proposes.

The purpose of this bill is simply to restore to Congress what it intended to have, what it should have, and what it presently does not have: control over its own operations by means of control of its budget. Because it does so, I believe this bill is sound and noncontroversial.

But I should like to touch on one more aspect of this matter which, I believe, is a further recommendation of my bill. We all know that in the past few months there has been a great deal of newspaper comment on the use of counterpart funds and a lot of rumor and speculation about its misuse. There are rumors of committees traveling abroad without authorization, solely by unauthorized use of counterpart. There are stories of extravagant use of counterpart funds, sometimes for personal expenditures. I do not pretend to know the facts or lack of facts on which these stories are based. But I am sure we have all been disturbed by them because of the reflections they cast on the dignity of this body. I think all of us would like to see them put an to, once and for all.

But stories like these flourish best in a situation of ignorance, where the facts

are not known. It is precisely because the facts about counterpart funds, escaping from the proper budgetary control of this House, are not known that rumor can circulate. I do not think any of us is willing to dignify malicious rumor by argument. But the best answer—and an answer suitable to the situation—is provided by this bill. When counterpart funds are accounted for within the regular budgetary procedure of the Congress, there is no longer any of the mystery on which rumor flourishes. So, I say, a second reason for enacting this measure is to free Members of the Congress from the necessity to answer such allegations—and to make it impossible for allegations any longer to flourish. Newspapers discussing this subject have referred to "arrogance," have commented on the "secrecy" of these funds and have talked about "freeloaders." The best answer to these charges, I submit, is this bill.

How Big Business Operates

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. MULTER. Mr. Speaker, the following item by Roscoe Drummond, which appeared in the New York Herald Tribune of June 18, 1956, is important reading. It gives an indication of how big business tells congressional commit- It implicitly sounds a warning that what big business tells Congressional Committees must be taken with a grain of salt:

Several powerful industrialists, bitterly opposed to President Eisenhower's liberalized, two-way trade and tariff program, are resorting to some pretty shabby and shoddy tactics to prevent the most influential voice of business from being heard on this issue.

It may be too lote to counter this particular tricky, below-the-belt maneuver, but it ought to be brought out into the open for future reference—and warning.

What would you think if a few leading Senators persuaded the Senate not to act on a vital matter until there could be a national referendum as the basis for action—and then blanketed the Nation with appeals to ignore the referendum entirely? In other words, a maneuver to block the Senate from acting by holding out the prospect of a referendum topped by a maneuver to block the referendum itself. If that should happen I would suspect you would think there was more there than met the eye.

This is exactly what is happening to the authorized referendum of the Chamber of Commerce of the United States on trade policy and United States membership in the Organization for Trade Cooperation. It doesn't look good any way you look at it.

Events followed each other in this order:

The policy committee and the board of directors of the United States chamber approved a declaration suporting the Government's multilateral trade program and the machinery to carry it out.

When this resolution went before the annual meeting of the chamber in Washington in May, opponents of the trade pact argued strenuously that this issue was much too important to be settled without a direct vote of the chamber membership, that it should only be determined by the democratic process of a referendum ballot.

Thus United States Chamber of Commerce referendum No. 95 was authorized and later the ballots were put into the mail.

But then the opponents of the multilateral trade program began to show their hand. After preventing the annual meeting of the chamber from voting on the recommendation of the policy committee and the directors by a plausible appeal for a referendum, they at once started a campaign to dissuade members from using the referendum.

The principal open move was a letter addressed to the member organizations of the United States chamber by Edwin J. Putzell, Jr., secretary of the Monsanto Chemical Co., warning them against making the mistake of stepping into the middle of a hot controversy.

Having blocked action at the annual convention by proposing a referendum, the opponents of the resolution next moved to block the referendum—which they had supported—in an effort to insure no action at all.

Their tactic was to argue that the issue was too controversial to vote on without a referendum and too controversial to vote on in a referendum. Pretty cute, wasn't it?

This trade and tariff issue is controversial. That's the reason for the referendum. If the answer were axiomatically obvious, there would be no need for a referendum.

Mr. Putzell did concede in his letter to the chamber's member organizations that "it is necessary at times for you to take a stand on controversial issues, but this is not such a time." Why isn't it the very best time? The problem is before us now. This is a matter directly affecting business and the national interest. Congress will soon be acting on legislation bearing on it. The annual meeting of the chamber asked for the guidance of the membership.

Mr. Putzell concluded his don't-vote appeal with this not very subtle admonition: "It is impossible for you to vote on this referendum without antagonizing large and meaningful segments of local industry represented in your organization. Therefore, we strongly urge you to refrain from voting on referendum No. 95."

This letter has not gone unanswered. When William Blackie, executive vice president of the Caterpillar Tractor Co., found out about it, he also circularized the chamber members. To the argument that businessmen must not express their views for fear of antagonizing other businessmen, Mr. Blackie replied: "It is possible that this could be an insulting as well as a gratuitous appeal to shirk a performance of duty because some dues-paying members might not be big enough to recognize the rights of others to differ on matters of judgment. Surely Mr. Putzell is going beyond his reasonable province when he tells you how to run your affairs."

We will soon know whether the Chamber of Commerce of the United States is to be a forthright voice of business—or the voice of silence.

Drought Crisis in Missouri

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. HULL. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to a situation in north Missouri covering not only my own district but a part of that represented by the dean of the Missouri delegation, Congressman CANNON. I realize that no political party or administration has a monopoly upon arbitrary capriciousness or obtuse redtape, but the present drought crisis in north Missouri has developed a situation which, in my opinion, merits the attention of the Congress.

For several years that region has been in the grip of a continuing drought. Year after year of substandard rainfall has produced a progressive, creeping paralysis of that entire agricultural area. It has reached the point where livestock herds must be disposed of, and in some localities there is even an immediate danger of lack of water for human needs. The situation is so acute that it has been described in the newspapers as far away as New York. The farmers and businessmen of north Missouri are a proud and self-reliant people, who do not panic easily and who are not inclined to request outside assistance except in desperation. However, late this spring actual conditions reached such a point that they appealed to the Federal Government for emergency relief under Public Law 875, passed by the 81st Congress, with which you are all familiar.

Their urgent request was made through established procedures, but the net result has been nothing. The statements of responsible citizens, including even those of eminent Republicans, were disregarded. The urgings of Senator HENNINGS and Senator SYMINGTON were useless. The recommendations of the Governor of Missouri, based upon survey of the Missouri State Drought Committee, were ignored. The representations of myself and Congressman CANNON were brushed aside. Instead, upon the basis of a casual and partial investigation by a lone subordinate, the Department of Agriculture concluded that the situation was not sufficiently acute to warrant relief.

In the wake of a bipartisan storm of protest which this ruling evoked, the Department is now conducting another investigation and I have no doubt but that the requested relief will be in time accorded. But in the meantime, valuable time has been lost and much further suffering caused. I believe that it would be well for the Congress to fully inquire into the standards and procedures established for the administration of Public Law No. 875 to determine whether or not the intent of the Congress is being followed and the public welfare is properly served. In partial corroboration, I am inserting herewith two news articles from the St. Joseph (Mo.) News-Press, a great Missouri newspaper which is edited by a gentleman whose political affiliations differ from my own. The first article was published on Saturday, June 16 and the second on Sunday, June 17:

[From the St. Joseph (Mo.) News-Press of June 16, 1956]

ALL-OUT PUSH FOR AREA DROUGHT AID PLEDGED BY HULL—CONGRESSMAN RAPS BENSON FOR FAILING TO GRANT AID

Farmers in the crucially parched lands of 12 Northwest Missouri counties were assured by Representative WILLIAM R. HULL yesterday that he and other members of the Mis-

souri delegation in Washington will do "everything in our power" to obtain Federal emergency aid for this part of the State.

His statements were made at a luncheon in Bethany before some 180 representatives of the drought-stricken counties, midway through an 11-hour aerial and motorcar tour he and other State officials completed late last night.

In his talk, Congressman HULL told the worried farmers every effort is being made to obtain the emergency relief as soon as possible. He said he and United States Senators THOMAS C. HENNINGS and STUART SYMINGTON would call on Secretary of Agriculture Ezra Taft Benson next week to present a report of yesterday's inspection.

SERIOUSNESS IN QUESTION

The Agriculture Department last week declined to designate the 12 counties as disaster area on the grounds the drought was not serious enough.

Congressman HULL told the farmers at yesterday's meeting that northwest Missouri farms are in "much worse" condition than they were when he visited the area only 13 days ago.

The critical situation is one to be met on a nonpartisan basis, he said, "and I intend to keep it that way." But at the same time, Mr. HULL lashed out at what he termed the "inconsideration and inhumanity" that has emanated from Secretary Benson's office ever since he took over.

He added, however, that his charge against the Secretary was not political and that "I'd be just as critical if he were a Democrat."

HASTY INVESTIGATION

The administration's decision to refuse emergency aid to northwest Missouri, Congressman HULL declared, "was based on a hasty and superficial investigation by a department representative."

He referred to an inspection tour made late last month by Robert Hall, an Agriculture Department aid.

Robert Crawford of Nevada, Mo., representing Senator HENNINGS on yesterday's tour, said the Senator shared Mr. HULL's sentiments. He said Senator HENNINGS is "gravely concerned with the need for emergency stock feed assistance in the area."

Mr. HULL added that Senator SYMINGTON, whom he was representing on the inspection, was equally disturbed by the seriousness of the drought and promised "every possible consideration."

EXTENT IS OUTLINED

The extent of the drought was graphically outlined by members of the drought relief committee and a number of farmers.

George Homan, former St. Joseph fireman and now chairman of the drought relief committee of Gentry County, reported an "extreme and acute" shortage of feeds, seeds, and water in his county.

Mr. Homan, now an implement and motor car dealer at Albany, Mo., said Gentry County has 387 dry farm ponds and 344 dry wells.

In Nodaway County, 12.34 inches of rain have fallen since last July 1, critically below the normal fall of 36.94 inches for that period. Nodaway County has had a 42.50 rain deficiency in the last 2½ years, it was reported.

In De Kalb County, the 8-month deficiency was reported to be 15.11 inches.

INSECTS A THREAT

In addition to the danger to crops, farmers at the Bethany meeting expressed deep concern over the threat of crop ruin from insects whose hatchings will flourish in the dry weather.

And again, farmers continued to register concern over the diminishing amount of pasture land, and the shortage of feed and water that has forced some to sell their live stock and may force others to dispose of theirs.

The counties making reports at the Bethany meeting were Putnam, Sullivan, Livingston, Mercer, Grundy, Daviess, De Kalb, Worth, Nodaway, Atchison, and Harrison.

STATE SENATORS PRESENT

Republican State Senators James Keller, of Trenton, and Clayton Allen, of Rock Port, were among those attending. Also present was Raymond Wheeler, of Bethany, who informed the group the State board of health had ordered Bethany to remove all "approved water" signs, because water there contained impurities.

However, Mayor Wheeler said, tests showed there were no impurities and the health board issued its order instead because of Bethany's water shortage.

Congressman Hull was accompanied on the aerial and motor car trip by his secretary, F. M. Wilson, Platte City, and Gerald Massie and Dale Fearn, both of the Missouri resources and development commission, and Harold Slater, city editor of the News-Press.

A similar inspection tour will be made Monday by Kenneth Scott, director of the credit service of the Department of Agriculture; Murray Colbert, State director of the Agriculture Stabilization Committee, and Mr. Hall, who made the earlier tour.

[From the St. Joseph (Mo.) News-Press of June 17, 1956]

DROUGHT SEEN AS THREAT TO ECONOMY OF NORTHWEST MISSOURI—DISCOURAGEMENT GROWING AS LIVE STOCK, CROPS, DWINDLE

(By Harold M. Slater)

Worry etched deep in their faces, north Missouri farmers feel their economy is gone if they do not receive Federal assistance within a week or 10 days.

As those farmers talked to Congressman WILLIAM R. HILL at more than a score of places throughout the area Friday it was apparent they have another potential enemy in addition to lack of water and feed and fear of grasshopper and chinch bug infestation.

That enemy is discouragement. "We've been feeling as if we didn't have a friend in the world," one farmer told the Congressman shortly after the HULL party arrived at the Albany airport. Others during the day re-echoed that sentiment.

CORN CURLING

Emphasized was the fact the present situation in north Missouri is not one that can be ended by a long heavy rain or even a series of such rains now. It is too late for pastures. Pastures are gone; the alfalfa crop is almost nil, and the corn already has started to curl from drought effects.

Many of the farmers expressed bitterness toward Secretary of Agriculture Ezra Taft Benson. Their contention is that the decision to refuse to designate north Missouri counties as a disaster relief area was based on a hasty and superficial investigation.

The field man who made the investigation on which the aid refusal was based did not get out into the full farm area to see the damage, they told Congressman HULL.

IN ARIZONA

"He had been in New Mexico and Arizona. He reported things weren't as bad here as down there. He didn't take into consideration the economy in those Southwestern States is based on 4 or 5 inches of rain a year; that ours is based on 30 to 35 inches of rain," one farmer at Albany said.

J. N. McMichael of the Gentry County Bank at Albany said one of the real blows to the area is the fact farmers are being forced into liquidation of their cattle. He pointed to grass and weeds in the bed of the Grand River as an indication of how serious the water shortage has become.

County Agent Ray Kampschmidt of Gentry County said the drought isn't just a 1-year affair. "We're 40 inches deficient on rain in the past 4 years," he said.

NOT SEEKING DOLE

Mayor Raymond Wheeler of Bethany said the farmers weren't asking for a dole; that they didn't want to ask for help. "But the situation is such that they must now. It's desperate," he said.

Fred Howitt, King City banker, said the grasshopper menace is great.

"I saw a truck bed the other day and thought some bluegrass seed had been left in it. It turned out to be just thousands of tiny grasshoppers," Mr. Howitt, who owns the Howitt Building in St. Joseph, said.

The first farm visited by Congressman HULL after he arrived at Albany is that operated by Ora Collier, Sr., and Ora Collier, Jr. The Colliers own 430 acres and rent and farm 120 more. George Homan, former St. Joseph fireman and now chairman of the Gentry County drought-relief committee, pointed out the Colliers have gone in for all balanced farm practices and have won many farm awards.

ALFALFA PASTURED

Ora Collier, Jr., looked at his sad-appearing fields and commented: "We got 3,500 bales of alfalfa on the first cutting in 1955. This year there wasn't any for a first cutting. We pastured it down. It lasted a week.

Six of the 12 ponds on the Collier farm are dry. Some of the others have as little as a foot of water. The Colliers have 230 head of cattle. They have started selling.

Carl Akers, who farms east of Albany, has 170 acres in alfalfa for his dairy herd of 55. "That alfalfa should be lush now. Look at it." It is about 6 inches high, and scant.

Akers and his wife operate the place alone. Last year they produced and sold 435,000 pounds of grade A milk. This is the first time he has never had a first cutting of alfalfa. He doesn't have a bale of hay.

PASTURING OATS

Five miles southeast of Albany on the farm of Sam Chenoweth, a herd of 77 Angus is pasturing on oats. "That will pasture them for about 10 days. I don't know what then," Mr. Chenoweth said.

"You fellows don't need to tell me," said Congressman HULL with a wry smile. "I'm a farmer and I know what you are up against. The big thing is convincing the Secretary of Agriculture how bad your situation is. I'm going to try to help you."

Mr. HULL was optimistic, however, that the resurvey of the situation promised by the Agriculture Department might bring about a reversal of the drought aid refusal.

The Hull party was shown how the farmers throughout the area are being deprived of one of their most vital things this year—their gardens.

At the B. A. Collins farm near Bethany they were shown a garden plot that was barren. "A garden probably means $1,000 or more to the average farm family during a year," a farmer explained. "This year on account of the drought we just don't have any."

Approximately 50 farmers were waiting when Congressman HULL arrived yesterday afternoon at the Stanton Halleck farm south of Ridgeway. The pasture there—as in much of the area—looks like a lawn in September when youngsters have played baseball on it all summer.

Hay has been thrown out in the barren pasture so the cattle will have something to eat. "And the pasturage should be lush at this time of the year," Mr. Halleck said.

HAS NO FEED

Farmers gathered at the Halleck place told the Congressmen the big part of the cattle in Harrison County would be sold and moved out if something is not done within the next 10 days.

"My son has been buying water for 3 months now for his cattle. Now he has no feed. He'll have to sell," a farmer there said.

The situation was almost the same among the farm group that waited at the Joe Campbell place, north of Ridgeway, to talk to Hull, who made much of the tour in shirt sleeves and sans tie.

There he was told that hay that averaged 80 bales an acre in Harrison County last year, this year will average 7 bales or less.

The delegation that greeted HULL at the Maryville Airport told him 65 percent of the farmers in Nodaway County are hauling water. Lloyd Fine, a farmer of near Hopkins, said land that yielded 500 bales of alfalfa last year produced 71 this year. "I'm driving my cattle half a mile to the river each day," he said.

Nodaway County is like the others in the area in that many of its cattle are being sold due to the shortages.

On the window of one Bethany cafe there is a sign reading "Due to water shortage, to get water you have to ask for it."

That seemed to be the final touch.

"Our pastures are just exercising lots," a Mercer County man said. "There isn't anything left in them for the cattle to eat." The rain deficit in Mercer County is one of the heaviest in the area.

De Kalb County representatives reported a 15-inch deficit in rain for the last 8 months. In some areas there, 90 to 95 percent of the ponds are dry.

CRACKS IN FIELDS

Worth County farmers told the Congressman half the wheat has been pastured or plowed under. Forty commercial trucks are hauling water in Nodaway County. One farmer reported he had spent $496 to have water hauled since October 1.

Numerous were the reports of fields cracking.

"One of our farmers up home," said a Nodaway County man, "reports he has a crack in one field that is 80 feet long, 18 inches wide, and 4 feet deep.

"Either it is an awfully big crack or it is an awfully big story."

That was about the only humor of the day's tour.

A Bill To Strengthen the Clayton Act

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ROOSEVELT. Mr. Speaker, section 4 of the Clayton Act permits any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws to sue and recover "threefold the damages by him sustained, and the cost of suit, including a reasonable attorney's fee." The provision has been in effect for a long time and may be found in Thirty-eighth United States Statutes at Large, page 731, and is codified as Fifteenth United States Code, section 15.

Section 16 of the Clayton Act provides for equitable relief and the granting of an injunction to prevent threatened loss or damage by a violation of the antitrust laws. Yet, strange as it might seem, there appears to be an unexplained omission in this section, because it is silent as to the granting of a reasonable attorney's fee when equitable relief is given a complainant.

It should be particularly noted that when an action at law for treble damages is brought, and even if it should be concluded successfully for the plaintiff, the unfair competition, or the violation of antitrust laws, is not necessarily stopped thereby, but often continues unabated. However, in a proceeding for injunctive and equitable relief, under the antitrust laws, brought by virtue of the provisions contained in section 16 of the Clayton Act, permanent relief is afforded and fair competition and compliance with the provisions of the antitrust laws is automatically restored. Both the public interest and the complainant's advantage are better served by this than by the mere award of monetary damages even if trebled.

Unfortunately, however, and I submit, unfairly, in an action for equitable relief, the complainant not only does not recover any damages but may be obliged to bear the cost of litigation as well as the expense of paying the attorney's fee. Therefore, under the present law, there is a great incentive for the plaintiff to seek recovery of treble damages, rather than pray for permanent equitable relief and the compliance by the defendant with the provisions of the antitrust laws.

It is because of this obvious unfairness and omission in the provisions of the Clayton Act that impells me to introduce a bill to amend section 16, and thereby put the complainant who seeks a permanent cessation of violations of positive statutory law by the defendant, on par and equality with the plaintiff who brings an action at law for treble damages, and thereby award such complainant when successful his cost of the suit, including a reasonable attorney's fee.

The Federal courts have repeatedly held that the rights of persons damaged by violations of the antitrust laws to sue the defendants guilty of such violations were also for the purpose of multiplying the agencies which would help enforce these important statutes, and therefore make them more effective—*Maltz* v. *Sax* (134 F. 2d 2). They are said to be designed to supply an auxiliary force of private investigators to supplement the Department of Justice in law enforcement—*Weinberg* v. *Sinclair Refining Company* (48 F. Supp. 203)—and to aid in achieving the broad social objectives of the act—*Fanchon & Marco* v. *Paramount Pictures* (100 F. Supp. 84).

Some time ago, when I introduced H. R. 8395, it was provided, among other things, that a successful plaintiff in an equitable proceeding may recover the cost of suit, including a reasonable attorney's fee. In this connection I should like to quote the testimony of Judge Stanley N. Barnes, Assistant Attorney in charge of the Antitrust Division of the United States Department of Justice. In his testimony before the Antitrust Subcommittee of the Committee on the Judiciary of the House of Representatives Judge Barnes stated:

I likewise support H. R. 8395's effort to permit a successful private antitrust plaintiff's recovery of costs not only where he seeks damages but also solely equitable relief. I think that this is consonant with well-recognized principles, that a prevailing party litigant should be entitled to his costs under present section 4 of the Clayton Act, any person injured may recover treble damages and the cost of suit, including a reasonable attorney's fee. Section 16, however, enables private antitrust plaintiffs to seek injunctive relief, but does not include a provision authorizing the recovery of costs. Where a private litigant does not sue under section 4 as well as 16, no rational basis appears for denying recovery of costs. In either case he should recover costs including a reasonable attorney's fee.

I submit and advocate the enactment of this bill into law in order to strengthen the Clayton Act and thereby aid small business. For, after all, small business is the backbone of the Nation's economy and the maintenance of the growth and survival of small enterprises are, indeed, vital to the country's strength and welfare.

An Effective Foreign Policy Might Be Surprisingly Refreshing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the Wall Street Journal of June 18, 1956, is further evidence of our lack of effective foreign policy. Everybody appears to know that, except our President and his Secretary of State:

For many years a prime function of American foreign policy has been the manufacture of defense alliances with other countries. Apart from the United Nations, which theoretically at least is an alliance, the United States has concluded such pacts with more than 40 nations. Now circumstances are forcing a reappraisal of the value of this approach.

That, we think, is the import of the confusion which Washington has been generating about this country's attitude toward other nations' neutrality. President Eisenhower said in effect that neutrality is understandable and maybe a good thing. Secretary of State Dulles suggested that, except in unusual circumstances, it is shortsighted and immoral.

The confusion may be, as Mr. Dulles contends, largely one of language. But the problem it reflects is real enough.

The reason for the American eagerness for defense alliances was, of course, the threat and at times the actuality of Communist aggression. Some pacts, like the North Atlantic Treaty Organization, have undoubtedly helped deter further Communist aggression.

Something happened, though, at last summer's Geneva conference to alter the aspect of the Soviet threat. There was a tacit agreement that hydrogen and other new weapons had made resort to war unthinkable. In other words, the Communists would no longer pursue their aims by military means where such means might lead to global war.

That notion may be the sheerest kind of wishful thinking. It may be more likely that the Soviet will blast this country when they are good and ready. Certainly the Pentagon assumes they will. But the fact is that the no-war theory is widely accepted in the world.

And whatever the Soviets' military intentions, they have in fact turned from angry

to soft words, directed mainly at the so-called neutral nations of Asia and the Middle East. This combination of circumstances makes America's policy of military alliances increasingly unpopular in the world, and therefore increasingly ineffective.

So the United States now appears to be trying to evolve a policy which will not anger nations that have risked something to enter alliances with this country, and which at the same time will make clear that there is ample room in the world for genuinely neutral nations—that they do not have to be with us in order for us to consider them not against us.

What will come of this reappraisal is anybody's guess. But we think a couple of basic points ought to be clear.

One is that the United States has put too high a value on defense pacts. Indiscriminate scrambling for allies is a dubious way of strengthening our own security. It is fairly absurd to suppose that some impoverished, politically illiterate Asian country is going to view the Communist threat with the same seriousness or interest as the United States. It is equally unlikely that such a country would be much help if the Communists did attack.

A second point is that the answer to the declining prestige of military pacts is not vast new economic aid. There is nothing to suggest that such aid makes neutrals less susceptible to communism or, indeed, that it even significantly strengthens the economies of backward lands.

The growing unpopularity of pacts ought, in fact, to suggest to the United States that the world has been too much with us, and we too much in it. Perhaps we could just calm down for a while. Instead of proposing defense alliances all over the place, let other nations ask our military help if they want it. Instead of insisting on subsidizing them, let them ask our aid. That is the only basis on which military or economic aid can be useful anyway.

That kind of policy could be applied to allies and neutrals alike. It would go far toward resolving the neutrality problem now bothering Washington. And its result, in terms of the world's attitude toward us, might be surpisingly refreshing.

He Was Our Friend, Faithful and Fearless

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include two editorials relative to a very prominent figure who has recently passed away. I am referring to S. A. Horvitz, known to his thousands of friends as "Sam."

He was a successful publisher as well as a successful highway contractor. He was one who spent many hours of his life fighting for the principles he believed right and he was always unequivocally opposed to anything that was dishonest.

The two editorials I am inserting, Mr. Speaker, one by Ken Woodman entitled "He Was Our Friend, Faithful and Fearless," and one by G. J. Kochenderfer, editor emeritus, which describes the life and record of Sam Horvitz. I am sure, Mr. Speaker, that I speak the words of all who knew him when I extend sympathy to his wife and family:

HE WAS OUR FRIEND, FAITHFUL AND FEARLESS

Born the son of immigrant parents in a poor section of Cleveland, S. A. Horvitz forged his way upward to become a nationally known figure in the newspaper publishing world and a builder of some of Ohio's finest highways.

Although he was best known for the driving energy which carried him to prominence in both these fields, Mr. Horvitz had three other qualities which greatly influenced the course of his life.

He cherished his family deeply and was proud of his pleasant, attractive wife and three fine sons.

He detested dishonesty in either business or politics and constantly urged his newspapers to fight gambling and excessive utility rates.

His third quality was a rich sense of humor which flashed continuously in his dealings with old and trusted employees.

He never wanted personal glory of any kind and gave stringent instructions to his editors not to play him up in his papers "unless I do something bad, then put me on the front page."

He constantly urged improvement in his newspapers here and in Lorain, calling for the best in typography and syndicated features but always with top emphasis on local news coverage.

With employees who were loyal to him, he was generous to an unusual degree if they were overtaken by misfortune. This generosity was always without fanfare.

His immense vigor gave vitality to every project he touched. This included not only the contracting and publishing business but overflowed into politics as well where he insisted on backing candidates whom he believed were honest and supported a good program for the State and Nation.

Through his newspapers he backed innumerable civic and charitable enterprises in Mansfield and Lorain, always maintaining that the papers and not himself should get any credit that was due.

Sam Horvitz feared neither pomp nor circumstance nor life nor death. And he met his final challenge as he would have preferred to meet it—quickly and quietly in a hospital room at Hanna House in Cleveland.

To those who worked long with Mr. Horvitz and knew him well the words of Mark Anthony are earnestly appropriate: "He was my friend, faithful and just to me."

PERSONAL REMEMBRANCE

(By G. J. Kochenderfer)

It seems impossible to realize that we of the News-Journal will never again see Mr. Horvitz, as on the occasion of his final visit here a few weeks ago he appeared in excellent health and displayed his customary forward-looking attitude.

My pleasant recollection of Mr. Horvitz extends back more than a quarter century to early in 1930 when he became interested in the Mansfield newspaper situation and, in the midst of that depression, decided to establish the Journal here, and I well recall the determination with which he went about that enterprise and the success with which it was carried through.

Then came the years of operation in the old News Building, with progress which justified construction of the present home of the News-Journal, with plans for further expansion as needs appear.

Always it was the impelling force of Mr. Horvitz, recognizing his obligations to communities he served, that carried through the enterprises in which he was engaged.

From a personal standpoint, I was always greatly impressed by Mr. Horvitz's high appreciation of his associates in his newspaper enterprises and his constant efforts to improve the quality of newspapers being issued.

The three sons which Mr. Horvitz leaves were small boys when the Journal was started here. They have since grown to stalwart manhood, and Harry, the oldest, has fortunately developed such an interest in newspaper work as to make him fully capable of assuming the duties of his father in the direction of the newspaper properties which now come under his supervision.

In the death of Mr. Horvitz, I, like many others, have lost a close friend, and it was with deep sorrow that I received the news of his passing from earthly life.

Hon. George A. Dondero, of Michigan, Speaks at Gettysburg

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. MADDEN. Mr. Speaker, our colleague, GEORGE A. DONDERO, of Michigan, was honored by being selected to make the annual Memorial Day speech at Gettysburg May 30.

Mr. DONDERO is recognized throughout the Nation as one of the outstanding authorities on Civil War history and Abraham Lincoln.

I am hereby submitting his magnificent address which he delivered on that day:

MEMORIAL DAY AT GETTYSBURG 1956

(Address of the Honorable GEORGE A. DONDERO, Member of Congress, 18th Michigan District, U. S. Military Cemetery, Gettysburg, Pa., May 30, 1956)

This is Memorial Day. It is a day of memories.

Americans everywhere around the world gather reverently, as we do here at Gettysburg today, to honor the Nation's dead. Their dust remains an inspiration to their countrymen.

Because of their sacrifice, on the Capitol Building at Washington—kissed by the sun of day and watched by the stars at night—waves the unconquered flag of your land and mine.

The struggle for freedom never ends. It was purchased with blood. It must be preserved by devotion. So Memorial Day is a day of honor, a day of remembrance, a day of reckoning, a day of accounting and above all a day of high resolve. We resolve anew today "that these dead shall not have died in vain" and with the help of God, who has never forsaken this favored land, we shall maintain our high resolve through future generations.

If the time should ever come when we no longer remember what brave men and women, living and dead, have done for us, in that day our Republic will no longer deserve preservation.

No one can stand on the battlefield of Gettysburg, on this spot, on this day and in this hour of history without a deep sense of humility. Here was fought one of the greatest and most significant battles of all time. Here were spoken, from a page and a half of ordinary ruled paper, the lines of an address that has never been surpassed on American soil. To me it has always seemed a near miracle that a man with President Lincoln's limited education, whose invitation to come here to make a few appropriate remarks was an afterthought, and whose

educational opportunities were so meager, could produce such a gem of English literature as the Gettysburg Address. Many years ago I asked Robert Lincoln, the President's son, the extent of his father's education, and he replied: "Father did not have anything to start with and hardly went to school at all." Lincoln's lines not only gave mankind the essence of the meaning of the struggle then being waged but also serve in this hour and for all ages as a prayer of deliverance for all people.

Abraham Lincoln the man, Gettysburg the place, and the soldier dead were the occasion for the ceremony on November 19, 1863. These combined to create for the free world an eternal light in man's unending struggle for the happiness God intended him to possess. Here at Gettysburg representative government ceased to be an experiment of 4 score and 7 years. The battle and the speech gave it the stature of perpetuity. Today, 4 score and 13 years later, Lincoln's question, "whether this Nation or any nation conceived in liberty can long endure," has again been tested in the crucible of war and answered affirmatively, at least for our day.

The circumstances dedicating this burial ground take on a shining luster and a sublime grandeur from the complete absence in the spirit of Lincoln's address of any note of hostility. It is weighted with the tragedy of the event and the whole war. It broods over the hero dead as though on both sides they had fought for the clarification of a great ideal and perished to realize it.

Great utterances have been delivered in many places down through the centuries. This one had the singular gift of expressing the basic meaning of the United States, in the noblest language, at a moment of deep national bereavement, by an American President forever stamped as typical, and whose entire lifework is summed up in these compactly beautiful sentences of that short oration. Never in the history of literature was so much said, so wisely, in so few words.

We know now that the address was not written on the back of an envelope, nor was it the inspiration of the moment. We know it represented the deepest soul searching of a profound and thoughtful President putting into 3 minutes of the spoken word what he had been thinking about for many years. The longer he lived the greater was his faith in the freedom of man and the stronger his conviction that it must be preserved.

What we have in the Gettysburg Address is deep thinking expressed in simple language. Its infinite compassion, its dedication, and its hope that "this Nation under God shall not perish from the earth" place it with the most sublime literature of the Hebrew prophets.

Whatever part of this Republic might be destroyed in a physical sense, its spiritual foundations, with these words, remain imperishable.

The real-headline or top attraction of the Gettysburg dedication 93 years ago was not Abraham Lincoln at all but perhaps the greatest of the great orators of that day. He was a former Member of Congress, former president of Harvard College, former Minister to Great Britain, former Secretary of State, former Governor of Massachusetts, and former United States Senator—the matchless Edward Everett. Yet the purest and most perfect prose was spoken not by the most educated American of his time who had attended temples of learning on two continents but by a most uncommon commoner from Illinois whose hands knew the feel of an ax handle and who hardly went to school at all. Yet the few appropriate remarks he was invited to deliver here stand forever as the symbol of our American philosophy of government.

There is still another circumstance equally challenging that holds us here today in this reverent hour of recollection and memorial.

"The world," said Lincoln with the humility of the lonely and the great, "will little note nor long remember what we say here, but it can never forget what they did here." Now 93 years after we find the Gettysburg Address as well as "what they did here" as much the living tradition of our country as the Declaration of Independence and the Constitution of the United States. Indeed I venture to suggest that we have to turn to the Bible and to our books of prayer to find words better remembered, more frequently quoted or vested with such moving spiritual force.

It was because of what was done here and precisely because of what was said here that we gather today to add our homage to the generations that before ours paid their tribute as will the generations that are to come after. Where we now stand is holy ground, a shrine as durable as man's love of freedom and as precious as his willingness to sacrifice life to maintain it.

We are rightly humble before the presence that watches over these sacred acres, and we should take as much as we can of inspiration from these surroundings for the tasks destiny has thrust upon us in an age where again freedom and slavery face each other in a world divided.

It may be that another American will in the decades to come add to the luster Abraham Lincoln gave to the American dream. It may be that another American taking his fire from the eternal light brought forth here will help mankind of a future day march to its hour of victory over the enemies of liberty. Perhaps we had less than 2 short years ago an approach to the Lincoln tenets of faith in the words of President Eisenhower, who stated on July 7, 1954, "I will not be a party to any treaty that makes anybody a slave."

Freedom has its life in the hearts, the actions, and in the spirit of men. This we know as we meet today in commemoration and communion; a weapon touched by the finger of God was forged here by Abraham Lincoln, a weapon of the soul and of the heart that cannot be vanquished by any force so long as man lives.

We have been obliged to forge some dreadful weapons to preserve our heritage. But no weapon we have yet forged is as enduring, no weapon is as strong, no weapon so grips our inmost conscience as that weapon of the mind that Lincoln tossed to men, like a torch, on the field of Gettysburg in 1863.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Our Heritage of Freedom

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 20, 1956

Mr. MANSFIELD. Mr. President, on June 3 I had the privilege and honor of delivering the address at the baccalaureate service at Montana State University, Missoula, Mont. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR HERITAGE OF FREEDOM

Twenty-three years ago I sat, by the grace and benefaction of the university faculty, where you graduates are sitting today.

I thought then, as you must think now, that one of the few burdens of this pleasant week which marks the milestone of 4 years of accomplishment was that I had to be subjected to the remarks of some oldster who had been selected by some process which interested me very little to give the baccalaureate service. It seemed clear to me then that while I was very little interested in what he had to say, I was quite aware that he had very little idea, if any at all, of what I really thought about anything.

But I remember well that I suffered him in silence, and I hope only that you will do the same for me. There are some significant differences, however, between my situation then and your situation now.

For one thing, I had reached the age of 30 before I managed to earn my degree. Unless my judgment is failing, I suspect most of you have some years to go before you will reach that ripe old age.

For another thing, when this university conferred the degree of bachelor of arts on me, the United States was still in the depths of a depression and jobs were few. Today, from what I know and read in the help-wanted columns, most of you won't need to worry about finding jobs.

But probably the most significant difference in the situation of the college graduate today and the graduate of 20 years ago flows from the changed situation of the United States in the world. The fact that the United States in two decades has moved from a position of chosen isolationism to a position of unsought world leadership has a most profound effect on every person in this Nation.

In the early 1930's the United States had not recognized Russia; the high tariff policies of the 1920's were strangling our international trade; we were not a member of the League of Nations and had not even accepted the statute of the World Court.

The events taking place in Europe, such as the rise of Hitler, seemed of small importance. The activities of the Japanese in Manchuria were not of particular concern. My classes at this university in the fields of Far Eastern and Latin American history were not characterized by overenrollment. The Foreign Service of the United States numbered less than 700 in 1930, and the total number of employees in the Department of State was less than 5,000. Communism was a movement that didn't seem to be of particular concern to most Americans. It was not viewed as an international conspiracy threatening our freedom. Indeed, the Communist candidate for President of the United States polled more than 100,000 votes in 1932 and some 80,000 votes in 1936.

I cite these facts so we may contrast them with the present. Today we not only recognize the Soviet Union in the legal, diplomatic sense, but we recognize her in the physical sense as the leading protagonist of international communism which poses the greatest threat of our time to individual man's freedom. We today recognize internal, as well as international, communism as an abiding enemy of free people.

Since 1934 our international trade barriers have been gradually liberalized under the terms of the Reciprocal Trade Agreements Act. And we have not only joined the United Nations, we take pride in the leadership we took in establishing the U. N. and its peripheral specialized agencies in the fields of health, agriculture, aviation, education, and labor. We have joined the International Court of Justice, have accepted its jurisdiction, and have abided by its judgments.

Our lack of concern with world events in the 1930's has been replaced by household familiarity with geographic areas such as Formosa, Indonesia, Indochina, Pakistan, and India. Our children literally call world statesmen by their first names. We accept as fact the proposition that events in faraway places may be of vital concern to individual Americans. We show this concern today by a Foreign Service some 4 times as large as in 1930, by a State Department which now numbers its employees at over 10,000, and by the fact that in 1955 no less than 32,000 civilian Americans were employed overseas.

These things have a direct impact on you graduating students. The status of the United States as a great power and its bastion position as defender and protagonist of freedom increases the demand for the skills you possess or will acquire.

For the foreseeable future there will be a heavy demand for men and women with foreign language ability. It daily becomes more important that more Americans than ever before learn not only the common languages of Spanish, French, Portuguese, and Italian, but the more unusual languages such as Russian, Chinese, Japanese, and the dialects and tongues of south Asia and Africa.

Combined with language ability, there is a growing need for men and women with special skills. South America, by way of example, is headed for a tremendous industrial and transportation revolution during the next decade and there will be heavy demands for help in American know-how. How many diesel engineers can General Motors send to South America who will have a working knowledge of Spanish? How many television technicians know Portuguese? How many of Montana's mining engineers understand why some Latin American states have nationalized their mineral resources?

Doctors, lawyers, teachers, psychologists, nutritionists, agronomists, mining engineers—there is scarcely a skill or profession for which there is not an international demand waiting to be satisfied. To the extent that worldwide needs for knowledge can be met by qualified Americans, we can expect to influence peoples. And I might add—to the extent the United States does not stand ready to help millions of people in neutralist states, there will be indoctrinated Communists ready to help them move toward a totalitarian life.

Now I know there are among you some who may ask why we should concern ourselves with the needs of other peoples. Why should I talk of trying to influence foreigners?

The main reason for our concern results from the fact that any diminution in the area of individual freedom, whether it results from fascism, communism, other forms of totalitarianism, or from the failure of dependent peoples to grow toward independence, threatens freedom in the United States. Undoubtedly, there are still among us some who view our relations with other nations as activities we could better do without, or in any event, matters about which only experts should be concerned. Too many of us, however, have seen wars that have taken a heavy toll of American lives, and that have disrupted our peaceful growth at home, to be indifferent to this interrelationship. We know that we cannot banish the problems of international relations by closing our eyes to them. We know we cannot—by voting Republican or Democrat—vote our international problems out of existence.

One observer put the matter clearly and trenchantly recently when he remarked, and I quote, "Every value that you and I cherish as free people, the things for which men have died on the battlefields of the world, all of the things that are woven together in the rich heritage that we call America, all of those values are in jeopardy because they cannot be preserved in a little vacuum called America. They must be preserved in the world in which powerful forces are at work threatening these basic values that we believe in."

The freedom we know will either expand and live, or be curtailed and die. Freedom is not a static thing which can be preserved in America and allowed to die elsewhere. What happens to the aspirations for liberty of the student in Indonesia will eventually effect the freedom of the men and women who walk the campus here in Missoula. I believe this thought was best expressed in a different time and a different age and in a smaller world. It was true then but it is much more true now. Let me read to you the famous words of John Donne, the 17th century poet and minister. They are taken from one of his sermons:

"No man is an island, entire of itself; every man is a piece of the continent, a part of the main; if a clod be washed away by the sea, Europe is the lesse, as well as if a promontorie were, as well as if a mannor of thy friends or of thine owne were; any man's death diminishes me, because I am involved in mankinde; and therefore never send to know for whom the bell tolls; it tolls for thee."

There are among us, of course, a few who search for a quick way to preserve freedom. They hope for the immediate creation of world government, for example, or to attain complete and universal disarmament overnight. I do not belittle the great efforts and devoted dedication of people who urge such projects as these—even though they may

well be visionary. The point I make is that there is no quick, no cheap, and no easy way to attain a Utopia in which men and nations may live in peace and freedom.

A few days ago I read a newspaper dispatch from Denver which discussed a fad that is sweeping some parts of the country. It seems that there are drugstores which sell what is known as a happy pill. These pills are advertised as being able to restore peace of mind. But the Colorado State Medical Society has cautioned that none of these drugs is curative of anything. They are only palliatives.

I want to emphasize that there is no happy pill that this Nation can take which will get rid of our international ailments—that will guarantee peace. We may as well realize that the one certain prediction that we can make for the future of our international relations is that we are in for a prolonged period of difficulty and there is no palliative for that condition.

In contrast to those who seek the happy pill treatment for international tension, there are those who believe that the way to relieve international tension is to encourage it to erupt into violence. Some even suggest preventive war. Fortunately, the number of advocates of this course is small and since the development of hydrogen or thermonuclear weapons it has become even smaller.

The difference then, between the world you graduates face and the world my generation encountered 20 years ago is that the United States is now a part of the world. We could not isolate ourselves if we wanted to.

Yet as a part of the world—and probably the most important part—we cannot singlehandedly mold the world to our own image. But we can influence the direction in which the world moves by the quality of our character as a government, and as a people.

It is important that we do our level best to influence the direction the world moves because we are at the crossroads of a fundamental conflict. Superficially we often think of this conflict as one which involves the United States on one side, and the Soviet Union on the other. But the issue is more crucial. It stems from the basic antithesis between freedom and totalitarianism. Relations between the Soviet Union and the United States are only the surface evidence of the basic conflict. The basic question underlying this conflict is whether the state exists to serve the individual, or the individual exists to serve the state. If on the one hand the individual is to find his aspirations for spiritual, political, and economic growth always hemmed in by the demands of an omnipotent state, individual freedom will constantly be curtailed and eventually it will die. If on the other hand the state exists to provide a framework within which the individual may grow, we may expect the gradual expansion of the area of man's freedom.

The origin of the cleavage is not new, although it has been a long time in becoming apparent. Over a hundred years ago Alexis de Tocqueville foresaw the conflict and made a remarkable prediction. In his words: "To achieve its objective, America relies on personal interest, and gives full reign to the strength and reason of the individual. Russia centers all authority of society in a single man. The principal instrument of the former is freedom, of the latter slavery. Their points of departure are different, they follow different paths. Nonetheless, each of them seems intended through some secret design of providence to hold in its hands the destinies of half the world."

Here then are the two fundamental alternatives which face mankind. Although the United States may be able to accommodate itself to such international tensions as grow out of boundary disputes or trade disagreements without a significant curtailment of individual freedom in the United States, it is by no means certain that a further expansion of totalitarian communism would not have a direct and immediate impact on the future of freedom in this country. As I suggested earlier, freedom cannot be preserved in a vacuum.

This is not to say that the ideological clash must lead ultimately to war. But it does seem clear to me that this conflict holds a greater threat to the peace and security of the United States than any other foreign-policy issue which we face. Indeed, the most profound foreign-policy issues of our time revolve around the ideological clash of communism and freedom. Just as the destiny of this Nation during the past century was determined by our management of our domestic resources, our destiny in this century will be determined by the way we manage our external relations.

Ultimately, it seems to me, there are only three possible outcomes to this struggle between freedom and communism. First, there could be military conflict which would relieve the present tension by the drastic treatment of destroying life as we know it.

Second, there may eventually be a stalemate in which the conflicting systems may live in fear and in the sullen acceptance of each other's presence on the earth. This would be a solution in the pattern of the great religious conflicts of the middle ages. I personally doubt, however, that the conflict between communism and freedom will end in a stalemate of that kind.

The third alternative seems to me to be the most likely. There may in time be world evolution which will result ultimately in survival of the system that is most fit to the temper of mankind.

In suggesting this possible outcome to the struggle you may think me guilty of begging the question, and I am afraid that is the case. I do not know at this point whether in the long run man will choose to move more in the direction of totalitarianism or freedom. It is my personal belief that the future of mankind lies in freedom. But you ladies and gentlemen know as well as I how perverse a creature man sometimes is. Although we have made our choice in this country, there are still great uncommitted areas of the world where men have little awareness of the fundamentals of freedom. For them there can as yet be no clear choice based on adequate understanding of the alternatives.

We are now, of course, coexisting with Soviet communism. But neither communism nor democracy are static concepts. One or the other will ultimately prevail not necessarily by force of arms, but more likely, in my opinion, by force of spirit.

This is the first graduating class to which I could ever state my belief that a world war in your lifetime may be avoided. I make this statement not because of things that have been done by Democrats or Republicans, or because nations have learned to handle their international relations on a rational basis. I make this statement because of things that have been done by educated men. The men of science from many nations have, in their pursuit of knowledge, uncovered the means by which man may light the fires of atomic destruction. This capacity which at one time was a threat may now have become a benefit in disguise because any nation which might start a world conflagration may now reasonably expect to bring about its own destruction.

The realization of the world's great powers during the past year that another war would be likely to destroy all life has imposed the "peace of mutual terror" of which Sir Winston Churchill has spoken.

The Geneva Conference, called at the suggestion of Senator WALTER GEORGE, the distinguished chairman of the Senate Foreign Relations Committee, may have had its failures, but it did, in my opinion, crystallize the unspoken and unwritten understanding of the United States and the Soviet Union that neither of them can start a war, or permit a situation between other powers to deteriorate to the point where a great war threatens.

The significance of this situation, if my judgment be correct, is not that we should abandon our readiness to meet force with force should that prove necessary. The important point is that the conflict between totalitarianism and freedom will be decided by force of spirit rather than by force of arms.

This, I suggest, is a hopeful situation, because it is in this realm of spirit where I believe the United States has before it the greatest opportunity to lead. Our greatest opportunities to advance the concept of human liberty in the next decade are to be found in the moral, political, and economic fields and not in the military realm.

The future of human liberty as a concept for man to live by is being decided in two areas of the world. It is being decided in the United States where action will speak louder than words. It is being decided in those areas of the world in the vicinity of the Equator which have newly achieved their national independence or are now in the process of achieving it.

It would require another speech for me to consider the ways in which our conduct within the United States influences our relations with the rest of the world. I suggest, however, that what we do at home is far more important than what we say. The influence of this Nation on the world is determined by what we are in fact, not by what we think or say we are.

The future of individual freedom is also being decided in that part of the newly independent world which stretches more than half way around the globe from Indonesia to Morocco. This area of the earth has for generations known Western civilization not so much as a clarion of liberty but as a source of exploitation. The western economic system which was known to the peoples of Asia was not the private enterprise we know in the United States characterized by respect for the rights of labor and a sense of responsibility to the community. Rather, Asia knew a capitalism of Charles Dickens' England, which, as a Justice of the Supreme Court has remarked, ran on a sweatshop basis, exploiting labor. It knew a capitalism that took great dividends out of a nation and in which a 25-percent return a year on capital was not uncommon.

The United States has been extremely active in the newly independent, underdeveloped areas of the world in recent years in attempting to show these areas that capitalism does not mean exploitation. We have spent more effort in these nations than all the rest of the free world and the Communist world put together. But I am not sure, despite our prodigious efforts, that all we have been doing is good. We must not make the mistake of believing that, because an operation is big, it is good. We have, I believe, placed undue stress on building defensive military umbrellas, oftentimes overlooking the concerns of the indigenous peoples who are immersed in problems of day-to-day survival. We have tended to give our economic assistance with principal emphasis on the idea that the recipient nations had to aline themselves in virtually every way with our own policies. Why help these nations move toward a better life unless they are willing to "stand up and be counted" has often been the contention.

The total impact of this kind of approach is that despite our bounty, we appear to many Asians as having a foreign policy focused on fear and arrogance. Any man who is fearful or arrogant is on the defensive, whether he knows it or not. Neither posture is fitting for a creative America.

Much of the world is not concerned with whether the United States opposes commu-

nism. We may as well realize that fact. Exhortations to others to share our opposition to communism have more often than not fallen on deaf ears. These people are not so much interested in what we are against, as in what we are for. They are not as much concerned with how much money we will put into a program deisgned primarily to assuage our own concern, as they are in sharing a partnership relationship with them as they struggle to improve the general lot of their lives.

What we should seek to create in our relations with the underdeveloped areas of the world is independence, not dependence. If we operate on the concept that the independent nations must either be with us or against us, we will in fact be creating satellites, not independent states, and a satellite has no strength of its own. If we condition assistance to these areas on the basis that they must be with us in opposition to something, we are in effect trying to buy mercenaries. Any state that can be bought is, in my opinion, not worth buying.

As long as we operate a foreign-aid program based on such a theory we are buying trouble. We will be buying tension as between ourselves and the states who hope for partnership instead of submission.

Our dealings with these new nations call for calm and caution on our part. We are not going to understand them and they will certainly not understand us if we view their future with pessimism and let our dealings with them be guided by passion.

I have suggested that there are two areas in which the future of man's freedom is being decided—in the United States by what we are, and in the uncommitted, underdeveloped areas of the world. The United States as a Nation and as a people exercises a tremendous influence in this battle for free men because the fundamentals of our Christian religion and our democratic form of government have always emphasized the importance of the individual.

Our religious attitude toward the individual is expressed by Christ's remark that not one sparrow should fall to the ground but that your Father would know. The Christian religion constantly emphasizes the importance of the individual.

Our form of government as well as our religion is also based on the ultimate importance of the individual. The Declaration of Independence states the "self-evident" truth that "all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their powers from the consent of the governed."

In other words, government and religion in the United States have promoted the growth of the individual in freedom and in spirit.

One of our great contemporary authors has written: "Nothing was ever created by two men. There are no good collaborations, whether in music, in art, in poetry, in mathematics, in philosophy. Once the miracle of creation has taken place, the group can build and extend it, but the group never invents anything. The preciousness lies in the lonely mind of man." But individual freedom is in danger from the attack of totalitarianism. The writer continues: "And now the forces marshaled around the concept of the group have declared a war of extermination on that preciousness, the mind of man. By disparagement, by starvation, by repressions, forced direction, and the stunning hammerblows of conditioning, the free roving mind is being pursued, roped, blunted, drugged."

The preciousness of our religion and our government lies in their ability to preserve and to promote the capability of every individual to make his unique contribution to the progress of mankind.

None of us can know the contribution he may make toward man's progress. Some may develop new ideas; others will improve on our physical surroundings; some will influence the lives of their companions; others will pass their heritage on to children capable of greater contributions than their parents. We each have the capacity to leave the world a better place than it was before us.

You may have heard the story of the rich and favored King who asked a wise Athenian whether he considered the King lucky. The answer was quick. "How can I tell. You aren't dead yet."

And this is, I suppose, a characteristic of the contributions we may make. Their total impact may not be known until we have passed on.

Man as an individual has laboriously struggled upward. He understands things today he did not understand last year or the year before. He has moved ahead step by step. He con continue this progress when his spirit and mind can operate in freedom. His growth will be stunted if his freedom is impaired.

It is for this reason that it is so important that we as individuals and as a nation shape our destiny toward protecting and promoting freedom within and without this nation.

You young men and women gathered here today to take an important step in life are the product of a free people. You are here to carry on the heritage man has built. You are each fitting yourselves to make your unique contributions to man's progress so that he may live and grow in peace and in freedom.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. SPENCE. Mr. Speaker, I yield to the gentleman from Kentucky [Mr. SILER].

Mr. SILER. Mr. Speaker, it was the poet, Alfred Tennyson, who gave us those lines Crossing the Bar:

Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea.

But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.

Twilight and evening bell,
And after that the dark!
And may there be no sadness of farewell,
When I embark;

For though from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crossed the bar.

Mr. Speaker, my fellow Kentuckian was a good man and I am confident that as he goes out to meet his Pilot face to face, he will be able to give a good accounting of his stewardship and of a life well spent and work well done.

Address of Hon. William A. Purtell, of Connecticut, Nominating Hon. Prescott Bush, of Connecticut, and Excerpts From Keynote Address by Leonard W. Hall at the Connecticut Republican State Convention

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. GOLDWATER. Mr. President, today, in Hartford, Conn., the Republican State Convention is being held; and this morning it was the pleasure of our colleague, the junior Senator from Connecticut [Mr. PURTELL] to place in nomination the name of a distinguished Member of this body, the senior Senator from Connecticut, PRESCOTT BUSH. I ask unanimous consent to have printed in the Appendix of the RECORD the remarks by Senator PURTELL, as he placed the nomination before the convention, and also excerpts from the keynote address delivered by Leonard W. Hall.

There being no objection, the address and excerpts were ordered to be printed in the RECORD, as follows:

NOMINATING SPEECH OF UNITED STATES SENATOR WILLIAM A. PURTELL, CONNECTICUT REPUBLICAN STATE CONVENTION, BUSHNELL MEMORIAL, HARTFORD, CONN., JUNE 19, 1956

Mr. Chairman, distinguished guests, ladies and gentlemen of the convention, fellow Republicans all; it is indeed an honor to be given the opportunity of addressing this convention. It is a signal honor to be privileged to present to you for the highest office to which this convention can nominate a colleague and a friend.

Four years ago in like conventions, two candidates were honored by selection for the United States Senate. I shall be forever grateful to my party and to the convention delegates who selected me as one of those candidates. I shall be eternally grateful to the citizens of Connecticut for having elected me to the Senate of the United States. We were most fortunate as a party and as a people in the selection and election of another Republican candidate for the United States Senate—the man whose name it is my privilege to place in nomination here today.

A nominating speech should embody certain basic elements. It should present, and in concise form, a clear picture of the candidate, his qualifications and his record. Now, just what do we seek in a candidate? Prime considerations are integrity, purposeful action, balance and dedication to the service of the people and to the principles and policies of the Republican Party. Certainly we have seen those most important qualities displayed and demonstrated time and time again by the man it is my honor to nominate.

There is little that I can add to your knowledge of him. You know him, you respect him, you have great admiration for him as have his colleagues in the Senate, the members of the Cabinet and as has that inspired and dedicated leader—Dwight David Eisenhower.

For the sake of the record, let me review a bit. While his birthplace was Ohio, if years of residence in, and service to a State are to be counted, and, of course, they count, then he is more native than many born here.

When a choice could be made as to where he would reside he unhesitatingly selected Fairfield County in the great State of Connecticut, not only as a place to live, but as a place to raise his fine family and as a place to work for and with his fellow man. For the past 32 years he has been not only a resident of Greenwich but a most active participant in the affairs of his community and his State, and yes, his party. His is a 32-year impressive record indeed.

He has a fine educational background which includes a bachelor of arts degree from Yale, the alma mater which has honored him with election to its board of trustees continuously since 1944. He is a veteran of World War I, having enlisted in the Connecticut National Guard as a private even before he was graduated from Yale. Before the war ended, he had won the bars of a captaincy in the field artillery—an accomplishment I speak of with great appreciation from my rank as a late but not lamented corporal in the A. E. F.

From college and the war he entered business in the realm of finance and attained a position of eminence that would have been impossible had he not possessed in substantial measure the fundamental attributes of pronounced ability, broad knowledge, integrity, and sound judgment.

Of him, too, it can be said that his private life has been as admirable as his public career has been illustrious. An exemplary father and husband he has been justly blessed with a devoted, charming, and capable wife, 5 fine children, and 9 wonderful grandchildren. He has been and is an active and prominent layman in his church, and in his home community of Greenwich he well deserves his place in the forefront of civic leadership.

Outstanding and commendable are all of these achievements, but that part of his life which I wish to emphasize here is his Republicanism and his lifelong devotion to the Republican Party and the ideals, principles, and policies for which it stands. In particular, I want to dwell briefly on his role in the United States Senate for it is there as a fellow Senator that I have seen him in action, and it is there in the Chamber of that body and in its committees that I have watched him reach a high level of respect, admiration, and recognition from his colleagues.

In the Senate of the United States he has worked tirelessly and unremittingly in behalf of our State and its local communities. He played a leading part in marshaling the forces of the Federal Government to aid our flood-stricken people. He was the leader in guiding through the Senate a program of flood insurance and flood protection. He played a major part in fighting for highway legislation beneficial not only to our State but to the Nation, both in economic growth and defense needs.

His interest in and concern for flood and other protections had been demonstrated long before the terrible disasters of last year. In 1954 it was the Bush Act—Public Law 71—which resulted in the hurricane study. He took the lead in steering this piece of legislation through the Congress. His work in the field of urban redevelopment needs no repetition here, nor does his support of a liberal housing program. He has displayed a deep interest in human needs and in the welfare of the people, not only of Connecticut, but of the country as a whole.

These are some of the reasons, but indeed not all, why I am happy to break precedent, if precedent breaking it is, to make this nominating speech here today at this convention of the Republican Party.

And I remember another convention, a convention which I and many of you attended in Chicago in 1952. You all recall, and I shall never forget, how ardently was espoused the cause of the man we selected at that convention. We chose not only the standard bearer of our party but, as he has since so ably demonstrated, we chose the standard bearer of this country and the free world. We selected and the people of this Nation overwhelmingly elected one of the great Americans—one who will in our history be recorded as one of the greatest of all Americans—our President—Dwight David Eisenhower.

Our party then in 1952 offered not only a great leader but a promise of a successful transition from war to peace. And that promise has been kept. The maiming and dying of American boys in Korea has been stopped. Economic stability has been restored in our own lives. Integrity and decency in Government now prevail. And added to all this, in the past 4 years we have seen real accomplishments in the area of human rights for all of our people. We have not given lip service to equal human rights. We have acted to make them a reality.

These were the promises made by the Republican Party. These were our goals. These too were the aspirations of the American people. They have been fulfilled. Yes, fulfilled under the administration, direction and inspiration of our President—Dwight Eisenhower.

These great achievements, and they have been great, have been accomplished because of the support and cooperation of other men as dedicated as he to the principles and policies he and they espouse, to the cause for which we have all fought shoulder to shoulder in and since 1952.

Under our system of Government, wisely divided as it is into the executive, legislative, and judicial branches, President Eisenhower could have done but little without legislators who believed in, worked for and fought for the program which he advanced for the good of America and the world.

One of these stalwart legislators who fought courageously, vigorously, and effectively for the program of President Eisenhower is my colleague and my friend—the senior Senator from the sovereign State of Connecticut. To him no job has been too big, no task too small in the service of our people. He indeed has kept faith with the people who elected him to serve them, this State and this Nation in the United States Senate.

Above and beyond all these important considerations is his deep loyalty to, his unswerving faith in, his untiring support of and his personal friendship with our great leader Dwight David Eisenhower whose administration is a blessing to every man, woman, and child in this Nation and in the free world.

Mr. Chairman and delegates, it is now my privilege to place in nomination to succeed himself to the office of United States Senator the name of my colleague and my friend, the senior Senator from Connecticut—PRESCOTT BUSH, of Greenwich.

EXCERPTS FROM KEYNOTE ADDRESS BY LEONARD W. HALL AT CONNECTICUT REPUBLICAN STATE CONVENTION, BUSHNELL MEMORIAL, HARTFORD, CONN., JUNE 19, 1956

It is an inspiring thing to appear before this convention and witness the energy, spirit, and enthusiasm of the Republican Party of Connecticut.

For many years it has been almost literally true that as Connecticut goes, so goes the Union.

This year you face a challenge: You can make a clean sweep. You already have two fine Republican Senators of whom every resident of Connecticut can be proud. BILL PURTELL and PRES BUSH. This year you can return PRES BUSH to the Senate along with your fine Republican Congressmen, HORACE SEELY-BROWN, Jr., ALBERT W. CRETELLA, JAMES T. PATTERSON, ALBERT P. MORANO, ANTONI N. SADLAK, and to take the first district back from the Democrats.

With a fine young war veteran and business leader like Ed May scheduled to run for Congress on the Republican ticket in the first district, now you have a chance—a real fighting chance—to help give Ike what he needs to do his job, a Republican Congress.

This convention has met for the purpose, among others, of renominating PRES BUSH for Senator and TONI SADLAK for Congress man at Large. They both are a credit to the Republican Party, to the State of Connecticut, and to the Congress of the United States.

Senator BUSH has shown himself to be a worthy colleague of Senator PURTELL. PRES is a man of outstanding courage and integrity. His work for hurricane and flood relief, in and out of Congress, has made him a national figure. A recognized fiscal expert and a man of broad business experience, he showed his character and courage by voting against the natural-gas bill. His yeoman work for roads and public housing further marks him a true progressive who commands the respect of his colleagues and the affection of the people of Connecticut, without regard to party. And he has supported President Eisenhower's foreign policy 100 percent.

Connecticut did a great thing for America when it sent men like BUSH, PURTELL, and SADLAK to Congress. And this year Connecticut can do it again—if we all work hard as a team.

This year's primaries showed that the voters in the larger cities and industrial areas are turning to the Republican Party. That is why the First Congressional District gives us a real opportunity to make it a clean sweep in Connecticut. You can carry it for Eisenhower and the Republican Party, if we all work together, work hard, and fight hard for victory.

• • • • •

Fortunately, this year, as in 1952, the Republican candidates have a strong appeal to the large group of independent voters. The independents not only support the warm-hearted, level-headed policies of the Eisenhower administration but they now realize that only a Republican Congress can be counted on to put those policies into effect.

This independent vote has decided the outcome of every Connecticut State election in the last generation. They are disgusted with the campaign promises that sought a Democrat Congress to support Ike in 1954, only to see that Congress turn and throttle the President's legislative program. They are bored with partisan politicking and annoyed with the Democrat campaign of misrepresentation and exaggeration.

• • • • •

We must all remember to tell the people, over and over again, that our message to America in 1956 rests on principles of government and respect for people. We stand on our record, and what a record it is.

Peace, prosperity, progress, coupled with principles of decency, honesty, and integrity in Government and above all concern for people in their homes, their rights, and their lives.

It is this record that is changing the political climate of the United States. These are the issues of the campaign and the Democrats can't meet them. So they are back at their old tricks of exaggeration, misrepresentation, fear and smear, doom and gloom.

The primaries are over and they have shown the country the internal weaknesses, the inconsistencies, the bickering, and squabbles that beset the Democrat Party.

No Republican need say any more about Mr. Stevenson than what has already been said by his own colleague, Senator KEFAUVER.

The Democrat primaries revealed an apathetic indifference to the principal contenders. First Senator KEFAUVER was ahead, then

Governor Stevenson was ahead. But I would sary that their efforts have failed to rouse any real enthusiasm within their own party.

* * * * *

The Democrats have tried—almost frantically at times—to find a real issue against the Republican Party and they have failed. They started with the gloom and doom predictions of another general depression. That fizzled and they tried Dixon-Yates, and giveaways, the hydrogen bomb, and a dozen others. They even tried to drag the newspapermen in with their silly charge of a one-party press.

But the fact is that the Democrats can't find any issue to stand up against the Eisenhower Republican record which has brought peace, prosperity, and progress to this great land of ours.

The Democrats are so short of issues that the other day Mr. Stevenson complained that the Republican prosperity was based only on money.

* * * * *

The overriding issue in this country today is peace, and the voters in my opinion will decide that President Eisenhower is best qualified to continue to lead us toward that goal.

President Eisenhower has given us not only peace but an unprecedented prosperity with that peace. This is something the Democrats could never do.

I believe the coming election will be decided on that simple issue which every American can understand.

* * * * *

It's up to us to work, to organize, and to bring out the biggest possible vote next November, because a big vote is an Eisenhower vote and a Republican vote and a vote for peace, prosperity, and progress.

Above all, it's up to us to work together as a team and to leave the feuding to the Democrats who today are bickering and squabbling over which of them will have the honor of taking a shellacking from Ike and Dick this November.

The Democrat Party is so disorganized and split that they called a meeting in Chicago last week to name a keynoter for their convention but could not get together on one name.

Yes; we can win. We must win. And we will win—but only if we organize, work, and fight—between now and election day.

And here in Connecticut you have the privilege and the duty to put your State at the head of the national parade, by sending PRES BUSH back to the Senate, by sending six Republican Congressmen to the House, and by giving President Eisenhower and DICK NIXON a resounding vote of confidence.

Butte and Montana Celebrate a Birthday

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Butte and Montana Celebrate a Birthday," published in the Montana Standard of May 27, 1956. I believe this editorial is worthy of the consideration of all Members of the Senate, because it outlines in some detail the growth of these two fine entities, first, the city of Butte, the most picturesque city in the United States, with the finest people, and Montana, the Treasure State, also with the finest people in the Union.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUTTE AND MONTANA CELEBRATE A BIRTHDAY

The city of Butte and the State of Montana are both 92 years old.

But the fact is cities and States do not grow old; they grow young until they die.

And both Butte and Montana are still growing young.

Ninety-two years ago last week the legislation which made Montana a Territory, separating it from Idaho Territory, was passed in Congress and signed by President A. Lincoln.

And at about the same time a couple of prospectors, G. O. Humphrey and William Allison, panned sufficient gold along Silver Bow Creek to establish a gold camp and attract other prospectors here. Within 2 years the population had reached 500.

Since then Montana and Butte have had their ups and downs, but they have continued to grow.

New mining developments and extension of old ones bring assurance that the population of Butte will increase materially within the next few years. Similarly, these developments have given the mining camp a new lease on longevity. The end isn't in sight.

Economists and scientists concluded in recent years that Montana's varied assortment of natural resources have only been scratched, thus giving the State a new lease on the future.

Although Montana's extensive deposits of minerals are irreplaceable once they have been removed from the ground, the supply as the years have passed has constantly grown larger and larger.

It has been similar with Montana's other natural resources.

New discoveries in scientific methods, irrigation, and new machinery have constantly increased Montana's agricultural productive capacity.

Montana's attractiveness as a tourist haven are only beginning to be realized. The tourist business has grown up within the memory of our young people from almost nothing to third rank in the State's income producing resources.

The State's population has been steadily increasing with the trend of the movement of people away from the crowded East to the wide open spaces of the West.

One resource which has scarcely begun to be developed is Montana's vast supply of water, a large amount of which is stored naturally in the form of snow in the mountains during the winter and seeps away gradually during the summer in clear, cool mountain streams.

Another resource which has only been scratched is that of petroleum.

In both of these categories there is room for tremendous growth, thus making the State of Montana younger even though it is growing older in years chronologically.

The migrations of people constantly westward across the United States is merely one of the signs that the areas from which they are coming are actually growing old, both chronologically and in resources.

In another field, Montana has a great opportunity to achieve still more youthfulness. This is in the manufacturing field. The trend here again is in our favor. The trend is to move the factory closer and closer to the source of raw materials needed for fabrication.

In the past, Montana has existed chiefly as a source of raw materials. Processing adds greatly to the value of a raw product. There is no reason why Montana can't grasp this advantage. It has most of the necessary ingredients.

So, here's a salute to Butte and Montana on their twin birthdays.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. DOUGLAS. I notice the blushing modesty of the Senator from Montana when he says that Butte is the finest city in the country, and that the people of Montana are the finest people in the country. Does not the Senator from Montana think he should sprinkle a little modesty on such glowing statements?

Mr. MANSFIELD. I will say to the Senator from Illinois that I was being unduly modest because of my sensitive feeling for other Senators. However, I could have gone to extremes and really told the truth about Montana, the Treasure State, which, of course, words are not sufficient to express.

Mr. DOUGLAS. It is always excellent to find people with such a charitable opinion of themselves.

Mr. MANSFIELD. Especially when it is the truth.

Simon Rifkind, Special Master in Arizona's Colorado River Lawsuit Against California

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. GOLDWATER. Mr. President, water is a fickle element. Here in the East the problems involved in it concern an overabundance. In the Southwest our problems with water arise because of a general lack of it. In my State of Arizona, only one surface source of this priceless fluid—the Colorado River—is left open to us; and at the moment we are embroiled in litigation with our sister State, California, as to whether Arizona's rightful share of this river will be recognized. The Supreme Court of the United States has appointed a master who is now hearing both sides of the argument in San Francisco. Mr. Joseph Stocker, an eminent author of Arizona and the West, has written a most interesting article about this master, Simon Rifkind, of New York; and I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOLOMON OF THE RIVER—THIS MAN MUST RULE ON A PERENNIAL AND HISTORIC PROBLEM: WATER—WATER—WHO GETS WATER?

(By Joseph Stocker)

The time was November, 1955. Scene: the New York State supreme court at Albany. A middle-aged lawyer, rather shorter than average, with slightly graying hair, an almost invisible mustache, and horn-rimmed glasses, was arguing a case. His name: Simon H. Rifkind.

Suddenly he was interrupted.

"There's a long-distance call for you," said one of the justices.

Rifkind registered surprise. "I'm afraid I can't take it, Your Honor," he said. "I'm trying a case."

"Perhaps you'd better," said the justice, smiling a little. "It's the United States Supreme Court calling."

And it was. More specifically, it was Justice Hugo Black. Would Mr. Rifkind (he asked) be willing to accept an assignment as special master in Arizona's Colorado River lawsuit against California?

You don't say "No" to the United States Supreme Court, so Simon Rifkind said "Yes." And, so saying, he moved into one of the biggest and toughest jobs in modern American jurisprudence. It's the job of sifting through the incredibly massive complexities of a dispute which has kept the West embroiled for two generations and then recommending a final adjudication to the Supreme Court.

On June 14 this historic and perennial battle of "water, water, who gets the water?" will come to trial in San Francisco. There, in a Federal courtroom, with 40 to 50 lawyers arrayed before him, Rifkind will begin working his way toward a decision on which rides the fate of Arizona.

The trial, which is expected to last about 2 months, will be an ordeal for Rifkind. Water is the stuff of life itself in the West and the parties to the case are bitter and irreconcilable.

Rifkind perceived as much when he held a pretrial conference in San Francisco earlier in the spring. In the course of the hearing, one of the attorneys observed that a certain point was not in controversy. "Everything," sighed Rifkind, "is in controversy here. I would say that even the right to the dew on the leaves is in controversy."

But if any man can pick a path through such a bramblebush of law, history, statistics, and general disagreement, Rifkind is that man. Leastwise his career and his standing in the profession he has served for 31 years would so indicate. For Rifkind, now 54, is not merely an experienced lawyer and judge. He is—in the words of a person who is well acquainted with the man and his record—"a judge's judge, known as one of the best trial men in the business."

In the first place, he is endowed with a brilliant, incisive, fastidious mind. If the hackneyed phrase, "legal scholar," fits anybody, it certainly fits Simon Rifkind. What's more, his mode of speech is as precise as his mode of thinking. He won't even split an infinitive. During the pretrial conference, he could be heard to utter such impeccably un-split infinitives as "affirmatively to prove" and "expressly to dispute."

Secondly, his great forte is expediting laggard lawsuits and cutting through to the core of an issue. Arizonians close to the Colorado River case believe, in fact, that it is this quality of Rifkind's which prompted the Supreme Court to select him as special master.

Even in his appointment there are some intriguing paradoxes. Here, for instance, is an immigrant (he was born in Russia) presiding over something so typically American—and frontier-American at that—as a controversy over water rights. Here, too, is an easterner (he's from New York City) handling a case in which the future of the West is involved. And here, finally, is a man who lives and works in tight and crowded Manhattan, deciding what somebody has described as "one of the biggest wide-open spaces cases in history."

It was back in 1911—when he was 10 years old—that Simon Rifkind was brought to this country by his parents. He took his law degree from Columbia University in 1925 and practiced awhile. Then he was appointed by President Roosevelt as judge of the United States District Court for a district embracing much of New York State and nearly all of New York City.

During the next 9 years, he handed down a variety of decisions which made a heavy impact on the body of American law. One of his decisions, for example, was the denial of diplomatic immunity to Valentine Gubitchev, the Soviet Embassy attaché convicted of being in "cahoots" with Judy Coplon in filching United States secrets for the Russians.

While he was on the bench, Rifkind was named by Gen. Dwight D. Eisenhower as special adviser on problems of the Jewish DP's. He spent 6 months in Europe and won a Medal of Freedom for his work.

Federal judges don't often resign their lifetime positions, but Rifkind did that in 1950, to return to private practice. It was while he was quietly minding his own law business last November that the Supreme Court tapped him for the job of special master in the Colorado River case.

What does the job involve?

The pleadings alone would occupy more space than Dr. Eliot's 5-foot shelf. And when Rifkind gets through reading and absorbing all the pleadings he will have just begun. He then may have to read and absorb a 40-year accumulation of such things as the Santa Fe compact, Boulder Canyon Act, countless individual water contracts, the proceedings of the League of the Southwest, a seven-State arbitration board, the committees of 14 and 16, and 3 previous Supreme Court decisions, along with sundry other light and frothy pieces of legal literature.

Over and beyond this, Rifkind will have to study and understand the geography of almost the entire West and its intricate river systems. He'll have to deal with—and decide on—such abstract and highly controverted terms as "beneficial consumptive use" and "riparian rights." And, finally, he'll have to try to get along with and keep the peace among 40-odd attorneys who are at such loggerheads that, if this were the Tombstone era, they'd be required to check their shootin' irons at the courtroom door.

Understandably, therefore, Rifkind is chary about discussing the Colorado River case outside the courtroom. It's not merely that this would involve the risk of offending tender sensitivities on one side or the other. He is simply taking no chances on creating the impression that he has any prejudices one way or another. Hence he will make only this carefully guarded, judicious, and reasonably noncontroversial comment on his job of trying the Colorado River case: "It's no different from trying any other case."

That may be true, so far as Simon Rifkind is concerned. But the water case is a good deal different from any other case so far as Arizona and California are concerned. For the decision ultimately arrived at will affect the economic future of two sovereign States and the lives of millions of their citizens.

Anzac Day Speech by Hon. Robert C. Hendrickson, Ambassador to New Zealand

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 20, 1956

Mr. CASE of New Jersey. Mr. President, in the past 2 days I have placed in the RECORD two recent speeches by our former colleague and my predecessor in the Senate, Hon. Robert C. Hendrickson, now Ambassador to New Zealand. It is my pleasure to submit for the record the third in a series of speeches delivered by the Ambassador during a recent swing through the islands where he now serves. In view of the Senate's interest in Ambassador Hendrickson and in the work he is doing in that strategic area of the world, I ask unanimous consent that an Anzac Day speech delivered by Bob Hendrickson on April 25, 1956, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ANZAC DAY CEREMONY, CHRISTCHURCH, APRIL 25, 1956

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds—to do all which may achieve and cherish a just and lasting peace, among ourselves and with all nations."

Gentlemen, they are the immortal words of a man who was about to die in the service of his country and a free world.

I quote these historic words from the Second Inaugural Address of President Lincoln not alone because he is my favorite character in American history, but rather because they issue the challenge which confronts every returned service man or woman of every nation who has been spared by his Creator for future service to mankind.

In that awful calamity of a war which well nigh desolated my country for future use to the world abroad, more than 494,000 lives were given to determine certain basic principles of freedom and justice.

Mr. Lincoln's views had prevailed—but, sirs, his mission from the moment of final victory to death was, as he put it so eloquently, "to bind up the wounds" and to do all which may achieve a just and lasting peace, among ourselves and with all nations.

As we meet together today to pay a just and fitting tribute to those brave men of Anzac units who gave their last full measure of devotion for the cause of freedom and justice under well-ordered law, let us, if we can, reflect a bit of the spirit of Mr. Lincoln's hopes and ambitions for his country and the world in those troublesome years of 1861–1865.

It was my high privilege as a very young man to associate myself with some of Mr. Lincoln's veterans in the commemoration of their Memorial Day as we, the returned servicemen of another generation, took over the torches they had carried so modestly for the enlightenment of a nation between two great struggles for the freedom of men's souls—theirs of 1861 to 1865 and ours of 1914 to 1918.

Thus, as I stand with you today, I understand the emotions which stir within you. I fully comprehend the inadequacy which you feel as you endeavor in a formal ceremony to salute the great hearts and minds of men whose courage and heroism preserved our greatest heritage by selfless sacrifice to the end that we, the living, may complete their unfinished labors on earth.

Anzac Day, my comrades and good neighbors of New Zealand and Australia, is truly a day of rededication of the very best instincts within each of us to all the finer things of life.

It was on the 25th day of April 1915 that Anzac forces made that daring amphibious landing on the coast of the Gallipoli Peninsula in Turkey.

The deeds of heroism which were written into that magnificent effort by a generation of stalwart sons of the British Empire requires no detailed account of the great

force and power of the sacrifices made on that occasion. The complete record was written then and there and it speaks for itself with greater eloquence than any words which I could hope to marshal if I lived for a thousand years—but among the beneficiaries of the unselfishness of those who made that last valiant and supreme sacrifice there are those whose minds need to be refreshed from time to time—and it is to them that I shall be bold enough to address a few remarks in review of that heroic but tragic incident in which your kinfolk gave their all—their right to pursue their lives, their liberty on earth and their pursuit of happiness.

It was against a formidable terrain, and well-trained and courageous forces that the Anzac divisions were committed. The mission was one of great strategic importance. Basically, it was designed to obtain control for the allies of that vital waterway of the Dardanelles. Surely it takes no one schooled in the logistics of soldiering to understand that its success would have ended World War I very quickly. With a sure and easier way to obtain needed food supplies from Russia and through the same route to supply arms, ammunition, and equipment to the hard-pressed armies of His Imperial Majesty the Czar of Russia the allies might well have prevented the communistic influences we confront today. So the goal was of tremendous importance.

Let us, who live to carry on that story of devotion to God and country always be mindful that the failure of the mission does not in the slightest degree dilute the measure of courage, daring and unselfish sacrifice of more than 35,000 men who died for their homelands, any more than did Captain Scott's failure to return from his polar discoveries diminish his attainments.

War, like peace, confronts our leaders with certain calculated risks and to attain success in either, if we are true disciples of the Prince of Peace and the governments which subscribe to His principles, we must be both prepared and willing on occasions to make every sacrifice, even that of life itself—to follow God's will as He gives us to see the right of issues of our time.

We all know full well the outcome of the heroic landings in Anzac Cove, but too many of us still measure the effort by its immediate impacts. Its long-range impacts for the peace of the world are the vital effects of the heroic sacrifices which were made there.

Let no son of the United Kingdom or of her dominions overseas ever forget for one moment that the driving forces of the Anzacs at Gallipoli and on the western front in World War I, in their grim determination to defeat the evils of despotism, will forever stand as a beaconlight to free men everywhere to show the way to safer havens. To those of us in America who served with Anzac troops in the two wars, we shall ever be proud and grateful, too, that your valor and daring chilled the spines of enemy forces whenever they learned that they were confronted with New Zealand or Australian units. Your mission was inspired by great spiritual forces—and you acted accordingly. This combination inevitably spells death to any enemy of freedom and justice.

A moment ago I referred to the impact of events on history. It was at Gallipoli that were learned those lessons of beach landings that were to be used nearly 20 years later in the great and daring beach landing operations of the Second World War.

Most people scoffed at the mention of Hitler, as he was on his rise to power from approximately 1933—and as for Mussolini, we in America thought of him as a 10-day wonder. Every nation in the world knew that Japan's policy of aggression and annexation, if allowed to continue, represented a threat both to the western powers and the Asian peoples. It was a strange combination of partners by which we were confronted, but the events should have been both foreseen and halted.

They were not—with the result that the truly peaceful elements of the world confronted conflict upon conflict without adequate preparation.

After the tragedy at Pearl Harbor, this wonderful country (New Zealand) became a base for allied action to repel the southward advance of the Japanese in the Pacific. What followed is a matter of recorded history.

But lest the contribution of Anzac Forces might be overlooked by those who were either freed or kept free as a result of their heroic sacrifices, I beg of you to abide with me a few moments while I spell out a few of their unselffish efforts toward that ultimate victory which struck away the shackles of the tyranny which had already engulfed Europe.

By the end of 1941 New Zealand had 44,000 fighting men overseas. By September 1942—170,000 New Zealanders had been mobilized and within this short period New Zealand had suffered 13,000 casualties. At the time of Pearl Harbor New Zealand troops had already garrisoned the Fiji Islands. These troops and the Fijian comrades, were later to gain fame as jungle fighters in the Solomon Islands.

As the fury of battle raged in the Pacific, as inch by inch and island by island, the allied forces moved westward and northward inflicting bitter defeats upon the enemy, the Anzacs added new glory to their time-honored tradition. The Americans who fought by their side on the ground, in the air, and on the sea at Guadalcanal, the Treasury Island, Coral Sea, Midway, New Hebrides and New Caledonia will never forget their valor. But the daring of the New Zealanders and Anzac troops was not confined to the Pacific.

We who served with them in North Africa and Italy will never forget that New Zealand forces in North Africa—on the desert there lent their weight to repelling Rommel's advance against Alexandria. The exploits of the Royal New Zealand Air Force in Africa have been described as "reducing the Axis to nerve-shattering misery".

Then, they swept into Italy. There I saw them in bivouac and battle. In my eyes the New Zealanders I served with in Italy will ever be heroes.

Were they in the Battle of Britain? Well, I will say they were. Of some 10,000 New Zealanders, 2,000 gave their lives while the fate of a free world hung in a precarious balance.

But whether defending liberty on their own Pacific doorstep or in Gallipoli or the African desert, or in Normandy, Anacs have written never-to-be-forgotten chapters in the annals of determined efforts to conquer tyranny. If New Zealanders and Australians have gained fame and respect for their exploits on the field of battle, this only reflects the stanch spirit of the background from which they stem.

It is evidence, is it not, of their underlying influence, vigor, and eagerness to exert constructive influence upon the course of world affairs.

My dear friends, it is to this present-day role in which the New Zealand spirit so gallantly shone in warfare, is now dedicated to the more important business of waging peace, that we now turn our attention.

Since the end of World War II, we have witnessed the transformation of Japan and its development as a member of the family of free nations.

Today the peace of the Pacific area has been threatened not by any resurgent militarism in Japan but by the ambitions of international communism.

We saw naked aggression in Korea, an attempt launched by the Soviet Union using North Korean and Chinese Communist forces to gain territory and to subject an entire nation to totalitarian tyranny, an attempt, by the way, to which the Chinese Communists lent their full military and economic support. As a Senator of the United States, I visited our major military hospitlas and personally shuddered, as I heard the stories of these youngsters and their experiences with the Chinese Communist forces. Our casualty list in that war, you know, was more than 140,000. Ours were not the only casualties, and here I hasten to pay tribute to the British Commonwealth forces who fought so courageously with us in Korea.

Then there is Indochina. Time has become too valuable to tell this story of the Vietminh forces and their "butter and egg man."

The Communists are now making new efforts to divide the English-speaking peoples. This is especially true on Far Eastern matters such as the offshore islands of Taiwan.

Anyone living on the British Isles would certainly view with alarm any encroachment or threats to the channel islands by a continental power.

My comrades, I think the time has come to be forthright in all matters affecting our security as free people. The United States and the United Kingdom must never forget that we are partners in a common enterprise affecting our mutual interests.

It is too much to hope that we can always see all matters in exactly the same way. But we must never let our differences divide us; and we must work unceasingly to remove our differences whenever they arise.

As one who in two wars felt it a duty to give whatever small contribution I had to offer—and this was not without some heartaches and financial sacrifice—I am prepared to say today to my Anzac comrades that all the great fortunes of the world, all the power in the world could never compensate for that complete satisfaction of having served when the need was seemingly apparent to me that I might by offering a mother's son to put a small thumb in the dike in an effort to prevent the complete destruction of our great civilization. It was worth all the investment that two fine parents had made in their hopes for me.

I am quite sure that those men who wrote their record of valor for God and country at Anzac Cove look down upon New Zealand and Australia today with pride as they review the great contributions their heirs and successors have made and are making against aggression and acts of aggression. In Korea the action of the United Nations to restore peace took place after the aggression had been launched. You, my New Zealand comrades, can be so proud that your country was outstanding among the nations contributing forces to the United Nations Command in Korea—and here again your forces did credit to the very highest traditions of their forebears.

Now, in part at least, these acts of aggression and threats of aggression have been met through measures of collective security. In other areas where Communist imperialism seriously threatens, New Zealand has participated in joint efforts to stop the aggression before it can be successfully launched.

Although the people of New Zealand, Australia, and the United States have shared a common language, the same ideals, and have always had close bonds of friendship, the postwar shift of power in the Pacific area has brought about a new and closer political relationship.

While retaining their full and very appropriate responsibilities of membership in the British Commonwealth of Nations—as well as their first loyalties to the Crown—New Zealand and Australia have joined with the United States for collective defense in the Pacific region.

The Anzus Pact, concluded at the time the Japanese Treaty was signed, united the three countries in a security system. Under its

terms the three nations pledged themselves to "act to meet the common danger * * * when the territorial integrity, political independence or security of any of the parties is threatened."

Apart from the merits of collective security, I am convinced that through the regular meetings of the Anzus Council—standing alone—a closer relationship has developed among the three signatories in which each has had an opportunity to exercise its own constructive influence.

This defense alliance on the outer rim of the Pacific area afforded little security, however, for the less-developed nations of Southeast Asia which are within the immediate shadow of Communist China.

During early 1954, as the Vietminh forces, supported by Communist China, were making very rapid gains, the United States and other countries called for a united defense in Southeast Asia. At about the time a truce in Indochina was being negotiated, the nature of an enlarged collective defense organization was given detailed consideration in the Anzus Council.

Both New Zealand and Australia were firm in supporting an expanded regional system in the Pacific. Both made great contributions in the diplomatic negotiations which followed—particularly was this so on the military staff studies which were conducted in Washington.

With the signing of the Southeast Asia Collective Defense Treaty at Manila in September 1954, eight nations, Australia, New Zealand, Thailand, the Philippines, the United Kingdom, France, Pakistan, and the United States, pledged to pool their efforts in dealing with any aggressors in the treaty area. By separate protocol the states of Indochina (Laos, Cambodia, and Free Vietnam) were brought within the protected area.

Beyond this the SEATO powers agreed to pool their efforts in countering subversion in the area. At the very first meeting of the SEATO Ministerial Council, in Bangkok in February 1955, coordinating machinery was established for close cooperation in military, political, and economic activities within the scope of the treaty.

In line with these measures, New Zealand is now supplying forces to the Commonwealth Far Eastern Strategic Reserve. The dispatch of New Zealand ground, air, and naval forces within Malaya is contributing materially to the security and stability of the entire southeast Asia region. At the same time New Zealand's influence in southeast Asia has been furthered by the opening of a diplomatic mission in Singapore. In addition to these commitments and responsibilities New Zealand has continued to fulfill its military commitments elsewhere.

As for the influence of your great country, gentlemen, in the councils of the United Nations, the record itself bears witness to the continuing and constructive part which New Zealand has taken in the United Nations efforts to foster and promote—and, indeed, to enforce conditions which will bring to the world a just and everlasting peace.

A few moments ago I reminded you that what seemed a failure on the peninsula of Gallipoli was but the beginning of the successful efforts in the interests of freedom and justice which the world has known since that fateful event.

So, as we salute again the heroism, the valor, the unselfish sacrifice of the men who gave Anzac its everlasting fame, let us never lose sight of the fact that their spirit will carry on. Shall we join them then today in a firm and high resolve:

That their sacrifice was not in vain and that the principles for which they lived and died will endure forever under governments dedicated to the will of God.

Commencement Address by Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an outstanding address delivered by the Honorable James A. Farley at the commencement exercises of Suffolk University, Boston, Mass., on June 12, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE BOARD, THE COCA-COLA EXPORT CORP., COMMENCEMENT EXERCISES, SUFFOLK UNIVERSITY, BOSTON, MASS., JUNE 12, 1956

I felt highly honored when I received the invitation from my good friend, Judge Frank Donahue, to address the 1956 graduating class of Suffolk Law School here in Boston.

It is here in Massachusetts that the common law first got its American start. It was in Massachusetts that the greatest of English institutions, English justice, first took form as American law and as an American system of courts.

It is notable, too, that here in Massachusetts the great stream of Irish immigration, to which I belong, first found itself. As you know, I have been a politician, of Irish extraction, and proud of both. Politicians are the pick-and-shovel men of democracy, the men who bring together the endless currents of individual opinion and mobilize them through parties into instruments of political action. Without politicians, democracy would have remained an abstract idea and American law could never have reached its present development. The Irish proved to be the men of political instinct who did that work in the period of American expansion. There used to be many attacks on us. Now, books are being written about us and we have become part of the American epic.

We are part, too, of something larger. For this America of ours has reached a point where she has to be greater than herself and we with her. My views on this are the results of my observations as a businessman and, let me add, as a politician.

It is no secret to any of you that the world is in a dangerous state. For the first time in this century a hostile power, the Soviet Union, has come within hailing distance of mobilizing a majority of the world around an ideal which conflicts with the ideal of America. It is not merely that the Soviet Union is against capitalism—though as a businessman I happen to believe in capitalism. More importantly, it is that the philosophy of the Soviet Union specifically denies the value and worth of the individual human being. Most Americans, whatever their faith, are committed to the belief that all human souls are valuable as children of God. All Americans are committed to the idea that they are entitled to freedom so that they can follow the endless search for eternal truth. Any system that denies that ultimately clashes with the deepest instincts we have. This is the real conflict between us and the Communist world.

My business regularly takes me abroad. My friendships bring me the privilege of contact with many people. From observation and direct contract, as well as from the daily newspapers, I know that we are moving toward some sort of great climax.

Probably the climax will show itself in the form of a crisis in foreign affairs. During the years of my service in Washington, I came to learn that a crisis in foreign affairs builds itself long before it shows up in a dramatic event. Experts can see the moves on the board a little ahead of the newspaper readers, just as expert chess players can see several moves ahead of the actual game. In this case, we can be fairly sure now what is happening and where the direction lies.

Quite simply, the Soviet Union has gone into politics all over the world—and they are better organizers than I wish they were. On the surface they have discarded, at least for the moment, the crude method of moving soldiers into other peoples' countries. They do move propaganda in, and party organizers, and where they can they do some gunrunning, as they are doing now in the case of Egypt, Algeria, and probably Singapore. They expect to create a situation in which a group of men in Moscow can give orders to a dominant political party in France or in Egypt, in Algeria or Malaya, in Italy, Mexico or Brazil. The object of all these maneuvers is to bring the countries not already in the Soviet orbit into their political machine. They have had relatively little success in the United States, which remains their principal opponent.

Now the truth is that the United States can neither defend itself or maintain itself from within the borders of the United States. There is a good deal of attack on internationalism from some quarters, and some of it is justified. But in simple fact, the air defense of the United States rests on warning stations, bases, and so forth, which are not inside American borders but outside them. One example is the great radar net across the northern part of Canada. Others are our bases in Greenland, and the base we are beginning to abandon in Iceland, and so forth.

It is also true that to keep the United States going even in peace—let alone war—we have to draw materials from all over the world and especially from Latin America.

In the days of the Civil War, we were pretty much self-contained. But now, a century later, we are in both defense and economics part of an international combination, or rather a series of them. If we are ever deprived of that contact with other countries we shall be in a dangerous position. When that happens the Soviet Union is quite likely to drop the mask and threaten the United States militarily from an overpowering position.

There is no scheduled deadline. One of the strengths of Russian diplomacy is that it takes its time—and it thinks it has lots of time.

Because of this, the United States, it seems to me, does have an interest in a lot of places and countries which are not in its own frontiers. Before World War II there were Frenchmen who said, "Why die for Danzig?" when Hitler threatened Europe. They found a few months later that the seizure of Danzig was only prelude to a direct attack on France. So some of us say now, "What have Italian politics to do with the United States?"—and will find later that Italy and the Mediterranean are only stepping stones to the Azores and into the Atlantic Ocean to our Atlantic harbors.

This is, therefore, the time when schools and colleges, when lawyers and professional men, when businessmen and students, have to go into politics and make the case not only in and for the United States but in and for the entire free world.

My business associates commonly state this case in terms of business. That is natural; they are businessmen. They point out that the American standard of living is the highest in the world. They are right about that. They insist that a poor man in the United States has a better opportunity to succeed than anywhere else in the world. They are right about that, too. But the

strength of the American ideal and the free world is something greater than the chance of being a success in business or the ability to buy more cars and television sets than any other population.

My political friends point out that America is one of the few countries where a man or woman born in poverty can aspire to rise to the Presidency of the United States or great political position. They add that this is because in America everyone has a free vote and every American can go in and speak his piece and ask for the support of his fellow citizens. They are right about that. But there is something greater in America than the capacity to be a political success.

My friends in colleges and schools say that there is freer flow of information to America than to any other country and that men can study and become great in any field of learning. They add that this is because in America education is free and available to practically anyone who really wants to get it. That is true; but the spirit of America is deeper than the ability to become a great expert writer or teacher in mathematics or engineering or history or economics.

No two men will express the spirit of America in the same way, and I do not ask your agreement on mine. Because our idea of the free soul pursuing eternal values according to its best light is so big, each man will find his own expression of it.

To me, America is primarily a spiritual conception. She affirms eternal values. She has faith that there is a spiritual order. Every human being has possibilities different from every other and so American democracy is intended and designed to give to each of us the fullest opportunity to realize those possibilities in his search for that everlasting order.

Free democratic institutions are part of that opportunity. The Bill of Rights in the Constitution is there to protect it. A free press is essential to it. American law with its meticulous concern for individual justice is part of it. American education, which insists that every child shall be able to inform himself and use his mind, is necessary for it. American politics which permit expression and organization of endless groupings toward a common end is part of it. Taken together, the American system is intended to liberate each and every one of our growing millions for the purpose, not of stamping on someone else, but of searching for eternal law and eternal values.

No one of us will find that law, or those values. We can simply move step by step toward the light as light is given us.

But what we can do is to prevent any power from blocking that search. We can prevent distorting of men's minds by brainwashing. We can prevent the strangling of free information by false propaganda. We can prevent any combination of business from imposing poverty and degradation on other groups. We can prevent the State, or big business, or politicians, or any other combination, from trying to dictate the uses of human life. We can do this within a framework of law and order. We do render to Caesar what belongs to Caesar; but the American system reserves to God what belongs to God.

If this seems strange doctrine coming from a politician, let me say that in my case it comes from experience. I like our business system but I know that men do not die for corporations. I like our political system but men do not die merely for the pleasure of casting a ballot. It is the ideal beyond our institutions that makes American institutions alive and great and strong.

And now it seems, we have to make the American ideal as strong beyond the seas as we have made it here. We will have to meet Spaniards, and Italians, Frenchmen and Mexicans, Indochinese and Koreans, Japanese and Irish and English on their own ground. No one of these peoples will see things exactly as we do. But they all understand that their power to be Italian, Mexican, Japanese, English, Irish, or Korean will depend on a kind of tremendous union of a free world for common defense and a common ideal.

We may well need new international institutions. That will be the business of lawyers and diplomats. We may well need greater avenues of information. That will be the job of teachers and journalists. We may well need a better system of international economics. That will be the job for the bankers, businessmen, and economists.

But most of all we need strong, convinced, tolerant, and hard-hitting minds. The kind of mind, in fact, that a good politician has when he puts together clashing elements and ambitions to get a political result. This, it seems to me, is the task of Americans who, like ourselves, have had the great opportunity America offers.

I am no longer young, and the number of my years is growing. A priceless opportunity has been given me to see a great deal. Today I have tried to give you, quite simply, the lesson of those years. Perhaps you may find it useful as you come to the years of your own strength, and meet the stress of great events in a great time.

The American Merchant Marine

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, June 20, 1956

Mr. BUTLER. Mr. President, all too often we hear speeches made, and with just cause, about the sad state of our merchant marine. However, on June 5, 1956, Mr. Alexander Purdon, executive director, Committee of American Steamship Lines, delivered a speech evidencing authoritative confidence in the future welfare of our merchant marine. I request unanimous consent that this speech be inserted in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF ALEXANDER PURDON, EXECUTIVE DIRECTOR, COMMITTEE OF AMERICAN STEAMSHIP LINES, BEFORE THE REGIONAL CONFERENCE, MIDDLE ATLANTIC REGION, PROPELLER CLUB OF THE UNITED STATES, VIRGINIA BEACH, VA., JUNE 5, 1956

I am glad to be here.

But when I read the list of participants in this conference I was reminded of the man who went to his doctor for diagnosis. He described all his symptoms and ended by telling the doctor that he felt inferior. The doctor examined him carefully and concluded by saying: "I'm sorry, I cannot give you a prescription or recommend treatment for the trouble is you really are inferior."

Those of us who navigate the stormy waters of the Potomac are well aware of the effective grassroots support which the Propeller Club can muster. In turn, we owe it our support, our enthusiasm, and attendance at its functions.

I met a man in Houston last week who in the last year signed up 180 new members for that port. He was really fired up with enthusiasm, but, in addition, he was selling something good.

I had the pleasure of making the Maritime Day address down there. The week before I got about as far away from salt water as it is possible to get, in Cedar Rapids, Iowa, for a talk on world trade.

Some of the things I want to say to you today are the same things I have said recently to other audiences. They may be old stuff to many of you—they may be new to a few. I hope they will be stimulating and encouraging to all.

Just last week I read a paragraph which referred to the sad state into which our merchant marine had fallen.

That kind of language disturbs me. It is all too frequent.

Those who talk about hovering on the brink of disaster—and sometimes we do—are apt to develop an inferiority complex.

Sometimes in the past we have stressed the negative when we should have accentuated the positive. There are prospects as well as problems. There can be confidence as well as concern. If I had a text for this sermon it would be the inscription on the pillars flanking the entrance to our National Archives.

It reads: "The past is but prologue—look to the future."

I have been saying that in my humble opinion the American merchant marine may well be on the threshold of one of its greatest periods—a period of greater service, more responsibility, and improved recognition. More people are talking that way today. There is a new spirit of confidence in the air.

Let me discuss with you some of the things that inspire my confidence in our maritime future. It's a long-range confidence. Believe me, it is not based solely on the present freight market—pleasing and rewarding as that is. Surely we have experienced enough peaks and valleys so that we will not be hypnotized by a period of relative prosperity.

I do not discount the difficulties we face in maintaining an American merchant marine tailored to the needs of our expanding economy. Other speakers have doubtless dealt with these—and they are many.

Carefully considered confidence based on thoughtful appraisal of the realities that confront us is quite different from foolish optimism.

Let me list the factors that in my opinion warrant a prediction of fair weather and favoring winds.

They are:

1. The increased emphasis on economic measures to combat and contain communism.
2. Our growing dependence on foreign trade.
3. Improved public understanding and support.
4. Cooperation between industry and government.
5. Technological improvement.

Let me first discuss the situation we find ourselves in vis-a-vis the Russians and their new policy of economic penetration.

It would be folly to assume that the shift in Soviet policy justifies any lessening of our military effort.

But it surely warrants a new evaluation of economic weapons and our ability to transmit the productive potential of America to the new arenas.

The "cold war" is "hotter than a pistol" on the economic front.

Commenting on what he called the "ice jam of the cold war," Bernard Baruch, in a prophetic statement, once said that when the frozen seas of international relations are opened—the passage could prove more hazardous than remaining frozen in deadlock.

We can hope and pray for sincerity behind the smiling countenances of Soviet leaders, but we do well to read their purpose in their own words.

It was Khrushchev who said to an East German group—"If anyone believes that our smiles involve abandonment of the teachings of Marx, Engles, and Lenin he deceives himself sorely."

Until events and their own actions prove the contrary we are forced to the conclusion that we are not merely faced with an expansion of Soviet trade. This is economic warfare.

The motives are the same—the weapons are different.

The Kremlin does not trade and give assistance for reasons of brotherly love. We are put to the test on a new battleground—the market places of the world. The test is not of military might but of our economic system—of democracy itself.

In either a hot or cold war we are the fourth arm of defense. But in economic war the merchant marine will not serve merely an auxiliary or supporting role. On this front we will be the cutting edge of an offensive based on our superb productive capacity.

No nation ever attained greatness without merchant ships. We know it now. Russia knows it, too, and she is building, building. Her present fleet is relatively small, but it is double her prewar strength.

We can view this expanded role as a source of confidence, but we must prepare to assume the burden of responsibility which it entails. This will require more than confidence. It will take energy, initiative, and enterprise, but we will not be found wanting.

Next we must consider our growing dependence on foreign trade to maintain our economy. Growth is the outstanding feature of the American system. We are bursting out all over. You can see the evidence of it in farm and factory across the Nation. In 15 years our gross national product increased nearly 300 percent, although our population rose only 28 percent.

With 10 percent of the earth's population we consume about 50 percent of the world's raw materials and produce 40 percent of the world's goods and services.

This very day $40 million worth of commercial exports started overseas. The same amount got underway yesterday and another $40 million sails tomorrow. The trend is upward, but even at today's levels this means jobs for 3 million Americans.

Imports added another 1.5 million jobs and are increasing concern. Our industrial machine would grind to a halt without a stream of materials from overseas.

Of 72 materials considered strategic and critical, we import our total supply of more than 40 percent and part of all the rest.

Inbound or outbound, it takes ships—it takes American ships.

For assurance of dependable supplies of raw materials—petroleum, ores, tin, etc.—is vital to our productive capacity, which is the ultimate source of our strength and well being.

We can afford to share our transportation with maritime nations willing and able to serve our needs. But our need is so critical that we cannot continue to give them almost three-fourths of our foreign trade. That's too close to a suicidal monopoly.

An increasing proportion of our increasing foreign trade must be carried on American ships. This will add strength to the maritime industry, but the justification is the security of our foreign trade and the welfare not only of those employed in our industry but those millions who depend on exports or imports for their livelihood.

This increase is logical and necessary, but not necessarily inevitable.

It will come to pass if we work at it—and we will.

One reason I am confident that we can increase our participation in the carriage of our own foreign trade is the growing public support and understanding of maritime affairs.

I know that criticism of industry public relations is a favorite topic for our Propeller Club meetings. Much of it is justified, but more is being done than ever before, and it is producing noticeable results.

Oddly enough, a byproduct of our efforts to retain the 50–50 principle has been the opportunity to tell our farmers about the merchant marine. That has been a good thing.

Attacks on 50–50 will continue, but those who attempted to drive a wedge between these 2 great industries will eventually discover that they have only succeeded in forging stronger bonds between natural allies.

Cooperation between Government and industry based on mutual confidence and respect was never greater and in itself inspires confidence in the future. The industry has reason to applaud the caliber and the character of those in both the executive and legislative branches who are responsible for our affairs. We are fortunate beyond measure in having at the helm in both branches men of understanding and integrity whose devotion to the advancement of the American merchant marine is untainted by partisan politics or personal advantage.

An industry that attracts and inspires such support has reason for pride and confidence.

Next I believe is the promise of technological advancement. The oldest form of transportation other than walking was the first to harness the atom. In time it will be economically practicable for commercial application. How soon that may be, I don't know. It will be sooner than most people think.

The glamour of nuclear propulsion should not blind us to the less spectacular but nonetheless commendable advances in other forms of propulsion including the gas turbine experiments being conducted by the Maritime Administration—roll-on, roll-off ships; combination ore-oil ships, and many others.

These developments combined with improvements in cargo handling and other technical fields represent a dynamic surge forward—a need and a desire to meet and beat the competition of other merchant marines.

They are possible because we have developed what might be termed maritime maturity. Our policies based on the 1936 act have proved that in the constructive partnership of industry and Government provided for in the act there is an economical and practicable pattern for building and maintaining an American merchant marine.

Government support in its many forms is necessary, desirable, and justified. It is a sound investment and costs less than you think and less than any alternative system.

For example, the apparent cost of operating subsidies can be vastly misleading. The real cost—taking into account taxes and recapture—is much less. Net cost on this basis from 1947 to 1954 was not hundreds of millions of dollars, but an average annual figure of less than $9 million.

If all the returns to the Nation from operating subsidies including the $500 million annually poured back into the economy in wages and supplies by the contract operators are taken into account the Government's contribution is at least balanced by the benefits.

Construction subsidy merely compensates for the cost disadvantage of building ships in American yards to American standards and at American wages. This is sound, necessary, national policy. We simply must maintain a shipbuilding industry. We cannot, we dare not do otherwise. But all the operators in the foreign trade who are eligible for construction subsidy are not benefited thereby. No advantage to them is intended. They are merely placed in the same relative position as other industries that are permitted to buy or build abroad. Industry plays a part in this, too—a very substantial one. What we have developed is an effective partnership of private investment and Government support. The replacement commitments already undertaken by our lines are a pretty substantial investment in the future of America and proof positive that our policies are essentially sound.

They have to be. For we cannot afford to be complacent although we can be confident that the genius of America—the constructive alliance of industry and Government—will forge an American merchant marine of new strength and increased effectiveness—a merchant marine planned for the future, not predicated on the past.

Let me close with a favorite quotation from Carl Sandburg:

"I see America, not in the setting sun of a black night of despair—
I see America in the crimson light of a rising sun fresh from the creative hand of God.
I see great days ahead—great days possible to men and women of vision."

He means you.

Postmen Muzzled

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Wednesday, June 20, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an important editorial which appeared in the Boston, (Mass.) Evening American on Friday, June 1, 1956, entitled "Postmen Muzzled," with which I am in full agreement.

There being no objection, the editorial was ordered to be published in the RECORD, as follows:

POSTMEN MUZZLED

No better example can be found of the widespread trend in Government bureaus to keep people in ignorance of their stewardship, than section 744.442 of the Postal Manual of March 1956.

The section clamps this muzzle on post-office employees:

"A. Information relating to the policies and decisions of the Post Office Department will be released only through official channels. Employees shall not engage in campaigns for or against changes in the service or furnish information to be used in such campaigns unless prior approval has been obtained from higher authority.

"B. If an employee has justifiable reasons for favoring or opposing changes in the postal service, he shall contact the proper officials and await specific instructions before engaging in local hearings or activities."

What's wrong with this?

That the postal service is a vitally essential public service and hence the people have the right to know what's right and what's wrong with it.

That bureaucrats in command will naturally tell only what is favorable to their regime.

That the best source of dependable public information about the service comes from the ranks of carriers and clerks, not from political appointees in command.

And finally, that a public service is the people's business, and no bureaucrat has the right to censor or suppress news about it.

Postal employees are noted for their devotion to their work and their desire to improve it.

They are notoriously underpaid and often overworked, but nevertheless stick to their jobs in the hope that well-informed public opinion will help improve their lot.

Now they are told to shut up and keep their place; to let only their masters speak for them at their autocratic discretion.

The gag order has not been meekly accepted.

A resolution vigorously protesting it was unanimously adopted by the Government Employees' Council, comprising all Federal civil-service workers, at Washington, D. C.

The same action was taken, also unanimously, by the recent convention of the California Association of Letter Carriers, a branch of the national association, at Long Beach, Calif.

Section 744.442 of the Postal Manual has no title nor justification to remain on the books. It should be rescinded—by congressional action if necessary.

Shipping's 12-Hour Red Light: The Yellow Flag

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. BUTLER. Mr. President, I have just received an excellent article entitled, "Shipping's 12-Hour Red Light: The Yellow Flag," by Mr. Stacey Bender, Jr., vice chairman of the committee on foreign commerce, American Association of Port Authorities. Mr. Bender, whom I have known for many years, and for whom I have the highest admiration, is universally recognized as an expert in this field.

Accordingly, although the article will appear as a guest editorial in the official organ of the American Association of Port Authorities, World Ports, I think it would be appropriate that it also appear in the RECORD; and I, therefore, request unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHIPPING'S 12-HOUR RED LIGHT: THE YELLOW FLAG—PART-TIME QUARANTINE INSPECTION COSTS SHIPS AND SHIPPERS MILLIONS

(By Stacey Bender, Jr.)

Six p. m.—an ordinary time of day on the clocks of the Nation, with no special significance to the great majority of our population. Six p. m.—a time for the start of the children's favorite television show; a time for the busy housewife to prepare for the family's evening meal; a time for United States Public Health Service quarantine inspectors to close their offices and wend their way homeward; a time for foreign-laden vessels entering United States ports to hoist the yellow banner, requesting quarantine inspection; a time for the Nation's legislators to ponder over the fact that on all three seacoasts of our Nation such a request will go unanswered for at least 12 hours.

For, just as surely as the hands of a seaport's clocks become vertical, anchor chains of ships rattle in quarantine anchorages, harbor pilots disembark, and our Nation turns on a red stop light, a red light of 12 hours' duration, on men and goods aboard vessels newly arrived from the ports of the world. Commerce is stopped cold—as cold as this frigid welcome to our deep-water commercial centers. Almost as though the United States didn't want, or vitally need, the raw materials and finished products stowed deep in the spacious holds of vessels flying the varicolored ensigns of friendly nations the world over, as well as our own Stars and Stripes.

This present freezing of ships, men, and goods arriving in our ports after daylight hours is of less than 10 years' duration. In the sailing days of "wooden ships and iron men" proper quarantine inspection was not deemed feasible after sundown because of the inadequacy of artificial light. Even with the advent of steam and the complex electrical systems aboard liners and freighters following the First World War, full-time inspection service did not become a reality until the passage of Public Law 796 by the 71st Congress back in 1931. Quarantine Inspection Service was then maintained by the Treasury Department, and the new legislation authorized the Secretary to receive payments for overtime wages of departmental employees so engaged from steamship owners, operators, or agents.

However, with the transfer of the Quarantine Service to the newly-formed Federal Security Agency, authorized by Public Law 410 in 1947, the provisions of the 1931 enactment did not permit a Federal security officer to receive such payments, and the service deteriorated to the present 12-hour period daily, 6 a. m. to 6 p. m.

In the ensuing years virtually all segments of the maritime industry, including chambers and associations of commerce, longshore and other labor unions, and regional, coastal, and national ports groups, have repeatedly advocated repassage of the enabling provisions of the 1931 legislation. Assuredly, there is no thought in the minds of the measure's proponents to saddle the cost of the proposal on the taxpayers of the Nation. Operational costs incurred by merchant shipping, particularly during their comparatively brief stays in port, are presently higher than at any peaceful time in the history of the world's commerce. It must be remembered that ships are primarily cargo carriers, and as their ability to deliver the goods is impaired, or delayed, needlessly, freight rates increase in direct ratio to increased port turnaround costs.

It is understood that there are certain exceptions to the clearly defined regulations, granted locally in some of the Nation's smaller ports. These harbors, the commerce of which has been unable to economically justify Federal maintenance of a quarantine anchorage, berth vessels on arrival, rather than block a main channel entrance. Too, where tidal variances preclude harbor entrances during daylight hours, berth inspection is granted on arrival. Size of quarantine anchorages play an important part in these exceptions. In the case of a limited quarantine anchorage, ships arriving after 6 p. m. drop the hook there, but after the anchorage is fully occupied, the lucky late arrivals proceed immediately to assigned berths for inspection, leaving the less fortunate early arrivals straining at their anchor chains, dismally flying their yellow flags of delay, until sunup.

In the summer of 1954 corrective legislation was overwhelmingly approved by the 83d Congress in the form of H. R. 6253. The bill provided that overtime payments by the steamship operator be made at a time-and-a-half rate for after-hours service of United States Public Health employees. Vetoed in Denver shortly after passage, President Eisenhower observed that the 24-hour service proposal had merit, that the "problems which the bill seeks to solve are real and pressing." He simultaneously ordered a study to be made, incorporating a summary of all governmental inspectional services, their need for overtime function, and a formula to be subscribed to by all Government agencies standardizing methods of payment. It is understood that the study has been completed, and that the matter is in process of being referred to the many concerned Government agencies. Legislation on this important matter has again been introduced, this time in both Houses of the Congress, but qualified Washington observers have dim hopes of enactment at this session. The survey, reportedly in the custody of an Interagency Committee on Overtime Pay for Certain Inspectors, is not moving with the speed that a 1954 real and pressing matter should.

We all know of the great need to move ships and cargoes ever faster. We are equally cognizant of the economic trend toward larger ships, with deeper drafts. The maritime industry have made their voices heard in the halls of Congress in regard to the cost of the 12-hour stop light on an estimated 40 percent of all ships entering United States ports.

But what of the transit inventory costs of this delay to our Nation's total importation—an importation well over $8 billion a year? What of the hundreds of empty, multimillion-dollar piers, waiting to berth vessels stalled under the yellow flag? What of the men on the ship, waiting to go ashore after a long voyage? And the men on the shore, waiting to unload the ship's cargo, and attend to the multitudinous details of ship's husbandry? What of the sharply diminished need for extensive quarantine anchorages under new legislation, and the taxpayer's dollars saved by reduced maintenance costs for smaller anchorage areas?

This need has far exceeded the 1954 real and pressing stage. This is 1956, and the matter affects every seaboard State in the Nation. Our Nation's commerce is being systematically halted, however briefly. This is a national issue—in need of solution—now.

Pope Pius XII

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. HUMPHREY. Mr. President, Abbot Theodore G. Kojis, OSB, of St. Andrew's Abbey, Cleveland, Ohio, recently addressed the 45th anniversary banquet of the Slovak Catholic Federation in Chicago. I ask unanimous consent that this significant address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Cleveland Slovak News of June 7, 1956]

OUR HOLY FATHER, POPE PIUS XII

(Address by Abbot Theodore G. Kojis, OSB, of St. Andrew's Abbey at the 45th anniversary banquet of the Slovak Catholic Federation during the national convention in Chicago's Sheraton-Blackstone Hotel on May 16, 1956)

The year 1956 will remain indelibly inscribed in the hearts of all Christians who recognize the Holy Father as the visible representative of Christ on earth. For it was in the month of March of this year, when the Holy Father celebrated two jubilees, namely, the 80th anniversary of his birth and the 17th of his coronation as Pope of the Holy Catholic Church. These two jubilees of the Vicar of Christ on earth touched the hearts of all Catholics as if by a magic hand and evoked in them the deepest and

most beautiful tones of affection, fidelity, admiration, and prayer. It was like the distinct, yet indescribable feeling, one discerns in the voices of children singing songs of affection for their father on his day of days.

It was indeed a veritable chorus of all the children of the church singing a song of love and fidelity as no earthly ruler in history has yet received from his subjects. The entire world was surprised at this spontaneous expression of filial devotion to the Holy Father, Pope Pius XII. Even the unbelievers could not help but wonder at the strength of the spiritual bond which joins the living members of the Catholic Church with the visible head, the Holy Father.

These voices have not yet died out. Although the silent church in Slovakia was physically prevented from likewise expressing her joy on the occasion of the twofold jubilee of the Holy Father, we do not doubt for a moment but that she found great strength in knowing that he remains a Good Shepherd even to them. More than a thousand-year-old tradition and history of the Catholic Church in Slovakia bears witness to this and gives evidence of an unbroken fidelity to the Rock of Peter, the Vicar of Christ. Because of this loyalty to the Holy See, there are imprisoned five Slovak bishops, hundreds of priests, nuns, and religious, as well as thousands of the faithful laity, who are suffering in prisons and labor camps for their faith. Slovakia, unable to pay her homage by messages written with ink, nevertheless sent her message of love and devotion written in the blood of her valiant confessors and heroic martyrs who have suffered and died for their faith in the past decade.

We Americans of Slovak descent did not neglect to join the universal expression of joy in being the spiritual children of the Holy Father. Our Slovak press, our radio programs, our parishes, and religious institutions—all commemorated the twofold jubilee of the Holy Father with due emphasis. Now, however, since we are assembled in the great metropolis of Chicago at this 38th convention of the Slovak Catholic Federation of America, it seems very fitting that we, a united organization of all Catholics of American Slovak descent, should reassure the Holy Father of our love and fidelity. We are truly grateful that in these days of uncertainty in the world, God has specially chosen him to guide the church. His white figure stands like a veritable lighthouse near treacherous waters. His heart so closely knit by prayer and love to the heart of the Divine Master reveals God's holy will to us. Every problem sorely confronting mankind immediately elicited words of truly divine wisdom, words of encouragement and certainty from His Holiness Pope Pius XII. No physician helps his patient as the vicar of Christ helps an ailing world.

We can liken his paternal heart to a high radio tower, sending to the heavens all our hopes, our prayers, our trials, our needs—and receiving in turn from the same heavens the message of God—which becomes our strength and our light, giving us perseverance and determination no to succumb to the powers of evil.

Bumpy Going for Turnpikes

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, there has been a great deal of discussion recently of the subject of roads, particularly in the Senate, and some mention has been made of turnpikes. I ask unanimous consent that a very interesting article on the subject be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUMPY GOING FOR THE TURNPIKES

In the past couple of weeks, inflation and politics have caused important shifts by the managers of some of the Nation's toll roads.

First came the unsettling news that passenger-car rates on the Pennsylvania Turnpike, oldest and most successful of the modern toll roads, would be upped 41 percent over its whole length from the Ohio line to New Jersey. At the same time, truck rates would be cut about 20 percent in an effort to draw the commercial traffic that is the meat and potatoes of any toll diet (BW—February 11, 1956, p. 43).

The turnpike commissioners figure the moves will boost annual revenues by $4 million; the fact that a political hassle has held up the toll changes hasn't lightened the impact on other toll roads of the proposed passenger car boost, first of any consequence since the pike opened.

EXTENSIONS

The need for more revenues did not arise from the main stretch of the road, the 327 miles from King of Prussia to Ohio. This stretch, knifing through some of the roughest mountain country in the East, has always more than paid its way. Since it was started in 1939–40, it has built up an $18 million surplus, and is far ahead of the amortization schedule of the original $211.5 million bond issue.

But other, newer stretches—to Allentown in the north and across the Delaware River Bridge to the east—are not doing so well. And none of the surplus can be applied to them until the bonds on the original stretch are all paid off, probably not for another 5 or 6 years.

The commission itself listed these reasons for proposing the rate changes:

Weight limits on free roads have been adjusted, opening them to trucks that formerly had to use the turnpike. This has caused some attrition of pike traffic, especially in the less-rugged areas in the eastern part of the State, and just west of Pittsburgh.

Route 22 has been widened and rebuilt east of Harrisburg, so that trucks prefer to leave the turnpike there and take the free road directly to New York, instead of staying on the pike to Philadelphia and then paying further tolls on the New Jersey Turnpike to reach the New York area.

Maintenance costs are rising all along the pike.

Truck traffic on the new extension from Valley Forge to the Delaware River Bridge has fallen far below engineers' estimates.

On all the new extensions, revenues are running about 40 percent behind expectations, and bondholders are restive. Last year, the extensions didn't earn even enough to pay interest on the $298 million issues that were floated to build them; 1956 prospects are even gloomier. The interest deficits are made up by a reserve fund, but under terms of the indenture, the bondholders' trustee—Fidelity-Philadelphia Trust Co.—can force the commission to boost tolls if deficits continue. There is no chance that revenues will meet this year's interest. If tolls aren't raised by July 15, the bank can order a 60-day study of the situation, then force new tolls. It could even ask for lower tolls if the engineers recommended them. But odds now are that higher tolls will be the prescription.

ENTER POLITICS

As if the economics of the pike weren't confusing enough, State politics have muddled the picture further. The Turnpike Commission normally has five members, but there were two vacancies when the first vote was taken, O. K. 'ing the higher tolls. Democratic Gov. George M. Leader—with the backing of highly vocal auto clubs and Pennsylvania newspapers—assailed the moves. The two Democrats on the commission were willing to reverse the recommendation, but Republican member James F. Torrance, Jr., refused to back down. The Governor then appointed another Democrat to the commission, which voted 3 to 1, to put the higher rates in the icebox until further studies could be made.

Until the studies are made, by engineers and by the State senate, there will probably be no action on rates. However, considering the unsatisfactory performance of the eastern extensions something must be done—be it voluntary, or forced by the bondholders' trustee.

CONNECTICUT'S WOES

While Pennsylvania's legislators and politicians haggled over tolls, Connecticut's State expressway bond committee came out with an expected request for a boost in bond authorizations from $398 million to $447 million. The reason given was rising cost of materials, construction, and land for the 129-mile Greenwich-Killingly Expressway that's now being built. The road's traffic engineers also estimated that tolls would have to be raised before the road is even in operation. The proposed 20-cent minimum for passenger cars would be raised to 25 cents.

Connecticut's struggle with costs is highlighted by Pennsylvania's experience on its unprofitable eastern extensions. For instance, the stretch from Valley Forge to New Jersey cost around $98 million—around $3 million per mile. This was in 1954. By contrast, the original 161-mile section of the pike cost only $70 million, with nearly $30 million coming from Public Works Administration funds, back in 1939. Cost per mile: about $430,000.

Actually, costs of highway construction have risen as fast in the past 12 months as in any similar postwar period; Engineering News-Record's index of heavy construction stands 5.8 percent higher this week than it did a year ago.

PLANNING

Fast-rising costs of construction and maintenance, coupled with reports of mediocre revenues on many roads, could put a crimp in plans for future roads. Ohio's plans for a north-south turnpike are undergoing vigorous scrutiny in light of the east-west road's disappointing performance.

Faced with the realities of slumping revenues from its east-west pike, Ohio's commissioners pared down their original estimates for a north-south road from $525 million to around $385 million, and hoped to float bonds for that amount sometime this summer. But this week one of the road's bond advisers, T. Henry Boyd of Blyth & Co., recommended that the issue be postponed because "The time is not propitious for the issuance of the bonds."

The key to the future of the north-south road now lies in the performance of the existing pike, where the biggest disappointment has been in commercial revenues, running far behind original estimates. It had been figured that for the first 7 months of the east-west Ohio pike's existence, commercial revenues would account for 74 percent of the total—but in that time, they have been only 36 percent of total revenues. Consequently, only 75 percent of the interest charges on the original issue of bonds were covered by revenues for the first 7 months. Terms of the bond indenture provide that surplus construction funds can be used to make up deficiencies in revenues for interest, but only for the first two payments. From now on, interest must be paid from revenues,

or Ohio may find itself in the same predicament as Pennsylvania.

Texas and Oklahoma also are considering new toll roads, but aside from a handful of States there may be little activity in the future. Senate-House conferences are underway on a new Federal highway bill for paying 90 percent of the cost of a nationwide system; most States, with an eye on the few States with existing toll roads are sitting tight until a final bill is evolved.

The Illness of the President

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I herewith include an editorial which appeared in the June 10 issue of the St. Louis Post-Dispatch. The editorial, entitled "The Illness of the President," follows:

THE ILLNESS OF THE PRESIDENT

The bulletins and statements from Walter Reed Hospital following the operation on President Eisenhower are most reassuring in their forecast of his complete recovery of his health.

Public relief came first when physicians announced that the operation for ileitis was a success. This was soon followed by an announcement that the cause of the intestinal obstruction was nonmalignant. Later it was announced by Press Secretary Hagerty that he did not expect "any interruption in the official duties of the Presidency."

Even more optimistic was the statement, at the Saturday afternoon press conference, that the President's recovery would probably proceed so satisfactorily that he would be able to campaign for reelection to his high office.

Indeed it was said that he would be healthier than before his sudden attack Friday morning and that he might well leave the hospital in a week.

All this is, as we say, reassuring. The overwhelming majority of people in the United States, whatever their political affiliation, will be happy to know that the President is progressing so well in his recovery.

But they also will be glad, so we believe, to allow him all the time it takes for him to build up his health to a safe and sure state. They are less interested at this point, in our opinion, in whether or not he will be able to run again than they are in the restoration of his health so he can conduct the office of the Presidency in the term to which they elected him 4 years ago.

At best the situation will not be easy. Assuming steady progress in the President's condition, some valuable time inevitably will be lost.

In the first place Congress is in session. Moreover, the session is approaching its critical phase. Leaders of both parties have set July 10 as the target date for adjournment. That is just a month away and this means in turn that a great deal of work remains to be accomplished.

In this the role of the President is obviously highly important. There is no one to take his place even temporarily, for example, in the urgent field of foreign aid. After the President's appeal to restore the committee's reduction of more than a billion dollars of foreign assistance was rejected in the House, the fight transferred to the Senate.

But in the Senate the Republican leader is KNOWLAND, of California, who only last week took the floor to commend Senators MCCARTHY, of Wisconsin, and JENNER, of Indiana, for demanding a revaluation of the administration's aid to Yugoslavia.

As the House passed the aid bill, it conditioned aid to Yugoslavia on a determination by the President himself that Marshal Tito's nation was not dominated by the Soviets and that it had not embarked on a course hostile to the best interests of the United States.

This is only one instance of how closely the office and function of the President gear in with operation of Congress. A majority of the Republicans in the House appear to be against participation of the United States in the International Organization of Trade Cooperation, as the President desires. If the United States is to affiliate with OTC it ought to be done by vote of Congress in the next few weeks.

Yet there is no one else who can talk to GOP Members of Congress in the way that Dwight Eisenhower can. No one else is both President and head of the party. And no one else is an avowed Republican presidential candidate whose coattails many Members of the House and Senate hope to ride come November.

Many other difficult situations could be cited, including the trouble in the Defense Department arising from the bitter rivalries between the armed services.

As the convention month of August approaches there will be more and more for the President to do as head of his party. The unpleasant problem of whether to help Senator WILEY, of Wisconsin, the Eisenhower administration's chief supporter on foreign policy in the Senate, is a sample of how hard to handle these intraparty controversies can become.

Once again the men around the President—Secretary of State Dulles, Attorney General Brownell, White House Chief of Staff Sherman Adams, and the others—will be put to additional test. We trust they will use their authority wisely and well.

As for the President's political future, let him not either be counted out or automatically assumed to continue in the arena of politics. He is entitled not only to have a chance to recover from this second serious illness in 9 months but to have an opportunity to decide for himself what he thinks he can and should do at his age.

Meantime all the country and much of the world rejoice in the good news from the Presidential bedside and hope that Dwight D. Eisenhower will continue to improve until he can leave the hospital as soon as it is safe for him to do so.

The Presidency—II

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. HUMPHREY. Mr. President, the New York Times this morning carries the second in a series of articles by James Reston on the Presidency of the United States. The second installment today contains an evaluation of the staff functions in the extensive executive establishment.

I ask unanimous consent that Mr. Reston's column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of June 19, 1956]

THE PRESIDENCY—II—AN EVALUATION OF THE STAFF KEEPING WATCH ON THE EXTENSIVE EXECUTIVE ESTABLISHMENT

(By James Reston)

WASHINGTON, June 18.—President Eisenhower was on a restricted diet of food and work today but The White House Office, which carries the main workload of the Presidency, was busier than Times Square on a Saturday night.

For example:

More than 2,100 letters poured into the White House mail room for the President.

The Special Assistant to the President for Atomic Energy, Lewis L. Strauss, who also is chairman of the Atomic Energy Commission, sent his monthly report on the peaceful uses of atomic energy to the President. It was put in his folder for tomorrow.

William H. Jackson, special Assistant to the President on Foreign Affairs, delivered a report to the White House on the Operations Coordinating Board.

A group of local and State officials met in the Fish Room of the White House and was addressed by the Assistant to the President, Sherman Adams. The Fish Room is so called because it once housed a tank of tropical fish.

There were staff discussions with the Bureau of the Budget about a legal snarl over funds to finance a research reactor for a foreign country and more discussions about when the President's plane would be available to bring visiting officials to the United States, among them Prime Minister Nehru of India.

In addition—and this was only a small part of the day's work—the President's Staff Secretary, Andrew J. Goodpaster, had to route from the White House to the various departments and agencies a vast number of communications on all kinds of things: A complaint from a citizen against allied acts of violence in the Mediterranean, an appeal from a feed manufacturer in Chicago for drought relief in Iowa, a complaint from a citizen that he could not get a Federal job and a proposal to send the National High School band and chorus overseas on a goodwill tour.

GREATER THAN ANY MAN

Anyone who studies the flow of work in The White House office will soon understand what President Wilson meant when he said:

"The office [of the Presidency] is so much greater than any man could honestly imagine himself to be that the most he can do is to look grave enough and self-possessed enough to seem to fill it."

In the first of these articles, the work that cannot be delegated to the President's staff was enumerated. But there is a mountain of additional work that can and does go on, regardless of the President's absences from the White House.

The duties and responsibilities of the Presidency have grown as vigorously as the growth of the Nation itself. For example, in 1790, under President Washington, there were nine executive departments, each doing with fairly simple duties. This had grown to only 11 under President Lincoln in 1864. Today President Eisenhower is responsible for 57 agencies and departments, many of them much larger than the whole Federal executive establishment in the 19th Century.

In 1789, President Washington approved 27 laws and 3 Executive orders; in 1955, President Eisenhower signed 390 public laws, 490 private laws, 65 Executive actions.

Similarly, in 1789, Washington transmitted 20 military and 65 civilian nominations to the Senate, while last year, President Eisen-

hower sent up 37,467 military and 3,219 civilian nominations. The civilian personnel of the Federal Government in 1789 numbered 1,000, the military 1,300, while today the civilian personnel totals 2,371,421 and the military 2,935,107.

This has, of course, meant a vast change in the buraeucracy of the White House, particularly since the beginning of World War I. President Washington had one full-time secretary, Lawrence Lewis, his nephew. Even at the turn of this century, President McKinley had less than a dozen personal aides working with him in the White House.

Today, the White House Office—as distinguished from the Executive Office of the President, which includes the Bureau of the Budget and several other large arms of the Presidency—numbers 398 persons with an annual budget of $3,375,000. In President Truman's last year, the White House Office had a total of 279, but since then, certain special projects on disarmament, psychological warfare, foreign economic policy, etc., have added 128 employees.

To think of the President, therefore, is one thing, but to think of the Presidency is something quite different. Who runs this vast establishment? Where did they come from? And how good are they?

ADAMS HEADS THE STAFF

The central figure in the coordination and direction of the Office is Gov. Sherman Adams, the assistant to the President. His principal assistants are Gen. Wilton B. Persons, who, as Mr. Adams' deputy, worries primarily about legislation; the three major secretaries, Bernard Shanley, who keeps the appointments and directs the flow of people in and out of the President's office; James C. Hagerty, who deals with the press; and Col. Andrew J. Goodpaster, who, as staff secretary, keeps the right papers going to their proper destination.

The core of this White House staff moved right into the White House with the President from his campaign train in 1952. This was true of Governor Adams, General Persons, Mr. Shanley, and Mr. Hagerty. It was also true of two of the President's main administrative assistants, Gabriel Hauge, a magazine writer who wrote speeches in the 1952 campaign, and Fred Seaton, a Nebraska newspaper publisher, who recently moved from the White House to be Secretary of the Interior.

Others on the campaign train who are now in the White House are Kevin McCann, a 1952 speech writer, who is doing the same job as a special assistant; the military aide to the President, Col. Robert L. Schulz, who was with General Eisenhower in Paris and at Columbia University, and Maxwell M. Rabb, a Boston lawyer, who worked with Henry Cabot Lodge, Jr., on the campaign train and is now secretary to the Eisenhower Cabinet.

The two innovations President Eisenhower has brought to the functioning of the White House Office are (1) a much clearer line of authority and delegation of authority to and through Governor Adams, and (2) the introduction of a corps of special assistants to the President on special subjects—disarmament, foreign affairs, foreign economic policy, etc.

Both are still controversial, probably because they are new. There is general agreement that Governor Adams has produced a tidier and more efficient administration of the White House staff. During the President's illnesses he has been both a rallying point and a source of continuity for the whole administration.

Even his critics in this political community, who are numerous—particularly in the vicinity of Capitol Hill—agree that he is a diligent, clear-headed man of character. But he is exercising vast powers beyond the scrutiny of Congress in a position where he is not accountable to anybody but the President. And the question about him is whether he is not establishing precedents that other men, of lesser character, might exercise in the absence of some other President.

ASSISTANTS IN CONTROVERSY

The appointment of special assistants for disarmament, Harold E. Stassen; foreign affairs, Mr. Jackson; atomic energy, Mr. Strauss; foreign economic policy, Joseph M. Dodge; public works, Gen. John S. Bragdon; has raised questions of conflict with the statutory authority of the heads of the established departments and agencies of the Government.

For example, Mr. Stassen has reacted in one way to the Soviet disarmament and arms-cut proposals and Secretary of State Dulles in another. There have been differences, too, between State and the special assistants on questions of wider technical and cultural contacts with the Soviet Union. These have inevitably brought the concept of the special assistants into controversy.

In general, however, there has been far less controversy between this White House staff and the departments than existed in previous administrations when powerful secretaries and White House favorites, such as the late Harry L. Hopkins, were at odds with the established Cabinet officials.

The main criticism of the White House staff is not that it has been at odds with the departments but simply that it is not as good as it could be or ought to be at a time when the responsibilities of the Presidency touch on the security of the whole free world.

The White House staff, it is generally agreed here, is loyal, technically efficient and industrious, but not brilliant. If the top men in it—those who work constantly in the White House—were compared, say, with the top men surrounding the president of any of the great industrial or commercial organizations in the United States, it is doubtful that they would be regarded as superior.

It compares well with any previous White House staff, but whether that is good enough today is a question that Washington, preoccupied with the President and indifferent to the Presidency, seldom raises.

Strengthening Social Security

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. DOUGLAS. Mr. President, as the Senate prepares to consider the Social Security Amendments of 1956, it may be helpful for us to bear in mind the growing public interest in the proposed disability provisions of the bill as passed by the House. I therefore ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Strengthening Social Security" from the Washington Post for June 7, 1956, pointing out the importance of expanding the insurance principles of social security to cover the risks of total disability.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRENGTHENING SOCIAL SECURITY

In the interests of a stronger and more equitable social security system the Senate ought to restore the amendment to the social security bill providing benefits for persons 50 years of age or older who are totally disabled. The Finance Committee struck this provision from the bill that the House passed last year. Now it will be offered again on the Senate floor. The arguments against it are almost the same that have been used against social security legislation from the beginning—that it would encourage idleness and put a premium on disability. The arguments do not hold water, inasmuch as the House wrote in strict standards of compliance designed to guard against abuse. Payments would not begin until after a waiting period of six months and they would be suspended in the case of refusal to accept vocational rehabilitation.

As a special study last year by the American Medical Association said in discussing workmen's compensation, "inadequate indemnity can lower patient morale or force return to gainful employment in advance of clear-cut medical indications." The study, which was approved in December by the AMA's house of delegates, said it is the proper intent of workmen's compensation "that a disabled employee and his family should not suffer a serious reduction in normal living standards during the rehabilitation period." Despite the AMA's opposition to the present amendment, we think the same principles apply equally to social security. They are an appropriate guide for the Senate in its debate on the well-justified proposal to provide monthly benefits to totally disabled persons.

Hanson Baldwin on Civil Defense

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. HOLIFIELD. Mr. Speaker, at this time I should like to call the attention of the House to two recent columns by Hanson Baldwin, military editor of the New York Times, relating to my subcommittee's current investigation of civil defense. These columns are appropriately entitled "Nation's Achilles Heel" and "Ostriches Versus the A-Bomb."

Since last January the Committee on Government Operations' Subcommittee on Military Operations, of which I am chairman, has received testimony from some 70 witnesses on the subject of civil defense. We have attempted to bring together the best possible thinking on this complex subject. Our subcommittee has received testimony from the Chairman and members of the Joint Chiefs of Staff, from representatives of the Federal agencies performing civil defense functions, and from State and local officials from all over the United States.

We have devoted a great deal of study to the program and operation of the Federal Civil Defense Administration, and have visited five of our major target cities to gain a firsthand understanding of local civil defense problems.

Before Congress adjourns, we plan to submit a comprehensive report of this investigation with recommendations through which we might achieve a vastly strengthened civil-defense program.

Mr. Speaker, these two articles by Hanson Baldwin, in my view, correctly interpret the first two parts of our printed hearings, and I want to commend him for his penetrating analysis of some

of the essential problems confronting civil defense in our Nation at this time. In more recent hearings we have received informed testimony on other problems of equal and possibly greater importance. These hearings have not yet been printed.

It is my belief that when these hearings are available that the same concern will be expressed with respect to these additional problems as Mr. Baldwin has related in his articles. The remaining parts of our hearing record will be printed before adjournment.

The articles follow:

[From the New York Times of June 6, 1956]

NATION'S ACHILLES HEEL—AN ANALYSIS OF WHY UNITED STATES CITIES REMAIN VULNERABLE DESPITE CIVIL DEFENSE PLANS

(By Hanson W. Baldwin)

Recent criticism of New York City's civil-defense preparations can be applied with equal validity to most of the United States.

The continuing concentration of United States populations, the vulnerability of our industry to atomic attack and the pitifully inadequate condition of our passive, or civil-defense organization represent the Achilles heel of the American security program.

Civil defense, since its inception, has been nobody's baby. Municipal, State, and Federal officials all have cooperative responsibility but no one really has authority. There are plans galore but most of them are not worth the paper they are written on. For the money, the equipment, the personnel, and the will to implement them does not exist.

A Military Operations Subcommittee of the House Government Operations Committee has been conducting inquiries about our civil-defense program. The group is headed by Representative CHET HOLIFIELD, Democrat, of California. Witnesses before this committee have been emphatic in stressing the deficiencies of our existing organization. They have repeatedly urged far stronger Federal leadership and authority, more funds, and more personnel.

BY CIVILIANS FOR CIVILIANS

The Nation's military leaders opposed suggestions that civil defense be made a part of the Department of Defense; it should remain what its name implies—passive defense by civilians for civilians, aided, of course, when possible by available military units.

All the military leaders testified that various disaster plans had been made by the military. Gen. Maxwell D. Taylor, Chief of Staff of the Army, said he had directed that 5 to 15 hours of additional instruction "in the Army's role in civil emergencies" be integrated into the Army's officer school system. The six Army commands in the United States have been instructed to start a course in martial law.

Various purchasing, storage and bomb-disposal functions for the Federal Civil Defense Admiinstration are carried out by the Army. The six Army commands and the regional heads of the Federal Civil Defense Administration collaborate in planning. Any military active or reserve units available could, of course, be used to bolster civilian defense in event of nuclear attack upon the United States.

But no units are permanently earmarked for such duty. Under present war plans all of them in fact have definite military mobilization assignments that have nothing to do with civilian defense.

State Guard units, on the other hand—intended in most States to replace the National Guard in time of emergency, when the Guard is federalized—exist only in cadre form or in blueprint.

Though some witnesses defended the principle of State responsibility in Civil Defense, virtually all agreed that Federal military aid would be needed in event of an atomic disaster. Yet no military units are permanently available, specifically earmarked or specifically trained for Civil Defense duties.

And in "Operation Alert"—a Civil Defense test evacuation of Government personnel in the Washington area—the President proclaimed as a part of the test a state of limited martial law for the Nation. The proclamation specifically pointed out that it was impossible for the Governors of the various States to meet the problem envisaged in the exercise.

This proclamation itself aroused considerable doubts and posed some difficult legal questions.

ANOMALY BROUGHT OUT

The committee then developed this anomaly:

The President had deemed it necessary to invoke martial law in a civilian defense test, thus putting the responsibility upon the Army. Yet neither the Army nor any of the other armed services desired—or where prepared for—this responsibility.

The immensity of the emergency posed by a simulated atomic disaster obviously persuaded the President that State or municipal organizations could not meet the problem. Yet the White House was not pressed for any basic change in the Federal Civil Defense Act, and the effectiveness of our Civil Defense still depends upon cooperative action between numerous Federal, State and municipal authorities. And many of these have different basic State laws and differing responsibilities.

It is this hodgepodge of organization and the obvious inadequacies of the whole program that caused Dr. Merle A. Tuve, chairman of the Advisory Committee on Civil Defense of the National Academy of Sciences and National Research Council to characterize Government Civil Defense activities as "erratic and inconsequential." Our present passive defense situation, he said, is "contradictory and irrational."

[From the New York Times of June 7, 1956]

OSTRICHES VERSUS THE A-BOMB—ANALYSIS OF HEAD-IN-THE-SAND ATTITUDE AND HOW IT HAMPERS UNITED STATES CIVIL DEFENSE

(by Hanson W. Baldwin)

The basic problem in civil defense appears to be a "head-in-the-sand" attitude coupled with a fatalistic philosophy.

"It can't happen here—and even if it does, there's nothing we can do about it."

This appears to sum up the public feeling about civilian defense preparations. This is not a universal attitude; there are thousands of public-spirited citizens who have served voluntarily in civil-defense organizations. But it does appear to be a majority viewpoint. Its essential negativism is encouraged by our completely ineffective passive defense preparations.

Willard Bascom, Technical Director of the Advisory Committee on Civil Defense of the National Academy of Sciences and National Research Council, made some telling points in recent testimony. He spoke before a House subcommittee on military operations.

"Much of the difficulty," Mr. Bascom said, "is traceable to the erroneous concept that civil defense is a State and local problem. It is not. An attack on any part of the country is an attack on the United States as a whole and as such should be defended by the whole United States; the Federal Government is clearly responsible.

"The public can scarcely be expected to have confidence in the present leadership when they turn to Washington and see that Congress does not provide for its own protection or participate in test exercises; they see that the executive branch gives only lip-service to its own talks of dispersal and continues to build its buildings and let contracts in critical target areas; they see that the capital city itself has no real civil-defense program (and budgets civil defense at one-sixth the cost of its zoo)."

CITIES CALLED VULNERABLE

Mr. Bascom was sweeping in his criticism. There is no adequate warning system, he said. Nothing is being done to reduce the vulnerability of our cities. There is "no shelter program worthy of the name." We do not have "any radiological defense plan."

Evacuation plans and procedures, measures for emergency radio broadcasting, the preparation of nonattacked areas to support devastated regions, and educational policies dealing with passive defense are all grossly inadequate, Mr. Bascom declared.

His criticisms, reinforced by many other experts who have made thorough studies of our civil-defense preparations, must be read against the background of some excellent and comprehensive industrial vulnerability studies made by the Rev. Neil P. Hurley, S. J., of Fordham University.

In an article entitled "How Vulnerable Are We?" in the December 1955, issue of Petroleum Refiner, Father Hurley finds that "four H-bombs could wipe out almost half of all United States petroleum processing plants within a few seconds. * * *"

"The hardware required for new plants and petroleum processing facilities depends largely upon steel, 74 percent of whose total annual ingot production is centralized in 10 areas of 25-mile radius. These same areas also account for 82 percent of total iron production and 77 percent of total American coke production."

Somewhat similar statistics could be adduced for other key industries.

NO DISPERSAL FOUND

Father Hurley has found that since the Nation became aware of the atomic menace Federal procedures for new plant construction—rapid tax write-off incentives, and so on—have led to the illusion of dispersal, but not to actual dispersal.

On the contrary our industry, in the chemical and petroleum refining field, at least, has become more concentrated and more vulnerable, as have our cities.

"Decentralization of industry and population for economic and sociological reasons is a spontaneous, haphazard affair," Father Hurley says. "If not directed, targets in new regions can multiply." He cites Houston, with its huge chemical and petroleum refinery concentration, as an example.

The remedial measures required to reduce our urban and industrial vulnerability and to provide an adequate Civil Defense organization imply some hard and unpleasant things.

As Father Hurley notes, they require political courage and economic sacrifice. They imply a willingness to accept the fundamental responsibility by the Federal Government; willingness of Congress to appropriate the necessary funds; willingness of the National Guard and of some regular units to train for and to be earmarked for Civil Defense duties alone.

Urban planning to reduce population densities, industrial planning to reduce vulnerability, construction of shelters and setting up evacuation procedures and the other parts of passive defense can command public support. But to do this they must be properly organized and energetically and courageously led.

The first requirement is high-level leadership. It must be willing to point the way to the hard, unpleasant and unpopular necessities essential to any hope of survival in the atomic age.

Poems Relating to Senator Morse

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 20, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of poems referring to a Member of this body, the distinguished Senator from Oregon [Mr. MORSE]. The poems are presented by one of his constituents, Mr. John B. Smith, of Eugene, Oreg.

There being no objection, the poems were ordered to be printed in the RECORD, as follows:

SENATOR MORSE

This is about our Senator MORSE,
The man who Republicans cannot endorse.
They'll tell this when they begin
This man committed the unpardonable sin.
Why he did this, these rhymes will tell,
And why the Republicans wish he was in Hell.
Once he was great, honest and wise,
But now he's a traitor and only tells lies.
Of his life he's made a horrible mess,
If you doubt that, read our one-party press.
It will tell all about his dastardly capers
When you see his name in the Republican papers.

For many long years he was a teacher of law,
And was the finest man you ever saw.
And that is what the Republicans said
Till he brought their wrath down on his head.
He became their candidate, the finest they had,
Then left their party and now he is all bad.
They search his past all he's done and said
For political mud to pour on his head.
And now we hear them rant and rave
While trying to dig his political grave.
A treacherous traitor, a political rat,
All because he became a Democrat.
They told him he must wear their political coat
And crammed their platform down his throat
It contained much he thought was wrong
But he must not think, just sing their song,
If you refuse, we will show our power,
Your political prestige won't last an hour.
We supported you in your political races
And put you in important places.
Now just defy us, if you dare
And we will shear your political hair.
All these things our WAYNE was told
Before he was kicked out in the political cold.

There is no doubt this grieved him sore,
He could not represent his State any more,
His valuable service to the world was lost
He must do something regardless of cost.
When back in Washington he arrived
Of his place on committees he was deprived.
Our WAYNE endured this a year or two
And then he decided what he must do.
The Republicans repudiated him, they did just that
So he was forced to become a democrat.
The Democrats had seen his work,
They saw his duty he did not shirk
What our WAYNE believed was right
He had the Courage to stand and fight
So Democrat political plans were laid
To welcome this man who was not afraid.
Now his character they would assassinate
Because he is a Democrat candidate.
A better man we cannot find
So let us all make up our minds.
Let's send him back with God's consent
Or else we may, of this repent.

There are few such men, honest, brave and true
With the ability to do what he can do.
He's a busy man, he gets no rest,
He's hard at work and doing his best.
Prejudice, slander, and false pretense
He must combat in self-defense.
Let's give him our support, be honest and fair,
Let's put him in the Senate and keep him there.
One more thing, please remember
This excellent man is presidential timber.
Now I suggest, with God's consent,
Later, let's make this man our President.

IKE'S PROGRAM

Of the Eisenhower program, we hear of so much,
It is this and that and such and such.
On it, many try to commentate
But none are able to elaborate.
It is a difficult subject, that is for sure
So don't expect much here, it is too obscure.
It's an abstract subject we learn at the start,
Let's see what's in it, let's take it apart.
Of campaign promises that's been forgot
To do many things that he did not.
To see what's in it there is no hope
Unless we use a microscope.

We are told to fight to the last ditch,
You know it's good if you are rich.
Observe the big companies the money they've made
And to keep this program, their plans are laid.
And they may succeed; I'll tell you why
They have every advantage money can buy.
Keep this program, do what you will
Don't mind expenses, just send us the bill.
We donate freely, we are a generous lot,
Get out and get busy, make this campaign hot.
Put Ike back in office to play golf on the green
And keep the Cadillac boys, if you know what I mean.
Those Cadillac boys, the ones up high,
They do all the work and see that Ike gets by.
They carry out his program just as they please
All over the world and keep Ike at his ease.
And if by chance his ball goes in the rough
He has NIXON at hand who is really tough.
And this we know gives Ike much joy,
Such a nice, obedient, tough chore boy.
He'll be loyal to Ike 'til the day he dies,
For he loves Ike on whose shoulder he cries.
We see this through our microscope
DICK NIXON is Ike's most fondest hope.

For this obscure program we give Ike our thanks,
It's an excellent thing for our great big bank,
High interest rates puts cash in their box,
Low taxes you pay if you own some stocks.
Just be a member of the board of trade,
They'll take care of you, you'll make the grade,
And if you are getting very high pay
We raise your wages as soon as we may.
And now we say to the far and near,
Now this program is no longer moot
When we judge the tree by its fruit.

Now that is the program here at home,
But in foreign countries where the diplomats roam
There is so much they do not tell
Makes one suspect they're worse than hell.
If things were good we'd get the facts,
Then our tense nerves we could relax,
But we know enough, I regret to say,
On the brink of war we seem to stay.
Of those terrible things we must not hear,
Just hush them up, this is election year.
Just silence of all our diplomats
And blame all wars on the Democrats.

OREGON SENATORIAL RACE

I have watched politicians, ever since my youth,
To me it is amusement, now that is the truth.
They are as fine a class of people, as any you meet
I watch them closely, but from a back seat.
Sometimes I help them, their problems to solve,
I'm an independent voter, I don't get involved
In making these statements I want you to find
I'll tell all parties I've no ax to grind,
I vote as I please, I've nothing to sell,
And if they don't like that they can go to Hell.
Now I hope I have made that all clear
For the senatorial race we go from here.
Now we go back to the recent past,
There is a lot to see if we don't go too fast.
Mr. Hitchcock, I think, is a very fine man
I can say that for him, I'm glad I can,
He made a clean campaign none can assail,
But Doug rode in on Ike's coattail.
Now Ike didn't like what MORSE had done,
He sent Doug home for the Republicans to run.
He wanted all other candidates out of the race
And you place Dougie in the very top place.
It's a free country, I know that is true,
But I'm telling Oregonians just what they must do.
WAYNE MORSE was excellent when he was Ike's friend,
But he didn't vote for him, that made him a fiend,
Now take Dougie, see that you make him win
So he (Ike) can get revenge for MORSE's sin,
Put all of your money in the pot for McKay
All other candidates are just in the way.
Do all that you can, be sure he doesn't fail
And get all other candidates off Ike's coattail.
He didn't send him home till almost too late
But his popularity you must all demonstrate.
Now we all know this is against the rule
But we also know McKay is his tool.

We Republicans know Ike what's best
To win this fall he must carry the West,
No off-shore oil to carry the south
Now about that oil, just shut your mouth.
There is nothing about it, you dare must say
That was the first of his give away.
The next on the list was the TVA,
Dixon Yates blew up, he couldn't give that away.
Now over that deal he lost some sleep
But the TVA he had to keep
When this raw deal didn't go his way,
He hired our man, the great Doug McKay.
We know this man was very bold,
Till he got mixed up in the Serena gold,
In this giveaway, we must remember
The gold was in the stand of timber,
And the game reserve where the birds and beast walk
He let the oil people have it, he knew the birds couldn't talk.
On the State of Oregon, he had his grip
Give away our big dams with his partnership.
What else he would give, no one can tell
If the Senators from Oregon hadn't raised all hell.
Now he is here on the tail of Ike's coat,
We must send him to the Senate or get Ike's goat.

Ike loves the name of Doug McKay,
It rhymes so well with giveaway.
Now behind McKay you must take your stand,
He'll lead you to the promised land,
To the land of the free where the billionaires prowl
Where in bankrupt courts the little man howls

Where our production makes the farmer groan
Where he starves to death or gets a Government loan,
Where with installment debts the workers strive
Where unemployment checks keep them alive
Where the rich billionaire after taxes are paid
Finds fat dividends at his feet are laid,
To elect WAYNE MORSE would be a sad frustration
To the Cadillac boys in this administration.

The Challenge of a New Age Looks for Leadership, for Deeds, not Words

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. ROOSEVELT. Mr. Speaker, during the recent primary campaign in California, former Governor Stevenson, of Illinois, made an address as Press and Union League Club luncheon in San Francisco on Tuesday, May 29, which I believe deserves careful reading by all those interested in our national welfare. I am therefore inserting it in the RECORD, omitting only those parts which dealt with the local political situation. I trust that my colleagues will find the time to read it:

It seems to me that in State after State the single most important fact of this campaign is the proof, demonstrated in one outpouring of Democratic votes after another, that there is a Democratic tide running in the country this year.

The general election next fall is an election that will demand the people's decision on some of the greatest questions free people ever faced.

We do not yet know who the Democratic candidate will be—and modesty forbids even a guess.

But we do know who the Republican candidate will be. And we also know the platform he will campaign on—the President himself has told us.

He told us in a speech he made to Republican leaders on April 17 that was billed by the Republican press agents as the opening shot in General Eisenhower's campaign for reelection. The President said, "I shall work in the coming campaign to have the American people more clearly know the principles of the Republican program."

And what is this program, these principles, he has enunciated? Let us examine it with the serious consideration it deserves.

The President made 8 points:

First, he said he is unequivocally in favor of the supreme importance of the individual. And I agree with him.

Second, he proclaimed the importance of spiritual values. I take it we are agreed on that.

Third, he is unequivocally in favor of prosperity, peace, plenty, and happiness. Anybody here against that?

Fourth, he said government must concern itself with human misfortune—though, of course, he cast the usual Republican anchor to windward by saying we must be careful not to impair the initiative or incentive of the unfortunate.

Fifth, he announced that one and all should cooperate for the common good. Anybody here against that?

Sixth, seventh, and eighth, he came out boldly in favor of Abraham Lincoln, declared that America must be prepared to defend herself, and he said we must promote freedom and justice and peace.

Now that is the program that the President put forth as his contribution to the national debate of 1956. That was what the President said—and that was all he said.

And I say to you that however lofty his sentiments, however good his intentions, this is not the kind of leadership we require as we venture upon the perilous stage of history in the last half of the 20th century—particularly when there are lurking in the wings the Vice President he esteems so highly and the Old Guard stage managers of the Republican Party.

The President, in his speech, did not say a word about how we can meet the rising tensions that have followed in the train of the Supreme Court decision on desegregation.

He did not say a word about what he proposes to do to help the farmer, or the small-business man, or the old people who are trying to get by today on yesterday's pensions.

And, on another front, the Middle East smolders in uneasy truce, and North Africa is aflame, and Russia is gaining ground in the cold war every day and outstripping us in getting ready for a hot one, and reins of the free world hang loosely in our hands—but of all this, not a word.

We members of the Democratic Party are not satisfied with this sort of program—and I don't think the rest of the people are, either. I think the people want to hear the real issues of this campaign discussed this year of 1956, and I'm willing to start right now. I'll even put these issues in a package, as the Madison Avenue hucksters like to say—an 8-point package.

These issues are our national situation today.

Despite campaign promises and 3 years of drumbeating by the Republican managers, the blunt truth is that today—

First, most farmers' firm price supports have been vetoed, their markets wrecked, their credit tightened, their savings drained, and their income chopped to pieces.

Second, the farm depression is spreading to the factory centers, the cheery optimism of the Secretary of Commerce notwithstanding, and right now workingmen by the thousands are being laid off in the farm-equipment and automobile factories—today 220,000 men are walking the streets, out of work, in Michigan alone. Moreover, thousands of small-business men, ignored by a big-business administration, are being forced to the wall.

Third, nothing has been done to meet the national emergency in our schools.

Fourth, older people are trying to pay today's prices with yesterday's pensions, while the administration comes out flatly against every new proposal to improve social security.

Fifth, from Dixon-Yates to Hells Canyon, this single-interest administration has given away or tried to give away the people's resources to private interests.

Sixth, the most dangerous crisis in 100 years, the crisis over civil rights, has stretched tension near the breaking point and the President is silent.

Seventh, progress on low-cost housing has been halted, medical research programs are languishing for lack of funds, mental hospitals are jammed to the doors, and the Nation has no national health policy.

Eighth, our prestige abroad has been brought to an all-time low by attacks on individual liberty at home, by boasts to our friends and bluffs to our enemies, and by a leaderless drift in the conduct of foreign affairs.

Whenever this administration has been confronted with a hard problem it has appointed a committee to smother the problem. And the prospect for the future is even worse. For we are now asked to remake the role of the Presidency itself to meet the present unfortunate circumstances. And already we are beginning to see the consequences.

The President is kept in ignorance of our lag in guided missile development.

The President smiles at Israel while the Russians move into the Middle East and arm her enemies.

The President evidently is not informed of the confusion of self-interest in the Dixon-Yates deal and at sundry high levels of his administration.

The President gives a clean bill of health to RICHARD NIXON'S California crony—yet the Republican managers discreetly drop him from the team.

The Secretary of State announces, in a magazine article if you please, that he has led us three times to the brink of war, with the President's approval, but the President says he has not read the article.

The President and his Secretary of State issue reassuring bulletins while Soviet leaders woo Asia.

The President is not informed of controversy in the armed services until it erupts in a violent quarrel.

The President withholds the immense prestige of his office from those who seek to resolve the crisis in civil rights, and in the latest so-called security case the President says he is not familiar with it because, as he puts it, "They bring before me what has been going on, usually not in terms of names but in terms of numbers."

A member of the Subversive Activities Control Board, a Republican incidentally, and an appointee of the present administration, had called public attention and the attention of the President himself to serious injustices in the Government's present personnel-security program. He has forthrightly condemned the political distortion by the administration of the actual facts regarding the hiring and dismissal of Government personnel during the past 3½ years. He has called for Presidential action—in the interest, if you will, of the very honesty in Government and decent regard for human values which the President has repeatedly extolled.

I suggest that these charges—which obviously have no conceivable partisan motivation—raise a very serious question, not only of the sincerity of the President's protestations but the very integrity of this administration. And if as is now predicted in the newspapers, its response will be only to get rid of Board Member Cain, then the true sense of this administration's values will become unpleasantly clear.

I suggest to you that it is the duty of the President of the United States to think of people as people, not as numbers. And protestations that he believes in theory in the supreme importance of the individual are of no help to the man accused.

Those, then, are some of the issues that we propose to put before the people next fall. There will be more to follow.

We believe in high principles; yes. But we believe in programs too.

Here is a Democratic program—in fact, here are 8 or 10 programs.

First, while we hope the soil bank will work, we will make certain that the farmer gets a fair share of the national income; and we will extend, not restrict, genuine soil conservation, easier farm credit, cheap power and cheap water, and the other things the family farmer needs to preserve his way of life, and we'll have a Secretary of Agriculture who cares about the farmer and agriculture as something more than an essential industry. We'll press on toward more imaginative use of our surplus stocks of food. I refuse to count the abundance of food as a curse in a world which is half-hungry, yes, when even in this Nation there is want and hunger. By reshaping of our relief, our old age, our school-lunch, and our foreign-aid

programs, we could, I believe, put to good use much of the so-called surplus we now have on hand.

Second, we'll act at the first ominous sign of depression. And likewise we won't be timid about putting the brakes on too rapid expansion, which is the inevitable prelude to trouble, and an old Republican weakness, as we are seeing again just now. And we'll be grateful for the jobs created by the Democratic highway bill now going through Congress. We'll have an administration that represents not only big business but all of our people. What's more we'll get rid of the antiunion provisions of the labor-relations law, and we'll restore to the NLRB its proper role as an impartial umpire in labor disputes.

Third, we'll enact legislation to help small-business men with their tax and credit and Government contract problems, and we'll sincerely attempt to moderate the tidal drift toward monopoly that has gathered such momentum under this administration.

Fourth, we'll increase social-security retirement benefits, lower the retirement age of women to 62, start paying benefits to disabled workers at 50, and provide better housing and cheaper medical care for older people.

Fifth, when the time comes to readjust the tax laws, the philosophy will not be that prosperity comes from the height of the top of the economic pyramid but from the breadth of the base. Yes, and the new revenue act won't be a field day for the special exception cases, either.

Sixth, we'll restore the Democratic policy of developing our natural resources—our rivers and forests, lakes and land—to their utmost for the benefit of all the people, not for the profit of a favored few.

Seventh, we'll push on toward better education, which is certainly one of our greatest emergencies. How we raise our children will shape the future of our society. We are talking here first about crowded classrooms and too few teachers—yes, and a stable school system that can help provide the anchor children need. There is no magic cure for juvenile delinquency, which is increasingly becoming a problem of the suburbs as well as the city slums. We need many things to combat it—decent housing, full employment, an expanded national Children's Bureau, an emergency program to give teenagers who need a chance to get off the crowded streets of our cities and to perform useful work and breathe fresh air in our national parks and forests. And certainly we need better schools.

Eighth, we will not ignore the crisis in civil rights. The Supreme Court has bespoken the Nation's conscience. To ease the transition from the past to the new, social adjustment is certainly a first order of business for the Nation and its leadership.

Ninth, we will defend, and not just talk about defending, the basic freedoms of every citizen to think what he pleases and say what the thinks.

Tenth, we will try with the urgency of crisis to restore the bright image of America that once was respected and trusted around the world, and to regain the moral leadership of the free world, and we will never give up the struggle to win through to genuine disarmament and secure lasting peace.

We cannot do these things by drift, complacency, advertising, no, nor by mottoes, slogans and the moral sentiments. We must have national leadership and the apex of leadership in the American system is the office of the President. Only the President can provide the firm direction, the bold vision, and the moral strength that made this country great.

The American Presidency is the greatest temporal office on our planet. Its capacity for good or evil, for influence on human affairs, is almost without limitation. When the President leads, billions follow. When the President falters, the world trembles. When the President speaks, the world pays heed. When he is silent or when he is absent, chaos threatens.

I would remind you of what the Presidency has meant in times past, when Democrats were Presidents, yes, and when Republicans were Presidents.

Thomas Jefferson made the Louisiana Purchase that converted a handful of States to an empire bounded only by the blue Pacific.

James Monroe gave us in his Doctrine the vision of a hemisphere for freedom.

Andrew Jackson fought the people's fight against strangulation by the bankers.

Abraham Lincoln set free the slaves and saved the Union.

Theodore Roosevelt rescued our natural resources from greedy men.

Woodrow Wilson curbed the excesses of industrialism and gave us the new freedom and the first glimpse of international order.

Franklin Roosevelt broke the back of the depression and led a social revolution at home from which all have profited, and led the free world to victory over totalitarianism.

Harry Truman stopped communism in its tracks, and with the Truman Doctrine, the Marshall plan, point 4, and NATO, he created the image of an America that seeks not to rule the world but to help men everywhere.

All down the years, in war and peace, in time of trouble and time of need, it is to the White House that the people of our country and the people of the world have looked for leadership—for deeds, not words.

Today we on earth have reached a great divide in human history. We did not need the tests at Bikini last week to convince us that man now possesses the power to annihilate himself, his children, and his civiliation. And it is of the White House now that mankind asks: What shall we do with our power?

Today, too, our people at home need many things—schools, pensions, housing, highways, jobs, medical care—and it is of the White House that they ask: When will we get them? How will we get them?

And the people look ahead to the future, and they want to know what will the Government do to meet the challenge of the new age—an electronic age, an age of automatic machinery, a television age, an age of miracle drugs, an age of better living, an age of leisure, when prosperity is not to be measured merely by how much but by how good.

I suggest to you that it is only in the Presidency that the people will find their answers. And I submit to you that on the record the Democratic Party is the one best equipped to lead the Nation to the new plateau of the better, safer life only just beyond the horizon.

The Highway Program

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. BOGGS. Mr. Speaker, I include herewith a series of articles from the Pittsburgh Sun-Telegraph written recently by Mr. John H. O'Brien, on the highway program embodied in the Fallon-Boggs bill.

This series is as comprehensive an analysis of the implications of the legislation now in conference as any as I have had the pleasure of reading. I commend it to all of the Members of both bodies:

[From the Pittsburgh Sun-Telegraph of May 31, 1956]

GREATEST PUBLIC PROJECT—ROAD PROGRAM TO AFFECT ALL

(By John H. O'Brien)

WASHINGTON, May 31.—When the Pharaohs built their great pyramids the economic impact was felt throughout the valley of the Nile.

When the 48 State highway departments start construction on the National System of Interstate Highways the economic impact will be felt across the continent.

When the Egyptian projects were completed the rulers had their pyramids, but when the road builders are through the American people will have 40,000 miles of superb highways, coast to coast, border to border.

No matter on what terms the highway program is described, it is the greatest public-works project ever undertaken by any nation in recorded history.

It involves more area, more people, more materials, and more money.

The construction of the Panama Canal, the pride of our grandparents, and the work on the St. Lawrence seaway could be fitted into the highway program with ease.

NOTHING IN HISTORY TO COMPARE

There is, actually, nothing in history with which it can be compared.

The great roads of the conquering Romans would be only a drop in the statistical bucket.

The combined Federal and State expenditures contemplated in the highway program will amount to something like $51,500 million over a 13-year construction period.

Only during World War II was the United States faced with any comparable expenditures. And war expenditures are economic waste.

The highway expenditures are capital investments in the economic welfare of the Nation.

The benefits will flow to all of us, even those of us who do not own or drive motor vehicles.

In fact, the weight of the evidence shows that a continuing lack of adequate highways will slow down the wheels of American commerce to the detriment of us all.

ROADS TO CONNECT 48 STATES

What is our highway system and why is its improvement so vital to us all?

The Federal program contemplates increased spending on all types of Federal-aid highways—secondary, or farm-to-market country roads; primary, or main State routes; urban, or main route connecting State roads through cities; and the Interstate System, or those routes through all 48 States that carry the great bulk of traffic.

Of the $51,500 million to be spent, some $29 billion will go for the last category, the Interstate System.

The Roman roads all led to Rome, but the Interstate System will connect all 48 States. It will connect all but 23 of the 232 cities that have populations of 50,000 or more.

The routes were selected by the 48 State highway departments in cooperation with the United States Bureau of Public Roads.

The Interstate System will be built to the highest standards that engineers now can devise.

Except in those sparsely populated areas where the very highest standards are not needed, the system will contain no crossings at grade.

NO STOP LIGHTS, STOP SIGNS

There will be no stop lights or stop signs.

Entrance and exit to the system will be planned in the interest of the motorist using the system.

Commercial establishments, with their frequent driveways, signs, and other traffic interferers will not be permitted.

The roads will be 2, 4, 6, or 8 lanes wide, depending upon the contemplated traffic for years to come.

The rights-of-way will be wide enough from the beginning to add lanes in future years when they may be needed.

The system will provide several cross-continental routes, but its greatest value to many motorists will be in and around our cities, where congestion has been slowly cutting down on the mobility of the automobile.

Main routes will no longer stop at the city limits, dumping traffic onto inadequate city streets.

The interstate system will be just that—a system of carrying heavy traffic almost anywhere it wants to travel in the United States.

[From the Pittsburgh Sun-Telegraph of June 1, 1956]

THE IMPACT OF NEW HIGHWAYS—ROAD PROGRAM TO SPUR STEEL

(By John H. O'Brien)

WASHINGTON, June 1.—The Federal highway program will require 5,200,000 tons of steel in a single year of construction.

It will require 112 million barrels of cement in its third year.

It will require 908,000 traffic signs in a single year.

It will require at least 5 million gallons of paint per year.

These are only a few of the statistics of the material requirements of the program.

In human needs, it is estimated that the labor force actually at work on the roads will rise from its present 220,000 to some 350,000 by 1958. By 1961 this figure will have grown to 500,000.

Thus within the next 4 years, 270,000 jobs will have been created.

These are all on the highway jobs.

ASPHALT INDUSTRY TO BOOM

There are no available statistics as to the number of added workers that will be needed in steel and cement plants, earth-moving machinery plants, quarries, and other material-supplying facilities, but the number can be assumed to be substantial.

What about other industries?

The roads now use about 50 million barrels of asphalt annually, five-eighths of the total production.

The asphalt industry can expand readily and it will have to, because the Federal program does not neglect county roads and 85 percent of our improved county roads use asphalt.

The aggregates industry—the suppliers of stone, sand, gravel, slag and other products—provided 357 million tons of material for highway construction in 1954.

HIGHWAY EQUIPMENT NEEDED

The industry believes it can increase production some 40 percent with existing plants but when construction reaches its peak it will need an additional 560 portable plants or their equivalent in large, stationary plants.

The manufacturers of highway construction equipment can see a rise in sales of from 150 percent to 200 percent when peak demand is reached.

One of the economic factors operating here is the length of the program.

A contractor who can depend upon 13 years of construction work is much more likely to invest his capital in new equipment and amortize it over the life of the program.

And the life of the program and its vast size also will entice more businessmen into the contracting field.

It is also expected to make the highway field more attractive to student engineers.

Contemplation of the job that will soon confront them has forced State highway departments into research.

They are busy today testing scientific tools such as electronic computers so that manhours can be saved at the drafting boards.

Thus while most of the economic impact of the highway program is in the future, actually it is with us now in the minds and efforts of many engineers and businessmen.

There are other industries that will benefit from highway construction.

Thus suppliers of timber piling will have to produce 2,823,000 more feet per year than they do now.

There will be few if any steep grades on the Interstate System and that means blasting away at rock formations that stand in the way of the road. So 18,345,000 additional pounds of explosives will be needed annually.

The same story can be told about everything that goes into road building.

Fortunately, the industries involved have a breathing spell in which to provide for the expanding needs since the early years of the program call for planning, scheduling, and securing rights-of-way.

So far the economic benefits described have all accrued to those businesses and industries directly concerned with highway construction, either as road contractors, or material suppliers, or manufacturers of machinery and equipment.

[From the Pittsburgh Sun-Telegraph of June 2, 1956]

THE IMPACT OF NEW HIGHWAYS—PROGRAM CUTS DRIVING COSTS

(By John H. O'Brien)

WASHINGTON, June 2.—A motorist who drives on the roads planned for the Federal highway program will save an average of $90 a year in car operating costs.

The experts estimate that an adequate road will save at least 1 cent per mile in travel expense.

Thus a motorist who drives 9,000 miles per year will save $90.

This is not all clear profit, however, because the added taxes on gasoline and tires to pay for the roads will cost him about $7 per year.

His profit, then, will be $83 per year. But this leaves out other factors.

SAVINGS IN LIVES

For instance, construction of the Interstate System to modern standards is expected to save 3,500 lives per year and, of course, there will be thousands fewer injured and property damage will be substantially reduced.

When this occurs it is reasonable to expect auto insurance premium rates to fall.

If the annual premium is reduced by $7 the motorist will be saved the entire cost to him of the added Federal taxes needed to pay for the new roads.

The 1-cent per mile added cost of driving on inadequate roads cost motorists something like $5,300,000,000.

This figure does not include the cost to the whole Nation of high truck shipping rates due to congestion.

Nearly everything we produce travels on a truck at one time or another and even a slight savings per mile of truck operating costs will represent an enormous economic gain for all of us.

It is difficult to put a cost figure on the death or injury of an American man, woman, or child killed in traffic.

One figure that is used puts the average economic loss per fatality at $85,000.

TIME ANOTHER FACTOR

Thus if we were able to reduce our traffic deaths a mere 10 percent we would be avoiding an economic drain of $323 million.

We killed more than 38,000 Americans on our roads last year and unless the 1956 rate drops substantially in the remaining months of the year we will kill 42,000 this year.

Another factor difficult to evaluate in money is time.

What is your time worth when you are driving to and from work?

Is your free time worth as much as your per hour wage or salary rate?

Everyone can make his own evaluation.

If the new roads, particularly through metropolitan areas, will reduce your daily work driving time by one-half, what will it mean to you in money?

If it means anything, add that to the economic gains attributable to better roads.

NEW TAX COST REGAINED

And if you estimate it is worth a mere $7 per year already you have recouped the cost to you of the Federal highway program in new taxes.

Thus the roads you buy with your $7 will return you that sum many times over through lower operating costs, lower premium rates, and time saved.

And if you do not own a car and, therefore, do not pay any tax at all for better roads, you will make a clear gain in whatever reduction occurs in truck shipping rates.

A previous installment demonstrated the economic benefits that will accrue to roadbuilders and their suppliers.

Today's relates the benefits to average motorists.

[From the Pittsburgh Sun-Telegraph of June 8, 1956]

THE IMPACT OF NEW HIGHWAYS—BETTER ROADS PUSH LAND PRICES UP

(By John H. O'Brien)

WASHINGTON, June 2.—One of the amazing side effects of better roads is the way in which the value of land along them skyrockets.

In 4 years the price of an acre along the New York Thruway soared from $714 to an astounding $6,000.

The new road has turned that acre from raw, almost useless land into a desirable industrial site.

The whole New York Thruway story reads like an account of the California gold rush.

The area around Syracuse, because of accessibility to the new road, attracted new plants constructed by such industrial giants as General Motors, General Electric, Carrier Corp., Allied Chemical & Dye Corp., and Western Electric.

ACREAGE VALUE INCREASES 20 TIMES

Near the thruway traffic interchange there was a piece of property of 23 acres. No water, sewer, or gas facilities were available. It was valued at $100 an acre, before the thruway.

After the thruway, in 1955, a machinery company bought the tract for $46,000.

The value had risen from $100 an acre to $2,000.

Thruway authorities say the road so far has attracted to it $150 million worth of new or expanded industries having an annual payroll of more than $100 million.

On the Pacific coast, along the Northern Sacramento Freeway in California, land sold for $600 an acre in 1947.

Two years after the freeway opened for traffic the price was $1,100 an acre.

LAND SELLS FOR $10,000 PER ACRE

In 1950, the price was $7,100 an acre and a year later it reached $10,000 an acre.

And to drive the point home:

There were no similar land price increases in the Sacramento area not served by the new freeway.

Here is how the chairman of the New York State Thruway Authority sums it all up:

"The tremendous toll that outmoded highways exact in lives, property damage, human misery, and sheer economic waste alone compensates for the cost of constructing modern highways against many factors, but paramount among them is the economic growth and development that have become synonymous with new expressways and major highway construction programs.

"We have underemphasized these benefits, in spite of the fact that they far outweigh the cost of providing the highways themselves."

BETTER ROADS MEAN FASTER TRAVEL

These are the main factors of the economic impact of the Federal highway program.

There are scores of other examples.

Let's look at just one—what better roads will mean to the airlines.

Today ground trips from and to airports frequently take more time than the flight itself.

Flight time between Detroit and Cleveland is 44 minutes. Ground transportation time, to and from the two airports, is 80 minutes.

Flight time between San Francisco and Los Angeles is 140 minutes. Ground transportation time: 120 minutes.

Flight time: St. Louis to Chicago: 122 minutes. Ground transportation time: 90 minutes.

Proposed expressways in 59 cities will save an average of 35 percent of ground transportation time.

AIRLINES INTERESTED IN PROGRAM

So the airlines are interested in better roads and so is just about everybody else.

Better roads do not necessarily guarantee a prosperous America, but can we have the economic expansion upon which prosperity depends if we do not have an adequate highway system?

Here is what the governors' conference reported to President Eisenhower:

"An adequate highway system is vital to the continued expansion of the economy.

"The projected figures for gross national product (the value of all our goods and services) will not be realized if the highway plant continues to deteriorate."

This statement, disregarding all others previously given on the economic impact of the Federal highway program, would seem to be the clincher.

If we want to prosper we must have better roads.

And we are going to get them.

And soon.

Tip Goes, Ex-Coxswain, Still Barks Commands

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article on Clifford (Tip) Goes, famous coxswain for Syracuse University and head of the United States Olympic Rowing Committee, written by Allison Danzig of the New York Times on Tuesday, June 12, 1956:

FORMER MEMBER OF SYRACUSE CREW IS A REFEREE—ALSO HELPS OLYMPIC ROWING COMMITTEE RAISE FUNDS

(By Allison Danzig)

Clifford (Tip) Goes was born upstate in the Cherry Valley country of the Leatherstocking Tales, not many miles from Cooperstown.

By rights, any boy raised in the vicinity of pellucid Glimmerglass Lake just had to be a baseball player. For was not that where in 1839 Abner Doubleday was supposed to have taken a stick and diagramed in the dirt the field for the game he had invented and given the name of baseball? And was not that game to become the national pastime, with its heroes enshrined in a Hall of Fame on that spot of hallowed soil?

But baseball wasn't for young Tip. Like most of the lads of Richfield Springs, Warren, and Cooperstown, he knew his way around with a bat and a ball and a mitt. But destiny had tapped him for fame in a sport that has nothing in common with baseball other than the qualities required to excel. And he was to betake himself some distance from Cooperstown, past West Winfield, Bridgewater, and Cazenovia, on to Syracuse, to achieve a fame that has become international.

A LAKE BRIDGES A GAP

Yes, there was something in common. There was Onondaga, the Glimmerglass of Syracuse. It wasn't pellucid, particularly when the wind was from the wrong direction. But across its broad bosom, fragile cedar craft known as shells might venture in safety and race in equality, and it was in these spidery varnished beauties that Tip Goes rode to fame.

One of the famous coxswains of his day as the man who barked the orders and steered the course for the championship Syracuse eight of 1913 and also for the 1914 varsity, Goes has become the most famous of all active rowing referees. He has become more than that. He is Mr. Rowing himself and head of the United States Olympic Rowing Committee, and honors have come to him at home and in foreign lands where he has officiated and helped in the development of the sport.

More than anyone else, Goes was responsible for the building of the James A. Ten Eyck Memorial Boat House at Syracuse. More than anyone else, he persuaded the board of stewards of the Intercollegiate Rowing Association that Onondaga was the best and fairest body of water on which to hold the Poughkeepsie regatta. And he is the donor of the Tip Goes trophy, competed for annually by Navy, Cornell, and Syracuse, and honoring three of rowing's most famous coaches, Charles (Pop) Courtney, of Cornell; Ten Eyck, of Syracuse; and Richard C. Glendon, of Navy.

DINNER GIVEN IN 1952

No wonder that Syracuse University, from which he was graduated cum laude and which he has served so faithfully as alumni trustee, has honored him repeatedly. He has been cited, too, by numerous other organizations, including the Boy Scouts of America, for distinguished service, and the Syracuse University Club of New York, which tendered him a testimonial dinner in 1952.

While carrying on his activity in rowing, which takes him to Europe annually, Goes has gained eminence in his professional career as a tax consultant in the utility field and a contractor and realtor who designs and erects residential and commercial structures. Honors have come to him in this field, too, including appointments from Governors Alfred E. Smith, Franklin D. Roosevelt, Herbert Lehman, and Thomas Dewey.

As chairman of the United States Olympic Rowing Committee, Goes has been occupied for many months in raising the $92,000 needed to send our oarsmen and scullers to Melbourne, Australia, for the games in November and December. At the same time he has been active in lining up eights, fours, pairs and scullers to compete in the Olympic trials and in setting the stage for this event. The trials will be held on Onondaga June 28, 29, and 30, following the IRA championships there next Sunday, and he will referee on both occasions.

STOP IN JAPAN IS PLANNED

He will go to Melbourne for the games and on his return trip he will stop in Japan. Except for the countries behind the Iron Curtain, there is hardly one in Europe he has not visited. He has officiated in the European championships, in the Pan-American games in Buenos Aires, and Mexico City and the Olympic games in Helsinki.

Next to his business, rowing has been Tip Goes' big interest since he got out of the Army, in which he served 19 months overseas during the First World War. He plays golf often and while in preparatory school he was devoted to football, which he coached at Rutgers Prep and which he still follows keenly.

But nothing gives him the pleasure of standing in his launch, with the wind and sun on his face, his megaphone to his lips and a dozen boatloads of rangy athletes waiting tense and expectant for his "Ready all, row" to send their delicate shells flying over the water. And his pleasure is doubled if the water is his own Onondaga, where he achieved fame some 40 years ago and to which he has brought the two biggest regattas of this Olympic year.

Address of State Senator Thomas J. Cuite, of Brooklyn, N. Y., Delivered on Occasion of 100th Anniversary of the Church of the Holy Family in Latrobe, Pa., on Sunday, June 10 1956 at Sportsman's Hall, St. Vincent's College

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. KELLEY of Pennsylvania. Mr Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Mr. Chairman, Your Excellency, very reverend and reverend clergy, distinguished guests, and friends, although I am a member of the senate of the State of New York, and notwithstanding the fact that I have spoken on many occasions as the national and, later, as the past national commander of the Catholic War Veterans of America, it is not without some misgivings that I appear before you.

Invariably, I have found that in an audience such as this, there are men more gifted in wisdom; more abundantly blessed with understanding and knowledge; more experienced and more qualified to discuss a topic or subject than the individual who is referred to nowadays as the "guest speaker." That is certainly true this evening.

Frankly, it would be preferable and certainly much more enjoyable, from my standpoint, if our positions were reversed and if you were to give me the benefit of your views, opinions and experiences instead of having to listen to any of mine.

It has been said, and is sometimes believed, that our laws express or reflect the wisdom of the Nation, or State, as well as the people to whom they apply. We know, however, that laws—all laws—are not better than the minds in which they are conceived. We realize also—and it is only too true—that the men who make our laws, whether it is at Washington or in the 48 State capitals, have their limitations. They are just ordinary human beings. They are neither all-wise nor all-knowing. Like all the rest of us, they are prone to error, and the occasions are not altogether rare when their efforts are rudely jolted or surprised.

So, tonight, my experience may be somewhat like that of the father who decided

the time had come to acquaint his adolescent son with the some of the facts of life. After some soul-searching and not without some hesitation, he summoned enough courage to invite his youngster into the living room. After carefully closing the door he cleared his throat and said:

"Son, your're getting on in years now. I'd like to have a good heart-to-heart talk with you."

"Sure, Pop," the boy answered instantly, "What do you want to know?"

Now, unlike this bright precocious youngster I am not sure it is possible for me to tell you much or even a little of what you would like to know. In our day and age there is, indeed, much we need to know, much we would like to know. But to many of the problems and questions confronting us there are, unfortunately, no simple, readymade answers.

For example, if our positions were reversed or if we could exchange questions and answers, I am sure there is much you good folks could tell me. For instance, as a resident of Brooklyn and a loyal Dodger rooter, one of my questions to you might be: "What has suddenly transformed your Pittsburgh Pirates into the remarkable team they have become?" Then, in turn, you would be equally justified in asking me: "What's happened to the Dodgers?"

If time permitted it would be most agreeable, of course, to discuss such a diverting topic as baseball.

Again, if time allowed, nothing would please me more than to describe for you some of the things that are occuring in my hometown, the Borough of Brooklyn and the city of New York, where vast transformations are taking place almost daily.

Just recently, as many of you know, there was completed the new colosseum, a building which will help to accommodate the 3 million visitors who come to New York for conventions and exhibitions each year. We are told, the total exhibition area of this building is equivalent to nine football fields, and that if all its facilities are fully utilized, including a 20-story office building that is part of this project, the colosseum will hold a population of 30,000 people.

Although this is a great institution it could not have been built, of course, without the products of your vitally important steel mills that are so essential to our national economy and security. In our magazines we read that 13,000 tons of fabricated steel and 4,000 tons of reinforcing steel bars were used in this structure.

In my own Borough of Brooklyn the Navy completed at a cost of about $200 million, and recently commissioned, the giant aircraft carrier *Saratoga*, the largest and mightiest warship ever built. The *Saratoga* is almost three football fields in length and from her keel to top of her foremast, is higher than Niagara Falls.

Although, as I have said, the *Saratoga* was built in Brooklyn, her construction would have been impossible, of course, without the steel and other necessary materials produced in our Nation's factories.

I merely cite the coliseum and the *Saratoga* to you as two examples of our dependence upon one another—a day-in and day-out process, which helps to unite us as a nation and people, and helps to form what is known today as our American way of life—our freedom, our culture, the rights we are guaranteed under the Constitution, our economy and all the additional blessings we enjoy under our form of government.

Like your own General Assembly here in the great Commonwealth of Pennsylvania, the Legislature of the State of New York is one of the oldest lawmaking bodies of the United States. It dates from 1777, the same year which saw General Washington's army encamped at Valley Forge, and just 1 year after the signing of the Declaration of Independence.

Although it is now a number of years since I began serving in the Senate of the State of New York, I am frank to say that the legislative process is one which never ceases to impress me I am impressed, for example, and also somewhat awed, at the number of bills introduced and the number which become law each year.

Since 1946—a period of 11 years—there has not been a single year when fewer than 5,000 bills were introduced. In that same year 1946 a total of 1,002 bills were enacted into law. Since 1950 the number of bills introduced has exceeded 6,000 in each session. And this year, although less than 1,000 new laws were added to our statute books, the number of bills introduced in the 2 houses of the legislature rose to a total of 7,455.

I am not being critical of this vast amount of legislation which comes before us each year. As a matter of fact, there are a number of bills which I deem it necessary to introduce.

But, the thought keeps recurring that if, perhaps, all of us would just pay a little more attention to the Ten Commandments, it would be unnecessary for the Congress and our State legislatures to keep adding tens of thousands of new laws to our statute books.

We recognize, of course, that in changing times and under changing conditions, new laws are necessary. We would be unwise, however, if we failed to recognize, also, that our system of lawmaking, like the system of government under which we live, has its weaknesses and imperfections.

But with all these weaknesses, we know and proudly maintain that our system of government, with its democratic processes, is the best which exists on earth today. It is a system of laws, and not of men, which stands in direct contrast—yes, in striking opposition—to the Communist dictatorship which now rules one fourth of the earth's surface and one-third of the world's population.

One of our national publications pointed out with timeliness and truth not long ago that while Soviet Russia never ceases to denounce what it calls "colonialism," the empire of Soviet Russia is the only one which never stops growing and becomes larger all the time.

You know as well as I do the sorrowful fate of the many formerly independent nations—Poland, Estonia, Latvia, Lithuania, Czechoslovakia and many others—which have been swallowed up, together with their brave people, so that today they have been wholly incorporated into the Soviet Union or are allowed to exist as Soviet satellites.

The fact is that, while the United States and the other free nations of the world, since 1900, have given independence to 22 countries with nearly 700 million people in 9 million square miles, Soviet Russia's domination today extends to 13,400,000 square miles and 923 million people.

These statistics are so staggering they are hard to grasp and digest. Indeed, you may inquire why I choose to emphasize them, and why I ask you to keep them in mind.

The answer, my friends, is that I and many others like me are convinced the menace of communism—the very real and grave danger this worldwide conspiracy represents to us and to all we hold dear—has never been greater than it is today.

I say this to you not only as one of your humble fellow citizens; not only as a legislator, and not only as a former national commander of the Catholic War Veterans of America, I say it as one who, like some of you younger men here and the sons of some of you older men, wore the uniform and served in our Armed Forces during World War II.

During that war Soviet Russia pretended to be our ally. She begged and demanded lend-lease, and received it along with inestimable additional aid. But while we were supposedly united in a struggle against the common enemy, during all this time Soviet Russia continued and stepped up its system of espionage and sent here its spies in the guise of purchasing agents.

To this day the Russian people have not been told the full extent of American aid which Soviet Russia received during the war.

During that struggle, as you know, solemn international agreements were made—agreements to which the Soviet rulers committed themselves—and were never kept. In fact, it became clear all too soon that the rulers of this Communist conspiracy never had any intention of keeping their pledges and violated them at almost every opportunity under their policy of treachery and deceit. The entire record of Communist intrigue is so well documented it is unnecessary for me tonight to review it in any detail.

In 1953 Josef Stalin came to his end, so we are told, from the effects of a brain hemorrhage and within a few days his mummified corpse was borne with the highest honors to Lenin's tomb in Moscow's Red Square.

During all the years of his dictatorship, and as long as it served the purposes of communism, this human monster was fawned upon by those near him and was exalted and almost deified to the Russian masses. Indeed, as the New York Times stated only a few days ago, Stalin, under communism, was portrayed as a "scientific genius, an infallible politician, a learned theoretician, a profound writer, a triumphant general, and indeed a demigod."

After Stalin's death a struggle for power ensued. Comrade Khrushchev emerged as the new Communist boss of the Kremlin and all Russia, and for 2½ years it served his purpose, along with Comrade Bulganin, Comrade Mikoyan, and Comrade Kaganovich, to consolidate their power and to devise new Communist tactics.

It is necessary to remember that these men were Stalin's favorites, his partners, and accomplices during the shocking years of hideous Communist crimes.

But, for their purposes and for the purpose of communism it was deemed necessary to present a new front to the world, a new and radically different policy, to divert attention from the monstrous record of Communist conspiracy, brutality, and terror. It was decided that a scapegoat was needed. And, so, 2½ years later—in February of this year and during the 20th Party Congress in Moscow—there began what has become known today as the downgrading of Stalin by the men who were his former partners in crime. Of course, downgrading is not the word for it. In plain language, he was to be shown, at last, for what he was, a savage, half-mad beast, complete with tail and a pair of horns. These have now been given him.

It was stated and widely reported in the press that at this congress the party boss Khrushchev placed the guilt for the politcal murder of 7,000 innocent men at Stalin's door. But with typical Communist deviousness and crookedness, the finer details of Khrushchev's speech to the party congress were never broadcast by Moscow radio to the Russian people. Instead, it was leaked to Communist agents in a gigantic whispering campaign and is only now making its appearance in foreign chancelleries and embassies. Only a few days ago, a large part of this speech appeared in our newspapers.

Here, in its audacity, was an astounding effort by the men who were Stalin's willing tools in mass murders, the forced deportations, and the enslavement of millions of human beings, to persuade the world that it was one man, Stalin, who was responsible for the crimes of the past. Nowhere in all this welter of words has there been a single admission that here was one of the bitter fruits of communism, and that a condition such as this could spawn only under a totalitarian dictatorship like Soviet Russia's.

This was a calculated effort to wash their own blood-stained hands; to absolve and

clear themselves, and to draw about them the cloak of respectability. Above all, it was a fantastic invitation to the nations of the free world, including our own, to engage in a mass demonstration of self-hypnosis; to forget all about the past; to forget the Communist slaughter of priests and brothers in Spain; the ruthless extermination by starvation and other methods of millions of people in Russia and the satellite countries; the known persecution of Jews under the present Soviet regime; the shameful mistreatment of Cardinals Mindszenty, Stepinac, and Wyszynski, and all the other horrible crimes of communism against freedom, religion, and human dignity.

If it were not an insult to Houdini's memory one would be tempted to say that Houdini at his best was but a rank amateur in comparison to what the Kremlin bosses were attempting.

My friends, before and during World War II, we learned how Hitler and the Nazis developed the technique of the big lie. Yet Hitler's big lie appears puny in comparison with the monstrous deceit Moscow is now attempting to peddle to the world.

Also during the Second World War there came into use another term—boobytrap. It is a term which deserves to be revived and remembered today when the world is being showered with Moscow's propaganda of peaceful coexistence and the almost daily exhibitions of Soviet smiles, happy talk, and receptions in the Kremlin. There is not, of course, the slightest intention by Soviet Russia to remove its heel from the necks of the nations it has subjugated. It has no intention of granting even token freedom to a single satellite.

Let us bear this in mind: No matter how much the mask of communism is changed, the more its evil intent remains the same.

As another of our metropolitan papers stated, and I am quoting from the New York Herald Tribune: "The aim of the Soviet Empire, whether it be collective or individual dictatorship, is to conquer. There is not the slightest evidence of deviation from the goal of global communism. Only the method of attack changes, and the one central challenge to the free world now is the new Soviet economic and political offensive. * * * The cold war has by no means ended; the struggle has just become more complex."

It is the very complexity of this new attack which may cause weak and wavering people in the nations of the West to relax their vigilance, to become complacent, and to fall prey to Communist blandishment.

But we of the faith know that, above all, communism at the center is a godless tyranny, which defies God, denies the God-given rights of man, and suppresses the basic freedom of speech, the press, religion and assembly.

If the world today is beset with doubt and confusion over the new Soviet policy, let the world heed the voice which has come down to us through the ages. Sometimes it whispers, sometimes its tones are stronger, but its eternal truth never varies or changes.

"Beware of false prophets, who come to you in the clothing of sheep, but inwardly they are ravening wolves."

You recognize this voice—the voice of our Divine Master—speaking to us through the Gospel of St. Matthew. And again the voice tells us:

"Every good tree bringeth forth good fruit, and the evil tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can an evil tree bring forth good fruit. Every tree that bringeth forth not good fruit shall be cut down and cast into the fire. Wherefore, by their fruits you shall know them."

My friends, it is necessary to know and understand, and it is just as necessary to use the knowledge we possess.

You may ask: What is it we can do?

My answer is that you—all of us—must fight communism at every turn. We must do this both as men of faith and citizens of our beloved country. We know that just as communism and all other totalitarian doctrines suppress and destroy the individual's sense of freedom, they also relieve men of all personal responsibility, except blind obedience to the state.

As citizens of a free nation, a sense of freedom is ours, and with it there is personal, individual responsibility and no blind obedience to the state. And all of us must do our share to protect and preserve that freedom and must exercise to the fullest our individual responsibilities as citizens. This we must do, not only as citizens, but as Catholic men, for we are commanded to do it through Catholic action, as well as community action.

Less than this we dare not do; at least this much we must do, for we owe it to ourselves, we owe it to our families, we owe it to our country, and we owe it to God.

Federal-Aid Highways

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks I include an editorial from the Boston Herald of June 8, 1956, entitled "Highways or Handouts?" It gives strong support to the House plan for the distribution of Federal aid for the 40,000-mile Interstate System in preference to the Senate plan.

The editorial follows:

HIGHWAYS OR HANDOUTS?

The recordbreaking new $37.6 billion Federal highway program is now deadlocked between the two Houses of Congress and threatens not to come out. The issue, ironically, is not the size of the program or the taxes to finance it, but how the spending is to be distributed among the several States.

It would be tragic if this vital program were killed or postponed because the two branches could not agree on this point.

In the version approved by the House funds to build and improve the National Interstate Highway System (roughly $25 billion out of the $37.6 billion total) would be distributed according to need. That is, they would be spent where the Bureau of Public Roads said they needed to be spent in order to complete the system in the next 13 years.

In the Senate version the available funds would be distributed according to a formula set down in the Highway Act of 1954. Each State would receive an annual share based two-thirds on population, one-sixth on mileage of rural free delivery routes, and one-sixth on geographical area.

Each formula has something to be said for it. Under the first, one group of States would get more money; under the second, another group would benefit. But the issue is really not that complicated.

We have only to decide what purpose the bill is supposed to serve. If, as the sponsors say, it is supposed to complete an integrated national highway system, then surely the money should be spent where and as it is needed, which is to say, according to the House plan. If the bill is aimed simply at bailing out the States by passing around some more Federal funds, then the Senate formula makes more sense. That is what it comes down to.

Under the House plan Massachusetts would get about $365 million more than under the Senate one. We can't say that this doesn't influence us. Massachusetts has been going all-out on highway building the last few years and it needs all the help it can get to complete the job. But we are not just being selfish.

Logic is all on the side of the House approach. The 1954 formula was devised not to provide a specific road system but to divide up a specific and relatively small sum of money. It doesn't fit the 1956 situation at all. Under it some States would actually get more money than they want or need to finish their part of the highway network. Others, like Massachusetts, would get less.

The Bay State would, in effect, be asked to finance both its own Federal road program and unnecessary Federal programs elsewhere, a stupid as well as an unfair arrangement.

The House and Senate conferees should agree to the House distribution plan. But, if that proves politically impractical, they should compromise on Senator BUSH's plan, which would apply the Senate formula for 2 years, then switch to distribution according to need.

That is the least that can be asked.

Labor Racketeering

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. BASS of New Hampshire. Mr. Speaker, my colleague from New Jersey [Mr. FRELINGHUYSEN] has been endeavoring to secure a thorough investigation of labor racketeering. In this he has received my full support. Under leave to extend my remarks, I should like to include in the Appendix of the RECORD two editorials; one from the June 8 edition of the Daily Eagle, of Claremont, N. H., entitled "Should Unions Be Investigated?" and the other from the June 16 edition of the Washington Post and Times Herald entitled "Racketeers in Labor."

The editorials follows:

[From the Claremont (N. H.) Daily Eagle of June 8, 1956]

SHOULD UNIONS BE INVESTIGATED?

Many of the thousands of union members of the Twin State Valley are interested in the labor movement as a whole. They realize that important trends sooner or later affect all unions, even the locals in the cities and towns of New Hampshire and Vermont.

Thus many of these union members who have the wider view must have been curious as to whether Congress would accept Victor Riesel's challenge that it investigate racketeering in unions. Although there's not much chance that such an investigation would directly affect valley locals, there's a good chance it would touch at least some of the international unions with which the valley locals are linked.

Congress has ducked this challenge.

This is unfortunate, for such an investigation would be good for the union movement.

It might, it is true, give honest men who believe intensely in this movement some unpleasant moments because it would be likely to place great stress on rotten spots.

Some of these honest men might claim that such stress would give all unions a black eye.

We admit the possibility of such a temporary reaction, but the investigation would be worth the risk because something certainly should be done to spotlight and stop the trend to brutal dictatorship, as well as direct or indirect links with gangsters in such outfits as the International Longshoremen's Association, some New York garment industry locals, and, apparently, the teamsters.

A congressional investigation would not, of course, be a complete answer, but it could be the start of an answer. We remember that the Kefauver investigation was the first step in sending a number of crooks to jail, or at least spotlighting them out of power.

If similar steps are not taken soon on the labor scene, the crooks and dictators are likely to become so firmly entrenched they can seriously contend with decent labor leaders like Meany and Reuther for the leadership of the AFL–CIO.

But that struggle for supreme power is still in the future.

It's the present situation that bothers us. Some incidents of outrageous injustice have been reported in a handful of powerful unions. It seems to us that all decent union leaders and members would want the conditions that breed such incidents spotlighted and corrected by the most effective means at hand.

Facts presented almost daily by such columnists as Riesel and Pearson and such papers as the New York Times and the Herald Tribune indicate that thousands of union members are being treated badly and even brutally. If the labor movement is to maintain its ideals and sense of justice, action is imperative.

It's true that AFL–CIO President Meany has been honest and courageous in meeting this challenge. But his power to deal with the problem is severely limited. Certainly he can slap down Teamster President Beck when he tries to aid the disowned longshoremen's association, but Meany can't do much about the bad situations existing within either the longshoremen's outfit or the teamsters.

We think a congressional investigation would bring out the facts so clearly and dramatically that men like Meany and Reuther would get the backing of the memberships of the small number of badly run unions, backing which is absolutely necessary for effective cleanup action.

Our strong desire for such a cleanup is based on deep respect for the finer elements of the labor movement, the decent methods of the great majority of labor unions and the sincere high ideals of many labor leaders.

[From the Washington Post and Times Herald of June 16, 1956]

RACKETEERS IN LABOR

Organized labor as well as the general public ought to give support to Representative PETER FREYLINGHUYSEN'S proposal for an honest, dispassionate, searching congressional look at the problem of racketeering within labor unions. Mr. FREYLINGHUYSEN is no labor baiter; and the probe he has suggested is no more an attack on organized labor than an investigation of lobbying is an attack on public utilities. The sober, responsible and public-spirited men who are predominant in the AFL–CIO continue to be plagued by elements in the labor movement who are vestiges from a less stable past; some of them have underworld connections and some are not averse to strong-arm techniques. The distardly attack on Victor Riesel a few weeks ago was only the most sensational among a number of instances of goon tactics. A carefully limited, constructive study of the problem by men of Mr. FREYLINGHUYSEN'S stamp could help labor rid its ranks of these parasites.

Gold

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. HORAN. Mr. Speaker, under privilege granted me to extend my own remarks in the Appendix of the CONGRESSIONAL RECORD, I am pleased to include a letter by Frank Lilly, a mining consultant and economist of Spokane, Wash., on the subject of the present gold situation.

I think the Members and all readers of the RECORD will find this letter of tremendous interest.

The article follows:

SPOKANE, WASH., *May 1, 1956.*

UNITED STATES GOLD COMMITTEE,
Washington, D. C.

GENTLEMEN: The reasoning of your chairman, in his recent letter, that "a free market for gold is not very far away because as the Treasury Department, in finally lifting all restrictions on the private ownership of gold coins, has gone all the way except the final step," is sound and I share his thought that now is the time to renew the effort to obtain "gold stabilization at an increase in price based on the average increase in price which has taken place in all other commodities."

I am, therefore, glad to comply with his request for copies of my recent studies covering pertinent facts relating to the price of gold, and for an expression of my "thinking as to the attitude and procedures that may best be adopted in our effort to get the early action toward the resumption of gold coinage."

Your chairman's proposal to present the committee's views on gold to both the Democratic and Republican National Committees is right to the point. In this connection, the Democratic Committee should be reminded that President Roosevelt emphasized that the action he took in nationalizing gold was only an emergency measure and that he planned later on to reestablish gold convertibility. The Republican Committee should, of course, be somewhat curtly reminded that the 1952 Republican platform contained a plank, introduced by Governor Herter, of Massachusetts, and unanimously approved, that pledged the party to provide "a dollar on a fully convertible gold basis." Incidentally, the sound, honest money that only gold convertibility can provide should not be a partisan matter.

Since our metal commodities are, more than any other group of commodities, the essential and determining factor in this country's industrial economy, I submit the following figures evaluating their present price status in terms of the equivalent price of gold:

	Price on metal commodities Jan. 31, 1934, when price of gold was set at $35 an ounce	Present price	Price gold would now be if it had increased proportionately
			Per ounce
Copper...per pound	$0.08	$0.46	$201.25
Lead.....do	.04	.16	140.00
Zinc.....do	.04¼	.13½	123.52
Pig iron.....per ton	19.50	58.50	105.00
Average			142.44

I did not include the rare and/or strategic metals in the foregoing table, for while a strategic metal, such as nickel, for example, is absolutely essential to our industry, only very small amounts of it can be obtained except in the black market, "at prices ranging from $2.50 to $3 a pound." (See CONGRESSIONAL RECORD, pp. A2866 et seq., Apr. 10, 1956.)

Note, however, that a price of $2.80 a pound for nickel, which is the price paid for 75 percent of the nickel purchased currently, compares with 35 cents a pound on January 31, 1934; and that if gold had advanced proportionately in price, it would now command $280 an ounce.

There are, of course, many comparisons illustrative of the fact that gold at $35 an ounce is greatly undervalued or, if not, that the prices of most commodities are greatly overvalued; and if the committee so desires, I will submit tabulations on other groups of commodities it may suggest.

Of even more significance than price comparisons of most commodity groups, however, is the fact that since January 31, 1934, the volume of both our national and private consumer debts has increased tenfold and our foreign short-term dollar liabilities, which are payable in gold on demand, over eightfold. Meanwhile, our volume of gold has increased only a little over 2½ times, and most of this is in hock to foreigners.

An analysis that I made early last year of figures on United States gold assets and liabilities disclosed the surprising fact that as of January 1, 1955, our gold liabilities—consisting of the amount required as a (1) legal monetary reserve of 25 percent against Federal Reserve notes and bank balances and (2) foreign short-term liabilities—exceeded our gold holdings by over $3 billion. In other words, by 1955 we found ourselves with a gold deficit of over $3 billion as against a gold surplus of nearly $5 billion in 1934.

Under the title, "Who Owns the Gold at Fort Knox?" U. S. News & World Report on February 23 last, made an analysis, covering the figures up to September 1, 1955, from which I quote, in part, as follows:

"United States position in gold is becoming vulnerable, in the event of war or financial crisis. Billions of possible claims on United States gold are piling up in foreign banks. The result could be trouble if anything happens to weaken foreign faith in the dollar.

"The United States, which is used to thinking of itself as having an abundance of gold, now finds that, in an emergency, it could be caught short. Foreigners actually could drain away more than half the gold in Government hands, including the huge hoard at Fort Knox, Ky.

"The United States now holds $21.8 billion worth of gold. The pile seems big enough to inspire confidence. On closer study, however, it appears that $13.8 billion of the gold is in hock. Foreign governments and firms have that much in business claims and United States dollars which they can exchange for gold at any time. These claims on United States gold are officially known as short-term liabilities of the United States.

"That leaves $8 billion of United States gold. However, the law requires $12 billion of gold backing for United States money, figured on the basis of $25 gold for every $100 of currency in the form of Federal Reserve notes and deposits in Federal Reserve banks. Thus, if foreigners were to claim all the gold they are entitled to, the United States would be short of meeting the legal requirement by $4 billion."

This short position in our gold holdings contrasts with a long or surplus position of $10,772,000,000 which we had achieved in 1941 when our foreign short-term liabilities payable on demand in gold totaled only $3,679,000,000 as compared with approximately $14 billion at the present time. In other words, the $10,772,000,000 surplus we had 15

years ago is gone and we are now in the hole over $4 billion.

This is truly a dangerous position, particularly in view of its similarity to the situation that developed during the 1926–29 boom period when foreigners were gold-cashing-in on their dollar balances; and which situation continued until by 1933 foreigners had converted a full 87 percent of their balances. The conversion, presently, of only 50 percent of current foreign-dollar balances would reduce our gold holdings by $7 billion, leaving the United States with only $1 billion of gold in our monetary reserve (which should legally total over $12 billion).

Of course, such a conversion may not take place, but it could, and the possibility should not be discounted. In this connection, I quote again from the U. S. News & World Report of February 23, which I hope is correct in its view that:

"Our Government is considering what steps to take if the drain on gold approaches a danger point, because officials recall that a flow of gold out of the United States in 1931–32 hampered efforts to overcome the depressoon."

However, the magaine goes on to say:

"So far, the official decision is to study the situation but do nothing that might arouse concern abroad. Meanwhile, the United States finds huge resources of gold and dollars piling up in foreign hands, while the United States gold reserve is weakened."

Because danger signals are seldom apparent, to those who look no farther than their noses, so to speak, it appears that "all's well" with this country's present economy and that there is accordingly no reason to be disturbed about our gold situation. This was also the attitude of most people in the 1926–29 boom period. Even after the "bust" in the latter part of 1929, the nothing-much-to-worry-about attitude continued; prosperity was just around the corner. The corner, however, kept receding, and we were never able to turn it until the gold-cure-price increase was finally applied to an almost dead economy.

The best way to judge the future, of course, is by the past, especially when confronted with almost identical situations. Accordingly, in view of past experience and the situation in which we presently find ourselves, it daily becomes more evident that application of the gold-cure-increase in the working value of gold which was given to our economy belatedly in 1934 (at the depth of a depression that could have been prevented by earlier action toward meeting the higher value given to gold in the British economy through its 1931 devaluation of the English paper pound) should again be made, and as quickly as possible.

Our Government, very soon, either by congressional action, or by action of the President under powers vested in him, should go all the way in assigning to gold a price that will give it parity with the working value at which it is used in the economies of the world's leading industrial nations.

In determining the value that should be assigned to gold at this time, there are, naturally, many factors to take into consideration. For example, we must consider not only the British gold price equivalent of $102.17 an ounce, on the basis of convertibility at legal monetary parity, but also, whether we like it or not, the Russian equivalent, which is $130 to $140 an ounce. The fact that our industrial metals, on the basis of present prices as compared with January 31, 1934, have now an average working value in our economy equivalent to $142.44 an ounce for gold becomes highly significant, and indicates that the British and even the Russian equivalents are not at all out of line with gold's true value.

But regardless of the value finally settled on for gold, as an immediate step the very least that should be done is to enact into law either the Case (Republican) or Engle (Democrat) bills, which would give United States citizens the right to an open gold market in which they might, as they wished, freely buy or sell the metal, a right now enjoyed by citizens of every leading nation in the world except Russia, China and the United States.

Sincerely yours,

FRANK LILLY, *Research Statistician.*

The Constitution and the Supreme Court

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. SMITH of Mississippi. Mr. Speaker, the Honorable Forrest G. Cooper, of Indianola, Miss., recently delivered a scholarly and thought-provoking address before the Greenville, Miss., Rotary Club. Mr. Cooper's views on the dangers confronting our constitutional system as a result of abuses in judicial power are worthy of the attention of all Members of Congress. By unanimous consent, I include his address, as follows:

THE CONSTITUTION AND OUR SUPREME COURT

(Speech delivered by Forrest G. Cooper, of Indianola, Miss., before the Greenville, Miss., Rotary Club)

I am deeply honored at the invitation of the Greenville Rotary Club to speak on the Constitution. I know that the members of this club are a cross section of the business, industrial, educational and religious leadership of this progressive community of nearly 45,000 patriotic citizens. You and I of the South crave to be understood. We have no corner on patriotism, tolerance or unselfishness, but we believe that we are also a true cross section of a Nation of people having noble ideals, unselfish purposes and the welfare of the Nation at heart.

We are troubled today because so much of the Nation does not understand us. They are the victims of a program of brainwashing. Our friends in the North and West are being swamped with propaganda through television, radio, editorials, magazine articles, from the pulpit and platform that we of the South are bigoted in our disrespect for the United States Supreme Court and in fact are rebellious in our refusal to bow down slavishly to the whims of the nine appointed judges now on said Court. Some call us traitors.

I want today to rivet our attention on the Constitution quietly without passion. We must turn first to the formation of our Government. We must hastily review the adoption of our Constitution.

When the 13 sovereign States met in convention to write a constitution and to form a government, they followed no precedent. The world has always admired our unique Government, marvelous in its imagination, profound in its soundness. It was a government of dual sovereignty. Thirteen sovereign States established a sovereign United States. The States surrendered to the United States certain specific powers. These powers are all set out in the Constitution. Time will not permit giving a detailed list of these areas of sovereignty. To illustrate: The Federal Government was given exclusive sovereignty in the fields of national defense, coining of money, operating post offices, etc. The original Constitution spelled out the Federal powers. I have read the discussions in the constitutional convention and now state that no where in the discussions was there any suggestion that the Federal Government would be given any authority or control or responsibility in the field of public education. Read the Constitution from beginning to end and you wil find not one word therein intimating that the Federal Government has any duty or responsibility in connection with schools or education.

Delegates seemed to understand that all powers and sovereignty not specifically given to the Federal Government were retained by the States and the people. But the original Constitution did not say so.

Remember that the constitutional convention merely proposed to the States the form of government and wording of the Constitution. It was then sent back to the States for ratification.

It is interesting to note that when this marvelous and world famous instrument of writing was being considered by the States for ratification, that nearly all of these States brought up the question that the Constitution failed to reserve in so many words all powers not given to the Federal Government. Without such reservation, these States felt that unmentioned powers might be automatically considered as going to the Federal Government. Therefore, a majority of the States would not ratify the Constitution until they had the specific assurance that the Constitution would be amended to this effect. For instance, Massachusetts wanted it thoroughly understood that: "That it be explicitly declared that all powers not expressly delegated by the aforesaid Constitution are reserved to the several States to be by them exercised."

Rhode Island said: "The United States shall guarantee to each State its sovereignty, freedom and independence, and every power, jurisdiction and right, which is not by this Constitution expressly delegated to the United States."

New York said: "That the powers of government may be assumed by the people, whensoever it shall become necessary to their happiness; that every power, jurisdiction, and right, which is not by the said Constitution clearly delegated to the Congress of the United States, or the departments of the Government thereof, remains to the people of the several States, or to their respective State governments to whom they may have granted the same."

South Carolina sid: "This convention doth also declare that no section or paragraph of the said Constitution warrants a construction that the States do not retain every power not expressly relinquished by them and vested in the general Government of the Union."

New Hampshire said: "First that it be explicitly declared that all powers not expressly and particularly delegated by the aforesaid Constitution are reserved to the several States."

North Carolina said: "That each State in the Union shall, respectively, retain every power, jurisdiction, and right, which is not by this Constitution delegated to the Congress of the United States, or to the departments of the Federal Government."

And finally, Virginia said: "First, that each State in the Union shall respectively retain every power, jurisdiction, and right which is not by this Constitution delegated to the Congress of the United States or to the departments of the Federal Government."

Let me further remind you that in the discussion in these States on ratification not one voice was raised anywhere that the Federal Government would have any powers except those specifically mentioned in the Constitution. When a majority of the States therefore declined to ratify without this promise, this became on the prime reasons for the famous Bill of Rights, the first 10

amendments to the Constitution. In less than 9 months after the Constitution was ratified, the bill of rights was proposed. Let me quote you articles IX and X of the Bill of Rights:

Amendment IX: "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

Amendment X: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

For 165 years down to 1954 no leader, party, court or faction, radical or conservative, had questioned this fundamental fact that the Constitution and the Bill of Rights did not give to the Federal Government any powers not specifically mentioned therein. This Nation grew great, won the respect of the world during those years. Its form of government became the ideal for most of the nations of the world. During most of those years no one in authority questioned the fact that the sovereign States had exclusive jurisdiction, responsibility and power in the field of public schools and public education. The Federal Constitution does not mention the subject. Now look at the 48 States' constitution! You will find that everyone of them, including the Thirteen Original States, specifically mentions public education. For instance seven sections of the Mississippi constitution regulates public education.

Our leaders, including George Washington, Thomas Jefferson, Abraham Lincoln and even Franklin D. Roosevelt recognized these facts.

Now let's look at the Supreme Court and its history. Its duties and authority are clearly defined. At the same time, for 164 years, when many of the greatest jurists in the world's history were members, they recognized that public education was the providence of the States. Let's mention a few: John Marshall, Joseph Story, Samuel P. Chase, Roger Tanney, Melvin Fuller, Edward Douglass White, Charles Evans Hughes, William H. Taft and Oliver Wendell Holmes.

Then suddenly, on May 17, 1954, the present nine members of the court ignored the Constitution, its history, its formation, ignored the wisdom of all the judges who had served on the bench before, began not only to try to take away from the States their recognized sovereign rights, but to concentrate in the Central Government powers and authority not permitted by the Constitution.

My friends, the tendency of the Supreme Court to change the Constitution, to read into it what is not there, to arrogate to itself powers that are not given in the Constitution is a dangerous tendency. It must be curbed. The Supreme Court will continue to take the place of Congress in legislation, will take the place of the Executive in executing the laws and will have the Central Government take the place of the States in the domestic affairs of its people. We want the people of the North and West to realize that the public school issue is merely an outward sore which indicates a malignant disease within.

Now some profess to believe that the 14th amendment gives to the Federal Government the right to control education. Let us see if the Members of Congress had this in mind when the 14th amendment was drafted and argued. The proceedings of Congress will disclose that not one argument was made that the 14th amendment should be adopted in order that the Federal Government could usurp the responsibilities of the States in the field of education. Not only that, but Congress at that very session enacted laws recognizing segregation in the District of Columbia. At that time segregation was universal in the Washington schools.

But the propagandists say the times have changed and the Supreme Court has a right to interpret the Constitution in view of changing conditions. However, it is a fraud for the Supreme Court to change a constitution, just because they believe times have changed.

The leftwingers are trying to brainwash the American people into believing the false idea that no one has a right to question the pronouncement of the Supreme Court. Neither the Supreme Court nor Congress, nor the President can change thte Constitution. All three of them together can't do it. It takes two-thirds of the House and three-fourths of the sovereign States. If changed conditions warrant a changed Constitution, there is a legal way to do it. The States would never have ratified the Constitution if the reservation in the Bill of Rights had not been made. No one can point in the Constitution to any clause which empowers the Supreme Court to say that segregation is unconstitutional. When the Constitution was adopted, segregation was universally practiced. When the 14th amendment was adopted segregation was generally practiced.

The Supreme Court is not a law-making body; the Supreme Court has no right to amend the Constitution. The Constitution is not "what the Judges say it is." The Constitution does not change with a change of Judges on the bench. For 86 years, the Supreme Court said that education was for the States and not the Federal Government.

As an attorney, I have sworn to uphold the Constitution. But so have the members of the Supreme Court. All of us owe loyalty to that document. But I owe no loyalty to any pronouncement of the Supreme Court which tries to read into the document something that is not there. The Constitution does not mean one thing yesterday, another thing today and something different tomorrow. It is not a fluid instrument. It is not something to be bent, torn, rubbed out, and rewritten to suit the whims of nine men. If such is the case, we have no Constitution. It is merely what nine men think it is and changes everytime the Court changes. It is patriotic to interpose State sovereignty, when any one President, Congress, or the Supreme Court deal unlawfully with the Constitution. George Washington in his farewell address said:

"It is important likewise, that the habits of thinking in a free country should inspire caution in those entrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism."

I have great faith in the intelligence and wisdom of the American people once they know the truth. We must get the truth to them. Let us remind our friends in the North and West that the usurpation of authority by the Supreme Court of the United States is dangerous to them also. The end is not in sight. They have recently begun to decide cases without giving the litigants a chance to be heard. The only precedent for this is communism. They are rapidly destroying State statutes recognized for decades as valid on the theory that the Federal Government is the only one to control the citizens. Just recently they, under the leadership of Chief Justice Warren, held that Federal and State employees could not be dismissed even though their loyalty to our form of Government had proved them dangerous. They have recently denied that the States had any right to curb its own citizens who were seeking to destroy our form of Government. Step by step, they are destroying our States, curbing the rights of our citizens to govern themselves, and concentrating power in Washington in people not selected by the people. The Supreme Court is seeking to legislate and take the place of Congress. They are even seeking to assume power to enforce the decrees in systems which invade the executive department.

The shoe pinches our foot now, but tomorrow the shoe will pinch the other fellow's foot. The Supreme Court has gone wild in its lust for power. The States may tomorrow be denied the right of taxation in certain fields, the right to elect its own officials, the right to control its election, the right to enforce its own criminal laws, the right to rely on its own laws for the protection of its citizens, the freedom to run their own business, the privilege of employing competent help. The States are being reduced to puppets. The people are being denied the right to govern themselves. We want our own people to know the truth and we want them to give the truth to our friends everywhere.

Samuel A. Horvitz

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. BAUMHART. Mr. Speaker, on Friday morning, June 15, Mr. Samuel A. Horvitz died in Cleveland at the age of 67. During his life's span Mr. Horvitz rose to prominence in the fields of newspaper publishing, road construction, and real estate development. I am sure that many of my colleagues are familiar with Mr. Horvitz' dynamic and farflung business enterprises and are also saddened to learn of his passing.

When Mr. Horvitz was only 8, his father, an immigrant Lithuanian baker, went blind. Mr. Horvitz went to work to help his family, revealing at an early age the personal drive that was to characterize his later life.

This ambitious drive was recalled in an account of his death appearing in the Elyria Chronicle-Telegram, which, like Mr. Horvitz' Lorain Journal, is published in my district. The Chronicle-Telegram said that Mr. Horvitz "earned a reputation as a fighter and an incisive thinker capable of recalling people and details and facts encountered only briefly years earlier. Many-sided in his business interests, Mr. Horvitz gave to each of them impetus of his own driving determination to make the most of each."

In extending sympathy to Mr. Horvitz' fine and devoted family and to his business associates, I would like to include in today's CONGRESSIONAL RECORD an editorial which was published in the Lorain Journal on June 16. This editorial reflects the sentiments of those who knew and worked with Mr. Horvitz most closely. It is a fitting and touching tribute to his memory:

[From the Lorain (Ohio) Journal of June 6, 1956]

S. A. HORVITZ, JUNE 16, 1889–JUNE 15, 1956

S. A. Horvitz possessed in generous abundance the qualities required of a newspaper publisher who measures up to his task.

Relatively few men and women in other walks of life realize either the challenge or the responsibilities involved in telling a community, day after day, what has happened

to itself and its world. Few know how much courage is required to publish a good newspaper.

Ever since the invention of moveable type resulted in journalism as we know it, this business of laying the facts on the line has been among the most significant of human endeavors. Comparatively few men have any talent for it at all, and still fewer have the perception and the fortitude to do the job as it should be done.

To meet such a challenge, S. A. Horvitz was endowed with rare attributes, and in large measure the endowment was of his own making.

Moral courage was, in truth, another name for Sam Horvitz.

It will be to the eternal credit of the Lorain Journal that the man who made it the newspaper that it is today was, throughout his career, one of the finest exemplars of the American tradition.

A poor boy forced to go to work at the age of 8 because of his father's blindness—the son of hard-working immigrant parents—he demonstrated again in his generation that America is truly the land of opportunity that has been so proudly proclaimed since the beginning of our history.

A pioneer himself in many of his endeavors, he was among those Americans who—whether in business, industry, or one of the crafts or professions—have kept alive the genius of pioneering, the process of blazing new frontiers.

On the economic side, the thing that Sam Horvitz proved basically was that whenever he set his hand to the plow the furrow was bound to be a productive one. If he built a road—and he built many of the finest the world has ever seen—it had to be the best road that could be built under the circumstances, for nothing less would meet the standards he set for himself.

When he turned to newspaper publication, he was equally insistent that the job be done well. It was ever his objective to make the Lorain Journal, in proportion to its size and readership, the best paper that could be found anywhere. To him, no edition was ever good enough so long as there was a demonstrable way of improving it.

Sam Horvitz had ideals that went far beyond the immediate job. Translated into everyday economics, those ideals were of the very essence of our free-enterprise system.

In public affairs, as in business, he was always a leader with the courage of his convictions. He was never a man to compromise with wrongdoing, never one to condone waste or sham, in politics or elsewhere. As a publisher, he was always a resolute defender of the people's interests as he saw them, and no matter how formidable his opposition, fear had no part in his makeup.

Once Sam Horvitz had decided upon a course that he believed to be right, nothing could swerve him from it. Moreover, his qualities of leadership enabled him to impart his courage to others. Always his counsel was, "If you know you're right, go ahead."

With all his ruggedness of character, Sam Horvitz was a kindly man. Again and again he quietly extended a helping hand to aid someone in need, or to further a good career, or a good cause.

Devoted to his home, he was a family man in the highest sense of the words. He reared his sons with wise counsel to carry on his enterprises and perpetuate his philosophy of achievement.

And with his tremendous record of accomplishment, he remained a modest man who shunned the spotlight of personal publicity.

When death came to S. A. Horvitz, it came with dramatic suddenness, and he faced it as he had faced life—fearlessly. As he would have wished, his career was an active one to the very end.

His accomplishments live on, and so does the inspiration of his example.

Radio-Free Europe and the Present United States Psychological Warfare

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by George Brada, Munich, Germany, entitled "Radio-Free Europe and the Present United States Psychological Warfare."

I commend this article to the attention of my colleagues:

RADIO-FREE EUROPE AND THE PRESENT UNITED STATES PSYCHOLOGICAL WARFARE

(By George Brada)

If we study the texts of the programs being broadcasted by American radio stations to the East, we reveal a unique picture how the so-called psychological warfare of America is being used instead of against communism against America and the cause of freedom itself.

The periodical Facts Forum News, Dallas, Tex., carried in its issues of January, February, March, and May 1956 a series of articles picturing the American psychological warfare and I shall try to give a very short condensation of these. Following are the policy lines of the private institution of Radio-Free Europe (a division of the Free Europe Committee Inc., financed by the Crusade of Freedom, by means of the "truth dollars"); however, the very same policy lines are also being carried out by the Voice of America and other United States information media.

When giving a short outline of the main policy lines of Radio-Free Europe's programs, of which quotations and samples of texts have been offered in the Facts Forum News (many identical ones of those can be given in addition), I believe that the best designation for this condensation of main lines of the United States psychological warfare would be a Handbook of Treason.

THE HANDBOOK OF TREASON

The RFE-personnel

In this outline is no place for discussing the RFE personnel. Only a few remarks are to be made. On the American side, there are many names of the Free Europe Committee, mostly New Dealers. The leading figure is the president of the Free Europe Committee, Mr. Whitney H. Shepardson, who holds speeches and makes representations. But RFE employees report that the most important man, however, is the vice president, the allegedly Russian-born Bernard Yarrow.

These Americans have hired for leading positions only former top men of the Communist-led national front regimes in the Eastern European countries (the regimes after 1945). In RFE's Czechoslovak desk, e. g., the Communist collaborators, Ferdinand Peroutka, Jaroslav Stransky, Jan Stransky, Julius Firt, Martin Kvetko, Ivo Duchacek, Ivan Herben, Vaclav Majer, Petr Zenkl, Juraj Slavik, Josef Lettrich, Milos Vanek, Frantisek, Listopad, etc., etc., are leading editors or festival speakers. They were ministers, journalists, deputies, politicians, etc., of the national front; they were Socialists, who carried out or supported the socialization of property, industries, and trade, the suppression of all non-Socialists and non-Communists. The few Christian representatives employed with Radio Free Europe are merely permitted to write religious programs. But they are not permitted to interfere with the Socialist spirit of the political and economic programs. Only the members of the former People's Party are admitted to subordinate positions, who have also cooperated willingly with the Communists and today are also cooperating willingly with the Socialists of RFE.

All those Czech and Slovak political parties and their politicians, who were not in the National Front regime or who once participated, but soon started to speak against this regime in the free world, are fully banned from RFE.

Thus RFE uses only nonrepenting national fronters in all important positions. It uses for its psychological warfare men, who, once by their unintelligence and pro-Communist attitude, helped the Communists in the East and who are today doing the same in the West.

The fact is that the psychological warfare of Radio Free Europe is led by men whom the Communists in the East had themselves chosen for that very purpose. RFE obviously chose the nonrepenting national fronters, because they have one thing in common: they do not understand the international Communist conspiracy and they are pliable tools of communism in the West as they once had been in the East.

But above all let me stress that it is because of their present activities in Radio Free Europe that these men are traitors to the free nations and the peoples in the East.

In the East it was the Communists, who had set the main policy lines, and the national fronters obediently carried them out. In the West, it is the RFE American staff who is setting up the main lines, and again the national fronters obediently carry them out.

The RFE Programs

As can be documented by the texts of its programs, Radio Free Europe observes the following policy lines:

I. Propagation of socialism and leftism and maintenance that no return to full economic freedom is possible

1. Radio Free Europe propagates socialism. As excuse the RFE bosses maintain that the eastern nations are socialistic therefore must be addressed with socialist terms.

2. In this line RFE maintains that no capitalism may be inforced on the Eastern nations and thus American economic successes, measures, and acts are being constantly interpreted by maintaining that in reality the American economy has approached socialism and is or will be socialistic.

3. RFE propagates the Czechoslovak national fronters and Communist collaborators. This, in part, is caused by the fact that former nonrepenting Eastern Communist collaborators and Socialists only are in the positions of editors, but obviously the entire line set up by the RFE American bosses is to uphold national front regimes in programs.

4. Radio Free Europe propagates appeasement toward communism and Communists. RFE has programs for members of the Communist Party and extolls "honest Communists," or Rosa Luxemburg, Karl Liebknecht, etc.

5. Radio Free Europe propagates Titoism. As an excuse for such a propagation, RFE and the American psychological warfare experts maintain that they can lure the satellite countries from Moscow and transform them into new Titoistic countries.

6. Radio Free Europe constantly states (also through the Czech editor in chief, Ferdinand Peroutka, who openly professes to be a Socialist) that, also due to the Communist movement, the world has made great progress, that we are standing on the threshold of a new era and that no return is possible to full economic freedom.

Thus, RFE is only addressing Communists, Socialists, and leftists, who rejoice; it is

leaving in full apathy all non-Socialists and anti-Communists in the East—just as the Communists want it.

II. Radio Free Europe Fights Communism in an Unintelligent and Superficial Way

Radio Free Europe is contantly telling harsh words against communism. By these words they maintain to fight communism. What does this fight look like?

1. They are telling the truth. Most of the broadcasting time has been allotted by Radio Free Europe to never ending reiteration of banalities. We might identify this curious practice as RFE's (as well as of the entire American "psychological warfare") special little game of telling the truth. It goes somewhat like this:

The Communists call the Americans imperialists. Americans are not imperialists. The Communists claim that they want peace; Communists do not want peace.

This endless repetition of these trivialities can only spread boredom and turns away listeners.

In a certain way, Radio Free Europe prides itself of being specific in the stale little game of telling the truth. Thus, they declare, e. g., that there is lack of sugar in Bulgaria, or deficiencies in supply in Hungary, etc. They like very much to quote numbers and statistics. This sort of news is, of course, no news behind the Iron Curtain, yet RFE is spending about 80 percent of time to picture to the people in the East the misery they enjoy at home.

For this method RFE has the support of many naive politicians in the West, who have considered telling the truth the best weapon against communism.

2. Radio Free Europe is preaching the people's opposition.

Until May 1, 1954, this sort of aimless and uncoordinated truth-telling seemed to be RFE's principal task. Then, suddenly, they invented a program against communism—the program of the people's opposition.

This program is a Socialist-Titoist program, calling for honest money for honest work, for the electing of labor functionaries by trade union members, for giving the benefits of production to the people and not to the Soviet Union, etc.

There is nothing in this program which could hurt the Communist system or/and which would call for real economic freedom and which would be against Communist socialism. This program, indeed, could have been devised by the Communists themselves, in order to improve their economy.

It is no anti-Communist program. There is, in the best case, nothing but the indecisive and dull suggestion to reform the present Communist system, to abolish its excesses, to turn it into some form of Titoism or national communism.

3. Radio Free Europe is deriding the Communists, playing theater, calling names, and making reproaches.

There are many plays in RFE and many posed scenes. It seems that RFE failed (or is forbidden) to fight communism on the level of intellect and reason, and therefore fights it by using theater against it. Very numerous comical sketches, fun-times, and jokes are presented every day. You will find many jokes too, among the printed material RFE is issuing for consumption in the West. Indeed, with its ideological emptiness and confusion, the whole Radio Free Europe has become one single shouting cabaret. Furthermore the employees of RFE make complaints and reproaches to their comrades in the East, who have betrayed them and socialism. Indeed, RFE does not fight communism. It is complaining against it.

RFE simply fights communism from the standpoint of unintelligent men and from the Socialist standpoint, which, practically, has the same aim as communism and also hates all capitalists, which differs from communism only by several methods and is blind toward the true system of the entire secret international Red conspiracy.

These three points—telling the truth, the people's opposition, and the cabarets and reproaches—are constituting the entire fight against communism by RFE. Everything else is full sabotage.

III. The Sabotage Committed by Radio Free Europe

Everything else of RFE programs constitutes more than mere stupidity or socialism. The other lines must be called full sabotage. They consist of the following:

1. Radio Free Europe (and the entire United States psychological warfare) gives a false interpretation of communism by representing it solely as a primitive Russian imperialism, a danger from the visible Communist Parties and the Red army, a danger only from without, and by fully suppressing all information regarding the secret international world Communist conspiracy: The danger from within, infiltration of government, universities, press, etc., the facts about the Harry Dexter White case, the real cause for the loss of China, the true reason for Communist successes of the past (including those in Czechoslovakia). RFE (and the entire United States psychological warfare) fully misinterprets the true methods, aims, and accomplishments of world communism. They simply give the Communist interpretation of communism.

2. Radio Free Europe fully protects the real bosses in the East. Radio Free Europe (and the entire United States psychological warfare) stupidly and superficially attacks small pig keepers and tractor drivers or known Communists, and fully protects the Communist system of secret informers, of officers of the secret police, who buy cooperators in using the weak and bad sides of men and nations. RFE conceals completely the truth about the nets of secret informers controlling each other and about the entire "invisible government" behind every facet of life (secret police, journalism, economy, diplomacy) in the East. RFE never mentions the mere existence of this real character of the Communist system in the East.

Radio Free Europe thus blinds the vision of the people in the East, exposing them to lethal danger, and in this manner betrays them.

3. Radio Free Europe spreads actual full lies about the Communist system in the East; it maintains that a certain international group which has formed communism in both the East and the West, since its very beginning, is being persecuted by the Communists in the East and therefore must be anti-Communist. This greatest and most perverted lie of world communism is the "No. 1 lie," which the "truth-telling" Radio Free Europe is spreading and concerns the core of the Communist system. It causes the full and complete perversion of the anti-Communist fight led today by the so-called free world, and the people in the East shiver with disgust and despair when hearing it.

Obviously those fine American politicians, who, from time to time, are coming forth full of well-sounding proposals for the revitalizing of the United States psychological warfare, should take care first of all that the very concrete cases of sabotage in this warfare be removed—above all this sabotage No. 1.

4. Radio Free Europe fully protects also the Communist system in the West. It never, I repeat never, broadcasts to the East the names of American Communists, spies, traitors, fifth-amendment Communists, who have already been rendered harmless. It fully hides before the East the true and real face of the communism in the West (in the same way as it also hides, before the West, the real face of the communism in the East).

5. RFE suppresses every mentioning of congressional investigations on communism. Absolutely never, RFE reports about the work of the legal committees of the United States Senate and the House of Representatives. The people in the East are fully unaware of the vital revelations these committees have made and they are also unaware of the existence of men like JENNER, EASTLAND, WELKER, VELDE, WALTER, JACKSON, DIES, REECE, and others. In this way the people in the East are deprived of any hope, when, by means of RFE's Iron Curtain, they are forbidden to learn any single word about those who really fight communism in the West.

6. Radio Free Europe, as a part of its false interpretation of communism, upholds past mistakes and Western assistance to communism. Thus the Yalta Agreement is being defended by RFE (in the same way as the Czechoslovak National Fronters, the Kosice program of this national front, etc.).

7. Radio Free Europe also informs falsely the East about what is really going on in America. Up to the present, RFE has fully concealed to the East which developments toward a more active anticommunism have taken place in America since the Truman era. The whole 1952 presidential campaign, the aims of Senator Taft, etc., were fully suppressed by and with the empty phrases and slogans of Radio Free Europe.

8. Radio Free Europe preaches bad military and political strategy against communism. This includes the use of great armies and of strategic and atomic weapons on European soil (so different to everything the late Senator Taft proposed)—a thing which is feared by all European nations, including those enslaved in the East.

9. Radio Free Europe discloses the secret ways of escapes of individual refugees. As sensations, Radio Free Europe has often broadcast in detail the roads of escape of those individuals, indicating in some cases even the identity of those who have helped the refugees during their flight. Thus the Communists in the East were able to shut tightly the remaining holes in the Iron Curtain, and potential helpers for future refugees were clearly advised not to do so, since otherwise they would be denounced, too.

10. Radio Free Europe broadcasts lies on individual events. This is quite explainable by the great number of direct Communist agents, who have worked for Radio Free Europe—now back in Prague—e. g., Vladimir Kucera, Marie Dvorakova, Jiri Kalas, Bohumil Lausman, etc. These agents would never be tolerated in an anti-Communist circle—but in Radio Free Europe, among the pro-Communists, they found a friendly and familiar working place.

11. Radio Free Europe wrongly handles the German problem. They do not disperse the fear of the eastern nations before an alleged German will for vengeance. They have fully suppressed every word about the goodwill and anti-Communist attitude of the German expellees. Thus, they try to keep the East afraid of the German expellees in agreement with the wishes of the eastern Communists. In the same way they uphold the expulsion of the Germans just as the Communists in the East are doing.

12. Radio Free Europe gives false economic and similar advices to the peoples in the East, e. g., the advice concerning a coming inflation in Czechoslovakia in 1952, etc.—advices which clearly play into the hands of the economic bosses in the East.

13. Radio Free Europe contributes to the liquidation of the resistance movement in the East by not warning the people of premature upheavals—on the contrary, encouraging such actions. So, in 1953, the American Radio RIAS contributed to the upheaval in Eastern Germany, broadcasting about it in such a way that the Germans believed the West will come and help. Radio Free Europe, in its programs to the satellite countries, followed the same line.

IV. Fight Against Sound Anti-Communist Forces

1. Radio Free Europe fights nationalism and is against the right for self-determination for all anti-Communist nations, e. g., the Slovaks. Radio Free Europe propagates internationalism, merger of races, world fed-

eralism, supernational superstates, the United States of Europe, and the United Nations.

While sound nationalism, together with Christianity, has been found to be the most effective enemy of communism, Radio Free Europe (and the entire United States psychological warfare) preach internationalism—like the Communists themselves.

2. Radio Free Europe broadcasts decadent literature, art and jazz. RFE's plays and books are full of suicides, show split personalities, etc. All sound literature and national music—both of the free world and the enslaved nations—are practically banned from the daily programs of RFE.

V. Use of Leftist Material

The archives of RFE contain all Communist and Socialist literature, all Communist, Socialist and international press and papers. Banned are the Chicago Tribune, the Hearst Press, the CONGRESSIONAL RECORD, the records of the congressional committees, etc.

Every day, selected articles from leftist or international press, (such as the London Times, the New York Times, the New York Herald Tribune, the Manchester Guardian, the French Press etc.) are being read and the voices of this press are also very often quoted in other programs.

VI. Radio Free Europe Has No Program for Liberation

While pouring daily, for many hours, its propaganda upon the listeners in the East, RFE—and the entire United States psychological warfare—except for weak consolations, has no program telling in which way the liberation might come.

VII. Praise for Certain Men, Slander Against American Patriots

In line with their leftist and poor spirit, RFE's bosses and editors have slandered in their programs American patriots, such as General MacArthur, Senator Robert A. Taft, Robert McCormick and other American conservatives and anti-Communists.

2. On the other hand, they have praised and extolled such as Adlai Stevenson, Mrs. Eleanor Roosevelt, Senator Herbert H. Lehman and other, New Dealers and leftist Americans.

3. A curious, but explainable policy, has been followed regarding Senator MCCARTHY. During the many years of RFE's existence, he has never, never been mentioned. Even when the newspapers were full of his activities in 1953 and 1954, he simply did not exist for RFE. In his case, RFE set up a rigid Iron Curtain.

The reasons seem to be obvious: they do not want to praise MCCARTHY, of course; and they cannot slander the Senator to the enslaved East as somebody overdoing anti-Communist investigations, since the East would immediately see in the Senator its great hero. The people in the East would say: This is the man we need.

If the people in the East would know about MCCARTHY, they would lose their apathy. This would be the end of communism in the East. Therefore RFE—on direct orders from above—has carried no policy line more carefully than that which says: "Beware of mentioning MCCARTHY."

VIII. The General Impression Made by RFE (Besides Treason)

1. Radio Free Europe leads only a psychological warfare. To lead a psychological warfare is, on principle, a Communist device. The West should, in my opinion, rather speak on the level of the high moral principle of what is wrong and what is right. Instead, RFE and the entire United States information and broadcasting agencies are developing a sly psychological warfare (in which the Communists are to be stronger, because it is their own weapon and which always turns itself against the free world) developing "gray" and "black" propaganda, humbug and theater.

2. RFE develops sterile journalism; besides quotations from articles of leftist press and very few quotations from speeches of leftist politicians or politicians soft on communism, RFE avoids carefully any verbatim quotations of American anti-Communist statesmen, commenting the latter only in the anonymous "third person." It mostly describes only picturing circumstances—cars, houses, or similar details—and it generally enforces its propaganda on the listeners in the East by slogans. By this device RFE has reached an admirable degree of artificiality, unsincerity, and emptiness.

3. Much of the RFE propaganda has the character of advertising stunts.

4. RFE develops the entire above-mentioned propaganda, helping communism, and yet speaks strong words against it. RFE speaks against communism and yet praises those who are making business and holding conferences with the Reds, calling them anti-Communists. This gives RFE (and the entire United States psychological warfare) an expressed character of schizophreny.

5. Radio Free Europe gives the impression of anonymity. Those few of the Socialist editors broadcasting under their own names are known as weaklings and pro-Communists in the East. Most editors of RFE, however, are writing by using pseudonyms. The impression of anonymity is heightened by the feeling that the impact of RFE's leftist propaganda must have originated from some anonymous collective gang behind the scene.

6. The other impression, in my opinion, is twofold. First: the group of the bosses give the impression of slyness, cunningness, special jargon, cynicism, restless impulse ever seeking change, gabbling around things never touching the core. Second: the group of the Socialist employees seem to be lyric, passive, empty, sophistical, naive, unintelligent, superficial, and talkative as well as soft on communism. They show bleeding hearts and the appearance of weaklings.

The entire impression is confusion, a constant defensive which only answers Communist moves; quarrels, polemics, immorality making compromises for alleged experiences.

They are sometimes arrogant, cynical, inexpressedly vulgar, and always spiritually inferior.

CONCLUSION

For the American truth dollars, Radio Free Europe spreads the above-mentioned propaganda and supports leftist and pro-Communist elements from the East, suppressing all real anti-Communists.

The kind of RFE propaganda is, let me stress it, the same stuff being spread by the Voice of America, Radio Liberation (for the peoples of Russia), the RIAS (for the Soviet Zone of Germany), and other United States information agencies. For those who believe that the—generally acknowledged—ineffectiveness of the United States psychological warfare could be improved by some superficial changes and empty phrases, it must be said that the fault is located much deeper, at the very core: the entire present United States psychological warfare serves the interests and aims of international communism.

Obviously, real anti-Communist broadcasts to the East should, practically in every point, have to do the real opposite of what is being done today.

The perversion of the crusade

However, returning to the private Radio Free Europe, there is still a greater, basic perversion concerning the entire activities of the Free Europe Committee and the Crusade for Freedom. It consists in giving the impression to the American people that there is something being done for the liberation of the enslaved peoples.

The truth is, however, that nothing is being done in this respect. The American people hear and see the great circus of the Crusade for Freedom, donate their dollars and RFE pours its propaganda to the East.

Even if this propaganda would be anti-Communist, the basic fact remains that the people in the East do not need to be told, day and night, that they are bad off, that the Communists are mean, or to be taught what freedom means. They know it better than those speaking empty phrases in the West. They thirst for it every day, every hour, every minute, every second—they thirst for the freedom and not for instructions what freedom means.

Any real anti-Communist society would do something quite different: It would use the collected funds for support of American patriots fighting communism, for the support of the policy of liberation, for the policy which seeks the abolishment of communism without war, for the support of the great men in the Senate and House committees. It would use its full power to support the McCarthys, Kerstens, Jenners, Knowlands, Walters, Veldes, Reeces, Thurmonds, Brickers and Burdicks (whom the RFE bosses dislike so much). It would use its full strength for the eradication of the international conspiracy in the United States of America and for establishing the policy of liberation as the basic American foreign policy.

And to the East this anti-Communist society would simply report how far the policy of liberation has moved forward, what strides American patriots have made, what successes have been achieved in the fight against communism and for the liberation. It would simply bring true reporting instead of artificial propaganda.

When we realize that real anti-Communist private activities in the United States of America should have to be like this, we can understand how perverted are the activities of the Free Europe Committee (and the "truth-telling" humbug of the entire present "psychological warfare"), how treacherous are its bosses and how naive are Mr. Shepardson and others, who are fronting for Radio Free Europe.

Then we can easily understand how the unintelligent and Socialist former National Fronters from the East (who once obeyed to Eastern Communists, now obeying RFE bosses) are once again working for the aims of communism, while speaking harsh words against it.

Coal Facts by the National Coal Association

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. FLOOD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

COAL FACTS BY THE NATIONAL COAL ASSOCIATION

America's newspapers are publicizing our need for engineers and scientists. This is an especially timely service now with thousands of boys and girls graduating from high schools and colleges, and facing the choice of a career. One of the most promising fields for a bright future in engineering is fuel technology, especially in coal mining and coal combustion. America's appetite for energy over the next 20 years will create a demand for many engineers at good pay in the coal industry.

Thirty colleges in 24 States offer mining engineering courses. The coal industry has

established more than 100 scholarships, with a total annual value of approximately $50,000, in nine States, available to coal mining engineer candidates. In addition, there are available various awards, loan funds and scholarships from non-coal industry groups.

A fine future in the coal mining industry is waiting for candidates. High school, as well as college graduates can find a place in the coal industry at high wages comparable to any other industry, and higher than most. The increasing mechanization of the coal industry makes it one of the most interesting fields at this time.

Coal is America's primary fuel. A ton of coal is required to make a ton of steel—and steel capacity is expanding. About one pound of coal is consumed in generating a kilowatt hour of electric energy—and weekly consumption of kilowatt hours is rising. Ten pounds of coal are needed to provide the energy to make one pound of aluminum—and the aluminum industry is engaged in spectacular new construction in coal fields.

Many new coal mines will be needed to supply these higher demands and to replace mines being depleted. Engineers are needed by the coal industry, entering a period which promises steady growth through production for big industrial markets such as steel, electric generating, aluminum, cement, chemicals under long-term contracts. Here is a future linked directly to America's growth, in an industry that pumps energy into America's throbbing industrial heart, and essential to national prosperity and security—an opportunity for great service.

Ghost Writers

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 4, 1956

Mr. JACKSON. Mr. Speaker, in this day and time it seems to be commonplace to use ghost writers, but it seems rather unusual for two people to use the same ghost writer. In the Appendix of the CONGRESSIONAL RECORD for May 22, on page 4094, is an article allegedly written by Mr. Clyde T. Ellis, of the Rural Electric Cooperative Association. In the same issue of the CONGRESSIONAL RECORD on page 4104 is an article allegedly written by Mr. Claude R. Wickard, former Secretary of Agriculture.

The article signed by Mr. Ellis is 6 paragraphs in length. The last 4 paragraphs are identical, word for word, with the last 4 paragraphs of the article by Mr. Wickard.

These paragraphs warn that there are "certain interests who would like to eliminate entirely the REA cooperatives." The next sentence in these identical paragraphs mentions the Hoover report apparently attempting to convey the idea that the Hoover report recommends elimination of REA. Of course, this is not true and was evidently recognized as such by the writer since he did not say the Hoover report would destroy REA but merely tried to convey that thought by inference.

The Hoover Commission recommended that the Rural Electrification Administration be reorganized on a self-supporting basis—interest and fees should be sufficient to cover the cost of money and administrative expenses—that it secure its financing from private sources, and that as reorganized, it be made subject to the Government Corporation Control Act.

Many of the people in my district seem to agree that this is a good idea.

From this point the articles went on to make a plea for public-power development. Could it be that the public-power advocates are so hard up for support for their cause, even when not forthrightly presented, that they have to steal each others material without crediting the real writer?

Porgy and Bess in Russia

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Down Beat of June 27, 1956:

THE FIRST CHORUS
(By Jack Tracy)

Dizzy Gillespie has made many valuable contributions to jazz in his career. But what may be even more important and remembered longer is the tour he recently completed of the Mideast with a large band.

The effect he had on the peoples there has been brought strikingly home by the series of dispatches written by Marshall Stearns for Down Beat, the last of which appears in this issue, and by the almost stunned reaction of the State Department to his appearances.

Dizzy has served his country well, and the good will he and the band built, the musical education they offered, and the lesson in democracy they gave deserve bows from even the most cynical. It was only fitting that Gillespie was honored upon his return by being invited to the White House correspondent's dinner to play for the President.

Let's hope, however, that the success of Dizzy's tour, Porgy and Bess' sojourn in Russia, and other such ventures carried off under State Department auspices encourages the Government to expand its efforts. Remember that the State Department does not pay the expenses of such tours; they only guarantee that the minimum expenses will be covered if the groups lose money on the bookings. So far it hasn't happened. You can do much to guarantee more such trips and also serve jazz well by writing to the United States Information Service in Washington, D. C., in appreciation of what they already have done and suggesting what you think they can do.

The realization is beginning to dawn on a lot of persons that jazz is one of our most marketable export commodities and one which is enhancing our reputation around the world. It is a music born of this country, a music that is uniquely expressive of our way of living.

And now that the value of jazz as an overseas voice has been discovered, it is up to all of us who love the music to do all we can to see that it is used often—and properly—in this way.

A Prisoner of the New Dealers

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. SHEEHAN. Mr. Speaker, many midwestern people question the direction of our State Department. The Chicago Daily Tribune's June 4 editorial, directed to Congressman WALTER H. JUDD's testimony before the Senate Internal Security Subcommittee, gives vent to some of the misgivings of the Midwest.

The editorial is as follows:

A PRISONER OF THE NEW DEALERS

Congressman JUDD, of Minnesota, a recognized authority on the far east, testified before the Senate internal security subcommittee that pro-Communist holdovers from the New and Fair Deals are dictating State Department policy. Mr. JUDD said that these career employees early decided to give Secretary of State Dulles the "Jimmy Byrnes treatment"—that is, to keep him so busy traveling abroad that they would actually run the department. In this, he suggested, they had been eminently successful.

"I am not calling them Communists or subversives," said Representative JUDD. "They are intellectuals to whom communism has an appeal, and the things they advocate consistently work out to the benefit of Communists."

Judd said that these State Department officials function at the working paper level and draft the reports and recommendations upon which their superiors act. In this way policy at the top reflects the decisions made down below, and JUDD found the policy consistently inimical to the interests of the United States.

The problem is not new, and documentation is abundant. In 1953, seven or eight months after the Republicans took office, Scott McLeod, the State Department's director of personnel and security matters, complained before the convention of the American Legion that difficulty had been experienced in placing Eisenhower followers in responsible positions in the Department.

He said that policies originating at the top must be executed at lower working levels, where holdover personnel often not sympathetic to the Republican viewpoint was firmly entrenched.

A couple of attempts to overhaul the department ran into a stone wall. The New Dealers were wired into their jobs by civil service. Of the 18 appointive top assistants to Dulles, 12 were career officers, not one of whom was on record against the past policies of Dean Acheson, the New Deal Secretary of State.

One example that has been cited is that of Robert J. Ryan, an Acheson holdover, elevated by Dulles to the important post of head of the Division of Foreign Service Personnel. Ryan had come under fire of Senator MCCARTHY'S Permanent Investigations Subcommittee on charges of having "stripped" Department files to protect favorites whose pro-Communist slant had exposed them to investigation. He was so chummy with Acheson that, when the latter vacated the Secretaryship, Ryan was picked to conduct the goodby ceremony.

"Mr. Secretary," Ryan said to his outgoing boss, "the employees of the Department and the Foreign Service are very proud of your many outstanding achievements. Your high sense of duty, your statesmanship, your courage, your patience, and your forti-

tude have been an inspiration to all of us. You, sir, are a true public servant. As you take your leave, may we express to you our sincere thanks and appreciation for your leadership and support."

And it was to a New Dealer of such unbounded admiration for Acheson that a Republican administration turned when it sought the man to command all of its Foreign Service agents.

Another example is provided by Francis Russell, who turned up with Mr. Dulles at a meeting at which he was billed as the Secretary's "expert on Near Eastern affairs." Russell was head of the Acheson propaganda mill, but ran for the storm cellar when he saw a Republican victory coming in 1952. He was assigned to Tel Aviv as his first post abroad in October of that year, a month before the election, and, on the basis of that one brief assignment, quickly blossomed out as the official "expert" on a vast troubled political area, with the ear of the Republican Secretary cocked to his counsel.

Parallel instances could be recited at tedious length, but we believe that enough has been recounted to show that the Republican Secretary of State is a willing prisoner of the New Dealers he inherited and has made no effort to dislodge. The situation is one to cause a real Republican to throw up his hands in disgust, for we are paying $183 million a year to maintain the 30,000 in the State Department, where the New Dealers pursue their insidious purposes with as much impunity as in the heyday of Alger Hiss.

Must Small Business Face Such a Future?

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. D. H. Symons, General Water Heater Corp., Burbank, Calif.

The letter quoted below has been, I believe, sent to all the Members of the Congress. It is, however, so typical of what I firmly believe is the condition of many of the small businesses of this country that I put it in the CONGRESSIONAL RECORD in order that we can all ponder the very serious problem which others face and with the hope that something can be done about them before others have to arrive at the same unhappy and unfortunate decision.

GENERAL WATER HEATER CORP.,
Burbank, Calif., May 1956.

To Members of the Congress Interested in the Survival of Small Businesses:

It is with deep regret that I am selling this business which my father founded in 1919, and which he, my brother, my son and I have built up from nothing into 3 plants providing employment for 320 people. We make useful products: Water heaters, furnaces, and power tools.

I am writing you about it because I believe you understand that the small businesses throughout this country constitute a large and vital segment of the economy and free enterprise system which has made possible our high standard of living.

And I believe that you might be interested in a typical example of how difficult it is for a small corporation to accumulate capital, or even survive when taxation has reached the point of confiscation of capital necessary to continue creating quality goods and jobs for a growing population, in competition with the large national corporations.

To buy up-to-date equipment or expand plant facilities, a small corporation such as ours must use its profits, or borrow the money for working capital. We have done both for years. Small business does not have access to the capital market and savings of investors. The Federal taxes take 52 percent of our gross profit (up to 90 percent during wartime), the State takes another 4 percent and we have reached our limit of borrowing from the banks. If I sell the business, the capital gains tax will take 25 percent out of money already taxed at the above rates, but if I keep the business until I die I will have a sizable inheritance tax to pay.

So in my case I can't afford to die. Or to put it another way, I can't afford not to sell while I live. So I will sell. And I write you with the hope that this case example may be useful in helping the thousands of other small and medium-size manufacturers who face the same discouraging situation.

Sincerely yours,

D. H. SYMONS.

The Flag: Our Heritage, Our Stay, Our Hope

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. CUNNINGHAM. Mr. Speaker, on Thursday, July 14, our colleague, the Honorable FRED SCHWENGEL, of Iowa, had the honor of being the speaker at the Flag Day exercises on the Capitol steps, sponsored by the Department of the Potomac Woman's Relief Corps, Auxiliary to the Grand Army of the Republic. I have always been disturbed because I feel that the flag is a part of our heritage which we take too much for granted. Because it is always with us, we are all too prone to be passive about its value and meaning. Flag Day too often becomes just another day. Because Congressman SCHWENGEL has taken more than the ordinary interest in the Flag Day exercises both years that he has been here, and because his remarks can be an inspiration to the rest of us, I ask that his address be printed in the RECORD and commend it to every patriotic American:

THE FLAG: OUR HERITAGE, OUR STAY, AND OUR HOPE

This day, Flag Day, is consecrated to the glorious symbol of our United States. We have hailed it in love and devotion as Old Glory; we have sung its praise as the Star-Spangled Banner; we have cheered its colors, red, white, and blue; we have marched to the tune of The Stars and Stripes Forever. If the flag were only sentiment—if the flag were only cloth, and colors, and a pattern—we should soon weary of the sentiment, and tire of looking at the cloth, always striped and starred, always red, and white, and blue. But the flag is more than we see. Its heritage must be understood, for it is more real than cloth, deeper than sentiment, more filled with light and life than any color could make it, more meaningful than any pattern. The schoolbooks and legends tell a hundred stories about how the pattern came to be, and what the colors symbolize. For the most part, many of these stories are fanciful, or, at best, of doubtful authenticity, but each story, even those drawn of fancy, add their bit to the pattern of American life and thought, and to the heritage that goes to build up the flag itself. Betsy Ross may not have taken up paper, and snipped it with her scissors to show George Washington how a five-pointed star could be made simply, but in thousands of kindergartens, and in the minds and hearts of millions of children growing up today, that story lives. Barbara Fritchie may not have waved her flag out of the window as Stonewall Jackson marched his Confederate troops through Frederick, Md., but that brave picture is a part of what we all see as we look at the flag today, and the story of courage and patriotic devotion, told in Whittier's ringing words, is a part of what we hear as the flag snaps in the wind. But do not think these legends live only in imagination and feeling. That would be soft and foolish sentiment. They may not be factual, but they do carry a deeper truth of symbolism. The simple story of Betsy Ross lingers in my mind as meaning that the highest authority in this land will consent to be taught by the most humble citizen, especially when that humble citizen has the knowledge that is available to all. It means that in our country pride and power must give way before reasoning and practical good sense. This is a characteristic that separated our young American Republic from the tired monarchies of Europe, where peasant and nobleman lived forever and unchangeably apart from each other. The story of Barbara Fritchie, romantically decorated as it may be, is the story of a courage that lived then and lives today in the hearts of American men, and women, and children. For one fictitious heroine so dramatically daring and so generously spared, there have been thousands and millions who have risked their lives with equal daring and stubbornness, for the flag and for the Nation symbolized by its striped and starry folds. Let Betsy stand for each poor seamstress or laborer whose thought and work and spirit have gone into the building of this country. Let Barbara stand for the unconquerable soul of America, that stands up in each of us and is expressed year after year in different terms, by men and women, by soldiers and civilians, from Nathan Hale's beautiful phrase, "I only regret that I have but one life to lose for my country," to General McAuliffe's brief defiance, "Nuts." This sense, this equality, this energy, this courage, live in our true stories as much as in our legends, in our own lives, and in the lives of our ancestors as much as in our imaginations. The colors and patterns of the flag are the colors and patterns of our national heritage.

In our flag, as in our country, there is unity in variety. The stripes represent the Union of the Original Thirteen Colonies. The stars represent the Union of the present 48 States. But by their very existence in the flag, the stripes and the stars symbolize the fact that each Colony, each State, continues its existence as an individual entity, not merged in subjection to the absolute authority of a central government, but holding up its head in the federation of equal States just as the individual citizen in the Republic holds up his head as an equal among his fellow citizens. From the beginnings of our country until the present day, we have acknowledged one master, and only one. George Washington reminded us of this master in his Thanksgiving Proclamation of October 3, 1789, when he said that it is the duty of all nations to acknowledge the providence of Almighty God, to obey His will, to be grateful for His benefits, and humbly to implore His protection and favor. We, the people of the United States, expressed his

idea when in 1954, we added the words "Under God" to the pledge of allegiance. When I look up to the flag, I see it as raised up in the sight of God, invoking His blessing upon our land and our people, and submitting all our actions to His will.

For liberty we and our ancestors have worked and prayed and fought. Our soil is rich with the blood of those who died for liberty, and the soil of our spirit, our heritage of honor, is abundantly rich with the memory of their sacrifice. Looking into the stars and stripes of the flag, at once united and separate, connected and independent, I think how our liberty is dependent upon our union. I remember the bold pun attributed to Benjamin Franklin:

"Unless we all hang together, assuredly we shall all hang separately."

I think of how Daniel Webster built up his reply to Hayne to the ringing climax:

"Liberty and union, now and forever, one and inseparable."

All this, our heritage of glorious words and brave deeds, is built into this wonderful banner we call our flag. As we look into the flag we see the independence of our Nation from all others, the independence of each State from all others, and the independence of each citizen from all others. But at the same moment, and in the same flag, we see that intimate union of equals in which the welfare of one is the welfare of all, and the welfare of all is the welfare of each one. Back in the time of World War II, the American poet Charles Malam expressed this thought simply and tellingly in his poem, Freedom, when he said:

"Freedom, wherein we shelter us together
Against the rage of time and prowling man,
Is as a house which in the angry weather
Looks out through storm to the horizon's span.
Whatever warmth and comfort there we know
Our labor and our heartbreak made it so."

This spirit of togetherness, this teamwork, this brotherhood, is what we must work for today to perfect. We have had too many jealousies: State against State, section against section, man against man. Let us look upon the flag today in the spirit of Daniel Webster's great saying: "One country, one Constitution, and one destiny." Let us build upon this heritage of the past a firm loyalty for the present. Let us keep our constitutional system of checks and balances—our Executive operating with skill and energy, our Legislature studying carefully and acting boldly, our judiciary true to the Constitution and the laws—all three independent of one another, but all three ultimately responsive to the considered and determinedly expressed will of the people.

As I look at the light thrown back from the flag, thus raised into the heavens, I remember how, James A. Garfield, out of his lifetime devotion to the Bible, and out of the tumult and stress of a terrible moment of history, rose to heights of eloquence. A crowd in New York, gathering on receipt of the news of the assassination of President Abraham Lincoln, was swelling and milling ominously, obviously on the verge of becoming a riotous mob, when Garfield, then a young Ohio Congressman, stepped out on the balcony of the customhouse. His commanding presence brought silence. The organ tones of his famous voice carried to the farthest reaches of the crowd as he said in that dramatic setting:

"Fellow-citizens, clouds and darkness are around Him; His pavilion is dark waters and thick clouds; justice and judgment are the establishment of His throne; mercy and truth shall go before His face. God reigns and the Government at Washington still lives."

These were the words for that ocasion, having a more than magical effect in calming the turbulent multitude, and changing an aimless terror to a constructive and faith-filled grief. But they were words for all time. As Garfield picked them up out of the age-old faith of Israel, and the eloquent language of the Old Testament, I take them now, charged with all the meaning in American history of their use by Garfield on that great and sorrowful occasion. They are the words of today, as of a century ago. "God reigns and the Government at Washington still lives." There is a sense in which the center of the United States is, for me, in Iowa, as for you it may be in New Mexico, or for you, in Maine. "The axis of the earth," said Emerson, "sticks out visibly through the center of each and every town or city." But for you, and for you, and for me, the center of the United States is, in a very real sense, right here in Washington—right here in the Capitol Building—right here in the flag that waves day and night overhead. Here is the center of Government, here is the place where the representatives of the people of the United States meet to carry out the will of those people, and at once rule and serve them, under the folds of this symbolic flag. A mile off, there, is the White House—and across the street, in that direction, the Supreme Court Building. Here we are, all three, joined in a partnership to rule and to serve under this flag.

But as the past leads into the present, and our heritage from the past is our possession of the present, so the present must be our preparation for the future. No one and nothing stands still. If we do not advance, we must slide back. Neither in our country as it is today, nor in our flag, the symbol of that country, can we see perfection as now present. What we see in flag and country is something better and brighter than perfection itself, for perfection would be a State from which our only possible progression would be downward. In these Stars and Stripes we must see hope itself—the hope that the growth our country has shown in the past, growth in courage, in selflessness, in devotion to the right, will continue and increase. The hope that we shall take and keep our rightful place as leaders for all the world—the hope that we in our time will more fully understand and practice the great admonitions of our forefathers so that the spirit of truth and freedom in the hearts of good people everywhere will know "the power of the United States is a menace to no nation or people. It will never be used in aggression or for the aggrandizement of any selfish interest of our own. It springs out of freedom and is for the service of freedom" (Woodrow Wilson, 1918).

The hope that all the nations of the world will know that what Woodrow Wilson once said, "A patriotic American is a man who is not niggardly and selfish in the things that he enjoys that make for human liberty and the rights of man. He wants to share them with the whole world, and he is never so proud of the great flag under which he lives as when it comes to mean to other people as well as to himself a symbol of hope and liberty. Liberty does not consist—in mere general declarations of the rights of men. It consists in the translation of those declarations into definite action."

Then let us not ever deceive ourselves into seeing our own advantage in another's loss, or our loss is his gain. In the spirit of cooperation and partnership there is a clue to an undreamed-of future of peace and happiness and prosperity for all the world. The helpfulness that drives forward toward accomplishment for the good of neighbor and for the good of all, without thought of the individual or national self, is the spirit than can win the world in a far happier sense than any totalitarian political or military conquest.

This is the present, from which still we may build a future such as was envisoned by Henry Wadsworth Longfellow, when, in those dark days in which the war clouds of the Civil War were gathering, he looked upon the organ-like disposal of cannon in the Springfield Arsenal, and dreamed his dream of universal peace:

"Were half the power that fills the world with terror,
Were half the wealth bestowed on camps and courts,
Given to redeem the human mind from error,
There were no need of arsenals or forts:
The warrior's name would be name abhorred.
And every nation, that should lift again
Its hand against a brother, on its forehead
Would wear forevermore the curse of Cain.
Down the dark future, through long generations,
The echoing sounds grow fainter and then cease;
And like a bell, with solemn, sweet vibrations,
I hear once more the voice of Christ say, "Peace."
Peace, and no longer from its brazen portals
The blast of war's great organ shakes the skies.
But beautiful as songs of the immortals,
The holy melodies of love arise."

Let us then forever remember the rich heritage of fundamental truths that have come out of the past to point the way of a higher civilization and a better life and let us follow the admonition of Abraham Lincoln when he said on that memorable occasion at Gettysburg, "Let us dedicate ourselves to the unfinished task," being ever mindful of the important place we play in this terribly challenging time in our history.

An ancient seer once said that no doctrine, faith, or knowledge is of value to man except as it bears fruit in action. Let us then never be guilty of unconcern for and about the greatest government ever given to man and always do our part as a patriotic American in such a way that God will continue to bless America, and thus will our flag forever wave over the land of the free and the home of the brave.

Festival of Lithuanian Art

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. HOFFMAN of Illinois. Mr. Speaker, on June 16 and 17, 1956, Americans of Lithuanian ancestry, together with leaders from the executive, legislative, and judicial branches of the Government, recalled the contributions of Lithuania to the cultural fabric of this Nation. An exhibit of Lithuanian art and handicraft, a concert devoted to works by Lithuanian composers, and a banquet attended by more than 1,000 persons were among the events of the Festival of Lithuanian Art and Music, of which Vice President NIXON was the honorary chairman.

I take particular pride in calling to your attention this festival, since the president of the National Lithuanian Society of America is Dr. Stephen Biezis, of Chicago, and the toastmaster of the banquet was Anthony A. Olis, president of the Metropolitan Sanitary District of Greater Chicago. Under leave to extend my remarks, I include articles from the

Sunday Star of June 17, 1956, in which this great Washington newspaper reported the events of the festival.

LITHUANIA WON'T ACCEPT SOVIET YOKE, ENVOY SAYS

Lithuania "has not accepted and will never accept the so-called incorporation into the Soviet Union," Stasys Lozoraitis, chief of the Lithuanian Diplomatic Service, declared last night.

Mr. Lozoraitis, visiting from his post in Rome, addressed more than 1,000 banquet guests at the Festival of Lithuanian Art and Music at the Hotel Statler, where he was guest of honor.

The Lithuanian soul, he said, "despite tragic hardships under Soviet occupation, remains free and thirsts after but one thing:

"To throw off Soviet-Communist slavery and to return to her rightful place among the democratic, Christian nations of the West, to which the Lithuanian nation belongs by right of her history, faith, and culture."

He said that his countrymen, having had "such tragic experience" with the Soviets, follow with misgivings the new tactic unveiled since Stalin's death.

In one of its aspects, he said, the Soviet Government wishes in certain internal affairs to give the impression that the political regime is now less rigid. But he said the dissolution of basic human rights remains in effect, and the Communist Party remains the supreme, deciding factor.

He also described the new foreign policy designed "to lull the alertness of the West, to bring it to political and moral disarmament and to the recognition, or at least to the forgetting, of the results of those international crimes of which the Soviet Union is guilty in attacking and occupying a whole series of nations, among them Lithuania."

CAPITALITES ATTEND FESTIVAL BANQUET

Official and residential Washington turned out last evening for the Festival of Lithuanian Art and Music, for which Vice President NIXON was the honorary chairman of the sponsoring committee. The 8 o'clock banquet in the Presidential Room of the Hotel Statler was preceded by a cocktail party.

An exhibit of Lithuanian art and handicraft for the 2-day festival, which commemorates the cultural threads of Lithuania which have been woven in the American fabric by the more than 1 million Americans of Lithuanian descent, was on display last evening and will be again today in the Congressional Room.

Music for last evening's banquet was provided by 50 members of the National Symphony Orchestra, under the direction of Alexandras Kuciunas. Music also was presented by the Ciurlionis Ensemble. Anthony Olis, a director of the National Lithuanian Society of America—of which Dr. Stephen Biezis is president—was toastmaster and chairman of the committee on arrangements.

The Administrative Assistant to the President and Mrs. I. Jack Martin were among those accepting. Other acceptances came from Assistant Secretaries of State Henry F. Holland, Francis O. Wilcox, and Carl W. McCardle and their wives; Assistant Secretaries of Defense Frank D. Newbury and Herbert B. Loper and their wives; United States Treasurer Ivy Baker Priest and Mr. Roy F. Priest; Assistant Secretary of the Interior and Mrs. Felix E. Wormser, Supreme Court Justice and Mrs. Sherman Minton, and the Deputy Director of the Bureau of the Budget and Mrs. Percival F. Brundage.

Of course, the Minister of Lithuania and Mrs. Zadeikis were there and other diplomatic missions were represented by the Ambassador of Viet Nam and Mme. Tran-Van Choung, the Dominican Ambassador and Senora de Salazar, the Afghan Ambassador and Mme. Ludin, the Ambassador of Honduras and Senora de Izaguirre, Laoation Ambassador Ourot R. Souvannavong and the chargé d'affaires of the Yemen Legation, Sayed Abdurrahman Ibn Abdussamed Abu-Taleb.

Senator planning to attend included JOHN L. MCCLELLAN, EDWARD MARTIN, JOHN STENNIS, EDWARD J. THYE, ARTHUR V. WATKINS, and HENRY C. DWORSHAK with their wives, and among those accepting from the House were Representatives STERLING COLE, BROOKS HAYS, KARL M. LECOMPTE, LAWRENCE H. SMITH, HAROLD H. VELDE, SID SIMPSON, and WALTER H. JUDD and their wives.

Residential Washington acceptances came from Mrs. Robert Low Bacon, Mrs. Nicholas Longworth, Judge and Mrs. F. Dickinson Letts, Mrs. Harry Grant Meem, Dr. and Mrs. Floyd S. Rogers, Jr., Mr. and Mrs. Roy St. Lewis, Mr. and Mrs. Arthur Sears Henning, and others.

What's Wrong With American Propaganda

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the New York Times of May 14, 1956:

FOREIGN AFFAIRS—WHAT'S WRONG WITH AMERICAN PROPAGANDA

(By C. L. Sulzberger)

PARIS, May 13.—In this era of political uncertainty and uneasy coexistence propaganda becomes increasingly important in maintaining the views and prestige of the United States among captive peoples of Eastern Europe. Yet, despite millions of dollars spent, we are unsuccessful. A tour of the satellite nations provides convincing evidence that our propaganda is a flop.

This is not for lack of technical ingenuity. Both Government and privately sponsored organizations have demonstrated imagination in getting our ideas across barbed-wire frontiers and a wall of radio jamming. Programs beamed by stations of the Voice of America and Radio Free Europe manage to circumvent these barriers and are heard. Pamphlets dropped from airplanes and windborne balloons have so saturated some countries that not even efficient sweeping operations of the security police have kept them from wide circulation. The criticism one hears is of the ideas themselves, not their means of distribution.

One American envoy in the area complains: "Our propaganda is utterly ineffective. Frequently our radios put out 'intelligence' information that is entirely inaccurate or ridiculously late—information that could be verified within 10 minutes by any embassy or legation. Much that we broadcast no longer has any bearing on reality. Many political emigrés make good money compiling useless material."

STUNTS RESENTED

A friendly Ambassador in Czechoslovakia observes: "The BBC has its Bruce Lockhart, who is deeply respected here. But you have no one. Your balloons and leaflets bear foolish messages. For example, they sought to work up a campaign encouraging 10 popular demands for freedom. Leaflets and stickers were dropped bearing the mystic number 10. This was an advertising stunt. It never took. People resented being incited to audacity by those dwelling safely abroad."

A highly intelligent Czech with pro-American sympathies adds: "All too often your radio either misses events; or it is late; or it is wrong. Once you get it through the jamming you'd like to know something.

"But the things your propaganda speaks about are frequently silly. Broadcasters give 15 minutes of statistics. Whom do they think they are talking to, professors of mathematics? Who cares about comparative steel production figures in 1952? Sometimes our emigrants working for you will denounce a man as a traitor when it simply isn't true. They are careless. This happened to a friend of mine and was infuriating."

One of our eastern European envoys says: "The United States has always encouraged these people to overthrow the government. Our propaganda still implies this purpose. We have done nothing or said nothing to give the impression that we will ever make our peace with this regime. Yet we must do busines with it—and do. This schizophrenic attitude puzzles the local population."

The American Government sends selected films to our embassies and legations not only to entertain them but to advertise the benefits of our society to local officials and diplomats. These movies sometimes are appalling. The Austrian chargé d'affaires in Bucharest used to attend our cinema showings. Eventually he remarked to our embarrassed minister, Robert H. Thayer, "This does you Americans more harm than good."

ALL SHOWINGS CANCELED

The writer attended an evening of films sent by our Government to Thayer's Legation. The first was a 1946 picture with the sound track so worn it sounded as if Ingrid Bergman had a mouth filled with bubblegum. It had to be stopped. Then came an inferior commercial. Third was a ridiculous advertisement for Dutch tulips. Fourth was a fifth-rate thriller on Haiti. Thayer, in despair, canceled all showings scheduled for the coming week.

From Poland to the Danube Valley listeners complain that emigrees working for American radio stations have lost touch with changing local conditions. A Bulgarian anti-Communist protests: "They are like all emigree movements. They are unaware of some changes that we accept with pleasure while opposing the regime—such things as free medical care. Many people think the emigrees enjoy a better life abroad than is actually the case. Nevertheless, unfortunately, they resent it. Such is human nature."

It is embarrassing to criticize people who fled tyranny and from unhappy exile try to keep alive the flame of freedom behind the Iron Curtain. But, judging from results, their propaganda is neither conceived with sufficient skill nor adequately coordinated with our diplomatic policy.

Perhaps we should concentrate more on telling our own story, stressing forever the ideals we believe. Objective commentary and calm, straightforward news are durable psychological commodities. We cannot afford to lose touch with changing realities within the satellites. Nor should we be so blinded by emotion that we occasion resentment among those we court.

Festival of Lithuanian Art and Music

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. HOFFMAN of Illinois. Mr. Speaker, in June 1940 the Soviet Government revealed its pattern of military conquest and political demoralization in

its unprovoked assaults upon Lithuania, Latvia, and Estonia. For 16 years, the light of freedom has been extinguished in Lithuania, but the ideals of liberty, independence, and justice continue to live in the minds and hearts of persons of Lithuanian ancestry and the hope remains that this great nation will once again resume its rightful place among the sovereign nations of the world.

On June 16 and 17, 1956, America was reminded of the contribution of Lithuania to the cultural treasure of this Nation by the Festival of Lithuanian Art and Music which took place at the Hotel Statler in Washington. The principal speaker at the banquet on June 16 was the Honorable Stasys Lozoraitis, Chief of the Lithuanian Diplomatic Service, whose analysis of Soviet policy I commend to the attention of my colleagues. Under leave to extend my remarks, I include the statement of the Honorable Stasys Lozoraitis:

ADDRESS BY STASYS LOZORAITIS, CHIEF OF THE LITHUANIAN DIPLOMATIC SERVICE, AT THE FESTIVAL OF LITHUANIAN ART AND MUSIC, WASHINGTON, D. C., JUNE 16, 1956

I consider it a great privilege to be able to speak, in the capacity of chief of the Lithuanian diplomatic service, at this distinguished gathering which climaxes the Festival of Lithuanian Art and Music and which is lent special significance by the generous presence of so many representatives of the Government and people of the United States of America and other nations.

In the folk art and music presented at this festival is heard the voice of Lithuania, the beating of her heart; in them her soul is mirrored. This Lithuanian soul, despite tragic hardships under Soviet occupation, remains free and thirsts after but one thing: to throw off Soviet-communist slavery and to return to her rightful place among the democratic, Christian nations of the West to which the Lithuanian nation belongs by right of her history, faith and culture.

This is the ultimate and unshakable will of the Lithuanian people. Our nation has not accepted and will never accept the so-called incorporation into the Soviet Union. In fact, this incorporation was an act of brutal aggression, the result of force, as contrary to international law and morality as it was to the will and interests of Lithuania. This premeditated international crime was carefully planned by the Soviet Government. In August and September of 1939, the Soviet Government reached an agreement with Hitler, forming a plot which opened the gates to the Second World War. One of the most important elements of this plot was the destruction of the independence of the Baltic States and their forced incorporation into the Soviet Union. The Soviet Government enacted this criminal plan in two stages: military and quasi-elective. In October 1939, by the threat of force, the Soviet Government imposed on Lithuania the so-called Mutual Assistance Pact in accordance with which it was able to introduce Soviet garrisons into Lithuanian territory, promising, however, to respect Lithuania's sovereignty and independence. But in June 1940, taking advantage of the fact that the democracies of Western Europe had succumbed to Hitler, the Soviet Government presented the three Baltic States—Lithuania, Latvia, and Estonia—with a totally unfounded ultimatum. This action was followed up by an attack on the Baltic States and their occupation by the overwhelming Red army. In Lithuania, at sword's point the Soviet indulged in electoral manipulations by which means the occupying force organized a so-called parliament composed of Communists, and authorized it to vote for the annulment of Lithuanian independence and the incorporation of Lithuania into the Soviet Union. This was the beginning of terrorist persecutions, mass deportations, and the annihilation of the most basic human rights in Lithuania, by which the Soviet Government has inflicted and continues to inflict the most grievous wounds. Only 2 days ago we marked the 15th anniversary of the beginning of one of the greatest crimes in the history of Europe—the deportation of thousands of Lithuanians, Latvians, and Estonians to certain death in the slave camps of Siberia.

Lithuania's painful experience in dealings with the Soviet Union is and remains a manifest example of how the Soviet Union interprets international coexistence. In the same way, soon after the establishment of the Soviet regime in Russia, in the days of Lenin, the Soviet Government carried on a whole series of aggressive acts toward its western neighbors of which Lithuania was one. However, a decisive defense closed the path of Soviet expansion to the west and forced the Soviet Government to change its tactic, replacing open aggression with a coexistence policy. This new Soviet tactic manifested itself in the abundant peace, nonaggression, and other security treaties which the Soviet Union concluded with its western neighbors. I surely would not be exaggerating by saying that in no other part of the world was there devised such a broad system of guaranties against every possible form of aggression as there was between the Soviet Union and her neighbors. To any person of good faith this system would certainly have seemed an inviolable barrier. Such guarantees existed also between Lithuania and the Soviet Union. Notwithstanding all these things, the Soviet Union seized the first opportunity—in 1939–40—to put an end to peaceful coexistence and to violate solemn treaties into which it had freely entered.

It is for this reason that Lithuanians, having had such tragic experience with the Soviets, now follow attentively and with misgivings the new tactic which the Soviets unveiled since Stalin's death. This tactic has two aspects.

First, it would seem that the Soviet Government is experiencing troubles within the regions which they occupy and rule, and must contend with the fact that the Soviet population and the populations of the nations enslaved by the Soviet Union abhor the political regime. For this reason, the Soviet Government wishes, in certain internal affairs, to give the impression that the regime is now less rigid. Therefore, I think it worthwhile to remember that this lessening of tension fails to affect any basic question. The Communist Party remains the supreme, deciding factor, totally beyond appeal. The dissolution of basic human rights remains in effect. In this way the Soviet regime remains what it was, as contrary to human nature as it is dangerous to world civilization.

As to the second aspect, that of foreign policy, the opposition of the West, under the leadership of the United States, to Soviet expansion, forced the Soviet Government to devise a new policy and to proclaim the watchword of peaceful coexistence. The purpose of this tactic is to lull the alertness of the West, to bring it to political and moral disarmament and to the recognition, or at least to the forgetting, of the results of those international crimes of which the Soviet Union is guilty in attacking and occupying a whole series of nations, among them Lithuania. This tactic seeks to demoralize international relations and to make expansion possible where military means would be impractical—by means of subversion. It seems to me that, although the new Kremlin leaders are second string men, their new strategy is as dangerous as was the old one. In this way the struggle of the Soviet Union, and indeed of Bolshevism, to subjugate the entire world—the struggle begun by Lenin and carried on by Stalin—is now being implemented by Stalin's successors. In this struggle, the civilized world has a silent ally. This ally is the group of millions belonging to the nations enslaved by the Soviet Union. These peoples, among them the Lithuanian nation, continue a moral resistance to the Soviet Government, and, I believe, by so doing they hinder the plans of Soviet imperialism. In this struggle the West has also a powerful weapon. Opinions are sometimes voiced that in this fight against communism a new ideal is needed. I do not think that this is the case. There are two ancient but always valid ideals: faith in God, and the devotion of people and nations to the principle of freedom. The intensified proclamation and implementation of these two ideals is that powerful weapon which I just mentioned. Its use in conjunction with peaceful coercion of the Soviet Union must bring the elimination of the danger which the Soviet Union constitutes to civilization. An indispensable condition in the elimination of this danger is the restoration of freedom to the Soviet enslaved nations which look with hope to the West for deliverance.

Ladies and gentlemen, the Soviet will never give up their proclaimed plans. It is only when they can no longer practice them that they put them aside until the times again become propitious. May the Western world not forget its plans for freedom and justice; may it carry them forward methodically and without compromise.

From that fatal day when the Soviet Union attacked and occupied Lithuania, the understanding attitude of the American Government and people in regard to the case of Lithuanian freedom, has been a source of comfort and of hope to the Lithuanian nation. Our people will never forget that from the very beginning America condemned the illegal occupation of Lithuania and refuses to recognize it. Our Nation remembers with gratitude, remembers the repeated statements of high placed American officials recognizing Lithuania's right to the restoration of her freedom. And the fact that the festival, this manifestation of the soul and culture of Lithuania, could only take place in the United States—in their Capital—will be welcomed by all Lithuanians and they will derive from it special significance.

I am certain that I express the feeling of all Lithuanians, at home and abroad when I thank the United States for their sympathy toward Lithuania. Furthermore, I am also convinced that I speak for all my countrymen in extending best wishes to President Dwight D. Eisenhower for his speedy recovery.

Ladies and gentlemen, may I consider your presence here as a sign of your sympathy for Lithuania? I will long remember this evening and I will always be grateful to the National Lithuanian Society of America for inviting me. I feel sure that this society has done much to help the Lithuanian cause and Lithuanian-American relations by the zealous organization of this festival.

Ladies and gentlemen, during the lifetime of one generation the United States of America twice was forced to take up arms and fight for the ideals of freedom, law, and justice. In this cause hundreds of thousands of American youths gave their lives but the Soviet Union blighted the ripening of the fruits of their sacrifice. I believe that those ideals, always alive in this huge Nation, will totally triumph through peaceful means, and that this will bring, to my country as well, the restoration of freedom and independence.

Foreign Aid on the Rebound

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. SHEEHAN. Mr. Speaker, it is indeed very interesting to take cognizance of the fact that there is an alarming possibility that foreign governments might have already established control of certain segments of American industry through concealed investments.

This view has been brought out by the testimony of some officials of the Federal Reserve Bank of New York who have strongly expressed their concern.

It is most interesting to note that we have spent over $50 billion in foreign aid, while at the same time foreign investments in this country now exceed half of that amount. This gives rise to the question of whether or not, through our foreign-aid dollars, we are permitting foreign countries to take this money and reinvest it back in American industry.

The Chicago Daily Tribune in its editorial of June 19, 1956, puts the light on this subject to which it directs some interesting comments.

The editorial is as follows:

FOREIGN AID ON THE REBOUND

A Senate Internal Security Subcommittee has been told by responsible officials of the Federal Reserve Bank of New York that there is an alarming possibility that Russian and other foreign Communists have established control of segments of American industry through concealed investments. These equities are held by banks abroad, especially in Switzerland, which cover up the identity of the true owners. American Communists have also actively interested themselves in industrial investment.

The threat to American security implicit in such ownership is apparent, but an even more interesting disclosure was made by Arthur I. Bloomfield, senior economist of the Federal Reserve bank. Pointing out that there had been a large movement into the United States of speculative or flight capital, known as hot money, Mr. Bloomfield testified:

"It is evident that a significant part of the foreign aid of the United States Government has, in effect, gone to finance hot-money movements from the recipient countries to the United States and elsewhere."

Mr. Bloomfield asserted that foreign long-term investment capital and short-term dollar balances in the United States now aggregate in excess of $26.8 billion. This figure means that foreign holdings in this country amount to roughly half of the total of American postwar foreign aid, and that they are in excess of the entire national gold reserve. If all of them were translated into demands on America's gold hoard, which no American citizen may touch but which may be tapped by foreigners, there would be absolutely no gold backing for the dollar.

Thus foreign nations are in a position to do great injury to American fiscal stability, but that consideration is of less importance than the corollary—that the foreign aid giveaway has not been used for the purposes intended by the American Government, but for one quite different.

Foreign aid is supposed to stabilize the economy of friendly nations, to spur economic activity in these countries, and to enable them to expand and modernize their capital plant. But, from Mr. Bloomfield's testimony, it is apparent that the foreigners are not disposed to risk good American dollars on their own economy. Foreign aid funds pause only briefly in transit in these countries before being sent back here for investment in American industry or conversion into open credits.

We thus have the anomalous situation wherein the American Government protests that it is necessary to maintain a high flow of dollar aid abroad in order to achieve strength and stability in allied nations, while the recipient countries funnel the dollars thus obtained back to the United States. One result is that Washington imposes heavy taxes on American corporations, partly in order to finance foreign aid, while the foreign beneficiaries turn around and use the dollars sweated from American taxpayers to displace American ownership of American industry.

A more scandalous and indefensible racket would be hard to visualize. If there were no other reason for ending foreign aid without further ado, this alone would suffice.

The President's Health

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. ROOSEVELT. Mr. Speaker, I have just received the text of a radio news broadcast by Mr. Eric Sevareid. Mr. Sevareid is widely recognized as one of the most objective and intelligent of current news analysts.

These remarks deserve careful study not only by Members of the Congress but by all Americans trying to reach a fair and just decision on a most involved and difficult matter. It would, of course, be easy to play politics with such an issue but I believe that there are millions of Americans who will vote after fairly and accurately analyzing all sides of the controversy as impartially and as factually as possible. It is for this reason that I submit this material for the RECORD:

Good evening. The President is slowly but, apparently surely, recovering from his operation; as he does so, attention is slowly turning from the immediate problem of his setback to its associated constitutional and political problems.

But what is not widely understood is that behind the front page statements about the President's physical prospects, a fierce argument is going on. It involves medical men and it involves the nontechnical journalists who must try to report all the news, even when the technicians themselves, in this case, the medical men, strongly disagree. What is happening this week is essentially what happened last winter, when Dr. Paul White publicly indicated an active life for the President of 5 to 10 years; the statement that profoundly affected public opinion and pushed the issue of the heart condition into the background. At that time, many doctors protested that White had gone too far, arguing that the life expectancy of a heart patient cannot possibly be prognosticated in specific terms of years; but, their organized fear of personal publicity being what it is, they did their protesting privately, frequently accusing reporters and editors of failing to put such a critical matter into proper balance.

This phenomenon is being repeated right now, in relation to ileitis and the statement of the operating surgeon, Major General Heaton, who said that bypassing the diseased area would improve the President's life expectancy. This statement and more especially the optimistic inferences being drawn from it all through the press are now being strongly criticized by many doctors. But again, in private. Washington journalists are now being remonstrated with by some medical men for, they contend, permitting the public to receive a badly one-sided impression of the President's prospects. They are not saying they know General Heaton to be wrong; they are saying, as I understand it, that he is only guessing and, that what is known and not known about ileitis gives no warrant for this degree of optimism. Again, these objecting doctors refuse to be quoted, but they are urging journalists to quote the standard reference works on ileitis.

For one thing, they argue, ileitis in a man of the President's age is so rare that no one can estimate even the statistical chances of post operation recurrence. Of 222 cases documented by Dr. Crohn, who first identified the disease, only 2 were in the 60 to 70 year age bracket; of 400 cases tabulated by Dr. Raydon, who attended the President, only 13 were in this bracket. Whether the President's age makes recurrence more or less likely appears to be something entirely in the dark.

But in general, Dr. Crohn has found, the disease comes back in 1 out of 3 cases after operation. And the medical reference widely used by life insurance companies, called "Risk Appraisal," has this to say about ileitis. I quote, "Short circuiting operations offer hope, but not much. Prognosis always dubious. Recurrence," it goes on to say, "is distressingly high, 1 in 3 within 2 years." This guide book recommends granting life insurance to ileitis victims only under rather exceptional rate provisions and as for disability insurance, the recommendation is in a flat negative; it regards the possibility of continuing poor health too great.

Other reference works appear equally pessimistic. The private doctors now insisting that this side of the story be given the people, are not saying that continuing invalidism is bound to be the President's fate. Medicine is by no means an exact science. Many individual cases refute both a doctor's pessimism and statistical tables and the President's case may happily turn out to be one that does. What these doctors are saying is that it is the simple duty of those who communicate to the people to communicate all the facts and the simple duty of the people to consider all the facts as they commit their Government to the future.

They must consider, in sum, that the Chief Executive has been the victim of not 1, but 2 serious diseases, both of which have a strong tendency to recur. This is Eric Sevareid in Washington.

Thailand Celebrates 24th Anniversary of National Day, June 24

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. POWELL. Mr. Speaker, I wish to send greetings to the people of Thailand, His Majesty Phumiphon Adundet, and His Excellency Pote Sarasin, Ambassador of Thailand, on the occasion of the cele-

bration of the 24th anniversary of National Day, June 24, 1956.

Thailand enjoys the proud distinction of being the only nation in southeast Asia, and one of the few on the Continent of Asia, which has been independent throughout its history. Although from the beginning of her history Thailand had been governed by a progressive monarchy, the people threw off the yoke of absolutism on June 24, 1932, and proclaimed a constitutional monarchy with the hopes that the new government might better meet the needs of the times.

She has known an area of unprecedented development, without regard to her internal and external security. The leaders of the nation have as their primary aim the development of the resources of the country in order to attain a better standard of living for the benefit of all its people. The Thai people along with the rest of the free world know that a free and prosperous people is communism's most formidable foe. Every well-founded and happy home is a fortress against tyranny, while poverty and wretchedness are its breeding ground.

It is Thai policy to maintain friendly relations with other nations. In amplification of this policy she has taken her place with the free nations in United Nations sessions, and has benefited greatly from membership. Thailand has maintained the best of friendly relations with the United States. It has welcomed American assistance in improving its economic well-being and keeping its political freedom.

Thailand's strategic position, its tradition as a free nation in southeast Asia, and its opposition to communism, give the country an important place in international affairs. It is an example and inspiration to other countries in the region who are engaged in the conflict with totalitarian aggression. As a bulwark against communism, the influence of the Thai may be beyond measure.

Again I salute Thailand and pray for continued mutual loyalty and respect between our countries and a continued strong purpose toward our peaceful aims.

The Last of the Three R's

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I herewith include an editorial entitled "The Last of the Three R's," which appeared in the June 11, 1956 issue of the St. Louis Post-Dispatch:

THE LAST OF THE THREE R'S

The University of Illinois a few months ago decided to drop remedial courses in basic English because it did not have time to teach hundreds of college students what primary and secondary schools should have taught them. Now the focus is on mathematics. A survey sponsored by the Carnegie Foundation finds that the teaching of mathematics in this country is in a deplorable state.

Princeton University's Educational Testing Service studied 60 classrooms in primary and secondary schools in 5 States. This is what it found:

Of 60 mathematics teachers, only 10 were fully competent; the 50 others were "confused."

Most of the teachers do not like mathematics and teach it only under compulsion.

Most of the students, naturally, also do not like mathematics and are hostile to learning it.

In fact, the testing service discovered in its year-long research that a good many teachers not only do not know their subject and are not able to interest their students in it, but also are barely able to keep ahead of the students. The conclusion is that mathematics is one of the poorest taught subjects below the college level.

These are especially serious findings at a time of increasing demand for scientists, engineers and technicians who need the fullest understanding of mathematics.

While the Princeton study lays much of the fault with the contemporary teacher, it seems probable that blame also lies with his teacher, with teaching methods and with the general educational system and the public's attitude toward it. In any case the research men recommend that the whole mathematics curriculum be brought up to date.

But perhaps the main recommendation of the survey is the creation of a remedial mathematics course for teachers of mathematics. We have now come full circle. Remedial courses used to be for pupils.

Extension of Veterans' Home Loan Program

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following very important statement of Mr. George C. Johnson, president of the Dime Savings Bank of Brooklyn, as submitted to the Veterans' Affairs Subcommittee of the Senate Committee on Labor and Public Welfare:

STATEMENT OF MR. GEORGE C. JOHNSON, PRESIDENT, THE DIME SAVINGS BANK OF BROOKLYN, TO THE VETERANS' AFFAIRS SUBCOMMITTEE OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, CONCERNING EXTENSION OF THE VETERANS' HOME LOAN PROGRAM

Unless provision is made, before the Congress begins its recess, for extension of the home loan guaranty program for veterans of World War II beyond its expiration date of July 25, 1957, hundreds of millions of dollars worth of planned home construction must be abandoned, thousands of veterans will be denied home ownership, and the building industry—second largest industry in the Nation—will suffer a paralyzing blow, with a resulting serious setback to the American economy.

The reason is this:

Under the home loan provisions of the Servicemen's Readjustment Act of 1944, all transactions as they apply to veterans of World War II must be finally completed before July 25, 1957.

In thousands of cases, such completion is impossible.

The situation is particularly acute in the New York and northeastern area of the United States. It is in these areas where exist the heavy preponderance of prime mortgage lenders—lenders which make mortgage loans only for their own account. They do not use any devices such as "warehousing" of loans; nor do they sell any Veterans' Administration loans to other lenders. Mortgage lenders in this category are termed by the VA "automatic lenders."

This means that under procedures established by the Veterans' Administration in VA Bulletin TB 4A–16 in November 1947, "automatic lenders" are permitted to allow veteran home purchasers to move into their houses and close the loans in escrow prior to completion of certain off-site work, such as paving, sidewalks, curbs, and other items subject to weather conditions.

Under this procedure (which has been followed for nearly 9 years) after the veteran takes possession of his new home, the lender files with the Veterans' Administration all documents in connection with each loan, and in return receives what is termed a "certificate of commitment." This is an expression by the Administrator of his intention to guarantee the mortgage loan when evidence is provided that all work is finished.

However, this "certificate of commitment" does not have statutory effect. It is not until the formal guaranty is received by the lender that the transaction is complete.

Because of the many factors and technicalities involved, approximately one year must pass between the time a lender makes a mortage commitment until the point of closing is reached.

After this closing in escrow, another 6 months are often needed to complete the exterior work which has been delayed by weather—work, which, in most cases, is prohibited by local building authorities during adverse weather conditions.

This 18-month gap between time of mortgage commitment and the time of finally completing the transaction to the point of receiving the VA loan guaranty, is why it is absolutely necessary to extend the veterans home loan guaranty program for at least 1 year beyond its expiration date of July 25, 1957—and provision made for orderly transition of the program into the Federal Housing Administration.

Unless prompt action is taken by the Congress in this connection, it is obvious that all those classified as "automatic lenders" under VA Bulletin TB 4A–16 must immediately—within the next few weeks—review their mortgage commitments for the purpose of cutting back all commited loans which cannot be finally processed before July 25, 1957.

I can assure you that this would be an extremely sharp cutback, and it would instantly prevent thousands of veterans throughout the Nation from buying homes on VA terms, even though the act has not expired. The VA itself has indicated that it will cease accepting home loan applications early next January.

In the case of the Dime Savings Bank of Braaklyn alone—and we are only one lender—such cutbacks would involve some $136 million in commitments and affect the construction of 13,500 new homes. Of these, we have outstanding construction loans on more than 6,000 dwelling units, and of those, more than 4,000 have been purchased by veterans.

Furthermore, the prime mortgage lenders, of which we are only one, are the chief supporters of the $600 million annual building volume on Long Island. Veterans comprise approximately 70 percent of that market.

I heartily agree with the theory that benefits under the Servicemen's Readjustment Act should not continue indefinitely.

However, I do respectfully urge that home-loan provisions in the act be extended for a minimum of 1 year and an immediate study begun to develop a substitute and machinery set up for an orderly transition into the Federal Housing Administration of the Government's entire housing program, so far as it affects private industry. Unless this is done promptly, a serious setback will be suffered by the building industry, which is so vital to our economy.

It is quite true that the Servicemen's Readjustment Act was originally conceived as a rehabilitation measure, and it has been invaluable in attaining that objective.

However, the veterans' home loan program has long since emerged from its status as a rehabilitation measure. That phase of the law now carries an enormous economic impact and is one of the strongest elements in the American economy.

Although only 4,350,000 home loans to veterans have been made, these have resulted in more than $35 billion in construction—an extremely powerful factor in providing jobs and prosperity for millions of Americans in every section of the country.

Furthermore, it is estimated that 11 million World War II veterans have not used their home-loan entitlements, but figures from the Veterans' Administration show that increasing numbers of veterans are using these home-loan privileges. Approximately 300,000 additional veterans exercise their entitlements each year.

In view of all the foregoing facts, I respectfully urge with all the emphasis at my command that you seriously and thoughtfully consider the extension of the home-loan provisions of the Servicemen's Readjustment Act for at least 1 year, and provide for orderly transition into the Federal Housing Administration of the Government's entire housing program, so far as it affects private industry.

Labor Leaders' Statesmanship

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. TOLLEFSON. Mr. Speaker, the following excellent editorial appearing on June 7, 1956, in the Bremerton Sun, points up the fine type of representation which is given to the first district of the State of Washington by our distinguished colleague, the Honorable TOM PELLY. During the years of his tenure in the House of Representatives I have observed his efforts to keep in close touch with his constituents in order that he might better serve them. He constantly seeks to ascertain their views on pending problems and legislation. As a consequence, he does an outstanding job of representing his district.

LABOR LEADERS' STATESMANSHIP

Recent remarks of United States Representative TOM PELLY in the CONGRESSIONAL RECORD disclose some real statesmanship on his part and on the part of some labor leaders in this area.

Faced, as is every Congressman, with the healthy prospect of a $2 billion Federal surplus (the first time in 5 years and the fourth time since the depression) at the end of the fiscal year this month, Mr. PELLY wrote to union leaders in the Seattle-Kitsap County area. He put it squarely up to them. He pointed out that there were three things which could be done with the black-ink money: (a) use it now in a preelection tax cut; (b) wait for the President's budget recommendations in 1957, or (c) use the money to reduce the national debt.

Obviously, the first one would be the political thing to do, particularly as PELLY's Republican Party undoubtedly would gain the most ballot credit if tax cuts were to be made available just before the Nation votes this November. Many—perhaps most—Congressmen would take that stand without consulting anybody. Yet PELLY not only wrote his labor leader friends; he pointed out in his letter that low-income groups, thinking themselves profiting by a tax cut, really would be benefited more by a reduction in the national debt, a reduction which would save them from the spending pains of inflation.

Despite these plain facts, 16 labor leaders replied to PELLY that they favored immediate tax reduction.

But 17 of them said they favored reducing the national debt. And nine of them favored waiting until President Eisenhower's recommendations after the next election (he still will prepare the 1957 budget regardless of who wins in November).

The vote, then, was 26 to 16 against doing the political thing. That is statesmanship in labor circles.

PELLY, already having stamped himself as being against a ballot-box lure for votes, made it a matter for the CONGRESSIONAL RECORD when, in reporting the results of his labor poll, he said: "Personally, I believe with the President that the right thing today is to refrain from the temptation of trying to write a tax reduction just before the election. If political enthusiasm runs away * * * it would be unfortunate for this country. There will be ample opportunity to reduce rates next January. And then, Mr. Speaker, let us not forget, as union leadership obviously has not forgotten, that low-income groups need relief from present high taxes. I suggest low-income family groups in particular."

Speech of Hon. A. L. Miller, of Nebraska, at Sixteenth Annual Meeting of Institute of Food Technologists

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD the following speech I made at the 16th annual meeting of the Institute of Food Technologists at St. Louis, Mo., June 11, 1956:

Mr. Chairman, honored guests, ladies and gentlemen, I feel honored to have the pleasure of appearing before this distinguished group of experts who deal with the problems of food chemistry and allied subjects. You are rendering a service to the public. As a physician and surgeon I was rendering a service to the public. It is not unlike serving in Congress where you also try to be of service to your constituents. As a physician people came to me seeking relief from pain or a physical condition—as a Member of Congress people either want something from government or they want to get government out of their hair. It's a service either way.

I pay my respects to you men and women who have made such a marvelous contribution to society through your efforts to improve the processing, the packaging and the handling of food. I have reviewed the program of your 16th annual meeting. It bears evidence that science marches on to unlock doors of the scientific tomorrow. The answers we find should bring additional blessings to mankind.

We who approach three-score years in life have seen in our lifetime more advancement in science, in technology and in the art of living than have any other equivalent period of history in this world. You and I have seen the coming of the automobile, the telephone, the radio, television, and a thousand and one gadgets that make life a little easier, and that give us more time to do the things we want to do in life. We have grown from the horse and buggy period to the jet-propelled plane that travels faster than the speed of sound. Guided missiles are on the trestle board which will travel 16,000 miles an hour and 300,000 feet in the air. The atomic powered submarine the *Nautilus* is a reality. It is quite possible the ships of tomorrow may all be powered by atomic energy.

The medicine of today is far advanced over that day when I received my sheepskin to practice medicine and surgery in 1918. Many diseases have been conquered. It is estimated that 70 percent of the prescriptions being filled over the drugstore counter today were not thought of 15 years ago. I doubt if the next 40 years will witness the many changes that have taken place in our lifetime.

One of the significant changes in the last two decades has been that of the scientific improvements in the dynamic and rapidly growing business of food technology. You scientists in your meeting today have been dealing in research which has opened up new frontiers. You have helped to create new industries, new and better jobs, and more and better things for a growing America.

I believe the American standard of living is greatly benefited because of the new things that research has been able to accomplish.

Research is a process that involves basically no more than asking questions of nature and seeking the answers. What new promise will come tomorrow is still a secret to many of the chemists living today. There will always be unexplored horizons waiting for someone to unlock the mysterious door to future progress, and it takes a pioneering spirit, a never-give-up attitude to discover those horizons and open those formidable doors.

There is no question but what chemicals are needed in the preparation, preservation and use of food. Much progress has been made through research in the field of nutrition and other practical applications of chemicals, and the American public can take pride in the manner in which our scientists and industry have handled these delicate problems.

I was privileged to be a member of a Select Committee, known as the Delaney Group Committee, established in 1950. We held 59 public hearings in 1950, 1951, and 1952, and heard 217 witnesses who presented their views; witnesses from the American Public Health Association, New York Academy of Medicine, National Research Council, United States Public Health Service, United States Food and Drug Administration, United States Department of Agriculture, Association of State and Territorial Health Officers, American Cancer Society, Grocery Manufacturers of America, National Canners Association, National Agricultural Chemicals Association, Manufacturing Chemists' Association, American Plant Food Council, General Federation of Women's Clubs, Cooperative League of the U. S. A., American Home Economics Association, National Council of

Farmer Cooperatives, National Grange, National Farmers Union, and others.

The select committee had this to say about food chemicals:

"The number of chemicals entering the food supply of the Nation has increased tremendously in the last decade. Chemical substances are being introduced into the production, processing, storage, packaging, and distribution of food at an ever-increasing rate. There is hardly a food sold in the market today which has not had some chemicals used on or in it at some stage in its production, processing, packaging, transportation, or storage. These foods include those eaten by every family, ranging from staples like bread to such luxury items as the maraschino cherry. Some eminent pharmacologists, toxicologists, physiologists, and nutritionists expressed the fear that many of the chemicals being added to food today have not been tested sufficiently to establish their nontoxicity and suitability for use in food. These scientists are not so much concerned with the acutely toxic compounds, whose harmfulness can readily be detected, as with those chemicals which may produce harmful effects only after being ingested for months or perhaps for years."

In the 84th Congress, several bills have been introduced that deal with chemicals in foods, the so-called food additives. Most of them attempt to regulate through the Department of Health, Education, and Welfare the quantitative and qualitative application of these additives. I know that unwise and excessive regulations, coupled with unwise and excessive administration, can do harm to any industry. We ought to create a favorable climate, taxwise as well as healthwise, if we are to promote the best interest of our cause. American industry must be encouraged to produce more and better goods. They ought to be produced at continually lowering prices because technical progress has shown the way. All legislation dealing with the question of chemicals in food should point the way to better living conditions. If the standard of living is lowered, we are going in the wrong direction.

It is recognized that present law does not provide adequate safeguards to guarantee a food supply absolutely free of injury to the public health. The consuming public requires more protection.

While industry has done a good job, we all know that in a tough economic world there is always someone ready to cut corners. That is why the public needs protection from those who might be less scrupulous than the large majority of the food and chemical industry.

Chemicals, antibiotics, and other things that made food better are essential to many manufactured items. The proper use of chemicals and other methods of handling, preparing, and storing food has reduced the cost of food and has kept it at a higher quality. Your technology group should have a great influence in shaping future legislation.

It is my opinion that the horizons of tomorrow will show still further progress for the food and chemical industry. The scientists are uncovering the secrets of nature and helping us weave a new fabric of life that will be even more pleasant than the one we enjoy today.

The interest in food and drug administration is countrywide. It is a subject that needs careful handling. We should not make the public hysterical. We should have composure and an objective view if we are to approach the problem in the interest of the public.

We should be sure that any new chemical is safe before permitting its application to the public food supply and that it will benefit the consumer. Now, by "benefit to the consumer" I do not believe this should be confined solely to a showing of functional value. We must recognize that foods with taste appeal, eye appeal, or sales appeal in many instances benefit the consumer just as they benefit the manufacturer and the dealer, to say nothing of the "ad man." It should be the responsibility of industry to thoroughly pretest the food additive before it is made available to the consumer.

We should never have a law which might permit untested chemicals to be introduced into food, but as the law now stands, they can be introduced into food, and the burden rests with enforcement agencies to determine whether or not they are injurious to the public health.

The bill that I have introduced, while covering all phases of chemicals in food, does set up a panel or council which is advisory and may be used by the Food and Drug Administration or by industry when a dispute on a chemical arises. A panel will be selected from the members of the Academy of Science. Let met emphasize that they are merely advisory. If industry is not satisfied it may then appeal to the courts who would then make an adjudication between the opposing parties. In the meantime the new chemical could not be introduced into the food until the final decision is made. The bill requires prompt action and eliminates long delays.

There is a great need to fill the gap which seems to exist in the present law which permits untested and inadequately tested chemicals to enter the food supply. This country is fortunate that we have a highclass group of gentlemen dealing with chemicals and food problems, and so the problems are less frequent than might be supposed.

The number of bills that have been introduced which deal with this subject indicate the desirability of such legislation, and the varied approaches emphasize that there is no universal agreement on the method for dealing with the problem.

It is a technical subject. It deals with technical, scientific problems for which there are no ready or easy answers. It is also a delicate problem, because, in considering in this legislation the desirability of a mechanism for the protection of the public health, we must not lose sight of the overriding principle that free enterprise must be encouraged in its constant research for a better, a more attractive, a more abundant, and a safer food supply for the American public.

The bill I introduced in this Congress defines new food additives as "any substance or treatment used, directly or indirectly, in or on food for the purpose of affecting the appearance, flavor, texture, or storage property of such food, or for the purpose of otherwise altering the quality or property of such food, which is not recognized among experts qualified by scientific training and experience to evaluate the safety of food, to be safe for use under the conditions of such use or intended use."

In other words, this definition confers jurisdiction in the Department of Health, Education and Welfare to apply the procedural sanctions of this bill to any substance or treatment used in or on food if, in the quantity and manner of use, the substance is not recognized as safe by qualified scientists.

There are many food additives now in use that are safe and are recognized as safe. There are many food additives now in use about which we have little scientific knowledge, but which have been used without any laboratory or practical evidence of hazard to the public health. It is my feeling that legislation requiring exhaustive laboratory analysis, pretesting and reporting of the old, recognized, safe additives would serve no useful purpose and would be unduly burdensome upon both industry and Government. They should come under the so-called grandfather clause provision. If, however, evidence—scientific evidence—should be developed in the laboratory or otherwise that an additive in use presents a reasonable probability of injury to health, the industry marketing that additive should be made to examine and reexamine its data and subject this additive to the scrutiny of the Department under this law.

Most of the bills that have been introduced on this subject agree, at least in principle, with this statement of the objectives of such legislation and with the jurisdiction which should be conferred upon the Department of Health, Education, and Welfare as its enforcement agency. The bills all quite uniformly agree that any industry proposing to market a substance that comes within the definition of a "new food additive" should submit a report of the scientific pretesting that has gone into development of the substance to the Department. The bills also are in material agreement on what the report should contain, and they all agree that the Secretary of Health, Education, and Welfare should have certain power over the use of chemicals and other added substances in our food supply.

The significant division in thinking appears in the procedures that are to be established. Here again, however, we all agree that the public health is paramount, and we all agree that the magnificent progress of American industry must not be blocked by an unwise delegation of power to a Government agency. The procedures established by these bills all have this purpose in mind.

We are dealing here with a problem that is primarily scientific, and secondarily legal. The problem of "what is safe for public health purposes" is essentially one within the knowledge of scientists who are qualified by training and experience to evaluate safety factors.

I believe the primary responsibility for evaluating the safety of new food additives should fall upon an advisory committee, composed of scientists. Any industry proposing to market a new food additive, after submitting its report of pretesting to the Secretary, may request that an advisory committee be appointed to examine the report of pretesting, and, after completing its examination, to submit recommendations to the Secretary. It does give the applicant and the Secretary the benefit of the knowledge and the impartiality of a board of experts. Their independent and impartial knowledge can act as a brake upon any inclination that might appear on the part of the Secretary to exercise arbitrary and unreasonable control over industry. It can also serve as an arbiter between industry and the Department if sharp differences develop. The committee can be requested and consulted by the Secretary, just as it can by the applicant industry.

The advisory committee device has proved itself well in another facet of the food field since the enactment of Public Law 518 of the 83d Congress. That law, of course, deals with the use of pesticide chemicals, or the Miller bill. It established advisory committees to make recommendations to the Secretary on pesticide chemical tolerances. I have followed the same framework in writing the advisory committee into new food legislation.

To those who fear the use of the advisory committee and suggest that it would become a tool in the hands of a capricious Department, may I say that on the only occasion when an advisory committee has been consulted under Public Law 518, the Committee's recommendations were contrary to the opinion of the Secretary, but the Secretary subsequently followed the recommendations of the committee.

The Secretary is given authority to write regulations that will define the use of a new food additive. If the applicant, or any party adversely affected wishes to protest the regulations, he may file objections thereto and proceed to public hearing in the De-

partment. The Secretary will then proceed to issue an order pursuant to the findings at the hearing, and the applicant's recourse is to the circuit court of appeals.

Again, let me say I am honored to appear before this distinguished group. I trust that in your deliberation you will give some thought to not only the new legislation but the type of legislation that will be best suited to a growing, dynamic America. The type of legislation that will best protect the health of America and provide the incentive for continued research in food technology.

Your land America is a dynamic, growing Nation. Many of the good things of life that we enjoy comes about because devoted men and women of science have worked hard and long to make our land a better place to live. We have grown from the 13 original colonies with 3 million people to 48 States with 167 million people. You are a part of this parade of progress and I am sure you will continue to make scientific contributions that will be in the interests of future generations.

Marquette University Honors Chancellor Adenauer

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. ZABLOCKI. Mr. Speaker, last week, I had the pleasure of witnessing a solemn convocation in the Milwaukee Auditorium, in the course of which the Marquette University honored Chancellor Konrad Adenauer, of the Federal Republic of Germany, with an honorary degree of doctor of laws.

This was an inspiring occasion, culminating the celebration of Marquette University's 75th anniversary.

I believe that the president of the university, the Reverend Edward J. O'Donnell, S. J., expressed the sentiments of the 5,000 persons who attended the convocation when he said:

It is most fitting * * * that at long last—in this city with its rich German sentiment and fine traditions, and at this university, where the glow of our 75th anniversary celebration still abides—we pay tribute to this illustrious statesman, stanch friend and ally, world leader and man of faith.

The city of Milwaukee was proud and happy to welcome Chancellor Adenauer, whose notable efforts to promulgate the growth of practical democracy on the national level in Germany, and whose personal integrity and courage in the face of totalitarian absolutism, have won the admiration of freemen all over the world.

The people of Milwaukee welcomed Chancellor Adenauer with enthusiasm, and they wish him well in his continued efforts to further the cause of democracy, and of lasting and just world peace.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to commend to the attention of the membership of this body the following text of Marquette University's honorary degree citation of Chancellor Adenauer:

ADENAUER CITATION

Konrad Adenauer is a man of Cologne. From 1876 until 1949, save for his years at the Universities of Bonn, Freiburg, and Munich, in Cologne he lived and worked as a lawyer, public prosecutor, deputy mayor, and lord mayor. There from 1933 till 1945, when he was not actually in prison, he was under house arrest by the Nazis. With poignant truth he said, "I have felt totalitarian absolute might on my own body."

But there also in Cologne he lived and learned democracy in local government that had centuries old municipal guaranties of personal liberty which had been worked out in the middle ages. Two wars have caused some to forget that these communities, whose histories go back to Roman times, developed at the town level the finest type of practical working democracy. To translate these tested safeguards of personal freedom up to the national level in Germany and then to the international level for the world is now his sole mission.

For this role divine providence has with deliberation prepared him, over the years, deepening his experience and wisdom. In 1949, at the age of 73, he was ready and became Chancellor of the Federal Republic of Germany. From that day to this he has been to the whole free world a strong symbol of a new Europe and a new hope; his sincerity, his selflessness, his deeply Christian appreciation of the rights of the individual as well as of society have stood firm both as rampart and as sign against the dark, despotic ways of godless collectivism.

Konrad Adenauer has often expressed and twice acted upon his desire to know the Midwest, the heart of America. In Milwaukee he finds a city and a university both of which have benefited from the industry and culture of men and women whose ultimate roots drew from the same Christian and European civilization which produced the ideas of Cologne and of Konrad Adenauer.

It is altogether fitting, therefore, that this university in this midwestern city, proud of its integrity and freedom, should this day declare that, because he has shown himself in private and in public life to be a man of inner strength who as a victim was not broken by tyrannical power, who as an intellectual and Christian humanist has understood Europe from within, who as a wise statesman knew how to be patient and how to be daring, who has shown to his friends and to his foes enduring strength and courage, whom all the world recognizes not as a creature of expediency but as a man of Christian and eternal principles, Konrad Adenauer has merited from Marquette University the degree of doctor of laws, honoris causa.

Encouraging Foreign Investment Through Tax Legislation

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. MACHROWICZ. Mr. Speaker, yesterday, June 19, 1956, I introduced H. R. 11838, a bill to encourage private United States investments in foreign countries by reducing the incidence of double taxation on taxpayers with more than 80 percent of their gross income from sources without the United States. I most strongly urge my colleagues to give this legislation their full support.

Our best insurance against a communistic world is to bolster the economies of our allies in foreign countries. A healthy economy and a high standard of living are rarely breeding grounds for communism. During the past decade the United States has been relying mainly on the foreign aid programs to help the underdeveloped areas of the world to improve their economic conditions.

It is doubtful that we can continue to afford these costly foreign-aid programs. Our people are coming to the realization that private enterprise must gradually take over the burden of developing the economies of these countries. Competitive, free enterprise, which has developed the United States to its present high economic level, is the best exportable product the United States possesses.

However, in order to encourage the American investor to undertake the development of foreign natural resources, industries, and markets for United States goods, the investor must be placed on a competitive level with the investors from other capital exporting countries.

Under the present United States income-tax laws, the American investor in foreign countries is at a disadvantage with his competitors. The removal of some of the tax obstacles would encourage him to take the risk of sending capital funds abroad, even in the face of exchange fluctuations, nationalistic tendencies, and the ever-present communistic influences.

One of the obstacles which causes an American investor to pay a combined foreign and United States tax in excess of the tax payable on the same investment made in the United States is the so-called per country limitation in the Internal Revenue Code.

The United States investor abroad cannot obtain in undeveloped foreign countries sufficient capital to develop and expand operations and must look to the United States capital market for funds. The fixed charges on these funds must be paid in United States dollars. Hence, the investor has found it necessary to invest in several countries; so that in the event the exchange and economic conditions in one country deteriorate then the fixed charges on the borrowings for the whole operation may be met with revenues from the other countries.

This diversity of investment in several countries is the same approach used by the United States in giving aid to several countries at the same time in its fight against communism. In this manner, if the aid to one country is ineffectual, the complete program will not be destroyed.

The per country limitation of the code does not recognize the business necessity of diversification and requires earnings and income taxes to be segregated by countries rather than allowing the taxpayer to consider the income and taxes from all countries as a single business unit. The total foreign income

taxes paid are an expense of the entire operation and the fact that in some countries the tax rate is low and in others it is high should not prevent the use of the full foreign income taxes paid as an offset to the United States income tax.

The allocation of income and taxes by countries required by the per-country limitation often results in a combined foreign and United States tax rate in excess of the present 52-percent tax rate on United States income.

The original and basic intent of the foreign tax credit provisions of the code was to avoid double taxation of foreign income. These provisions have been of real value and without them a United States company could not possibly operate in a foreign country.

The removal of the overall limitation in the Revenue Act of 1954 should have been an impetus to the investor with United States source income to invest abroad, since it enabled him to use foreign income taxes as an offset to the tax on United States income. However, the removal of the overall limitation did not afford any tax relief to the investor who derives practically all of his income from sources without the United States. Such an investor does not have sufficient United States income against which foreign taxs could be applied. This investor must still bear the inequities brought about by the application of the per-country limitation.

In order to remove these inequities entirely and thus give full impetus to investment abroad, the per-country limitation on the use of foreign tax credits should be removed from the code completely. Though this would be reasonable and in the public interest, the Congress may not consider it feasible to take this action at the present time.

However, the per-country limitation should at least be made inapplicable to the taxpayer whose gross income qualifies as foreign source income under the provisions of subchapter N, part I, of the code. Such qualified taxpayers are the true foreign investors. With the assurance that their combined taxes will not exceed the United States tax rate, these are the organizations which will send capital funds abroad to further expand and develop industry and markets for United States goods.

Power on the Line

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. WESTLAND. Mr. Speaker, the following editorial appeared in the June 7 edition of the Skagit Valley Herald, a daily newspaper in my congressional district. It points out the benefits which the area will derive from the construction of a new dam on the Baker River by the Puget Sound Power & Light Co. This newly licensed project demonstrates how the power industry of the Northwest is planning ahead, investing millions in the future of the area. I am certain that the growth of our Northwest industries depends to a large degree on power, and this project is a solid step toward meeting the needs of the future.

The text of the editorial is as follows:

BAKER RIVER DAM PROJECT

Puget Sound Power & Light Co. has taken a commendable stride forward with the construction of new hydroelectric facilities on the Baker River totaling 140,000 additional kilowatts of power output.

This $35-million project demonstrates the great faith of this private utility in the Puget Sound area. It is the largest single undertaking in the power company's life, and it comes at a time when this area is looking to the greatest economic expansion in its history.

The immediate effect upon the economy of this region will be felt as men and materials unite to build the dam. Every shopping district from Marblemount to Mount Vernon will receive direct benefit from the $11 million payroll that will be paid to construction workers in the next 3 years that the project is under construction.

The Superior Portland Cement plant at Concrete is probably another Skagit County beneficiary of the huge project.

However, it is the long-range benefit that is the greatest result of the two Baker River developments.

The additional energy made available to western Washington is of vast importance to new business, agriculture, and industry. The lessons of the past decade in the Northwest clearly show that economic expansion follows closely the development of low-cost power. It is nearly impossible to have too much power, for as soon as new energy is developed new customers appear to use the power.

Power-hungry industries so attracted spell economic development for the Puget Sound area. Puget Sound Power & Light is providing more kilowatts to turn the wheels and drive the machines or industry, machines which offer more jobs to an expanding population along the western slope of the Cascades.

Without new sources of energy the Puget Sound area's development would be stunted. Puget Sound Power & Light has recognized the opportunities and has assumed a leadership in the economic progress of the Puget Sound region.

Continued growth and prosperity for everybody from farmer and factory worker to doctor and lawyer is an inevitable result of Puget's forward stride in power development.

Resolution in Opposition to the Recommendation of the Bradley Commission

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mrs. GRIFFITHS. Mr. Speaker, the recent report of the Bradley Commission on veterans' benefits has aroused considerable discussion in my home State of Michigan and throughout the Nation.

This is quite proper in our democracy where important questions of public policy should be intelligently evaluated at all times by our people.

In this connection the Disabled American Veterans of Michigan recently held their 31st annual convention in Detroit and adopted a resolution in opposition to the recommendations of the Bradley Commission.

Under leave to extend my remarks, I wish to include the text of this resolution in the RECORD:

RESOLUTION CONDEMNING THE BRADLEY COMMISSION REPORT

Whereas the Bradley Commission has rendered a report which cruelly departs from the accepted principles of veterans' benefits established over the years by our Government since the Revolutionary War; and

Whereas the Bradley Commission report introduces new and dangerous concepts which would destroy the philosophy of veteran's benefits now existing and in its place would substitute a set of sociological principles not particularly related to veterans' problems; and

Whereas we believe the Bradley Commission report gives lip service to the obligation owed to the Nation's service-connected disabled defenders but has in fact laid the foundation for a wholesale assault on veterans' benefits: Now, therefore, be it

Resolved, That the DAV Department of Michigan, in convention assembled this 8th, 9th, and 10th of June 1956, at Detroit, Mich., does go on record as condemning the Bradley Commission report as destructive of veterans' benefits as evolved by the duly elected congressional representatives of the grateful people of this Nation over the course of its history; and be it further

Resolved, That copies of this resolution be furnished to the public press and copies mailed to each of Michigan's Representatives and Senators and to our national legislative chairman.

Approved June 10, 1956, at the 31st annual convention of the Department of Michigan Disabled American Veterans held in Detroit, Mich.

LAWRENCE R. SYLVESTER,
Department Adjutant.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. LESINSKI. Mr. Speaker, on May 27 of this year, I joined with Detroit members of the American Committee for the Independence of Armenia to celebrate the 38th anniversary of Armenian Independence Day. At that meeting, I heard a fine address by Mr. Arpo Yemen, secretary of the American Committee for Armenian Independence in Detroit. I think Mr. Yemen's remarks are worthy of notice and am submitting them for the information of the Members.

The remarks follow:

May 28, 1918, represents the culmination of six-centuries-long Armenian aspirations for national independence.

In her more than 3,000 years of glorious history, Armenia was oppressed nearly by all the notorious conquerors—from Assyrian, Persian, and Roman emperors to Genghis

Khan and the even bloodthirstier tyrants of modern Turkey.

But even during the darkest periods of Armenian history the unquenchable spirit of independence was preserved in the hearts of Armenians. Massacres, horror, rape, and plunder, toil, sweat, and more blood have only strengthened the indomitable will of the Armenians to regain the paramount condition of existence—freedom, freedom of worship, freedom of thought and speech, freedom to live decently, and the right to die with dignity.

The Armenian saga of May 28 is only one of numerous other confirmative examples that the price of freedom is very high indeed, but not too high for nations determined and willing to pay it.

Today's celebration of the 38th anniversary of May 28 carries a special significance—a significance which illustrates the nature of our renewed struggle against slavery and tyranny, this time wearing the ugly mask of communism.

Representatives of five other once politically and culturally free and proud nations full of brilliant historic traditions, are joining us in our rededication to the sacred cause of liberty; they are: Ukraine, Bylorussia, Estonia, Lithuania, and Latvia. They all have a common enemy—Soviet Russia, and a common desire for freedom and a common hatred of tyranny, be it exercised by Lenin, Stalin, or his former assistants. The history of their respective countries have a striking resemblance to the history of Armenia; in fact, some of them proclaimed their national independence in the same blessed year of 1918, and were incorporated in the Soviet Union in the same dark November of 1920. The Baltic States, Estonia, Lithuania, and Latvia, were enslaved in the form of Soviet Socialistic Republics 20 years later in June of 1940.

Disregarding the statistical differences of chronology and geography, the history of all freedom loving peoples is strikingly similar to each other. Scientists and historians have long but in vain sought an equation—a mathematical expression of the course of history. Here is one, even though oversimplified:

Struggle + saerifice + perseverance + optimism + faith = freedom. You see, my dear friends, this time we are not alone in our struggle, sacrifice, perseverance, optimism, and faith, and therefore we should attain freedom more surely than before.

There are some more captive nations in the Soviet Union, nations which we must not fail to mention in this celebration commemorating freedom anywhere, anyplace. All these countries have been swallowed by Soviet Russia in one form or another.

In the form of Soviet Socialist Republics there are: Georgia, Azerbaijan, Turkestan, Uzbekistan, Khazakhistan, Kirghizia, and Karelia.

In the form of "Eastern European satellites"—a phrase we hear more often nowadays than "Soviet Socialist Republics," possibly because the memories of some influential statesmen in the free world such as George Kennan, author of the dubious policy of containment, Winston Churchill once an ardent foe of communism, and even our own Secretary of State John Foster Dulles can reach as far back as 1947; or they want to deliberately set the course of history at 1947. Anyway, these so-called satellites, equally entitled to their place in the sun of liberty are Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, and Albania. When free elections are permitted in those countries, Mr. Churchill would "do business" with "new Russia" and even admit her to NATO. What "new Russia" are they talking about, I do not know. But to make our list of Soviet colonies as complete as possible let us not forget China, North Korea, North Indochina, and East Germany—all once free, independent, culturally and ethnically distinctly non-Russian nations. Today they are all being oppressed in the most ruthless form of colonialism the world has ever witnessed.

Just a few days ago Mr. Khrushchev made a toast for the independence of Algeria from French colonial rule and, in general, of all nations seeking freedom from colonialism.

So let us join Mr. Khrushchev in that toast by extending his wishes to the countries I already enumerated—countries which are victims of the Soviet brand, much more vicious type of colonialism.

We can assure Khrushchev, Bulganin, and the Kremlin gang that they are not just ironically laughing at us.

There are certain implacable laws of history, among which the axiom that dictatorships are inevitably doomed to destruction and that through the somber clouds of slavery and injustice the sun of liberty and justice is bound to shine again.

In the meanwhile, every year on May 28, we are going to remind both the free and enslaved worlds that there cannot be eternal peace on earth until such time as every nation in the world, including the smallest ones, are granted their place in the family of peace and freedom-loving nations.

Live a Little Longer

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article by Dr. William A. Sawyer, International Association of Machinists medical consultant, which appeared in the Machinist for June 21, 1956. This article is entitled "Live a Little Longer" and concerns the chain of 10 new hospitals constructed by the United Mine Workers Welfare and Retirement Fund for the benefit of soft coal miners of Virginia, West Virginia, and Kentucky. The article follows:

LIVE A LITTLE LONGER—MINERS' HOSPITAL CHAIN HERALDS BETTER HEALTH CARE

(By Dr. William A. Sawyer)

I had the privilege on June 2 of sitting with several thousand miners and their families, while John L. Lewis, president of the United Mine Workers of America, dedicated a chain of 10 new hospitals which will serve the soft coal miners of Virginia, West Virginia, and Kentucky. As President Lewis dedicated them in memory of those miners who suffered and died in the past without adequate hospital and medical care, a response of "Amens" was heard among those assembled. On their faces were expressions of warm and enthusiastic gratitude, despite the chilly, misty day. The service was held outside the 193-bed Beckley Hospital, which is the largest of the chain.

These hospitals were made possible by the welfare and retirement fund started 10 years ago by a tax of 5 cents on each ton of coal mined. Today it is kept going by a tax of 40 cents on each ton. After trying for several years to take care of sick and injured miners and their families in the too few and insufficiently equipped hospitals of these States, it was decided to provide, where needed, additional beds in more modern hospitals.

This chain of hospitals, ranging in size from 50 to 199 beds, will have a total capacity of just over 1,000 patients. They will have the services of various specialists in the three base hospitals at Harlan, Ky., Williamson and Beckley, W. Va. Training schools for registered and practical nurses, as well as for technicians and other personnel, will be located in these base hospitals also. These hospitals are located throughout the hills for 250 miles, connected by winding roads. No one hospital is more than 65 miles from its neighbor. Because of this, personnel and supplies can be changed readily.

This chain hospital system for medical and surgical care of miners and their families is new in the realm of orthodox medical care and union health and welfare plans. The buildings are of brick and glass, functional in design, attractively decorated within, and medically provided with the latest and best of equipment. No money has been wasted on nonessentials. In fact, they have been constructed at a lower per bed unit rate than is true generally. Ordinarily, it costs between eighteen and twenty thousand dollars per bed. The memorial chain averaged $16,000 per bed.

These hospitals are introducing methods of operation that hospital experts will be studying and talking about for many years to come. The basic idea back of some of these new ideas is to provide people and things at the patient's bedside as speedily and economically as possible. The object of all such planning is not merely to save money, but to put time and money where they really belong—with better patient care.

As I toured the Beckley Hospital and listened to each department head describe his or her work, it was evident that only the best and most skillful diagnosis and treatment were good enough for their patients. Doctors, nurses, technicians, and various other staff personnel are being carefully selected, trained where necessary, and paid better than is the average generally in hospitals.

From such generous support and careful selection of staff, superior care should be possible. If the art and heart of good medical care can take new and deep roots in this advanced medical service system, the memorial hospitals in the coal regions may well become new beacons of better medical care generally, for more people everywhere.

Remarks by the Honorable Wilber M. Brucker, Secretary of the Army, at Flag Day Celebration, Philadelphia, Pa., June 14, 1956

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am inserting speech made by the Honorable Wilber M. Brucker, Secretary of the Army, at the Flag Day celebration in Philadelphia on June 14, 1956:

It is refreshing to stand here on Flag Day in the shadow of Independence Hall, where our Nation was born, and where, 179 years ago today, the Continental Congress adopted the Stars and Stripes as our national emblem.

This is also the 181st anniversary of the United States Army, which from the very

first moment of its existence has been our country's stanch defender. It is altogether fitting that the Army's new flag, which it was my privilege to receive only yesterday from the hand of Vice President NIXON at a ceremony on the steps of our National Capitol, should be unfurled to the breeze for the first time on this historic occasion. With all its proud record, the United States Army has never had a flag of its own. Its divisions, regiments and other units have had individual flags. Now the Army has its own flag, symbolizing the unity that embodies all its elements. This flag throughout all the years to come will fly alongside the Stars and Stripes as the splendid symbol of "Duty—Honor—Country" to which our great Army has ever been true, and from which it will never depart.

We are gathered here today to pay tribute to Old Glory, the symbol of our national unity, our national endeavor, and our national aspirations. It is the emblem of the courage and the indomitable spirit of a great people. It is the embodiment of the wholesome principles that have made our Nation great.

It is a flag of peace—the kind of peace that is based on justice. It stands forthrightly for the rugged determination of Americans to fight—to the death if need be—to protect their freedom against any enemy. It is a flag of power—of the material power for national security and the protection of free men everywhere. It is a flag of spiritual power that sustains free men in consolidating their hard-won freedom into workable self-government. It flies proudly over our Army posts, our ships of war, our air bases and every farflung bastion of our military strength in 73 countries around the world. It flies over our schools where our citizens of tomorrow are in the making, and recite the pledge of allegiance to the flag. It occupies in solemn dignity an honored place beside our religious altars. It adorns our courts of justice. It is a beloved member of countless households. It is a living embodiment of the faith of 167,000,000 Americans.

When the flag was born, our Nation was less than a year old. In those early days, the flag was displayed everywhere with genuine pride. It was the radiant symbol and visible evidence of the bond that welded Americans of diverse backgrounds into one people, with one purpose and with one spirit. In more recent years, some people have come to take the flag for granted. They have come to take their heritage of freedom for granted. They do not give the flag its proper place of honor. If this tendency continues, we shall have lost much of the vital stimulus and spiritual vigor which only the flag can give.

By honoring the flag, we honor our country. Flag etiquette is not just idle ritual. It is the outward evidence of inward reverence for America. We do not honor the bright silk or bunting of which the flag is made, but rather the living soul of our Nation which is incarnate in its gleaming folds. When we hoist the flag at sunrise and take it down at sunset, when we place it in its proper position at the right of the dais or pulpit, when we give it the place of honor over all other standards, when we salute it, or take off our hats as it passes on parade, we are according our country the respect to which it is entitled in our lives.

The very act of displaying the flag, or standing proudly at attention and saluting it, helps to awaken in the heart of a true American the essential spirit of our Nation. Every time he salutes that flag he strengthens immeasurably his inward patriotism by giving it external expression. Old Glory can contribute so much to enrich our lives if we only take the time to do it. Yet how careless we have become in our outward manifestations. On Memorial Day as I drove through the streets of Washington on my way to Arlington Cemetery to lay the wreath at the Tomb of the Unknown Soldier, I was struck by the absence of the American flag. Today, as I traveled to Philadelphia, I was saddened by the lack of the display of the flag. Isn't it high time we quickened our zeal by restoring respect for the flag to its rightful place?

I call upon Americans to renew their patriotic spirit by displaying Old Glory upon every appropriate occasion and rendering it the respect that is its due. No school, no public building, and no home should be without the Stars and Stripes, prominently displayed on our Nation's birthday, on Memorial Day, and on other patriotic occasions. Nothing the average citizen could do would help more positively than such action. The impact everywhere would be as astounding as it would be beneficial.

It would serve notice upon any who seek to destroy our freedom that we are solidly united. Could there be any more effective way of dismaying our enemies, and raising the confidence of our own people in this important hour?

Flag Day is a day of solemn rededication of national faith. Years ago an intrepid Army sergeant carried the flag forward in advance of the troops attacking across open ground amid a rain of bullets. So fierce was his charge that he found himself well ahead of the line, which had become pinned down by enemy fire. "Bring the colors back to the line," the captain shouted to him. "No," replied the sergeant, "Bring the line up to the colors." Inspired by his intrepid example, the troops surged forward and the line was brought up to the colors.

In like manner, we must all bring our lives up to the flag. The flag causes us to rise above lesser motives and strive to measure up to the high standards it represents. The flag inspires us to live up to what is expected of us. The flag brings out the best in all of us.

On this 179th anniversary of its birth, the flag looks down upon a Nation threatened by a vicious international conspiracy under the hammer and sickle, backed by the largest mobilized armed forces on earth. During the last 10 years, the Communists have extended their control to embrace 600 million people. They have more than 8 million men under arms at this moment, including 2½ million Red Chinese. Most of their troops are ground troops. They have 405 armed and well-trained divisions ready for immediate action.

Menacing as this may be, it is only a part of the overall challenge that we face. Of equal importance is the menace of a diabolical ideology of hate, atheism, and intellectual perversion which saps men's moral stamina, impoverishes their minds, and gnaws at their souls. The Communists know that if they could destroy America by either method—I mean, of course, with military force or this insidious ideology—they could end all effective resistance to their plans to capture the whole world for communism.

The ability of our Nation to stand firm in the face of this challenge rests upon our spiritual strength, our unswerving purpose, and our sustained vigilance. The steel of America's spirit will always be her most formidable armament.

The concept that the soldier should be called in only after statesmanship has failed and war is actually upon us is outmoded because it is moth-eaten, shoddy, and threadbare, and a part of the past. Today our Armed Forces are the strongest pillars of statesmanship by which we are seeking to compel any warlike nation to keep the peace. We are keeping ourselves militarily strong in order to cope with the military power arrayed against us. We have a magnificent Army-Navy-Air Force team. Working together, our Armed Forces constitute the greatest power for peace in the world today.

The United States Army has half its strength deployed overseas. Our troops abroad constitute visible evidence to the leaders of the Communist conspiracy that we mean exactly what we say—that we steadfastly intend to resist aggression in any form. In the future, there should never be an occasion for an aggressor to explain that he misunderstood America's position. The presence of our troops standing guard along the frontiers of freedom in Europe and Asia stimulates the morale over there, and stiffens the resistance of our friends. It is a constant reminder that we're in this together. It proves our determination to see it through together, and it constitutes a powerful deterrent to any aggression.

Although man has struggled for freedom since the dawn of time, only a few have achieved individual freedom like ours. Experience and wisdom acquired the hard way through all the ages were blended into the blueprint of America. Democracy will always be an unfinished work. We cannot take for granted its permanence because we have enjoyed its benefits for 180 years. America cannot rest upon the laurels of Washington or Lincoln. Democracy is strictly a matter of day-by-day accomplishment. Unless we translate the inspiration we derive from the achievements of the past into equally splendid achievements today, our democracy cannot long survive.

There is too great a tendency among Americans to be spectators rather than participants in our great democracy. There are too many critics and too few builders. A man who could not build a tarpaper shack can tear down a cathedral. When the Declaration of Independence spoke of the right to the "pursuit of happiness" it meant just that—the right to work out our own destiny. It did not mean that we could avoid all the unpleasantness of life. In God's economy there is no attempt to protect man against difficulties. In fact, He permits difficulties in order to temper men's souls. The same fire that burns wood hardens steel.

Our freedom and our American way of life are always under attack. Only through eternal vigilance and unremitting effort on the part of every one of us can they be kept secure. Freedom is not like a prize that can be won for all time and locked away as a perpetual treasure. It is a living thing that must be constantly nurtured by the toil and sacrifice of dedicated men and women. Freedom will continue to bless us with its presence only so long as it is vigorously cherished and zealously guarded.

America was built by patriots and it will be kept secure only by patriots. When we think of all the flag has meant to generations of Americans, can we believe the cynics who say that patriotism has become outmoded? Can we forgt that all we have today—our freedom, our civilization, and everything that raises us above the primal savage of the jungle—has been won and held by men who, loving life, loved principle more, and were willing to sacrifice their lives if necessary for their beliefs? Patriotism must remain dominant in our lives. America has a greater need today than ever before for men and women who think in terms of what they owe their country, not what their country owes them.

There still lives in this Nation the spirit that made it great and has kept it free. That spirit will lead us onward to heights as yet touched only by our dreams. Sometimes patriotism lies dormant until it is sparked by some great event or moving experience. In the meantime it continues to reside in he heart of true Amercans. It will continue to be the source of our strength through all the years to come.

Last December in the course of an inspection trip to the Far East, I visited Pearl Harbor. It was about 14 years from the time of the infamous attack, and I told the

admiral who welcomed me that I wanted to visit the spot where the battleshihp *Arizona* sank under the unexpected rain of aerial bombs that terrible day in 1941. He took me out in a small boat, and as we approached the area in the harbor where the *Arizona* lay, I noticed that the form of the great ship was outlined by small floats. Although the deck was 15 feet or more under the water, I was able to step out on the bridge which projected several feet above the surface.

While standing there, I looked down and let my eyes trace the outline of that historic ship under the dark water, and I thought of the 996 Americans who lie in eternal honor within her shattered hull—where they fell, and where they remain because their dear ones want it that way. As I stood there, I noticed the irridescence of an oil slick on the waves. As I pointed to it, the admiral said: "Yes, we've noticed it many times. It's oil, still oozing up from the *Arizona*." It was a solemn moment.

I turned toward the stern, and there an American flag was flying. I said, "Why is the flag flying out here?" The admiral drew himself up and said, "Sir, this is still the *Arizona*. Every morning we come out here and raise her flag, and every evening we take it down." We both saluted the *Arizona's* flag and her immortal ship's company—while I gulped and wiped my eyes.

After that precious experience I felt a tingle running along my spine—greater faith in my heart—and renewed determination to be fully worthy of that glorious flag. You don't have to shout about patriotism. You don't even need to talk about it. You just feel it—deep down inside of you.

There is a little couplet which expresses my faith in this Nation, and in the inherent patriotism of our people:

"America's strong, America's young,
And her greatest songs are still unsung."

Campaign Against Loud and Obnoxious Radio-TV Commercials Bolstered by TV Guide Magazine

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. HOSMER. Mr. Speaker, several weeks ago I issued an interim report on my then faltering campaign against loud and obnoxious radio-TV commercials. Subsequently TV Guide, a weekly which bills itself as "America's television magazine," took up the fight and editorialized as follows:

AS WE SEE IT

Anybody have an opinion on loud commercials? Here's a chance to say something about them.

Congressman CRAIG HOSMER has undertaken a campaign against "loud, noisy and therefore obnoxious commercials on radio and TV." It's a praiseworthy endeavor if there ever was one, and certainly is worthy of support.

Breathes there a red-blooded American viewer who hasn't muttered imprecations against sponsors who insist on filming their sales messages at higher-than-normal volume? Is there one among us who hasn't dreamed happily of wonderful tortures to be tried on station executives who instruct engineers to "turn up the sound for the commercials?"

Congressman HOSMER says his campaign is "faltering." He complained to the Federal Communications Commission. No answer. He wrote the networks. No response. Now he's appealing to the people.

With a few hundred thousand letters in his mailbag, the good Congressman, who hails from California, might start impressing the men responsible for loud commercials. He might carry some weight with a well-supported complaint to the National Association of Radio and Television Broadcasters.

Let's all write Congressman HOSMER a letter. Let's tell him that we agree—or disagree—with his campaign to bring the commercials down to the same sound level as the programs.

Send your letter, or card, to: Hon. CRAIG HOSMER, room 241, House Office Building, Washington, D. C.

The result has been a deluge of mail from 48 States and 6 Canadian Provinces, too. It is being analyzed, and I shall soon be able to make a second interim report concerning my no longer faltering campaign.

Present indications are that the forthcoming report will be comforting to neither network vice presidents nor the Madison Avenue hucksters who ad nauseam try to brain wash every living American and Canadian in such things as wondering "where the yellow went" or "why grandma can't get a queen size pop bottle."

Resolution on Civil Rights

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NEW YORK COUNCIL PIONEER WOMEN,
New York, June 12, 1956.

Hon. CLAYTON POWELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN POWELL: We have the honor to transmit to you a resolution on civil rights, adopted by the New York Council Pioneer Women at the annual conference, held May 24, 1956, at the Belmont Plaza Hotel, New York City.

Sincerely yours,

FLORENCE SELKIN,
President, New York Council Pioneer Women.

MILLY BRANDT,
Chairman, American Affairs.

RESOLUTION ON CIVIL RIGHTS

(Adopted at the Annual Conference of the New York Council Pioneer Women, New York City, May 24, 1956)

Resolved that we, the New York Council Pioneer Women, in annual conference assembled, May 24, 1956 at the Belmont Plaza Hotel, declare our solidarity with the forces in American life which are striving for the full implementation of the Supreme Court decision in favor of desegregation in our schools, and declare this decision to be a basic step on the road to the full equality of the races which together make up our great Nation.

We pledge our best efforts to the attainment of full civil rights of all our people, regardless of race, creed or color, in the field of employment, voting, housing, education and equal protection before the law.

We urge both the Democratic and Republican parties to include in their party platforms at the coming national conventions, a courageous and liberal civil-rights plank, in keeping with the spirit of the Bill of Rights, which is part of the fundamental document of the freedom of our country.

Be it further resolved that copies of this resolution be sent to Mr. Leonard Hall, national chairman of the Republican Party; to Mr. Paul Butler, national chairman of the Democratic Party; to Senator HERBERT H. LEHMAN, and to Senator IRVING M. IVES.

Submitted by:

MILLY BRANDT,
Chairman, American Affairs Committee.

Why the Reserve Has No Technicians

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the April 1956 issue of Air Force magazine entitled "Why the Reserve Has No Technicians":

WHY THE RESERVE HAS NO TECHNICIANS

(By Edmund F. Hogan)

As we have pointed out before (Air Force, January 1956) the establishment of an air technician program is a basic requirement for the Air Force Reserve. Briefly, this program uses full-time, civilian employees in place of the active-duty Air Force people who are now assigned to Reserve flying units. The civilian employees, however, must be members of the units in which they are employed, and go on active duty with their units when mobilized.

The Air National Guard has had a similar program since 1946. The years have proved it to be an unqualified success. There is every reason to believe that this program in the Air Force Reserve would be equally successful. An air technician plan for the Reserve was developed by Continental Air Command a year ago. It is specifically designed to improve the combat-readiness of the 24 Reserve flying wings. But there are other important byproducts.

First, the technician plan would release some 9,000 active-duty Air Force officers and airmen for assignment elsewhere in the active establishment. Second, it would save about $2 million a year in salaries alone and an estimated $9 million a year in hidden costs required to support the present system.

Last June the Air Force submitted the plan to the Department of Defense, specifically to Carter L. Burgess, Assistant Secretary of Defense for Manpower and Personnel. Mr. Burgess looked it over and sent it back to the Air Force for answers to questions which had risen from a review of the plan by his staff.

On August 31, Air Force Secretary Quarles sent a memorandum to Mr. Burgess, replying to the questions he had asked. One of these concerned civil service status of the technicians. The legal and technical staffs of the Civil Service Commission agreed to the plan, but the Commission Chairman wanted the endorsement of the Department of Defense. Mr. Quarles' memo urged that Department endorsement be conveyed to the

Civil Service Commission as soon as possible.

That endorsement is still to come. In fact, every attempt to get Mr. Burgess to approve the plan has failed. Even the recommendation of his own top advisory group, Defense Department's Reserve Forces Policy Board, has not moved Mr. Burgess. This board, headed by Dr. Milton G. Baker, has approved the air technician plan. Moreover, a few weeks ago Dr. Baker, in a personal appearance before Defense Secretary Wilson's Armed Forces Policy Council, specifically recommended that the air technician plan be given the green light. Still, the plan remains pigeonholed.

Recently, Congressman ED EDMONDSON, of Oklahoma, asked Mr. Burgess to tell him why he continued to hold up the plan, Mr. Burgess replied as follows:

"The plan is currently being studied in my office both with regard to its intrinsic merits and its relationship to other important elements of the program.

"When our review is completed, a determination will be made as to whether the proposal will contribute to the effectiveness of the Reserve program."

That would indicate that Mr. Burgess has no confidence in his own Reserve Forces Policy Board, much less in the Air Force itself. It would seem that he still is not convinced that the plan "will contribute to the effectiveness of the Reserve program," despite the proved success of the same project in the Air Guard, and despite the fact that everyone else concerned has approved it. But Mr. Burgess is far too smart a man to be so illogical as that.

Why does Mr. Burgess continue to sit on the plan? For the answer to this mystery we apparently must consider a few "extenuating circumstances."

Mr. Burgess happens to be directly responsible for the success or failure of the administration's National Reserve plan. This law offers young men a number of options for completing required military service. One option permits a youth to volunteer for 6 months of active-duty training, following which he has a total Reserve obligation of 7½ years.

Up to the moment, at least, the Air Force has wanted no part of this plan, on the grounds that the 6-month training cannot possibly furnish it with the highly complex skills it needs. Mr. Burgess has been almost violent in his insistence that the Air Force use the plan.

So the plot thickens. With the air technician plan in his bottom drawer, Mr. Burgess has something the Air Force wants. If the Air Force wants the technician plan badly enough it presumably can get it—by accepting the 6-months' feature of the National Reserve plan.

Mr. Burgess indicated this himself not long ago. When asked why he was holding up approval of the technician plan, Mr. Burgess replied, in effect:

"When the Air Force shows some good faith to us, we'll show good faith to them."

Now there is no connection between the air technician plan and the 6-months' training program. Each should be considered on its own merits. There is no reason why the Air Force should be required to take 6-month trainees—and jeopardize its recruiting program—in order to get civilian employees for its Ready Reserve. No reason, that is, except Mr. Burgess.

Many times in the past when the Air Force Reserve program has bogged down, it has been difficult to pinpoint those responsible. Not so in this case. The responsibility lies squarely with Carter Burgess.

We think it's high time Secretary Wilson stepped in, and stepped on his ambitious Assistant Secretary.

We hope the Air Force holds tight and refuses to make a deal in order to get air technicians, despite the obvious need for them. Once it becomes party to gangsterism, there'll be no end to it.

Congressman GEORGE MAHON of the House Appropriations Committee has promised to take a full look at the Defense Department's delaying action. We hope this will result in full support of the air technician program.

Lacking such straightforward action, many thousands of Reservists have every reason to wonder whether they are getting more lip service than sincere leadership in building a Ready Reserve.

Address by Walter V. Chopyk at Opening of Ukraine Art Exhibit at the Syracuse Museum of Fine Art

EXTENSION OF REMARKS
OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I submit the following address presented by Walter V. Chopyk, secretary, DPW, representing Mayor Pankow, of Buffalo, at the opening of the Ukraine art exhibit at the Syracuse Museum of Fine Art, Syracuse, N. Y., on Tuesday, June 5, 1956:

Mr. Chairman, reverend fathers, distinguished guests, members of the Ukrainian art committee, who are to be congratulated for their efforts in bringing about this wonderful art exhibit, and ladies and gentlemen, first of all I would like to convey to all of you the personal greetings and best wishes of his honor, Stephen Pankow, the mayor of Buffalo, who has delegated me to represent him here tonight and I would also like to extend sincere personal thanks, both for myself and on behalf of my beloved wife, Lee, to Mr. Kuzma, for his kind invitation to us to take part in today's festivities. Mr. Kuzma, all of our friends in Buffalo, will know of your gracious hospitality to us. That I promise you.

One of the highest mediums of expression of human spiritual activity is art. Art is the medium whereby many peoples and national groups give vent to their creative imaginations and express profound thoughts. The specific mediums of expression are broken down into such categories as literature, music, painting, sculpture, and architecture.

In the case of the Ukrainian people, where we find various sections of the country with differing historical developments among each group, still the basic economic factor all have in common is their predominantly agricultural background. This underlying condition has influenced the Nation's character, and from this have its artistic traditions, customs, and world outlook grown, and because of the unchanging and timeless quality of things associated with the land, therefore, we can say that the Ukraine's artistic traditions and national temperament have been preserved and have changed very little over a period of many centuries.

I believe the Ukrainian people express themselves artistically in their activities and habits of everyday life to an extent greater than any other national group. They decorate everything that surrounds them. Their costumes are colorful; both the peoples of the mountain regions and the plains are unique for the colors they select in their embroidery, like a rainbow, bright hues of red, blue, yellow, black, and other shades predominate, vivid with expressions of gaiety, the joy of living, faith in the eternal goodness of life. Their homes, however small or simple, are always decorated brightly. Interiors show colorfully embroidered linens, curtains, and soft downy pillows. Brightly painted icons hang in surroundings showing eternal hope and faith. The trident—national emblem of free Ukraine—is found side by side with these icons, each home having a spiritual and national shrine which is the embodiment of the Ukrainian tradition.

Why, in the Ukraine, not even an Easter egg escapes the artistic touch of the women of the household.

In a recent publication entitled "Ukraine in Pictures," by Michael Boretzky, the author states:

"Along with folk art, trades professionally tied with artistic decoration, have long existed in the Ukraine, e. g., potterymaking, goldsmithing and silversmithing, glassblowing, rug weaving, etc. Formerly there was no distinction between an artisan and an artist, artisans were often real artists while artists considered their profession a trade. Trade secrets were handed down from master to apprentice along with traditional types of execution and ornamentation. Under conditions of rural life, the latter underwent very few changes over the centuries. In the larger centers, such as cities or monasteries, however, the artists who encountered imported patterns, borrowed new ideas, transformed them to their own taste and thus Ukrainian forms of universal art styles came into being.

He goes on to say:

"In the arts, painting, sculpture and architecture, occupy a place of importance. Painting began to develop in the Ukraine towards the end of the 10th century (with the adoption of Christianity). The first Ukrainian painter whose name came down to us was Monk Alipy, the famous Kievan master of the 11th century. Lay painting was developed, as well as religious, particularly icons. The latter were executed strictly in accordance with old Byzantine tradition, but gradually Ukranian medieval painting of icons acquired some characteristics of its own, distinguishing it, especially from the Russian, also done in the same pattern. The Ukrainian icons are more decorative, designed to be looked at from a distance and having a greater harmony of color; under the influences of the mild nature of the Ukrainian people, the facial types of saints on icons have lost their austere asceticism."

In the field of architecture, Ukrainians can be justifiably proud of the contribution made to the world's beautiful edifices. The leading example is, of course, the Cathedral of St. Sophia, in Kiev, founded in the 11th century, by Prince Yaroslav, the wise Grand Prince of the Ukraine, it represents a Byzantine style joined with Ukrainian influences. It is considered one of the outstanding examples of architecture of the Middle Ages; however, unfortunately, today those that rule by force in the Ukraine have marred its beauty and disgraced its fair name, and it will be the sacred duty of all of us to see that it is someday restored with the full dignity and respect it deserves as the symbol of a free, vigorous, devout, and democratic Ukraine.

In its troubled history, the Ukraine has been coveted by foreign enemies. In the many wars and troubled times of the past, national heroes in the form of writers have arisen to the defense of their nation and heritage. Their writings served to inspire, arouse and kindle the flames of patriotism in the same way that Abraham Lincoln, Thomas Jefferson, and other Americans led American thought through the troubled times in which they lived. Such names as Ivan Kotlarevsky, Michael Gogal, Hryhory Kvitka, and Peter Hulak—and later, Toras Schevchenko and Ivan Franko, occupy an immortal place among Ukrainian artists and heroes.

The arts of a people, along with customs, language and traditions are the uniting and cohesive factors that preserve and isolate a group as a nation, far more so than the land which it occupies. History shows us that many conquerors have tried to absorb, obliterate and completely wipe out nations. They have sometimes succeeded, but for the most part, their efforts have been in vain and vanquished peoples have often lived through captivity and slavery to rise and prosper once more as strong, proud and free nations. These conquerors know that enslaving people physically is not enough, but that they must also be enslaved mentally, spiritually and completely.

Today, the nation of our forefathers is undergoing a sinister program of complete and gradual obliteration. The Soviets would like to erase the idea of Ukrainianism, to gradually stifle individuality in expression, to prevent the preservation of national traditions, to substitute their own forms and ideas for those characteristically Ukrainian. Thus, they wish to slowly and eventually destroy the very idea or memory of the Ukraine. We know this to be true because of the idealogical purging they seek in the field of art. However, as long as Ukrainian art traditions, music and culture can be preserved in this world, the Soviets cannot succeed. When the land is eventually liberated, the nation will be restored because of this preservation of ideas.

The artistic endeavors of contemporary Ukrainian artists, such as are exhibited here today, are reassuring proof that our art is alive and vigorous. Refugees from behind the Iron Curtain bring proof every day that the campaign to destroy our culture is being resisted.

Free Ukrainians in all parts of the world are deeply aware of the more sinister and undermining battle against their culture, and it is highly encouraging and good to know that they are responding with pride, defiance and resistance to this movement.

After the end of World War II, American and Canadian Ukrainians, eager to preserve their cultural heritage, established museums in Ontario, California, Chicago and Winnipeg. Even before the war, the establishment of the museum in Stamford, Conn., showed that Ukrainians were quick to realize the dangers threatening, and responded to the problem in a positive manner.

Artists in the Ukraine, who refused the cultural brainwashing of the Communist ideology, were forced to flee. These refugees have risked their lives for the sake of their art and nation. Some of their works we proudly find on display here at this museum.

While I cannot hope to mention, by name every living example, I do wish to note that in the field of music and ballet, after World War I, Dr. Alexander Koshetz with his famous choral group and Vasile Avramenko with his ballet ensemble, were the first to bring the riches of Ukraine to America.

Today, our own Bandurist chorus are not only serving as a means of entertainment, but by traveling throughout the United States and Canada, are reminding all Ukrainians and non-Ukrainians alike that we come from a distinctive culture, that our folk music and national songs of the past, telling their history and folk traditions in music, are not forgotten.

It is a sad fact in the world today that many good people, with fine intentions, do not even now fully realize or understand that we of Ukrainian extraction come from a separate and distinct national origin from that of the U. S. S. R. That our culture is distinctive, our language different, our customs and art are of our own type. How can we, who are dedicated as all true Americans are, to the liberation of enslaved peoples, promote the cause of bringing about the liberation of the Ukrainian nation from the Soviet yoke, if those to whom we appeal are blind to certain truths. The fight for liberation continues on all levels of human activity and the preservation of popularization of Ukrainian art and culture has an important part to contribute to bringing about the ultimate goal.

We are indebted to the contributors at this exhibition, to the directors of this beautiful museum and to those who worked diligently to make this exhibit a success.

Their efforts mean more to me than just having the opportunity for one happy day of art appreciation and esthetic stimulation, their efforts also contribute to a greater understanding of Ukrainian culture and to the ultimate liberation of the land of our fathers.

I shall close by reciting a few lines of poetry written by Ivan Franko, who expresses our fondest hopes and dreams far better than a thousand words:

"The time will come, once obstacles are hurdled,
When you will shine among the greatest nations;
Will shake the Caucasus, while the Beskid girdled;
Black Sea will echo with your liberation
And you'll behold, once being your own master,
A home of joy and fields of consolation."

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. BOW. Mr. Speaker, today a sergeant in the Marine Corps is serving a 4-year sentence in a Japanese prison. He was fortunate, through appeal, to secure a reduction in his original sentence of 8 years. This reduction was apparently only a sop thrown to the victim of foreign justice.

The observers at this serviceman's trial described the testimony on which he was convicted as not only preposterous and fantastic, but in some respects patently impossible. They further said the conviction was manifestly unfair and unwarranted. Testifying in February before a subcommittee of the Senate Armed Services Committee, General Hickman said the appeal had not cured the original defects in the trial amounting to a denial of justice.

This is but one example of the justice meted out to our servicemen abroad by foreign courts. Yet the House Foreign Affairs Committee told you in its report on the Mutual Security Act that hearings which the committee had held did not bring to light a single instance where an innocent American serviceman had been imprisoned by a foreign court, or an American sentenced for an act which in the United States would not be considered a crime. This also ignored the French practice of trying a man for an alleged crime solely to enable the prosecuting witness to assert a civil claim. Americans have been tried by the French when our court-martial board did not think the facts warranted prosecution. The penalty imposed may be only a small fine, but the serviceman is thus made a criminal statistic.

Two Eminent Detroit Octogenarians, Judges Henry M. Butzel and Charles C. Simons

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mrs. GRIFFTTHS. Mr. Speaker, two citizens of Michigan who have distinguished themselves in the life of my State and our Nation recently celebrated birthday milestones.

They are Justice Henry M. Butzel who was a member of the Michigan Supreme Court for 25 years before his recent retirement and Justice Charles C. Simons, who has served with distinction in the Federal bench since 1923. Judge Simons is presently Chief Judge of the United States Circuit Court of Appeals for the Sixth Circuit.

The careers of these two outstanding men were recently covered in an article in the Detroit Jewish News. I am pleased to include it in my remarks:

PURELY COMMENTARY—WE SALUTE TWO EMINENT DETROIT OCTOGENARIANS: JUDGES HENRY M. BUTZEL AND CHARLES C. SIMONS

(By Philip Slomovitz)

JUSTICE BUTZEL, 85; JUDGE SIMONS, 80

Michigan Jewry's two most distinguished citizens will observe important birthdays next week.

Former Michigan Supreme Court Justice Henry M. Butzel will be 85 on May 24.

United States Circuit Court Judge Charles C. Simons will marke his 80th birthday on May 21.

They are most important dates for all of us to make note of. In extending hearty birthday greetings to the two leaders, we are enabled to look back into the scores of years of our city's and State's history, into the annals of our Jewish community, in all of which both men played important roles.

Justice Butzel and Judge Simons represent a generation of leaders who pioneered in community building, who set forth principles and ideals that continue to serve as guides in humanitarian services for all races and creeds. They are splendid men, and it is thrilling to be able to count octogenarians among our eminent contemporaries.

JUSTICE HENRY M. BUTZEL

Justice Henry M. Butzel, the oldest of four sons of Detroit pioneers, the Magnus Butzels, was born in our community on May 24, 1871. One of his brothers, Fred M. Butzel, became one of America's most distinguished Jewish leaders. Justice Butzel's birthday is marred by a sad memory: it is the eighth anniversary of the death of his brother Fred.

Referring to the family background of the Butzels, in an article he wrote for us 10 years ago, Judge Simons recalled: "Justice Butzel's mother was Henrietta Hess, known to her intimates as 'Tante Yeta.' She was always looking for maids, until one morning she undertook to take a buxom lass home with her from Central Market in her electric and was arrested as a white slaver. The brothers never tire of that story."

Henry Butzel received his doctor of philosophy and bachelor of laws degrees from the University of Michigan in 1891 and 1892. His brother Fred, who also was graduated from the University of Michigan, joined him as a law partner in the firm of Butzel & Butzel in a modest office in the Union Trust Build-

ing in 1897. That office grew into the distinguished law firm of Butzel, Levin & Winston in 1915, and still functions under that name.

Henry encouraged Fred in his social service efforts. He assumed most of the burdens of the law firm, and Fred acquired much free time for his public services.

Henry Butzel was always the generous man, aiding many causes and encouraging humanitarian efforts. He was one of the very early members of the American Jewish Committee in which he and Brother Fred were leaders for many years. He was president of Temple Beth El and the United Jewish Charities. He was chairman of a Legal Advisory Board in World War I. He taught law at the University of Detroit and guided many distinguished lawyers in their paths toward leadership in their profession.

He was for many years among the most active figures in the Jewish Welfare Federation and the Allied Jewish Campaigns.

Governor Fred Green appointed him as Associate Justice of the Michigan State Supreme Court on July 25, 1929. The governor praised him as a man with "the broad and understanding outlook on life and the qualities of good citizenship which are as necessary as profound legal knowledge to a correct solution of the important problems that come before our highest court."

Justice Butzel was reelected in 1931, 1940, and 1950 to full terms of office and retired from the Supreme Court last year.

In his tribute to Jtustice Butzel, Judge Simons wrote: "He brought to the court a sound legal scholarship, a breadth of human sympathy and understanding, an intimate knowledge of the problems that beset business and industry * * * he has been a great influence on that court * * * in clearing the way to progress by departure from obsolete doctrine."

An entire community is blessed by the things he has done, by his mature judgment, by his friendship and sincerity. His birthday is a blessed day for the entire State.

We wish Justice Butzel many happy returns of the day.

JUDGE CHARLES C. SIMONS

Those of us who enjoyed the friendship of David W. Simons, one of Detroit's most distinguished Jewish leaders in the first three decades of this century and a member of Detroit's first Nine-Man Council, and who are privileged to continue a similar friendship with his eminent son Charles C. Simons, must take special pride in being able to congratulate him on his 80th birthday.

Charles Simons was born in Detroit, May 21, 1876. He was educated in Detroit schools and received his B. A. and LL. B. degrees from the University of Michigan in 1898 and 1900. He was one of the youngest men to be elected—in 1903—to the Michigan State Senate and gained national fame for his sponsorship of the first direct State primary Law, a step that was revolutionary at that time.

He was Wayne County circuit commissioner from 1905 to 1906. He was a member of the Michigan State Constitutional Convention in 1908. In 1916 he was a Republican Presidential elector at large. He was a director of the Detroit Board of Commerce in 1918.

President Warren G. Harding appointed him to the United States district court in 1923, and in 1929 he was elevated by President Herbert Hoover to the United States circuit court of appeals, the highest court in the land next to the United States Supreme Court.

One of Michigan's most brillian orators, Judge Simons traces his speaking ability to his college days, having won the Northern Oratorical League contest as the University of Michigan representative in 1899.

Active in many causes, a leader in local, State, and Federal bar associations, Judge Simons devoted himself for a number of years to congregational affairs, as a leader in Temple Beth El, the Union of American Hebrew Congregations, and Hebrew Union College. In 1941 he was president of the biennial council of the Union of American Hebrew Congregations.

In 1946 he was as disturbed as most of us by the actions of the anti-Zionist (now pro-Arab and anti-Israel) Council for Judaism, and he made this statement to us:

"I would have the Council for Judaism reevaluate the logic and reexamine the effect of the impact of a purely subjective concept upon a harrassed and homeless people whose tragically realistic experiences deny it. If this be naivete, make the most of it."

He wrote this in the days when there was no Israel but merely a "harrassed and homeless people" whom a group of frightened Jews were harrassing further, perhaps even more brutally, that the anti-Semites. Judge Simons expressed his rebuke out of his sense of fair play and his contempt for injustice.

This is what has motivated his activities—in behalf of allied Jewish campaigns, in support of religious concepts, as a leader in and worker for humanitarian causes.

The fact that the Michigan Patent Law Association, the State Bar of Michigan and the Detroit Bar Association are combining to honor Judge Simons, with a birthday dinner, on May 21, is an indication of the esteem in which he is held by all.

It is as an able jurist, as a just man, as a defender of the downtrodden, that we think of Judge Charles C. Simons whom we greet on a great day in his life: his 80th birthday.

The Freedom Crusade

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. ADDONIZIO. Mr. Speaker, I wish to associate myself wholeheartedly with the Freedom Crusade to effect the release of the Americans in captivity in Red China. Of the 13 who have been in confinement, 2 were released June 15, but they are still in Shanghai and our State Department has no further information on them.

The Freedom Crusade is a nationwide letter-writing campaign to Chairman Mao Tse-tung, head of Red China's government, politely petitioning the release of all the Americans still held prisoners by the Chinese Reds. This crusade has been launched by the Very Reverend Harold W. Rigney, SVD, a Divine Word missionary whose 10-year prison sentence in Red China was cut down to 4 years and 2 months by prayer, publicity, and letter writing. I am sure all Americans will respond willingly and generously to Father Rigney's plea in behalf of these prisoners. It is so little for each American to do, and every letter will be a powerful instrument in bringing these Americans back home.

I respectfully urge the membership to enlist the participation of their constituents in this noble crusade. All Americans must have a feeling of anger and sorrow when they think of their fellow Americans suffering prison life in Red China, and all should be willing to cooperate in the Freedom Crusade which can be productive of so much good.

House Resolution 541

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. FASCELL. Mr. Speaker, last Thursday, June 14, 1956, I introduced House Resolution 541 which calls for disapproval of Reorganization Plan No. 2 of 1956. This proposes a separation of the Federal Savings and Loan Insurance Corporation from the Federal Home Loan Bank System. The proposed plan is undesirable in principle and deficient in technical draftsmanship and should be rejected. The affected agencies have never publicly proposed such a plan, nor has it the endorsement of any of the leaders of the savings and loan business which it affects.

Contrary to the explicit grounds for reorganization as defined in the Reorganization Act of 1949, Reorganization Plan No. 2 does not reduce the number of agencies, does not eliminate overlapping and duplication of effort, does not group or coordinate, or promote economy, or promote the better execution of laws, or increase efficiency.

The primary purpose of reorganization plans and the primary objective of the Hoover Commission was to promote economy. This proposed plan does the opposite. Where there is now a single board and a single agency, it would create two boards and two agencies. The Federal Savings and Loan Insurance Corporation and the Federal Home Loan Bank Board now use the same personnel for legal work, personnel work, publicity work, and so forth. The plan would require the establishment of separate departments to handle each of these functions.

Even the President's accompanying statement admits that it will not promote efficiency or economy by the following language:

> There will be a modest increase in the overall operating expenses of the Corporation and of the Federal Home Loan Bank Board which are financed from the receipts of assessments, fees, premiums and investment income of the Corporation and of the Board, not from ordinary Government appropriations.

In addition to these general objections about which more will be said later, there are certain technical inadequacies of great importance and which make the entire plan either illegal or contrary to all previous congressional intent. One blaring deficiency is that no term of office is provided for the trustees. In the Reorganization Act of 1949, as amended, it specifically prohibits increasing the term of office beyond that provided by law for such office, and in no event in excess of 4 years. Secondly, there is no requirement or provision in the reorganization plan that requires bipartisan appointment of the trustees. This gross omission would mean that the board of trustees of the Federal Savings and Loan Insurance Corporation could consist of three members of the same party.

Reorganization Plan No. 2 is in the opposite direction from the President's own declared intentions of reducing the number of independent agencies. Last year administration spokesmen opposed the establishment of an independent Federal Home Loan Bank Board, making the following statement:

The administration believes that new independent agencies reporting to the President should be created only upon the showing of clear and compelling reasons for such action and of persuasive advantages to be derived from it. In signing the Housing Amendments of 1955, President Eisenhower stated: "I also have serious objections to the provisions of the bill which would create still another independent agency in the executive branch by detaching the Home Loan Bank Board, including the Federal Savings and Loan Insurance Corporation, from the Housing and Home Finance Agency."

Yet less than a year later the President is asking for the establishment of another new agency.

The administration cites the Hoover Commission report as one of the justifications for the proposed reorganization plan. There is a big difference between the Hoover Commission recommendation and this plan. The Commission report simply recommends that—

No person be permitted to serve as a member of the Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation at the same time.

The reorganization plan, however, goes far beyond the personnel of the respective boards and requires the establishment of a separate agency and a separation of all personnel, records, and so forth. Ironically, the President's plan is not even consistent with the brief recommendation of the Commission. Under Reorganization Plan No. 2, the Federal Home Loan Bank Board Chairman would serve as a member of both the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation, and thus would be in violation of the Hoover Commission recommendation that no person serve on both the boards.

More significantly, the plan is directly opposite of the recommendation of the Hoover Commission task force on lending agencies which made a thorough study of the operation of both the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation. The task force report on lending agencies concluded its discussion of the Federal Savings and Loan Insurance Corporation with this statement:

Except for the general recommendation on management presented earlier in this report, the task force has no recommendation to offer with respect to the organization of this mutual insurance trust.

As a matter of fact, the task force specifically approved present organizational structure of the Board and Insurance Corporation with the statement on page 38:

This appears to be a natural grouping of functions which requires no change.

Thus, the experts after careful study of this field, recommended the continuation of the organization as Congress has established it.

Conclusive evidence that the objective of the plan is, to say the least, on shaky ground, is borne out by the fact that the task force on lending agencies of the first Hoover Commission in 1949 recommended that the Federal Deposit Insurance Corporation be placed under the Federal Reserve Board. This recommendation is directly contrary to one of the basic arguments for separating the Federal Savings and Loan Insurance Corporation from the Federal Home Loan Bank Board; namely, because "the FDIC is an independent agency." As noted above, Reorganization Plan No. 2 is not a Hoover Commission recommendation and, in fact, violates the recommendations of both task forces and the overall Hoover Commission report. In addition to these inconsistencies, the Housing and Home Finance Administrator and the Chairman of the Federal Home Loan Bank Board have both, in the past, been recorded as opposed to the separation of the Insurance Corporation and the Board.

One of the most singular sections of the reorganization plan is section 3 (b), which in straight, simple language says that the Corporation and all the matters under the jurisdiction of the board of trustees shall be subject to the "direction and control of the President of the United States." To my knowledge, there is no precedent for this provision, and the question that comes to mind is what is the purpose and intent of this unusual provision? The Reorganization Plan No. 3 of 1947 dealing with housing agencies contained no such provision. Under present law, the Insurance Corporation reports to Congress, and Reorganization Plan No. 2 would appear to be an effort to bypass the Congress and have the agency solely and completely subservenient to the President.

In reviewing the general effects of the plan the following points should be considered: First, it would increase the number of effective agencies by making two out of the one now existing; second, it would create duplication of reports, regulations, and so forth, both by the Government and the individual associations; third, it would add an additional group of high-salary-bracket employees to the operating expenses of the Insurance Corporation; fourth, the expenses of the Insurance Corporation are borne by the individual institutions, yet they were not consulted on this measure to increase these expenses; fifth, the law required that all Federal institutions, in effect, would still be controlled by the Federal Home Loan Bank Board, since they have the sole power to charter new member institutions; sixth, as a practical matter, the Insurance Corporation and the Board have always worked closely in supervising, regulating, and chartering institutions. In fact, the Insurance Corporation's regulations are sometimes used as a means of strengthening the operations of all savings and loan associations.

I urge my colleagues on both sides of the aisle to join in support of House Resolution 541.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

UNICO National and Columbus' Heirs

EXTENSION OF REMARKS
OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. REUSS. Mr. Speaker, the annual scholarship award banquet, sponsored by the Italian Civic Association, chapter of UNICO National, was held Sunday, June 17, at Milwaukee, Wis. True to UNICO's motto, "Service Above Self," the society honored six young Milwaukee County high school graduates of Italian descent with $1,000 scholarships. Each of these young people was chosen on the basis of outstanding scholastic achievement and participation in extracurricular activities: Robert F. Romeo, 18, of 2776 South 44th Street, a graduate of Pulaski High School; Anthony Tarantino, Jr., 17, of 815 East Lyon Street, St. John Cathedral High; Daniel A. DiLeo, 17, of 732 South 23d Street, Pius XI High; Ronald F. De Battista, 18, of 2231 South 21st Street, Don Bosco High; and Mary Ann Maglio, 17, of 518 North Van Buren Street, Lincoln High School. The chapter's annual athletic trophy was awarded to Joseph Sansone, 18, of 521 East Lyon Street.

Presiding at the presentations were Angelo Provinzano, president of the Milwaukee chapter; Dr. James J. Balistreri; Dr. Gabriel E. Ceci; and Mrs. Marion Conte. Among the officials of UNICO National assisting at the presentation were Mrs. Joseph Fontanazza, president, Milwaukee Ladies Chapter; William J. Calvano, past president, UNICO National; Theodore Mazza, past president, UNICO National; Emil Santacrose, scholarship director, UNICO National; Dominic H. Frinzi, vice president, UNICO National; and Dr. D. M. Nigro, athletic director, UNICO National.

The principal address of the evening was made by the Honorable Rocco C. Siciliano, Assistant Secretary of the United States Department of Labor. Mr. Siciliano's inspiring message, entitled "Columbus' Heirs," follows:

It gives me very great pleasure to be with this group tonight and to see another concrete evidence of the consistent records of scholarship and achievement being attained throughout our Nation by young Americans of Italian ancestry Let me first then, congratulate all of you as well as the honor graduates who have achieved such distinguished scholarship records.

This occasion, like all graduations, is a time for joy and good feeling. I hope, therefore, to make my short talk completely informal.

Let us start by listing the things we all have in common and then discuss them one by one and with appropriate brevity.

To begin with, we all have our Italian ancestry. This gives us a heritage we hold with high pride. Next, there is our unquestioned love of America, which gives meaning and direction to our school efforts and our subsequent employment goals. Third, there is the deep recognition that our love of America imposes certain obligations which require us to examine critically our loyalties, our beliefs, our plans, and our ambitions. And, finally, since much of our contribution to this Nation and to the world will be expressed or achieved through our vocational endeavors, it is important that we consider together the kind of jobs we look forward to holding.

On the first point, I have already said that we hold our Italian heritage in high pride. The reasons are numerous and need not be described in detail. A few of the more important points will serve our purpose. Christopher Columbus pioneered a watery trail into the New World which has been followed through the years by several million of his countrymen. Few of them have had the chance to go down in history as he did, but for all there has been the open door of continuing opportunity and the Italian people have been quick to grasp the chances which the New World has offered them.

The motivations which brought Columbus to these shores were completely consistent with the best ideas in contemporary American international relations. He had been moved by a desire to stimulate the trade that would bring the good things of life more quickly and more cheaply to the people of Europe, and to open new exchanges of commerce, friendship, and understanding between Europe and the Orient. To him, the avenues of commerce were worthy of his highest dedication and devotion because they meant providing better things for better living throughout the world.

Ever since the Italian Renaissance, Italy has contributed perhaps more than her share of achievement in the fine arts and music. Even the Italian language is the most nearly related to Latin of all the romance tongues, and Latin, as we know, has been the tongue for transmitting through the ages the clear concepts of Roman law and the legislative process.

Many of the finest artistic achievements of the Italian people have remained in their homeland—Michelangelo and Leonardo da Vinci—but in more recent days the leading artists—Eleonora Duse, Madame Galli-Curci, the great Caruso, Tetrazzini, Toscanini—have come to our shores to share the richness of their art with the people of the Americas. In the field of science, Marconi and Fermi have left distinguished marks upon their professions. The list can go on, of course.

The elements of the Italian arts and sciences have been blended into the mainstream of American life so that their names are as familiar in the average household as the names of our own American artists and scientists—Mary Garden, Eli Whitney, and Thomas A. Edison.

Before leaving this brief discussion of Italians in America, I should like to mention one very important element—that is, our attitude toward our Italian extraction. It has been said that Americans of the first generation recall their European roots only with embarrassment, while for the second generation the fact of having a European-born grandfather is a matter of indifference, seldom remembered and lightly regarded. Only the third generation considers itself sufficiently settled and a part of this western world that it can show a proper pride in its roots which extend back to older cultures. It's too bad if we have to wait for the third generation to recognize its tradition. All of us are better Americans if we know whence we, and the American culture, came. Each corner of the world has contributed to what we have and cherish.

If attitudes about our ancestry are allowed to develop into feelings of inferiority, we defeat ourselves, our ambitions, and thus limit the contribution we can make to American life. If, on the other hand, we take reasonable pride in our origins and strive in all ways to put our best foot forward, then we achieve more for ourselves and contribute more to our Nation.

Let us next consider briefly the second point I mentioned in connection with our interests in common: our love of the United States and the kind of life it symbolizes, fosters, and promotes for all its people. The rich mixtures of bloods and cultures, of languages, sciences, and arts which it has assimilated from all parts of the world, have given it a heritage all its own. I dislike the notion that America is, or ever has been, a "melting pot." America has not melted and molded all the peoples and cultures which have come to it into any homogeneous, dull, gray, mediocre standard "type." I prefer to say that the American society is like a great piece of mosaic art, composed of distinct and distinguishable ingredients, each contributing its own peculiar virtues and strengths, but blended together into a single, unified, meaningful picture which tells one great, central story. Thus, our culture is variegated. Our speech is diverse. Our art is manifold in its forms.

Just as our country cherishes the variety of its culture and admires the uncommon, just as it has room for its people to express their own opinion and personalities, so its Government, if it is to reflect the people, must be a liberal and flexible instrument for the expression of the people's will and the satisfaction of human needs. It is because these ideals are real and true that we love America as we do. In most nations of the free world, these qualities stand as goals for the future, but in the United States they stand as landmarks of what we have already achieved.

The third point to be discussed briefly is the question of our responsibilities and loyalties to the Nation we cherish. Our times call for a dedication of each of us to work together for the common good—to build and maintain a government which does for us those things we cannot do at all or do very well, as individuals. A grave threat from a vigilant and implacable enemy hangs over us and, whether we like it or not, may well continue to hang over us for the rest of our lives. America needs the active participation of all our people in the processes of government to keep our system strong and healthy.

I am concerned that, as an American, I do the best job I know how to promote the interests and the welfare of all the American people. I am sure that each of you, whether preparing to enter one of our great universities this coming autumn or preparing to enter the world of work, will dedicate yourselves earnestly to these same ends.

And now it is time to consider the fourth point in my outline. That embraces the important task of selecting and building our

careers in such fashion as to bring maximum satisfaction to each of us as individuals and workers and, at the same time, to make the greatest possible contribution to our national life and national security.

A moment ago I distinguished between the two major groups here this evening: those who will go on to college this fall and those who will start their work lives without further education at this time. For both groups there is a world of almost unprecedented opportunity.

During March of this year, of 31,142 jobs being cleared between offices, almost half (14,968) were in the professional and managerial categories. Clearance openings in skilled occupations increased moderately; semiskilled openings dropped radically—from 2,370 in February, to 1,110 in March. These data would indicate that the fields which are not expanding in today's labor market are the unskilled and casual occupations. The Nation's accelerated programs for research and defense production would indicate that for a long time to come the great demands will be on the scientific, professional, managerial, and skilled occupations. Current studies indicate that plant and equipment outlays are expected to set new records in 1956, exceeding the 1955 outlay by some $6 billion. With this fact in mind, we are not surprised that industry is taking all reasonable steps to be sure that the skilled manpower will have been found and will be ready for work as the new production facilities swing into operation. It is significant that the figures just cited from our public employment offices reflect these trends.

In recognition of these unquestioned trends, the Department of Labor has, in the last year, undertaken a special project devoted to the expansion and improvement of the skills of the work force. Of very great importance are the expanded apprenticeship programs. Of equal importance is the counseling responsibility of the public employment offices, so that workers of the Nation may be kept abreast of technological developments and their effects upon employment outlook in the several professions and crafts. The Department's program considers not only the public responsibility of the community to provide needed training for the development of labor-force skills, but also works diligently with industry to promote better on-the-job training, directed toward the advancement of young workers and the development of systematic plans for replacing older workers as they approach retirement age. This program is still in an early stage of development, but we have high expectations for substantial achievements during the next 2 or 3 years.

Each time a worker changes jobs, he has a chance to improve his skills, or by making a poor job choice, allow them to deteriorate. The Federal-State system of public employment offices constitutes one of the Nation's major instrumentalities for assuring the smooth functioning of the labor market. This system is now making an average of almost 15 million placements a year, more than 6 million of them in nonagricultural employment. Both figures represent new all-time peaks in the history of the Service. Reflecting the Nation's greater demand for skilled workers in all the major professional fields, in managment, and in the several crafts, placements made by this system show a steady increase in these categories.

Whether your present plans call for going on to college or entering the labor market this autumn, you will be interested in a few simple facts about what we call the occupational outlook—that is, our best estimate of which occupations will be in the greatest demand in the coming years. To name a few, occupational opportunities look good for tool-and-die makers, machinists, and electricians in the skilled occupations. Stenographers and typists, computers and key-punch operators, draftsmen and laboratory technicians are other occupations in which long-run employment prospects are good.

Even without considering the vital element of competition with other powers, we find ourselves hampered by growing shortages of scientists, engineers, and skilled craftsmen to meet the needs of our own rising standard of living at home.

We envisage a day not too far distant when automation, the emergence of nuclear energy, the growth of new industries and production processes, and the demand for more and more complicated civilian and military products will make the worker without skills a very hard man to place in a decent job. From the viewpoint of the worker's own self-interest, there is no law, no program, no protection as effective in promoting his own security as his skill.

Today, the Armed Forces, with a strength of only 3 million men, are roughly 30 percent short on fully qualified skilled personnel needed to fill many thousands of critical military jobs. For example, there is a need for some 35,000 aircraft mechanics and electronics technicians; about 25,000 electronic equipment operators; 18,000 communications equipment mechanics, and so on. These shortages reflect similar shortages in private industry. For every 3 skilled persons or technicians that the armed services require, only 2 are currently available, and many of the individuals in these positions have been pushed in without adequate training.

There are many factors apparent in the national picture which give us real concern about the future labor market in this country. Less than half of our most gifted young people—those in the upper 10 percent of their high-school classes—even start to college. Tens of thousands do not even finish high school. Only half of the fraction who do enter college stay to graduate. All in all, about 100,000 of those in the upper 10 percent of the high-school classes drop out below the college level each year. An even heavier attrition occurs among those in the next 20 to 30 percent of our high-school population.

Whatever the causes—and there are many—the obvious starting point is to work toward an educational and guidance setup which helps each individual, regardless of race, religion, color, or financial status, to understand his potentialities and at least give him a chance to choose to develop them as fully as possible.

Today there are only 8½ million skilled craftsmen and 6 million professional and technical workers in a total civilian labor force of 65 million. We cannot create a larger working force by wishing it, but we can create a more highly skilled work force by consciously developing it. And each of you, in making his individual job decisions, can contribute significantly to the development of the needed labor force.

Domination by Soviet Troops of Communist Satellites and Free Nations on the Black Sea

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. JENNER. Mr. President, we have recently been hearing of Soviet plans to demobilize a million or more members of the armed forces.

Recently I pointed out that Soviet troops are apparently still on the soil of Rumania and Hungary, although all shadow of justification for their presence ended with the signing of the Austrian peace treaty.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of October 18, 1955, showing how important is the role of those Soviet troops in dominating not only the Communist satellites, but also the Black Sea and the free nations on its shores.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET DOMINATES PORT IN RUMANIA—RUSSIAN TROOPS EQUAL NATIVE SOLDIERS IN CONSTANTA—PEOPLE WARY OF AMERICANS

(By Jack Raymond)

CONSTANTA, RUMANIA, October 17.—In contrast with Bucharest, Rumanian capital, the presence of the Soviet military forces is very much in evidence in this Black Sea port.

Here Soviet troops have requisitioned hotels and housing. Russian soldiers guard office buildings and other installations.

Russian officers stroll about the streets with their families, pushing baby carriages. Russian soldiers march through the city. Military trucks carrying equipment and personnel give Constanta a busy air to counteract the absence of private vehicles.

The port itself also seems busy, although it is far from being crowded. Among the tankers and small cargo vessels are small military ships.

BUILDINGS ARE NEGLECTED

The city has many handsome buildings. However, city officials obviously feel there are more important things to do than maintain them, for the buildings are shabby and run down.

When one arrives at the small rickety railroad station the impact of the overwhelming number of soldiers present is immediate. It seems that 2 out of every 3 young men is in uniform.

The second impression is that there are easily as many Soviet uniforms as Rumanian. Discipline is evident. Enlisted men and junior officers rarely neglect to salute their superiors.

The first impression of local residents is the great number of poor peasants as well as gypsy women. Gypsy women and children swarm over the main streets selling sunflower seeds. They do a good business.

Communist slogans are prevalent. Communist murals have been painted on the walls of buildings in City Hall Square. One billboard in another square carries the text of the Warsaw pact grouping the Soviet Union and its East European satellite states into a military bloc formed to counterbalance the Atlantic alliance.

Shops seem adequately stocked but the prices are high. A big casino restaurant offers a limited menu, but its food is tastily served. In the evening many young Rumanian and Russian couples dine and dance there.

As everywhere else in Rumania, this reporter aroused immediate curiosity wherever he went. But striking up acquaintanceships proved virtually impossible. The statement that I was an American elicited wide-eyed wonder—then quick goodbyes.

There were 1 or 2 exceptions. From them one received the impression that most Rumanians felt they would be better off if they did not have contact with foreigners, particularly Americans.

Yet, the people did not seem to be unfriendly. It appeared only that they were not certain what to make of the presence of a United States reporter carrying a camera in

the port city and they preferred not to be involved.

The same held true of Russian soldiers with whom several efforts to start conversations failed.

A young Rumanian sailor said he had not seen an American in Constanta since a United States ship docked here 5 years ago. He, as well as some others, expressed surprise that a Uited States reporter had been permitted to come to Constanta. I was allowed to visit this port, although I was forbidden to go to Jassy or Galatz, north of here, or to Ploesti.

How a Senator Promotes His State's Hotel Industry

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. WILEY. Mr. President, recently it was my privilege to prepare for the Hotel Gazette an article entitled "How a Senator Promotes His State's Hotel Industry." As printed in that distinguished magazine, the article was accompanied by a picture of President Eisenhower and his brothers on a visit to Wisconsin's famed North Woods, where they caught a number of large pike and muskellunge. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW A SENATOR PROMOTES HIS STATE'S HOTEL INDUSTRY

(By Hon. ALEXANDER WILEY, senior Senator from Wisconsin)

What are the usual duties of the average United States Senator?

If you were to ask Mr. Ordinary American that question, he would probably answer, "A Senator's duties are basically legislative—to work on bills and laws in the State's and his Nation's interest."

That answer is absolutely sound.

But in addition to the legislative challenge, as such, there are dozens of other duties performed by the average Senator. These duties include: Keeping the home folks informed of major issues affecting them, and helping on many constituents' problems with Government agencies in the public interest. An example of the latter work would be assisting on a veterans' claim with the Veterans' Administration, helping on a farmers' problem with the Department of Agriculture, and so forth.

All in all, a Senator must basically fulfill the broad needs of his entire State.

Inevitably, serving the interests of one's State also means helping to boost the industries of the State.

And, since so many of the 48 States now rely heavily upon the tourist industry for major income, it is perfectly natural that a United States Senator should interest himself in focusing national attention on his State's tourist attractions.

As Wisconsin's senior Senator, representing as I do a State where tourism is perhaps our second greatest industry, I am vitally interested in the well-being of the Badger Hotel and related industries.

I am pleased, therefore, to report to the readers of Hotel Gazette regarding my efforts along this line.

I do so because I think that other Senators and Representatives may be in a position to help their own hotel industry. Thereby, they will help America's sound leisure-time activity, its sound pursuit of happiness.

TIPS ON SPOTLIGHTING A STATE

Let me therefore list some of the ways by which I have helped throw the friendly national spotlight on Wisconsin tourism:

1. Each year, on the Senate floor, I have issued an open invitation to Senators and Representatives to come and visit wonderful Wisconsin.

In hot humid Washington in June, July, and August, Congress wends its weary way toward adjournment, handling hundreds upon hundreds of bills. And, so at that time, I have said to my colleagues, "Come and relax in the 56,000 square miles of superb vacation land, which is Wisconsin. Enjoy the unexcelled fishing and hunting of my State."

I have said, in effect, "for months, we legislators have been fighting one another. Now, let's get wise and go out and relax. Let's fight—on the fishing line—one of Wisconsin's famed muskies. Let's enjoy the thrill of the best outdoor sports in the Nation."

My comments as published in the CONGRESSIONAL RECORD have been reprinted in tens of thousands of copies.

The prints have been forwarded to all the resorts of my State, and thereafter to their guests and clients for other States.

2. Pictures have played a very important role in this publicity. I use pictures of Wisconsin's tourist attractions in my weekly newsletter, which is distributed not only to the newspapers of my State, but to other press men all over the country. Included are pictures of Wisconsin fishing, boating, swimming, hunting, and just plain outdoor relaxing—pictures which adorn my office too, and which prominently feature articles which I have prepared from time to time.

3. When word came that President Eisenhower might not vacation in Colorado this year, I wrote to him and issued a press release which "broke" in the national wire services, urging him to come back to Wisconsin. Ike responded most graciously with assurance that he would certainly bear Wisconsin in mind when he picks his vacation spot.

4. On the occasion of the holding of important national conventions in Milwaukee or Madison, or elsewhere, I have spotlighted these functions by remarks in the Senate. I have warmly welcomed the convention delegates from the 48 States. I have pointed out that I know they will enjoy our splendid hotels and restaurants.

This has helped, I believe, to encourage other conventions to meet in Wisconsin. My readers know how crucial national convention business is to a State.

5. A great boost to Wisconsin hotels has been provided by the wonderful Milwaukee Braves which have broken all National League attendance records.

"Come on and watch baseball's greatest team," I've said to the Nation, before personally heading for opening day and other games at Milwaukee County's greatest stadium.

6. In visiting abroad, and meeting with prominent foreign leaders, I have not hesitated to mention in interviews with foreign correspondents this fact: While I enjoy visiting foreign parts, I have unhesitatingly invited the distinguished leaders of those countries to come to the United States and visit wonderful Wisconsin.

These, then, are a few of the phases of my pro-Badger tourist activities.

All this has, of course, required close liaison with the Wisconsin State Convention Department, the Wisconsin State Hotel Association, the Wisconsin State Chamber of Commerce, with various county and regional resort groups, and a wide variety of other folks, designed constantly to boost Wisconsin tourism.

I have done this not simply to serve the Wisconsin hotel industry, of course, but that vast variety of other groups in our society which benefit from tourist dollars, from the gasoline station on the highway to the cheese stand, the roadside restaurant, the fishing lodge, outdoor guides, and everyone else who benefits from tourist income.

In conclusion, I certainly like Wisconsin hotels. They are clean, efficient, well run, friendly. They pride themselves on the traditional high quality of their personal service.

I won't ever let them down. I'll do all that I can to constantly build them up. They are worthy of all my devoted efforts because they are a mainstay of the economy of Wisconsin.

A Constitutional Congress Can End World Government

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks made by me on June 7 at a meeting of For America in Los Angeles.

These remarks point out that NATO also has, from the beginning, had political, economic, and propaganda authority sufficient for any activities in these fields, and that it is developing a system of governmental agencies for dealing with these powers on a supranational basis.

The remarks further point out that neither the executive branch nor the judicial branch can reverse the drift to a one-world government. Congress can reverse the drift if supporters of national sovereignty will turn their attention to the congressional contests and nominate and elect constitutionalists, in both parties, so they can tip the balance in Congress back to nationalism by the same methods by which Harry Hopkins and Sidney Hillman tipped the balance in doubtful areas to collectivist internationalism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A CONSTITUTIONAL CONGRESS CAN END WORLD GOVERNMENT

You have been hearing expert testimony on the fantastic taxes you are paying your Government today. I will try to show you something of what you are getting for your money.

Let me take, as an example, one of Mr. Acheson's most curious achievements, NATO.

I mentioned, at the New York meeting of For America, that the North Atlantic Treaty area includes not only Britain, France, Benelux, and the other Western European Powers, but the African territories of the member nations, their airplanes and their ships at sea. I received a doubting letter from someone in California, who asked if I hadn't made a mistake. Wasn't NATO, he said, limited to the nations of Western Europe?

I quoted from the North Atlantic Treaty, and added, "The NATO area also includes the Atlantic Ocean, Canada, and the United

States. San Francisco is as much NATO territory as Paris."

Why do our people have this propaganda picture of NATO as something limited to Western Europe, instead of a vast empire stretching from Alaska to the borders of Iran? Perhaps someone planned it that way.

Another evidence of NATO's importance is its financial resources. A report in the New York Times of April 22, from the North Atlantic Council, datelined Norfolk, Va., stated that the NATO nations had spent $316 billion on defense in the past 7 years.

Of that amount, the United States spent $252 billion, or about 5 times as much as the other 13 nations combined. It is true that part of our expenditures were for the Pacific area, but it is also true that most of the NATO members have Pacific territories. We also make nonmilitary contributions to help support the budgets of member nations.

You may wonder why American defense expenditures are included in the NATO figures. Just remember that NATO is a holding company which silently directs the defense programs of member nations as Sam Insull's holding companies used to direct your local light and power companies.

THE NATO GOVERNMENTAL STRUCTURE

NATO does not stop with pious statements of intention. It has governmental organs to put its intention into effect. Some one planned it that way.

NATO has a secretary-general and other officials, and a permanent international civil service. This purely executive operation is nowhere subject to any limits on its powers.

NATO has organs for budgeting, purchasing, letting of international contracts, accounting, auditing, and inspection. Like Topsy, these agencies just "growed" but how they "growed."

The NATO Council of Foreign and Other Ministers is the top policymaking layer. Their permanent deputies come next. The Joint Chiefs of each member nation form a third supervising layer, and a military executive committee in Washington is a fourth layer, all above the military commander who sits in splendor at the headquarters called SHAPE.

These powerful but almost invisible agencies give political guidance and strategic directions to the commander of the NATO forces.

NATO has its own armed forces in being. This is the crucial test of sovereignty. Its forces are made up of parts of the armed forces of the West European member states assigned to it, and the components of our army stationed in western Europe.

Whoever is guiding the evolution of NATO has been careful to avoid anything which would arouse American suspicions. The comamnders of NATO forces have always been Americans—Generals Eisenhower, Ridgway, Gruenther. But the military commander is low man on the totem pole of the policymaking hierarchy in NATO.

Now it is perfectly clear, if you read the record, that these military contingents from the members nations form one integrated NATO armed force.

It is the duty of the Supreme Commander to see that they are integrated. Great care has been used to avoid visible signs of this integration. Uniforms are different. Titles are different. All the unimportant things are different. Some members of our armed forces sincerely believe the national contingents are still legally and militarily independent, but I see no grounds for any such illusion. This hope is part, I believe, of the natural tendency of professional military men to believe our powerful Military Establishment is unchanged, if the only change is in the fine print of a legal document.

NATO'S POLITICAL-ECONOMIC POWERS

From the beginning, NATO has had political, economic, and social as well as military responsibilities. Article 2 of the treaty proclaims the intention of the signers to promote conditions of "stability and well-being." Words like "stability and well-being," in present-day legislative drafting, are designed to cover the waterfront. The Ismay report on the first 5 years of NATO, says, and I quote, "Peace is not merely the absence of war. Its maintenance requires continuous cooperation by governments in the economic, social, and cultural as well as in the military field." Article 2 is, in fact, merely a restatement of articles 55 and 56 of the United Nations Charter.

NATO's aim is to unite all the member states into one community. What will be left of the American experiment, when we have been integrated with the political system of France, the economic system of Turkey, the social system of Italy? I do not know, but someone knows.

I cannot understand the present hullabaloo over giving NATO economic and political responsibilities. Certainly Mr. Dulles, Prime Minister Mollet, Foreign Minister Lester Pearson, and the other ministers of NATO nations know what was in the treaty and is now in full operation. The three wise men who were assigned to present a program for enlarging the role of NATO may be needed to prepare public opinion, but not to provide any new powers.

Military responsibilities are in themselves both economic and political controls.

Armies consist of men, supplies, weapons, and the command and staff structure. Supplies and weapons are economic problems. Command and strategy are political. NATO moved early to authorize its bureaucratic agencies to oversee the production of weapons and supplies, and the financial operations involved in defense production by member nations.

The significant area of economic and political control is the planning of expenditures yet to come. Here the key word is "coordinated."

In the mushroom growth of the governmental network all over the world today, the coordinators have all the fun. If any of you are ambitious to get a place in one of these hierarchies, get a job as a coordinator. Then everybody will be working for your nod of approval, and their fate will be in your hands.

NATO puts what its members should do, in the form of recommendations to member governments. But what recommendations NATO has made to the American Government I do not know. They are classified. You have to be a high official in the executive branch before you can be told. Members of Congress, the press, and the people lack the necessary intelligence or discretion or something. The facts on NATO must be kept from them.

At this point let me remind you that there is nowhere in the North Atlantic Treaty system any provision for keeping Communists out of either its governing councils or its permanent international staff.

We know the high proportion of Communist voters in France and Italy. We know that, in Britain and Canada, communism is strong, as it is in our country. How much vital military information is channeled to the Communists by the NATO machinery? I do not know, but I consider it the neatest espionage setup the Communists have yet devised, not excluding the agreement which put a Soviet national at the key point in U. N. through which military reports are funneled. You remember how all General MacArthur's military reports on the Korean war were sent to a U. N. official from the U. S. S. R. How many such reports our busy bureaucrats are sending to NATO links in the Communist net, we cannot know. Judging from the information we obtained under oath on the so-called international civil service of the United Nations, I fear the worst.

IS NATO REPLACING NATIONAL MILITARY FORCES?

We have one test case of how NATO planning works. That is in the mystifying developments in the rearming of West Germany.

Somewhere in the maze of NATO it has been decided that West Germany may enlist her manpower, put her men in uniform, and train them. But the West German Government may not do certain other things. It may not have a military general staff. It may not have atomic weapons, chemical weapons, or the most modern planes.

Germany is the front line for the defense of all Western Europe. Who gains from a system which makes the German troops a mere armed horde, without its own general staff and without modern weapons of war?

Suppose we should face the threat of a war with the Soviet Union, and Germany wants to fight with us, but the other West European countries go neutralist? German troops will be bound hand and foot. Someone planned it that way.

I am troubled about another question. I wonder if this amputation of the essential organs of military power, in the case of Germany, is the pilot model for all national armies in the future? Are we moving, by deliberate plan, to the day when no nation will have a general staff, or atomic weapons, or airpower?

NATO has a curious interest in civil defense. Now some of you are worried about the constitutional dangers implicit in civil defense. These doubts were intensified in Washington, when our executive branch held a dress rehearsal for dispersal after an imaginary atomic-bomb attack, and the President proclaimed martial law. Apparently it was a mistake in signals. The connection between atomic attack or even rumor of atomic attack, and martial law here at home, was not supposed to be brought out so clearly.

So far NATO has operated with a velvet quiet. But it is getting too large and too important for secrecy. So what is the alternative? NATO is stepping up its machinery for saturating our minds with propaganda, through the printed word, motion pictures, radio, student tours, and all the other devices for political brainwashing.

HOW NATO ERODES OUR CONSTITUTION

Constitutionally NATO is not responsible to the people of the member nations. Only the executive branch has any influence on the policies of NATO. Only the executive branch is permitted to learn what NATO decides. The growth of NATO is a continuation, in another form, of the mushroom growth of the executive power, far beyond the point where it can be influenced by Congress, the courts, the press, or the people.

But note this: Under the American Constitution, when the people wanted to change their Government policies, they voted the administration out of power, and out it went. Today our elected officials, and their advisers, are wedged tightly between an internationalist bureaucracy above them and an independent self-guiding bureaucracy below them. The officials in the front windows may be changed by a national election, but they can make almost no change in our policies.

I have given you the simplest, most unemotional and undramatic presentation I could make of the information about NATO, from its own published reports.

NATO is part of a system of regional pacts which includes SEATO, and the Organization of the American States, that strange new agency, which has locked the Pan American Union firmly into the United Nations, where we of the Americas can now act only with approval of Soviet Russia in the Security Council.

Do you like this silent relentless drive to world government?

Do you think global executive supremacy is superior to American constitutional freedom?

Do you think the clever men who planned this devious political straitjacket should be trusted with making American policies, in the life and death struggle with the Communist elite?

CONGRESS ALONE CAN DEMOLISH WORLD GOVERNMENT

You ask what you can do, to help destroy this superstructure which cages us in.

There is no slightest hope that anyone in the executive branch can cast off the chains that bind us. The weaving of the net was too cleverly done.

You know well that our Supreme Court will not do it.

The only power that can restore constitutional liberty is the Congress. On February 11, I said "We must put none but constitutionalists on guard in Congress." But people say, "What do you mean. How can we do that?"

Isn't it pitiful that Americans do not know how to get a Congress that represents them?

Let me give you a short-cut method of electing a constitutionalist Congress. Study how the leftwingers have year after year elected their leftwing, collectivist, internationalist spokesmen in Congress!

The collectivists understand something we have forgotten. The political contest to win the executive branch is entirely different from the contest for control of Congress. The executive branch operates as a unit. It is a Roosevelt administration, or a Truman administration, or an Eisenhower administration. The fight at election time is for large blocs of votes in key States, to win or lose all, for 4 years.

Congress is entirely different. Nearly 50 percent of the Members of both Houses speak for the party out of power. The problem is to tip the balance in Congress. A few districts mean victory. Every congressional district, every Senatorial contest, in large or small States, is critical. It may be the battle which wins the war.

COLLECTIVISTS HAVE A GRAND STRATEGY TO WIN CONGRESS

The collectivists have carefully planned the strategy and tactics for congressional elections. Sidney Hillman taught them, many years ago, to fight for the marginal districts, to win where the other party's margin was small.

The collectivists see the congressional campaign as a chessboard on which is clearly marked the margin of victory, and the record of opposing candidates, in every congressional district in the United States.

The objective of their strategy is to help collectivists to defeat constitutionalists. They work in both parties, because they know the constitutional struggle is far more fundamental than the contest between parties.

The collectivists have perfected three techniques.

First, they build a vigorous organization in every district, to ring door bells. It is directed by their national agencies, but appears to work through local people.

Second, they build up a nationwide propaganda to indoctrinate people with the leftwing policies which their candidates will be supporting.

Third, they mount an intensive campaign, backed by all their resources of money, propaganda, and organization, to destroy the leadership candidates on the conservative side, and to elect outstanding candidates on their side.

For many years the collectivists have worked together brilliantly, along all three roads, regardless of party, to elect men to Congress who will serve their purpose, and to pass a political death sentence against those who oppose communism, socialism, big spending, or internationalism. The attack on the 80th Congress, which exposed wartime communism, was their most blatant, but not their only, victory.

CONSTITUTIONALISTS CAN BEGIN TO FIGHT FOR CONGRESS

The constitutionalists have no comparable organization to help American nationalists in their districts, to create a tide of opinion in favor of constitutionalism, or to strengthen the leadership on their own side in both Houses, and defeat the leaders on the other side. They have never tried to tip the balance in Congress to the conservative side.

For decades, the voters who revere the Constitution have sulked in their tents like Achilles, while collectivists were out ringing doorbells, keeping up a continuous barrage of collectivist ideas in the press, over the air, and in a thousand papers and magazines, and sending their best teams to drive from public life the leaders of constitutionalism in Congress.

For decades conservative voters have watched the balance of power in Congress being pushed toward the left, a little more every year, and done nothing. Then they wonder why Members of Congress who were elected by the leftwingers vote for foreign aid and big spending.

Jim Farley had a saying which we ought to heed. He kept repeating, "In politics, you can't beat something with nothing."

It is now June. Congressional elections are 5 months away. For all of those 5 months the collectivist political machine will be in high gear, working in and through both parties, to destroy the remnants of American constitutionalism. What will you be doing?

If you wish, you can do something. Now is the moment. You can take your eyes off Washington, and ring doorbells in your own district. You can ask for America to compile a list of the hard core of leadership on the left and try to defeat it. Also a list of the hard core of leadership on the American side, and reinforce it. You can study how the collectivists spread their slogans and symbols and then tell the story of our Constitution as it affects the fight today.

You may not win a majority in Congress on the first try, but you can begin to tip the balance your way. In each succeeding Congress you can do a little more. In a few short years you can have a constitutionalist Congress. Then your Congress can cut down big spending and demobilize the bureaucratic elite.

Or, if you wish, you can do nothing.

Let me end with this. While you do nothing, the mesh of world government is being woven tighter and tighter, in the U. N., in NATO, in SEATO, in UNESCO.

It is moving to control your money, your foreign policies, your armies, and the minds of your little children.

The collectivists are watching. They will know the moment when they dare spring the trap.

Once they spring the trap, my friends, I promise you, you will be helpless to do anything, because you will have had it.

Fiftieth Anniversary of First Conference of State Governors on Conservation

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, June 21, 1956

Mr. WATKINS. Mr. President, the Committee on Interior and Insular Affairs has been holding hearings on Senate Joint Resolution 139, relating to the observance and commemoration of the 50th anniversary of the First Conference of State Governors on Conservation. Statements were made by various representatives of conservation groups. Mr. William E. Welsh, secretary-manager of the National Reclamation Association, submitted a statement which was received too late for printing in the hearings. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT SUBMITTED TO SENATE INTERIOR AND INSULAR AFFAIRS COMMITTEE ON SENATE JOINT RESOLUTION 139, RELATING TO THE OBSERVANCE AND COMMEMORATION OF THE 50TH ANNIVERSARY OF THE FIRST CONFERENCE OF STATE GOVERNORS ON CONSERVATION, BY WILLIAM E. WELSH, SECRETARY-MANAGER, NATIONAL RECLAMATION ASSOCIATION, WASHINGTON, D. C., JUNE 1956

My name is William E. Welsh. I am secretary-manager of the National Reclamation Association. I am submitting this statement on behalf of that Association.

The National Reclamation Association is a private, nonprofit, voluntary organization entirely independent of both Federal and State Governments which represents the irrigation and water resources interests of the 17 Western States. These States comprise approximately 60 percent of the area of the United States.

The association was organized in Salt Lake City, Utah, in 1932, upon the call of the then Governor, later Secretary of War, George H. Dern, primarily to save reclamation for the Western States. Although the scope and functions have been broadened considerably during the past 25 years, the overall objectives as indicated in the constitution remain fundamentally the same—"The development, control, conservation, preservation, and utilization of the water resources of the reclamation States."

MEMBERS

The membership of the association is made up of public-spirited citizens who come from every walk of life, including farmers and waterusers, businessmen, professional men, lawyers, bankers, newspaper men, and many others. A large majority of the members, however, are officers and directors of irrigation districts and canal companies who are officially authorized to speak for the irrigation farmers of the West on matters pertaining to the conservation and development of the water resources of the West.

CONSERVATION IMPORTANT TO THE WESTERN IRRIGATION FARMERS

Therefore, we of the National Reclamation Association are very much in sympathy with the overall objectives of Senate Joint Resolution 139 because of the emphasis that it places upon conservation at this critical time. Not only does the future growth, prosperity, and well being of our Nation depend upon the continued conservation and wise use of our natural resources, but to the irrigation farmers of the West, conservation of water is the only means of existence.

The irrigation farmers of the arid and semi-arid West have perhaps a better reason to be interested in conservation than any other group of citizens in the United States. In that area man cannot survive upon water as it is delivered to him by nature, largely coming in the form of snow falling on the mountains during the winter months. Water must be stored and conserved and made available for the hot, dry summer months. A well-sustained stream flow runoff is essential to the growing of crops in the West. This means that there must be an adequate and

well-planned program of watershed protection on all of the watersheds of the streams throughout the West where irrigation farmers are dependent upon that stream to yield a well-sustained, late season run-off for the growing crops.

CONSERVATION STUDIES, BOISE RIVER WATERSHED, IDAHO

I hope that I may be pardoned for referring to my own experiences to illustrate this point. For 24 years I have served as watermaster on the Boise River in southwestern Idaho. The Boise River is only 115 miles long. It rises among the Sawtooth Mountains 10,000 feet in elevation and empties into the Snake River at 2,000 feet elevation. In other words, it falls 8,000 feet in a little more than 100 miles. Under such conditions, the danger of erosion is very great. The Boise Valley is a highly developed and intensely farmed agricultural area of more than 300,000 acres, and with considerably more than 100,000 population. The successful growing of crops in this fertile valley and the well being of the population of the valley depends upon an adequate supply of water during the entire growing season. There must be a well-regulated and sustained stream flow runoff. In 1929 I took the initiative in having a forest and range experimental station established on that watershed by the United States Forest Service for the purpose of determining the manner and extent to which the timber could be cut and the range lands grazed without doing injury to the watershed itself. My latest information was to the effect that this experimental station is still in operation.

In my opinion, that is conservation at its best. It is based upon commonsense. It contemplates the wise and fullest use of all of the resources of this area, keeping ever in mind the necessity of maintaining a well protected watershed for the benefit of the entire population of the area. At the same time the scenic and recreational attractions of the watershed are not only unimpaired but enhanced. Tourists and vacationists who visit and enjoy the scenic and recreational attractions at Lucky Peak, Arrowrock, and Anderson Ranch Dams and Reservoirs on the Boise River watershed exceed the number who visit and vacation in other areas of the watershed.

ABUSIVE USE OF WATERSHED: EROSION, FLASHY RUNOFF

The attitude of the western irrigators not only in the Boise Valley but throughout the entire West was well illustrated by a statement by the chairman of the Boise Valley Waterusers, submitted before a congressional committee quite a number of years ago in which he said:

"Any use or abuse of the watershed of the Boise River is of vital importance to every citizen of this valley. We believe that every acre of this watershed should be so utilized as to protect and preserve to the fullest possible extent this great natural resource—the water—for the benefit of all those who are dependent upon it for their subsistence."

It is generally recognized throughout the entire West that abusive use of a watershed results ultimately in erosion and siltation of reservoirs as well as quick and flashy stream runoff. For these reasons, the members of the National Reclamation Association, over a long period of years, have been very strong supporters of conservation, including particularly watershed protection on the watersheds of the West.

THEODORE ROOSEVELT AND GIFFORD PINCHOT

The conservation movement as we know it today was given its greatest momentum under the leadership of President Theodore Roosevelt and Gifford Pinchot. The extent to which Theodore Roosevelt, in all of his messages dealing with this subject, related reclamation to the entire conservation program indicates his deep feeling as to the importance of reclamation. In fact, it appeared to be a major part of his ultimate goal and objective in all of his messages dealing with conservation.

Following are quotes from President Theodore Roosevelt's messages to Congress:

From his first annual message, December 3, 1901

"The forests are natural reservoirs. By restraining the streams in flood and replenishing them in drought they make possible the use of waters otherwise wasted. They prevent the soil from washing, and so protect the storage reservoirs from filling up with silt. Forest conservation is therefore an essential condition of water conservation. * * *

"* * * The forests alone cannot, however, fully regulate and conserve the waters of the arid region. Great storage works are necessary to equalize the flow of streams and to save the floodwaters. * * *

"* * * The Government should construct and maintain these reservoirs as it does other public works. * * *

"* * * The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of streams. The object of the Government is to dispose of the land to settlers who will build homes upon it. To accomplish this object, water must be brought within their reach. * * *

"* * * There remain, however, vast areas of public land which can be made available for homestead settlement, but only by reservoirs and mainline canals impracticable for private enterprise. These irrigation works should be built by the National Government. The lands reclaimed by them should be reserved by the Government for actual settlers, and the cost of construction should so far as possible be repaid by the land reclaimed. The distribution of the water, the division of the streams among irrigators, should be left to the settlers themselves in conformity with State laws and without interference with those laws or with vested rights. The policy of the National Government should be to aid irrigation in the several States and Territories themselves, and as well stimulate needed reforms in the State laws and regulations governing irrigation. * * *

"* * * The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi Valleys brought prosperity to the Atlantic States."

From his second annual message, December 2, 1902

"Few subjects of more importance have been taken up by the Congress in recent years than the inauguration of the system of nationally aided irrigation for the arid regions of the Far West."

From his third annual message, December 7, 1903

"The work of reclamation of the arid lands of the West is progressing steadily and satisfactorily. * * *

"* * * The Nation as a whole is, of course, the gainer by the creation of these homes, adding as they do to the wealth and stability of the country, and furnishing a home market for the products of the East and South."

From his fourth annual message, December 6, 1904

"The Reclamation Act has been found to be remarkably complete and effective, and so broad in its provisions that a wide range of undertakings has been possible under it."

From his fifth annual message, December 5, 1905

"The creation of small irrigated farms under the Reclamation Act is a powerful offset to the tendency of certain other laws to foster or permit monopoly of the lands."

From his sixth annual message, December 3, 1906

"The conservation of our natural resources and their proper use constitute the fundamental problem which underlies almost every other problem of our national life. We must maintain for our civilization the adequate material basis without which that civilization cannot exist. We must show foresight, we must look ahead. * * *

"* * * The Government dams should be used to produce hundreds of thousands of horsepower. * * *

"* * * Irrigation should be far more extensively developed than at present. The Federal Government should seriously devote itself to this task, realizing that utilization of waterways and waterpower, forestry, and the reclamation of lands are all interdependent parts of the same problem. * * *

"* * * The work of the Reclamation Service in developing the larger opportunities of the western half of our country for irrigation is more important than almost any other movement. The constant purpose of the water resources of the public lands for the ultimate greatest good for the greatest number; in other words, to put upon the land permanent homemakers, to use and develop it for themselves and for their children and children's children."

I was especially impressed by the marvelous statement presented to this committee by Mrs. Gifford Pinchot in which she outlined the history and the background of the conservation movement as it was developed into a national policy by her distinguished husband. I was particularly impressed by her statement that "Conservation to Gifford Pinchot was never a vague, fuzzy aspiration * * *. The conservation he preached dealt with protection of the forest in terms of wise use and sustained yield. It dealt with the relation of these forests to the fertility of the soil, to erosion, and flood prevention." The first of the three great purposes of Mr. Pinchot, she said, was "To wisely use, protect, and renew the natural resources of the earth." Then she summarized by saying, "In other words, the greatest good, for the greatest number, for the longest time."

It is truly refreshing to note that Theodore Roosevelt and Gifford Pinchot never for a moment advanced the theory that conservation meant to set aside vast areas where all of the natural resources should be bottled up and denied to the public, except as something to look at. These two great conservationists adhered to the commonsense theory that these great God-given natural resources were created for the benefit of man to enjoy and to use—but to use wisely.

Six million acres of reclamation projects scattered throughout the entire West constitute an enduring testimonial to these two great leaders in conservation a half a century ago. The construction of these projects was made possible because of the farsightedness and aggressive leadership of Theodore Roosevelt. The water supply necessary to keep these projects operating successfully has been greatly enhanced by conservation programs on all western watersheds which were initiated and promulgated by Gifford Pinchot while he was our first Chief Forester.

These reclamation projects have created prosperous American communities with beautiful and well kept homes which will be there for the enjoyment of generations yet unborn and for centuries to come.

To paraphrase the prophecies of Theodore Roosevelt, "the reclamation and settlement of the arid lands" has enriched "every portion of our country." Reclamation has used "the water resources of the public lands for the greatest good for the greatest number."

The Gifford Pinchot ideal "the greatest good for the greatest number for the longest time" is being fulfilled.

History may well record the enactment of the National Reclamation Act signed by President Theodore Roosevelt on June 17, 1902, along with the passage of the Homestead law signed by President Abraham Lincoln on May 20, 1862, as two of the greatest legislative enactments for the conservation, development, and wise use of our Nation's natural resources ever adopted by the Federal Congress.

The National Reclamation Association is happy indeed to endorse Senate Joint Resolution No. 139, because we are in sympathy with the overall objectives as they are outlined in that resolution. We believe that the establishment of a National Conservation Memorial Commission, as provided for in this resolution, will prove to be a very helpful stimulant to the cause of conservation.

Mr. Chairman, we are very grateful indeed for the opportunity to present this statement.

Respectfully submitted.

WILLIAM E. WELSH,
Secretary-Manager, NRA.

California Weighs Giant Dam

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the Christian Science Monitor of March 13, 1956, concerning a proposed giant dam through which California hopes to start solving its last big long-range water problems.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CALIFORNIA WEIGHS GIANT DAM

(By Harlan Trott)

SACRAMENTO, CALIF.—California is hoping to make a good start toward solving its last big long-range water problems at a special session of the legislature.

Full development of the State's marvelous water resources will cost close to $13 billion.

Gov. Goodwin J. Knight will be satisfied if the legislature authorizes the start on the $1½ billion Feather River project.

The Water Project Authority has recommended that the State spend $27 million to start damming the Feather at Oroville and its related San Joaquin Delta diversion project.

Governor Knight has partially implemented this in the current budget by inserting an item allotting $5 million for surveys and construction plans. This includes buying the Oroville and Delta dam sites and rights-of-way for the relocation of the State highway and the Western Pacific Railroad.

HOPES FOR 1957 START

Legislative approval would commit the State to the next big step of building the $400 million Oroville Reservoir. The dam, 6,780 feet long and 730 feet high, will hold back 3,500,000 acre-feet of water. It would contain more concrete than Grand Coulee.

Governor Knight says he is hopeful that shifting the highway and the Western Pacific tracks up through the beautiful Feather River Gorge could get under way not much later than July 1957.

The legislature will have to decide how to finance the plan to dam the Feather River where it tumbles out into the coastal plain close to Oroville. The California engineering firm of Bechtel, builder of the trans-Arabian pipeline and other giant engineering feats, has issued a report saying the Feather River project is feasible to build and finance.

For almost a generation now, the notion has permeated people's thinking that multipurpose reclamation projects costing billions are beyond the ability of any one State to pay.

The United States built California's Central Valley project ostensibly for that reason.

WEIGHED BY LEGISLATORS

Now the California Legislature is considering a water project costing nearly 10 times as much. The reason is that California's representatives in Congress have been told that there is no chance of Congress appropriating $1½ billion to have the Department of the Interior do the work.

So California is tackling the job. The challenge to California's future growth will have to be faced by California alone, or the State which now ranks second only to New York in population will stop growing.

Already the population exceeds 13 million, and in another decade California may pass New York.

Legislators from as far south as San Diego and in the semiarid parts of the lower Central Valley are excited about the prospects of storing up the winter rains and diverting the winter runoffs from northern to southern California.

Harvey O. Banks, acting State engineer, has assured legislators from the thirsty south that when the water project authority submits its report by June 30 of this year it will show the feasibility of bringing water to almost every arid spot.

POLITICIANS ELATED

Politicians are elated. Assemblywoman Dorothy Donahoe from Bakersfield, for example, says she has been trying for 3 years to get the State engineer or his staff to make this commitment.

The land in her district is wonderful cotton land when the holders can get water to it. Water would greatly accelerate the development of industry and agriculture in eastern Kern County, which she represents.

How the State will finance these great engineering works is said to be important. If they are financed in the traditional California way, the danger of land speculation will be greatly minimized, small family-size farming will be encouraged, and the threat of inflation will be curbed. That is California's experience in regional as opposed to State or Federal financing of water and power projects.

Los Angeles and neighboring communities and districts have financed their water developments without either Federal or State subsidy. Those familiar with the California success pattern, engineers such as Samuel Morris, of Los Angeles, advocate regional financing.

STATE CODE CITED

The California water code is adequate for this purpose. Under its provisions the people could by popular vote bring all of California's land, or any part of it, into an irrigation district or superdistrict.

The underlying factor in the success of California's local reclamation projects is that the cost of all water developments can be paid by the holders of land which the project makes more productive and desirable, without putting any burden on those using the land, as users. This is the method David E. Lilienthal has just advocated in Colombia's new water project.

Those who side with pioneer "doers" such as Sam Morris, of Los Angeles, say that former Secretary of the Interior Harold L. Ickes defined the basic question a decade ago when he said:

"It is the age-old battle over who is to cash in on the unearned increment in land values created by a public investment."

Will the businessmen and wage earners of California—in other words the consumers—be required to pay for the projects? Or will the holders of the benefited land be required to pay for public works which increase the value of their land?

Spokesmen for California's hundred-odd irrigation districts, labor unions, and others who see and support the traditional California way are expected to make themselves heard when the legislative committees get down to work on the great opportunities confronting them at this special session here.

Shortage of Scientists and Engineers: Are We Losing the Race With Russia?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 21, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial written by Donald C. McGraw, president of the McGraw-Hill Publishing Co., Inc., entitled "The Shortage of Scientists and Engineers: Are We Losing the Race With Russia."

This is one of a series of editorials prepared by the McGraw-Hill department of economics to help increase public knowledge and understanding of important nationwide developments of particular concern to the business and professional community served by the company's industrial and technical publications.

THE SHORTAGE OF SCIENTISTS AND ENGINEERS: ARE WE LOSING THE RACE WITH RUSSIA?

There is new confidence in the Kremlin. One key reason is expressed in a recent boast of Communist Party Secretary Khrushchev: "The capitalists always regard our people as being backward, but today we have more engineers and more supporting engineering technical personnel than any capitalist country." He promised that this lead would be widened and that communism would be victorious without war.

This boast cannot be dismissed as Communist propaganda. Adm. Lewis L. Strauss, chairman of the United States Atomic Energy Commission, has warned: "In 5 years our lead in the training of scientists and engineers may be wiped out, and in 10 years we could be hopelessly outstripped. Unless immediate steps are taken to correct it, a situation already dangerous, within less than a decade could become disastrous."

This second editorial in a series on the shortage of scientists and engineers is designed to explore as carefully as possible the facts and the implications of the new emphasis on technical training in the Soviet Union. It draws heavily from the authoritative book Soviet Professional Manpower, prepared for the National Academy of Sciences and the National Research Council by Nicholas DeWitt of the Russian Research Center of Harvard and released recently by the National Science Foundation.

TREND IS AGAINST US

If the Soviet Union already has a lead in technical manpower, it is not very great. Both the United States and Russia now have around a million scientists and engineers.

About a third of the Russian engineers were trained on inferior pre-1935 standards. It's the trend that is alarming.

Over the last 5 years we have turned out only 142,000 engineers, compared to an estimated 216,000 in Russia. In 1955 our output was around 23,000 compared to their 63,000. Over the next 5 years our projected output is 153,000, against at least 400,000 in Russia. There will be an additional 150,000 or more in the satellites and Red China.

In Russia, 30 percent of the college students are in engineering, compared to 8 percent here. Another 30 percent or more take degrees in natural sciences. Moreover, unlike ourselves, the Russians are ploughing back a large proportion of their science graduates into teaching, which implies a rapid buildup in the future.

QUALITY AS WELL AS QUANTITY

It would be foolhardy to assume that these new Russian graduates are inferior to ours in the quality of their technical training. They start out with much more intensive mathematical and scientific preparation at the high school level. They study harder and longer in college, with more laboratory work and more practical training. Their courses and textbooks seem to be as thorough as ours. Even though the Russian graduates may be overspecialized, they get results.

These results have been striking. The Russians developed both A-bombs and H-bombs faster than we expected, and it's not certain that they had to rely much on espionage. They pushed ahead of us for a while in jet fighter design, and they showed up with a fleet of long-range bombers well ahead of schedule. They are crowding us on nuclear power, electronics, and automation. There are grave fears that they have established a lead in the vital field of military rockets.

The goal of Soviet scientific manpower policy includes not only weapon supremacy but also leadership of the neutral and uncommitted areas of Asia, Africa, and the Middle East. The Soviet leaders may be bluffing in their offers to export capital, but they are preparing to export Russian scientific and technical know-how in a big way.

HOW THEY DO IT

The Russians are determined to win the race for scientific supremacy, and they do not count the cost. They pay their scientists and engineers salaries that seem fantastic when compared with other Soviet incomes.

Senior professors, research scientists and top engineers are a major segment of the Russian elite. Their incomes are frequently 6 to 10 times the average industrial wage. (In the United States 6 to 10 times the average industrial wage would be $25,000 to $40,000 a year.) Housing and other privileges are correspondingly lavish. While preaching equality, the Soviets use capitalistic incentives far more boldly than we do. Indeed, practicing engineers and scientists have been complaining about the exalted status of professors and top research people, and salary scales are now being adjusted to give greater emphasis to practical results.

The Russians are also generous in their aids to education. Tuition has just been made free at all levels. Undergraduates receive 200 to 500 rubles a month and graduate students 800 rubles (about equal to an industrial wage) to cover living expenses. The biggest stipends go to science and engineering students. College students are deferred from military service, and engineers and scientists often enjoy continued deferment even after graduation.

Finally, the Soviet leaders can channel engineers and scientists—and all other human and material resources—into any area they choose. And the areas the Soviet leaders choose are predominantly those that contribute to military or political objectives, rather than to a better life for consumers.

WHAT'S OUR ANSWER?

We are certainly not going to adopt Soviet methods. We do not want scientific robots, but free men, able to understand and add to our democratic heritage. At the same time, our world leadership in technology—and perhaps even our survival as a Nation—will be threatened if we allow ourselves to lag far behind Russia in the training of scientists and engineers. Ways to keep the United States in the race will be discussed in a later editorial in this series.

Green Bay Road

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following article on the Green Bay Trail, for which the Illinois Historical Society recently selected William Koretz as one of 37 statewide junior historians. William Koretz, an eighth grader in Elm Place School, Highland Park, Ill., was awarded the society's certificate by Gov. William G. Stratton at a ceremony in Springfield.

GREEN BAY ROAD

(By Bill Koretz, eighth grade, Elm Place School, Highland Park)

The Green Bay Trail originated as an Indian foothpath between fur trading posts at Detroit, Mich., and Green Bay, Wis. The French established St. Francis Xavier Mission at Green Bay about 1670. After the French and Indian War the British replaced the French mission with Fort Howard. An important trading station along the trial, situated where Waukegan is now, was named Waukeganence (an Indian word for little fort). It was probably built in 1695.

The Green Bay Trail was active with trading of furs—beaver, otter, and mink. French-Canadian missionaries used it when trying to convert Indians to Christianity. In this area, the trail was used most by French-Canadian trappers and by Potawatomi Indians. Directions were marked by Indian trail trees.

The Indians gave up this territory to the Government in 1833. Soon afterward soldiers were ordered to widen the trail, as it was too narrow for wagons. The soldiers were in a hurry and lacked money to straighten the road, so they followed the Indian path in its complicated windings around ravines. The men laid rough rafts and log bridges over creeks and blazed trees along the way. Settlers who came later called the trail the Military Road. In its improved form the road began on North Clark Street in Chicago, continued past Rosehill Cemetery, followed the shoreline to Winetka and the Hubbard Woods Ravines, turned west to the north limits of Glencoe, and followed the current road to Highwood Avenue. The path ran through Fort Sheridan to Sacred Heart Academy, and then returned to its present route.

A stagecoach line was established in 1836, carrying mail and passengers from Chicago to Green Bay. This was an improvement over previous postal service. In good weather the mail carrier on horseback arrived in this area about once every 2 weeks. In winter or in rainy weather he was often unable to travel the muddy or snowbound trail. Passengers on the stagecoach found travel along the trail uncomfortable because of the many ruts and stops when wheels were stuck in mud.

Several taverns or inns were constructed beside the trail. One of these was the Green Bay Tavern, near the present Moraine viaduct. The farmers who inhabited most of the land beside the trail until the Civil War used it in the Highland Park area when they made their rare trips to Chicago markets. The railroad (present North Western) was opened through Deerfield Township in 1855. Highland Park was incorporated in 1869.

Additional Scientific and Professional Positions in the Federal Government

SPEECH
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11040) to advance the scientific and professional research and development programs of the Departments of Defense, the Interior, and Commerce, to improve the management and administration of certain departmental activities, and for other purposes.

Mr. HENDERSON. Mr. Chairman, with respect to H. R. 11040, it is not news to anyone that the United States no longer has the tremendous lead that it once enjoyed in military strength, airpower, and international prestige. Other nations of the world have challenged our position and as they offered the challenge, have themselves begun energetically to work at the task of assuming a prominent role in world leadership.

Nor is it any secret that our Government is facing grave difficulties in obtaining the necessary key scientific personnel to keep pace with the requirements of modern-day warfare.

Our committee hearings on this legislation disclosed that inability to attract and retain competent top-level scientific professional, technical, and administrative personnel is one of the most pressing problems faced by the Department of Defense, the National Security Agency, and the National Advisory Committee for Aeronautics. Private industry has found the necessity for such top-level personnel, and private industry is prepared to pay substantially higher wages than is the Government, under existing legislation.

Witnesses before our committee pointed out that although it is possible to keep key personnel when the wage differential may be 50 percent, that those people who are in key positions with the Government are devoted to their work and hesitate to change, when the monetary difference between what industry is paying and what Government is paying is not too great. But, tell a man with a growing family who wants to own his home and have a better car that he can go into private industry at 2 or 3 times the salary that he is receiving from Gov-

ernment and it takes a unique type of loyalty to keep him there.

And that is just what our departments of Government have discovered to be the case. The condition is particularly evident in the field of research and development. These programs have increased in size. They have grown more complex, and the demands are far more urgent. This bill is designed to help those departments of Government to attract and retain the talent which is necessary for the programs. They are not able presently to attract and retain these talents because of the shortage of higher level positions. This legislation would increase from 45 to 275.

A number of scientific and professional positions in the Department of Defense under Public Law 313 as amended, provide 56 positions for use by the National Security Agency, increased from 10 to 60 the number of such positions in the headquarters and research stations of the National Advisory Committee for Aeronautics under Public Law 313, as amended, and authorize the Secretary of the Interior to establish and fix the compensation for not to excede 10 such positions in the Department of the Interior, and finally to authorize the Secretary of Commerce to establish and fix the compensation for not to exceed 35 such positions in the Department of Commerce, making a maximum total of 375 such positions. These positions would pay not less than $10,000 or more than $15,000 as provided in Public Law 313, as amended.

I would like to point out here very emphatically that these are positions in the classified Civil Service, and that the salaries thereof as well as the qualifications of proposed appointees will be subject to prior approval by the United States Civil Service Commission.

Now, in addition to those positions, one other section of the bill provides that the Secretary of Defense may place 285 positions in grades 16, 17, and 18 of the general schedule of the Classification Act of 1949 in lieu of 236 such positions now allocated to that Department by the Civil Service Commission. The difference between 236 and 285 is a net increase of 49 such positions. This is done by adding a subsection F to section 505 of the Classification Act of 1949. The 236 positions thereby released will return to the Civil Service Commission and be available for allocation to other departments and agencies of Government in accordance with section 505 of the Classification Act.

One further change is made wtih regard to section 505 by the enactment of this bill, as follows: Under section 505, as previously established, allocation of these so-called supergrades has been left exclusively to the Civil Service Commissioners in accordance with their determination of the needs. By the enactment of this legislation, Congress is saying that of the supergrades authorized 285 of them will be for the exclusive use of the Department of Defense.

The bill provides for a detailed system of reporting so that the Congress may maintain very close watch over the use of the scientific and professional positions. This is done two places in the bill—one on page 4, section 3, of the act of August 1, 1947, as amended, and again on page 6, where a new section of law is being enacted with regard to the reporting of supergrades by those agencies to whom they are assigned by the Civil Service Commission and by this act.

Insofar as the individual positions are concerned which are being filled by this act, each of them were detailed to us in the hearings, and in the opinion of our committee were fully justified. The day has come when, unless our strategic branches of Government can recruit and retain its key professional, scientific, and top executive career personnel, it cannot keep pace in this battle of wits, in this struggle for ideals, and in the campaign for military strength in which it is engaged in this day of democracies versus communism.

Steel Wage Dispute

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. MADDEN. Mr. Speaker, the Nation's No. 1 heavy industry, the manufacturers of steel, is now engaged in conferences over a new contract between labor and management.

The following letter from David J. McDonald, president of the United Steel Workers, set out facts which are important for the information of the Congress and the American public:

JUNE 18, 1956.

To the Officers and Members of All Local Unions of the United Steelworkers of America.

DEAR SIR AND BROTHER: I am writing this letter to each local union so that our members can have the facts—the straight facts rather than industry propaganda—about the current situation in our bargaining with the basic-steel industry.

On June 13 the representatives of the industry made us a take-it-or-leave-it offer. In making this offer the representatives of the industry stated quite clearly that, although we could bargain about details and the allocation of the costs of the fringe benefits, the total package was a fixed package. They also said that the only basis upon which they would conclude an agreement with us was a fixed contract, without reopeners or room for later negotiations on any subject, for a 5-year term.

The international wage policy committee unanimously rejected the industry offer as too little, too late, and too long. The wage offer is too little and would result in a take-home pay increase to the average steel worker this year of about a nickel an hour—about 2 percent. The fringes offered by the industry to dress up this unacceptable wage proposal are inadequate and become effective too late to have any significance. The whole contract, instead of being modernized, is to be extended, with its obsolescent features under the industry's proposal for 5 years—far too long a period.

The industry has advertised far and wide that the package which they have offered us costs 17⅓ cents in the first year of the contract and, over the 5-year term, would cost 65 cents an hour.

I want to label these industry figures as propaganda rather than fact: The industry has not offered us either 17⅓ cents this year or 65 cents for 5 years. This is what they have offered, in their own words:

EFFECTIVE DATE AND IMPROVEMENT

July 1, 1956: Advance all job class 1 employees to job class 2 and combine the 2 classes.

July 1, 1956: Increase all standard hourly wage rates by 6 cents and increase increments between job classes above job class 2 by two-tenths cent.

July 1, 1956: Establish supplemental unemployment benefits plan in form attached, with company contributions of 5 cents per hour.

November 1, 1956: Establish improved insurance program in accordance with insurance proposal attached.

July 1, 1957: Increase all standard hourly wage rates by 6 cents and increase increments between job classes above job class 2 by two-tenths cent.

July 1, 1957: Add a seventh paid holiday.

5. Vacations: The industry offered, effective 1958, to increase the vacations of employees with 3 and 4 years, and with 10–14 years of service, by one-half week. They coupled this offer with a new method of computing vacation pay on the basis of a percentage of the average of the previous year's earnings. And they also required, as a price for this benefit, that the companies be given the unilateral right to require employees to forego their vacations and take vacation pay instead.

6. Shift differentials: The companies offered to increase shift differentials by 1 cent per hour for the second and third shifts in 1958 and again to increase the differential by 1 cent for the second shift and 2 cents for the third shift in 1960.

7. Sunday premium pay: In answer to our request for double time for Sunday work and time and one-half for Saturday, the companies offered to pay the night-shift premium for Sunday work; that is, they offered a premium of 10 cents per hour effective 1959, and a 12-cent-per-hour premium effective 1960. Even this offer was carefully restricted. First, the companies stipulated that not even this night-shift premium would be paid for hours worked on Sunday if they were overtime hours. And to make sure that this restriction would apply wherever possible, they propose to change the regular workweek, which now begins on Sunday, to a week beginning on Monday, so that Sunday instead of Saturday would be the seventh day.

8. Jury pay: The final fringe benefit offered by the companies was jury pay, and this not to be effective until July 1959.

What is this whole package worth to the steelworkers? Our research department has computed the value of each of these items, and, giving the companies the benefit of every doubt, estimates that ultimately the value of these benefits, when they all finally go into effect in 1961, would be 45.3 cents per hour. This includes not only the companies' payments into the supplemental unemployment benefits fund, which will average about 3 cents per hour, but also the companies' payments into the insurance fund of 1.5 cents per hour—neither of which, as presently proposed by the companies, will provide any real benefits to the steelworkers.

But, even counting these in, while the package at the end of 5 years will be 45.3 cents, the average benefit over the 5-year term of 1956–61 amounts only to 28.5 cents per hour. The reason for this is simply that we will not get many of these benefits for several years.

What this actually means is that the industry has offered a package worth, on the average, for the 5 years, a total of 28.5 cents per hour. In return they insist that we execute a firm 5-year contract, forbidding us to negotiate on anything until 1961. We

would have to give up, for 5 years, every one of the changes which we have asked be made in our contracts to bring them up to date. At the same time, the companies insist, as part of their offer, that if the Government should impose controls at any time during the 5-year term, they would have the right to reopen and cancel all of the future benefits.

November 1, 1957: Increase pension benefits in accordance with pension proposal attached.

January 1, 1958: Increase vacation pay of employees with 3 to 5 years of service to 1½ weeks and increase vacation pay of employees with 10 to 15 years of service to 2½ weeks.

July 1, 1958: Increase all standard hourly wage rates by 6 cents and increase increments between job classes above job class 2 by two-tenths cent.

July 1, 1958: Increase shift premiums to 7 cents for afternoon shift and 10 cents for night shift.

July 1, 1959: Increase all standard hourly wage rates by 6 cents and increase increments between job classes above job class 2 by two-tenths cent.

July 1, 1959: Establish new premium for Sunday shifts equal to night shift premium.

July 1, 1959: Grant jury pay.

July 1, 1960: Increase all standard hourly wage rates by 6 cents and increase increments between job classes above job class 2 by two-tenths cent.

July 1, 1960: Increase shift premiums to 8 cents for afternoon shift and 12 cents for night shift.

July 1, 1960: Apply new night shift premium to Sunday shifts.

The above does not tell the whole story. The actual increase for take-home pay in the first year under this package would be less than 5 cents an hour. A steelworker in job class 8 (the average job class) would receive a wage increase of 6 cents plus an increment increase of 1.2 cent, or a total of 7.2 cents. From this average wage increase would have to be subtracted 1.5 cent which the companies insist must be added to the employee contributions under the insurance program. Therefore, the net increase for job class 8 would be 5.7 cents. When taxes are subtracted from this net increase, the total in take-home pay is less than 5 cents per hour.

The companies' package includes a similar increase in each of the 4 years after this year. In addition, it provides for certain fringe benefits. I think you are entitled to know precisely what these other benefits are:

1. Supplemental unemployment benefits: Under the plan offered by the industry practically no benefits would be paid to any of our members. This is because the industry has invented a new gimmick in supplemental unemployment benefits plans. Under other plans that have so far been negotiated, such as our can plan, the total unemployment benefit (including State unemployment compensation) is 65 percent of 40 hours' take-home pay. The steel companies propose that the total benefit should be 65 percent of take-home pay for the hours actually worked in the 3-month period immediately before the layoff. Since, in most cases, our members work a short week (often down to 32 hours) in the period before they are laid off, this would mean that in many cases the total benefit (including the State unemployment compensation) would be 65 percent of the take-home pay for 32 hours of work. In almost every State in which we have any number of members, this total benefit would hardly be larger than the State unemployment benefit. Therefore, under the plan offered by the industry—unlike any other supplemental unemployment benefits plan—virtually no benefits would be paid out of the fund.

In addition, the companies refused to make adequate provisions by which our members in Ohio, Indiana, and Virginia would be guaranteed benefits if the authorities in these States persist in their rulings that supplementation of State benefits is not permissible. Under the plan offered by the companies no benefits would be paid out of the fund in any State in which supplementation or the payment of substitute benefits is not permitted by State law.

2. Insurance: The industry offered us an improved insurance program. The actual cost of the new benefits which they offered us is $2.25 per employee per month. But they insist, as a condition of this improvement, that the average employee contribution be increased by $2.55 per month. They did agree to increase the company contributions, also by $2.55 per month, but all of their money would be retained as reserves.

3. Holidays: The companies offered a seventh paid holiday, but not until the day before Christmas in 1957. They refused even to consider our proposal that premium pay be paid, in addition to the holiday pay, for hours worked on the holiday.

4. Pensions: The companies offered to increase minimum pension benefits to $2.50 a month for each year of service, but they offered to make this effective only with respect to years actually worked after 1957. This means that it would be 1987 before an employee could retire with 30 years of service at $2.50 per month—the pension benefit we negotiated with the can industry last year. In can, a worker retiring today with 30 years of service, or more, receives a pension of $2.50 per month for each year of past service.

For service up to November 1957, the steel companies offered an increase in the minimum pension from the present $1.83 a month per year of service to $2 a month per year of service, effective next year. But even this small increase would not be given to present pensioners. In the can industry we not only negotiated a $2.50 a month pension, effective last year, but the companies agreed to apply it retroactively for all present pensioners.

In addition, the companies insist on an additional penalty clause, under which every worker who, during the 5 years, participates in a work stoppage or any interference with production, would lose, in addition to his wages, 1 day's vacation and 1 week's supplemental unemployment benefits for every day's work lost.

The industry's 28.5-cent package for 5 years is not a fair offer. This is a year of record prosperity. Despite this, the industry is offering us, for this year and each of the 4 following years, much less than we have received on the average during the past 10 years.

The international wage policy committee, in rejecting this offer, said that it was "too little, too late, and too long." In the words of the wage policy committee:

"The wage offer is too little and would result in a take-home-pay increase to the average steelworker this year of about a nickel an hour—about 2 percent. This trifling 2-percent increase would be the steelworkers' reward for increasing their productivity by a recordbreaking 11 percent last year."

In rejecting the industry's offer, the policy committee reaffirmed the union's desire to achieve a fair and reasonable settlement. It said:

"Insofar as the union is concerned, the union's negotiators, without stipulating any prior conditions, are ready to meet both day and night, with the industry representatives for the purpose of hammering out a decent settlement.

"We call upon the leaders of the steel industry to meet with the union in the same spirit and without attaching conditions which roadblock give-and-take bargaining."

I am confident that our membership will support this unanimous action of the wage policy committee.

Sincerely yours,

DAVID J. MCDONALD,
President.

Work of Representative Dante Fascell, of Florida

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial highly complimentary of the work of Representative DANTE FASCELL, representing Florida's Fourth Congressional District.

The article is entitled "FASCELL Is Right on the Right To Know," and it appeared in the Miami Herald under date of June 14, 1956.

We of the Florida delegation are justly proud of the very fine work being done by DANTE FASCELL, who is completing his first term in the Congress. His fine qualities and outstanding ability as a legislator are known to many of us in the Congress. He justly merits the confidence and overwhelming support of the people of his district.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FASCELL IS RIGHT ON THE RIGHT TO KNOW

Representative DANTE FASCELL of this city is a member of the House Subcommittee on Government Operations.

This subcommittee inquired into the availability of information from Federad departments and agencies. It investigated whether Government agencies were denying or restricting the people's right to know what their officials were doing with their business.

During the hearings Representative FASCELL made this statement.

"It is my thinking that the right to know does not stem solely from the Constitution; rather it flows through the Constitution and that by ordaining and publishing the Constitution the people of this country established the principle that all powers and rights are vested in the people. • • •

"That principle would guide my thinking • • • even though it may have been restricted by Executive act, by congressional act, by judicial decision, or otherwise. I am just as interested in the individual's right, whether it might be exercised by him personally, or exercised through the press."

Representative FASCELL recognizes that in this day and time the people's right to know—whether as individuals or as a group—can be effectively exercised only through the press, or other communications media, having access to the records of departmental and other agencies of Government.

When officialdom seals off the press from its meetings and its records as a governing and continuing policy, the people's right to know has not only been negated but the people can't know what's what with their business.

Steel Wage Dispute

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. MADDEN. Mr. Speaker, the following is a breakdown of important issues now in discussion between labor and management concerning the renewal of the present contract between the United States steelworkers of America and steel management.

These comments and analaysis are submitted by the United States Steel Workers Union:

COMMENTS ON PROPOSALS OF BIG THREE STEEL COMPANIES

1. WAGES

The annual increase of 6 cents plus increase of two-tenths of a cent in increments (worth a total of 7.3 cents per year in United States Steel) gives a 2-percent increase in wages for an 11-percent increase in productivity. For 5 years, wages go up 7.3 cents each year, but since 1946 wages have been raised as follows:

	Cents
1946	18.5
1947	15
1948	13
1950	16
1952	16
1953	8.5
1954	5
1955	15

Deducting the additional 1½ cent employee insurance contribution, discussed below, results in a take-home increase of less than 6 cents. Deducting income tax, the total will be less than a nickel.

2. SUPPLEMENTAL UNEMPLOYMENT BENEFITS

(a) Sixty-five percent of weekly wage earned in period just preceding layoff is offered. Since layoffs usually are preceded by short weeks—32 hours—65 percent of 32-hour average would not exceed State benefits. Therefore, no supplemental benefits would be paid except in States where unemployment compensation is low.

(b) Employees in Ohio, Indiana, and Virginia get no supplementary benefits under the company proposals and the union's practical proposal to make the full benefits payable despite the legal problems raised by the denial of supplementation in these States has been rejected.

3. WEEKEND PREMIUM PAY

Ten cents for those Sunday hours not subject to overtime, effective July 1, 1958, and 12 cents effective July 1, 1959. This equals about one twenty-fifth time.

No Saturday premium.

Workweek to start Monday to increase possibility that Sunday be an overtime day and therefore excluded from premium rate.

4. INSURANCE

Addition of 3 cents to fund—1½ cents from company and 1½ cents from worker (which will cost the worker $2.55 additional per month). Increased benefits offered by company cost $2.25. The remaining $2.85 would stay in the fund as a reserve against increasing the company's costs in the future according to the company and would be used for excessive funding of life insurance for retired workers. Effective November 1, 1956.

5. PENSIONS

Effective November 1, 1957, increase minimum for each prior year of service from $1.83 to $2. With respect to the years of service after November 1, 1957, the minimum pension for each of such years would be $2.50. The 30-year maximum retained. The full benefit of the $2.50 minimum will not be available until 1987.

No increase offered for those on pension prior to November 1, 1957.

No vested rights offered for employees leaving before age 65 regardless of age or years of service.

6. UNION SHOP

Rejected full union shop but proposed making checkoff subject to restrictions contained in State right-to-work laws, even though such laws are superseded by the Federal law with which the present contractural provisions conform.

7. HOLIDAYS

United States Steel and Republic propose an additional holiday, December 24, effective 1957. Bethlehem proposes an additional holiday to be agreed on effective subsequent to July 1, 1957.

Union request for premium pay in addition to holiday pay for hours worked on holiday rejected.

Bethlehem refuses to agree to count holiday hours worked for purposes of computing overtime for hours worked over 8 in a 24-hour period, as now provided by United States Steel and Republic.

8. VACATIONS

Extra half week of vacation for 3-to-5-year men and for 10-to-15-year men effective July 1, 1958, coupled with percentage formula which reduces vacation for employees on short weeks, out sick, off on union business, etc.

Management wants unrestricted right to deny time off for vacation.

Republic proposes to require work in 60 percent of the payperiods in prior year to qualify for vacation instead of present system of disqualifying only those absent for 6 consecutive months.

Refuse protection against forcing employees to take their vacations during plant shutdowns.

9. SHIFT PREMIUMS

From 6 to 7 and 9 to 10 cents per hour, effective July 1, 1958.

From 7 to 8 and 10 to 12 cents per hour, effective July 1, 1960.

10. OVERTIME

United States Steel proposes eliminating overtime for 6th and 7th day worked in any 7 consecutive day period crossing 2 payroll weeks. This was company's answer to union's request to eliminate requirement of making claim to foreman to obtain this benefit.

Republic and Bethlehem refuse to grant such 6th and 7th day overtime provision as now provided by United States Steel. All three companies refuse to provide penalty against schedule violations.

11. REPORTING PAY

Refuse increase from 4 hours to 8 hours.

12. SENIORITY

Refuse to liberalize the 2-year break.

13. LOCAL WORKING CONDITIONS

Bethlehem refuses to accept the industry pattern.

14. SAFETY AND HEALTH

Refuse to liberalize provisions for furnishing safety equipment.

Refuse to provide the union with accident reports.

15. DISCIPLINE

United States Steel persists in refusing to permit arbitrator to modify discipline.

16. JURY PAY

After finally agreeing to jury pay, refuse to make it effective until July 1, 1959, with the right to cancel this benefit and all others not yet in effect in the event of a national emergency.

17. INCENTIVE

United States Steel wants right to adjust incentives without guaranteeing prior earnings.

United States Steel refuses to agree to convert all incentives to standard hourly wage rate base but proposes it will do so only when it chooses.

18. WAGE REVIEW

Refuse joint review of incentive problems.

United States Steel and Republic agree to review manual only to see if additional specimens should be developed. They refuse a review of job classifications.

Bethelehem agrees to review manual but refuses to review classifications which average out to lowest in industry.

19. STRIKES

Company proposes a penalty of one day's vacation and one sub "credit unit" for each employee for each day he participates in a strike or "other action which shall interrupt or interfere with work or production at any of the plants or shall prevent or attempt to prevent the ingress or egress of any person to or from any of the plants," in addition to any other discipline imposed by the company.

20. FIVE YEARS DURATION OF CONTRACT

No reopenings unless there is a national emergency.

On such a reopening all wage increases and fringe benefits not yet made effective are cancelled out.

Dual Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News on June 16, 1956, which lauds Rev. Thomas Hughes, pastor of the Welsh Baptist Church, Edwardsville, Pa., who marked two important milestones in his life on Sunday, June 17, 1956:

DUAL ANNIVERSARY

The Reverend Thomas Hughes, pastor of Welsh Baptist Church, Edwardsville, will mark two important milestones on Sunday when he will observe the 25th anniversary of ordination and the 25th anniversary of his pastorate. He has had only one charge since entering the ministry.

The Reverend Mr. Hughes also has the unique distinction of being the only individual to serve as moderator of the Welsh Baptist Association both as a layman and as a clergyman.

Although he is regarded as one of the best informed clergymen in his denomination, he is selfeducated. As a boy, he worked in the breaker and later he was a railroader. Incidentally, he was one of the breaker boy models for the statue, erected on the River Common in memory of Mrs. Ellen Palmer.

The Reverend Mr. Hughes has been an untiring worker in the vineyard of the master. His modesty, zeal, and deep religious convictions have added to his stature through the years. The rich rewards of his ministry have been shared by the community and congregations from Olyphant to Shenandoah.

The President's Health

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. MULTER. Mr. Speaker, the following item by Marquis Childs, from the Washington Post and Times Herald of June 20, 1956, is must reading for all Americans:

PRESIDENT'S HEALTH CERTAIN TO BE ISSUE
(By Marquis Childs)

The issue of President Eisenhower's health will not be ruled out no matter how optimistic the assurances of his doctors and associates. As a candidate for a second term, he will be confronted with it until election day.

Those close to the President profess to be not in the least concerned at this prospect. They are confident that the President's recovery from his operation and his own optimistic temperament will answer any and all insinuations about his capacity to serve for another 4 years. Moreover, they say that any effort to exploit the health issue is certain to backfire and build up sympathy for Mr. Eisenhower.

There are indications that the Democrats, too, are afraid any effort to capitalize on the President's illnesses will bring a sentimental reaction on the part of many people who will want to show Ike that they are sorry for him and they believe in him no matter what has happened.

The Democratic line is likely, therefore, to be also one of sympathy—sympathy for a gallant soldier pressured by self-seeking politicians into the intolerable ordeal of another 4 years in the White House when he should be allowed to retire to well-earned peace and quiet.

But health will be uppermost in the minds of many politicians in both parties. Photostats are being circulated in Washington of a news story from the Milwaukee Journal headed, "Ike Had Wrong Operation, Philadelphia Surgeon Says."

This was based on an interview with Dr. Robert B. Laucks of the University of Pennsylvania Graduate School of Medicine, who said that the bypassing operation would not relieve the President's symptoms of pain and discomfort although it did get around the intestinal obstruction.

Another University of Pennsylvania specialist, Dr. Isidor Ravdin, was one of the team of the surgeons in the operating room at the time of the President's operation. Dr. Ravdin, who joined with the other doctors in the optimistic report that Mr. Eisenhower would recover sufficiently to run for reelection, has stayed at Walter Reed Hospital virtually all the time since the emergency operation was performed.

Some Democrats have gone so far as to suggest, strictly in private thus far, that a committee or commission to pass on the fitness of the President is in order. If anything like this were publicly proposed before the President's convalescence, it would certainly be resented by everyone.

The unhappy precedent is being recalled of the Republican Senators who invaded the sick room of the ailing President Woodrow Wilson, ostensibly on a matter of state, actually to see what condition he was in.

One of them, the late Senator Albert Fall who was later disgraced in the Teapot Dome case, is said to have suddenly pulled back the covers on the bed to determine if Wilson was paralyzed.

One of the noted specialists attending Wilson declared that he was "organically sound, able-minded, and able-bodied." Mark Sullivan, in Our Times, notes that this went "as far in minimizing Wilson's condition as a natural wish for allaying public concern would temper scientific accuracy."

There then was no question of a presidential race, since Wilson was in his second term and the two-term tradition had not yet been violated. Wilson was able in his last months in the White House to function only fitfully.

Stricken on September 26, 1919, he died in retirement on February 3, 1924.

Another and less sensational proposal, still in the idea stage, is for a commission to inquire into the Office of the Presidency to determine whether it should be diminished or whether the effort to delegate certain powers is a contradiction of the nature of the American Government, which makes the President the sole unifying force under the Federal system.

This would, as now discussed, be a bipartisan commission on which medical experts, political scientists, and others would serve.

Whether with the conventions and the campaign so close, it is possible to take the whole subject, so vital to the future of America not just for 1 campaign or 1 election, out of the realm of speculation, rumor, propaganda, gossip, and downright malice is doubtful. But few would dispute that it should be put on a higher plane.

Promising Partnership

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Sunday Star, Washington, D. C., on June 17, 1956, calling attention to the fact that labor and capital in the soft coal industry have created a shipping corporation to carry their product to European markets:

PROMISING PARTNERSHIP

Labor and capital in the soft coal industry are entering into an unusual and promising venture in their creation of a shipping corporation to carry their product to the booming European market. With 2 coal-carrying railroads also participating, a group of coal-producing companies and the United Mine Workers are putting $50 million into the new shipping concern. The announced plan is to acquire ships—presumably by lease or purchase—for American flag operation under direct management of the new company.

European demand for American bituminous coal has been mounting steadily for the past several years and industry authorities express confidence the trend will continue. Our exports to that market totaled 27 million tons last year and will be higher in 1956. By 1960, the market is estimated at 44 million tons and by 1975 at 55 million. Purchases currently are being made on contracts covering as long as 5 years. Delivery poses two problems in the transportation field alone, first of all the question of enough shipping space and, secondly, the question of keeping costs low enough to hold the market. Existing cargo space not only is being strained already but there is always danger of it being diverted to other traffic. By operating its own ships, the group joined in this current venture hopes to assure itself of an important part of the needed transport capacity. It hopes, likewise, to maintain a rate structure that will help solve the cost problem.

Described by one of the railroad spokesmen as an "unprecedented partnership," the plan is credited to an initial proposal by John L. Lewis, UMW president. Its implementation, however, reflects an imaginative as well as businesslike approach to a problem of mutual interest to both the labor and industry sides of the partnership. It is a good example of teamwork in the economic world.

The Late Honorable Alben W. Barkley

SPEECH
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 1, 1956

Mr. COOLEY. Mr. Speaker, will the gentleman yield?

Mr. SPENCE. I yield to the gentleman from North Carolina.

Mr. COOLEY. Mr. Speaker, for many years I have enjoyed the friendship of the great man whose memory we at this moment honor. I have been very closely associated with our beloved colleague and I have known him intimately and well; I have admired and loved him through the years.

ALBEN W. BARKLEY was a citizen of the world, and today the liberty-loving people of the universe are mourning his death. This great man was not only loved in Kentucky; he was not only loved in America; but he was loved and admired by the men of many races in all parts of the world.

Because of our mutual interest in the welfare of the tobacco farmers of our Nation and of our mutual interest and activities in the Interparliamentary Union, we have been very closely associated with each other. Mr. BARKLEY, as chairman of the American group of the Interparliamentary Union, designated me as a delegate to the first meeting of that great organization, which I attended approximately 10 years ago. It was because of his great interest in the activities and the affairs of that organization that I became interested and finally was elected as a member of the nine-man executive committee of the Interparliamentary Union, in which the lawmakers of 46 nations of the world are now participating.

I recall with pleasant memories our visit together to the Holy Land, the place where Christ was born, en route to Cairo for the first postwar meeting of the Union. Our distinguished colleague was loved and respected and held in high esteem by members of that great organization which has labored through the years for peace and a better world understanding. He is the only member of the American Senate to my knowledge who has served on the executive committee of the Interparliamentary Union. When I was elected to the executive committee, I, of course, deemed it a great honor. During the Easter holidays the executive committee met in

Dubrovnik, Yugoslavia. It was an important meeting; but as chairman of the House Committee on Agriculture, it was necessary for me to remain in Washington and to forego this meeting in Yugoslavia because the farm bill was in conference. I knew that Red China was seeking admission to the Interparliamentary Union and that the petitions of Red China would have the support of Russia and all of its satellites. The State Department had urged me to attend this meeting, but I considered the farm problems of America of paramount importance and could not abandon my post of duty here.

In this situation I turned to my beloved friend, the distinguished statesman of the world, ALBEN W. BARKLEY. I discussed the matter with him in the Democratic cloakroom in the Senate, and he agreed with me that under no circumstances should I leave Washington because of the importance of the farm bill. I then asked him if he would go as my alternate and substitute to attend this very important meeting. Mr. BARKLEY said, "I will talk it over with Mrs. Barkley; and if I can possibly do so, I will."

He finally advised me that he would represent me at the meeting of the executive commitee in Yugoslavia. I went to the airport to see them off and to bid them bon voyage. On that day the Barkleys were happy and lighthearted as we waved to them on their last voyage together across the sea.

Mr. BARKLEY was successful in his efforts at the meeting at Dubrovnik.

This great man, whom we honor at this moment, could not have died more gloriously nor could he have lived more magnificently. When I think of his political life and the political campaigns in which he has engaged, I know that he was always guided and directed by the impulses and sentiments expressed in these brief words:

When the one great Scorer comes to write against my name,
He will write not that I won or lost but how I played the game.

I also think of a poem:

Oh, heart of mine, we shouldn't worry so
What we've missed of calm we couldn't have, you know!
What we've met of stormy pain and of sorrows driving rain
We can better meet again if it blow!
For we know not every morrow can be sad;
So forget all the sorrow we have had.
Let us fold away our fears and put by our foolish tears,
And through all the coming years just be glad.

I am glad that I knew ALBEN W. BARKLEY: May we through all the coming years just be glad that we have known and loved this great man and have worked and labored with him here in the Halls of Congress.

We need not build a monument to the memory of ALBEN W. BARKLEY. He has built for himself many magnificent and beautiful monuments in the hearts of his friends throughout the world. His life was a blessing and a benediction to all mankind.

Mr. Speaker, I extend to his lovely and devoted wife and to all the members of his family my very deep and profound sympathy. May God bless them all.

A Happy Hospital: Veterans' Hospital at Coral Gables, Fla.

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, June 21, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Happy Hospital," written by Francis A. Adams, a volunteer veteran of the Spanish-American War and also of World War I.

The article lauds the members of the staff and the employees of the veterans' hospital at Coral Gables, Fla., for the excellent treatment accorded veteran patients. It is heartening to know of the fine work performed by these public servants and its effect on the welfare of our veterans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A HAPPY HOSPITAL

There is an atmosphere of calmness that is absolutely free of tension in the Veterans' Administration hospital at Coral Gables, Fla. It furnishes an example of the happy union of three elements—the patient, the doctor, and the staff. There is an air of confidence at this place which envelops the patient upon arrival.

The routine of a great medical organization is not neglected, yet there is no harsh and hurried process that would tend to disturb a sick man. The common denominator in everything is quiet, efficient team work. Things go along smoothly. After a few days the patient realizes that this is indeed a "happy hospital," a term of endearment that is bestowed in only rare instances.

Arrival at the hospital is an event that the patient will never forget. It is the culmination of a long series of events. He is greeted in the reception room where he has been notified to report, by an attendant who shows a genuine interest in every case. No matter how many applicants may be in the room, the latest arrival is not left to cool his heels, but is given a friendly nod and told to take a seat.

Then in only a few minutes, the attendant's words are: "Let me have your notification card." This is the opening of the interview that will speedily lead to your being assigned to the proper ward.

There is endless paper work in operating a hospital that cares for hundreds of patients. This is essential and inescapable. It can be made a torment to the sick or imbue one with hope. The latter is the happy approach that exists at Coral Gables. You are not treated as an intruder.

To get the story of how a veteran gains admittance you have to go back to some necessary preliminary steps. A veteran has to establish his status. This requires that he get in personal contact with his county medical officer, his county service officer, and through him get in touch with the VA regional representative.

Service papers showing honorable discharge from the Armed Forces of the United States of America have to be produced; some are photostated and an identification card is established.

With thees steps taken in the veteran's home town or nearest VA office, the wheels begin to turn and within a period of 10 days to 2 weeks a notice is sent to the veteran that his papers have been examined and that he is duly registered as qualified for hospital treatment or surgical care.

In the case of surgery the patient is advised to arrange his personal affairs so as to be absent from home for a period of 2 to 3 weeks, according to the nature of the operation.

When the applicant decides upon a time that he can go to the hospital he asks for a definite date of entry. Upon getting a letter from VA notifying him of the date of admission he also is given a memorandum sheet of instruction telling him what to bring with him in the way of personal effects, and listing things that cannot be brought with him, stipulating firearms or drugs.

At the reception desk on the date of arrival the veteran's papers are immediately available. Take the case of No. 48986B—who arrived 10:30 a. m., July 27, 1955. He had made original application in May, on proper forms and following a local medical examination by Dr. J. D. Parker, Stuart, Fla., Martin County medical officer. The papers had been forwarded to VA through Martin County Service Officer H. B. Kraft. The regional contact representative C. T. Sheehan, of Fort Pierce, had examined the applicant and inspected his papers. Because the operation was not critical, but curative, entry had been delayed until there was an available vacancy.

With the VA notice in hand, the veteran, whose service number is C-911609—handed it to the receptionist. It was compared with the papers assembled at the desk and found to be in order.

"We've been looking for you," the attendant said in a friendly voice. It was noted that on May 18, 1955, the applicant had visited VA hospital, Coral Gables, and had received emergency examination by Dr. Maxwell at the ambulance emergency entrance. It was further noted that the case would be accelerated.

"Now you may go to the clothing room at the end of the hall," the attendant directed, "and change your clothes for hospital dress."

At the clothing room civilian clothing is changed and checked for storage so as to be available upon your discharge. With hospital cost, pajamas and bathrobe, the entrant passes on carrying with him the few toilet articles he has brought. Dressed in hospital attire you return to the induction center near the reception room, where a clerk gives you a card for a blood test; a urine test and an X-ray heart test. To go through these processes may take an hour or more, so it may be well along toward noon before you arrive at your ward.

Here a nurse at the ward control station will ask what diet you have been on, and if you say "I've been eating regularly," she will issue you a diet card stamped "Regular," and tell you to go to the mess hall on the main floor for lunch.

Thus begins your introduction to hospital fare. At Coral Gables the food is excellent in quality, is well prepared, and is served attractively cafeteria style. Regular schedules are observed, with orthopedic cases having the first period and with their tables reserved nearest to the entrance and food counters. There is no rush and no evidence that you are being put through the mill. The mess hall at Coral Gables is the former grand diningroom of the fabulous Miami Biltmore.

Upon return to your ward after lunch on your first day, you are visited by the doctor in charge. He is accompanied by the head nurse. An identification tag is tied to the foot of your bed.

You have become one of the patients in the ward, and your welfare and comfort are placed under strict hospital supervision, including that of a dietitian who designates what you are to have at each meal.

Throughout the day and night nurses or attendants stop at your bed to take your temperature and pulse and to ask if you have evacuated. Orderlies bring ice water, towels, washcloths, and changes of clothing. Those

in need of special diet or feeding are cared for with scrupulous attention.

For the first day or so a patient is restless and inquisitive. The time hangs heavy, and he wonders why he is not whisked off to the operating room so that the affair may be over with.

Why these endless visits by groups of doctors who look at some records and pass on?

Things cannot go as fast as you might wish. It is only in an emergency case that action is speeded up. One night in July 1955 an emergency patient entered the ward at 11:30 p. m. and was operated on for acute appendicitis and was back in his bed in less than an hour. The actual operation was performed in 25 minutes.

But for the patient who is being cared for in preparation for surgery that does not call for posthaste, the process is gradual. He is conditioned for the ordeal.

After several days in the ward the patient begins to get the swing of things. He hears that his blood test has been completed; that the cardiograph report from the X-ray room has come through and that it is favorable; that the other tests, taken upon the day of entry, have all been collected and made part of his record; that the facts have been studied and his case properly diagnosed.

The case of No. 48986B is growing into a carefully compiled hospital record. It is getting so elaborate that the doctors can begin to see the true condition of the patient and can act with accuracy.

A nurse, while taking temperature and pulse in the morning routine, will say in a confiding voice, "We will have to stop feeding you through the mouth today. We want to get you ready for the operation."

Then for 24 hours the red tag dangles from your bed. It reads: "No food by mouth."

During the 24 hours of restricted feeding, the patient has been readied for the hour when he will be wheeled on a stretcher to the operating room. For several days he has become accustomed to visits from the chief surgeon and his associates. They have chatted with him and have established a friendly relationship. The physicians are men of fine caliber and are dedicated to their profession. They possess the rare quality of human gentleness that affects their patients with feelings of admiration and confidence.

The individual case of No. 48986B disclosed that the patient was in his 81st year. He was a veteran of the Spanish-American War 1898–1902 and of World War I. Dr. M. H. Todd, senior surgeon, said encouragingly, "Your heart is all right and we can fix you up with a local anesthetic."

Turning to his associate Dr. R. G. Reid, he said, "I'll perform this operation tomorrow."

Next day it was less than an hour when the patient was back in his bed and resting comfortably. The hernia operation has been painless.

It was during the period of convalescense that the amiable atmosphere of the hospital is appreciated. Every week there is general inspection of the hospital, when E. F. Zimmermann, M. D. chief of professional services, accompanied by visiting general officers, makes a tour of the wards and other facilities.

These men find time to stop at a bedside and talk with the patients, not in a perfunctory manner but in a friendly spirit. Their inspection includes a survey of the entertainment features that are staged for the patients, under the direction of chief of special services, Claude Lipscomb. For the convenience of the entire staff and the patients and their visitors, there is a well appointed PX. When the patient can leave his ward there are places to go. The library, the recreation hall, the swimming pool.

For the next several days the period of recuperation was a time of varied activities and pleasant association with the staff and fellow patients. At the same time the faithful stream of callers came each day to offer help in little things; there was the representative of the United Spanish War Veterans, who confided the news that, "Two other comrades are here"; the callers from the Veterans of Foreign Wars stopped to give a cheering word; the Red Cross resident representative and the Women's Auxiliary of the American Legion found something they could do for veterans. Mail and floral remembrances were delivered daily.

Callers each day included the chaplain, relatives and friends during the afternoon 2:30 to 4 p. m. These visitors from the outside were helpful in bringing a human touch to the period of confinement. Floral remembrances brightened the sickrooms and were a constant reminder that people are not forgotten in a time of affliction. Most patients were assigned three to a room. There was no overcrowding.

For recreation those who are at Coral Gables have a wide variety of entertainment. The weekly program includes card games, bingo and concerts. These affairs are sponsored by fraternal organizations and prizes are furnished.

The 10 a. m. Sunday services held in the great hall by Chaplain James A. Boston is an event that is well attended. On every floor and in almost every ward there are TV sets and radio that patients bring with them, and share with roommates, when they are unable to go to the amusement centers.

Of course everyone who goes to a hospital wants to get well and be back home. But that day of departure is not hurried just to meet the desire of the patient. The doctors and nurses have to take care that everything is all right. The diet must be reestablished to normal and a final check made to see that there is no aftermath from the operation.

Then the checkout gets underway. The patient goes through a dental examination; again the blood tests and ultimately the record shows that case No. 48986B can be closed.

Like running a picture in reverse, one goes to all the checking points and finally to the clothing room. The silent efficient system works, for there at the appointed hour, are your clothes. You shift from the hospital pajamas and robe. You return to the reception room in civilian attire and you are free to go home.

The lesson you have learned in 3 weeks is that human kindness is the best medicine in the world; that a hospital can take on personality, and be a place where happiness manifests itself and that service is a matter that springs from the heart. The VA hospital at Coral Gables, Fla., is, indeed, a happy hospital.

FRANCIS A. ADAMS.

STUART, FLA., *September 8, 1955.*

Youthful Federal Attorney

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the folowing editorial which appeared in a recent edition of the Wilkes-Barre Record commenting on the appointment of Attorney Robert J. Hourigan, a member of a prominent Wilkes-Barre family, as senior assistant to the United States attorney for the middle district of Pennsylvania:

FEDERAL ATTORNEY

Appointment of Attorney Robert J. Hourigan of Forty Fort to the post of senior assistant to the United States Attorney for the middle district of Pennsylvania is impressive recognition for one of the younger members of the Luzerne County bar.

Attorney Hourigan, member of a family with many ties in the legal profession and the community, is a man who obviously is going places in a hurry, as he makes up time lost by his service in the Second World War. Admitted to the bar only 7 years ago, he has served as assistant district attorney under two Luzerne County prosecutors and as a special deputy to the attorney general of Pennsylvania, an unusual record of public service. He also has sandwiched private practice between these assignments.

Attorney Hourigan enters upon the duties of his new office with considerable experience beyond his years. United States Attorney J. Julius Levy has acquired the services of a seasoned, capable and conscientious aide who will measure up to the responsibilities he has been called on to assume.

What Do You Know About CD?

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. RODINO. Mr. Speaker, the attached editorial entitled "What Do You Know About CD?" which appeared in the June 7 issue of the Observer, of Kearny, N. J., is a timely one. I wish to commend the editor for calling this subject to the attention of the people in such a forceful and pointed manner. The editorial follows:

WHAT DO YOU KNOW ABOUT CD?

Are you one of the citizens who poke fun at the neighbor who is an ardent volunteer in civil defense?

It is amazing how many people there are in this country who, as taxpayers, think it is perfectly all right to spend $40 billion a year to maintain the Army, Navy, and Air Force, and yet scoff at civil defense. These people seem to forget that our military force is a standby organization, ready to move against an enemy when necessary. But the men of this vast Army and Navy are not producers—they are consumers of food, clothing, transportation, weapons, and a hundred other things.

Who produces all this? You, the citizens, who are not in the military organization. The minute this huge military organization goes into action, civil defense, the fourth branch of the service, is critically necessary. This fourth branch is composed of the citizens who must produce the equipment, food, transportation, etc., that the Army, Navy, and Air Force must have, and these citizens must do one thing more, they must protect the homeland because your military will be busy elsewhere.

This cannot wait until calamity is upon us. Emergencies require a trained force that knows what to do, and you, if you want to be a good citizen, should be part of it. We have heard all the answers. You are too busy or you can't be bothered; you must earn a living, etc. You won't be doing any of these things if international relations get out of hand and an enemy decides to send a bomb or two our way.

There Is No Reason To Be Proud in Announcing Again "I Told You So"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the Washington Post and Times Herald of June 21, 1956, emphasizes an important moral principle. There are some who think it is of no great moment that Egypt violates the Suez Canal Treaty, its own obligations and the United Nations resolutions, when Egypt blockades the Suez Canal against its use by the State of Israel.

It is of great moment, that what Egypt does today against Israel, tomorrow she may do against Britain and the next day against the United States.

When will our Secretary of State wake up to the fact that you cannot violate a principle just a little bit? Violation of a principle is tantamount to its destruction.

The editorial is as follows:

SHEPILOV IN EGYPT

The visit of Dmitri Shepilov, the Soviet Union's new foreign minister, was the high feature of the Egyptian celebration of the end of the British occupation of the Suez Canal zone. It was his first excursion in foreign affairs as the responsible minister—a bold reminder that the "focal point" of Soviet aspirations which Stalin outlined to Hitler 16 years ago is well on the way to achievement. The Soviet Union is in the Middle East to stay.

Egypt is now completely independent, but for how long? Colonel Nasser's jubilant speech had little in it about reconstruction at home and much about freeing Palestine and helping the Arab countries get rid of the westerner. It looks more and more as if the colonel intends "to busy home minds with foreign quarrels." How different from his predecessor, the domestic-minded Colonel Naguib, who wanted the new Egypt to tend its own garden. However, Nasser has little power of his own to do much more than swashbuckle. It is Soviet armed might—given to Egypt under the "commercial transaction" with Soviet Czechoslovakia and prominently on display in the air and on the ground during this week's celebrations—which imparts more than local authority to Colonel Nasser. It did not require Shepilov at his side to demonstrate that the revolutionary junta in Cairo is leaning more and more on what Shepilov called its "reliable friend" in Moscow to achieve its vaunting ambitions.

The spectacle at Cairo should apply a spur to the Western allies to integrate their diplomacy under article 2 of the North Atlantic Alliance. Egypt's control of the Suez Canal confers a world responsibility upon Colonel Nasser and his successors. The responsibility is to world shipping. Noninterference was laid down in the original 1888 convention and revalidated in the Anglo-Egyptian agreement under which the British have quit the area. How has Colonel Nasser interpreted the agreement? By using his new power over the canal to intensify his blockade practices at Israel's expense. In other words, control of the key to this vital world artery is being misused to pursue a national quarrel—altogether contrary to the letter and spirit of the 1888 convention.

All this, moreover, is in flat violation of a U. N. Security Council resolution. A fresh effort should be made by the Western Powers to bring Egypt's violation to Russia's attention with the view of getting Colonel Nasser to lift the blockade. Before Bulganin and Khrushchev went to Lindon, they said they would cooperate in promoting Israel-Arab peace. Here is the place to begin. Perhaps it is useless to expect any such cooperation. Shepilov at Cairo was not belligerent, but he stressed once again the oneness of the Soviet Union with the Soviet world. In any event the Western allies must work together or face the prospect of complete extrusion not only from the Middle East but also from the eastern Mediterranean.

Civil Rights—Cleveland, Ohio, Style

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. DAVIS of Georgia. Mr. Speaker, a few days ago the press of the Nation reported a most remarkable and almost unbelievable incident which occurred in Cleveland, Ohio, a place which is noted as the seat of some of the most ardent agitation for so-called civil rights. According to these reports, a judge of one of the Cleveland courts issued an exile order, under which one of his court employees was required to place a Negro woman and her minor children on a train or a bus and send them back from Ohio to Alabama.

Section 2 of article IV of the United States Constitution reads:

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

It is an unquestioned constitutional right of every citizen to live anywhere in the United States where he or she may desire to live.

According to the newspaper stories, this Negro woman protested tearfully that she and her children desired to live in Ohio and did not want to live in Alabama. Over this tearful protest and in violation of a clear constitutional right, they were not only ordered back to Alabama; they were sent back to Alabama.

Undoubtedly this is a violation of civil rights, but I have not heard of the Federal Bureau of Investigation being placed on the case.

Undoubtedly this is a violation of civil rights, but I have not heard of any protest from Ohio or elsewhere on the part of those who work themselves into a frenzy of protest whenever any violation of so-called civil rights is reported south of the Mason-Dixon line.

Is there a double standard of conduct on the question of civil rights? Does the fact that the act is committed in Cleveland, Ohio, convert into a laudable and praiseworthy act something which would be denounced and excoriated if committed in the South?

It may well be that this Cleveland judge feels that he has as much right to ignore the Constitution of the United States as the Supreme Court has, and that he is following established precedent in doing so.

Although this order of banishment has not created any furor, or even a ripple of protest, in the North and East, it has attracted some notice in the South. The Metropolitan Herald, of Atlanta, Ga., carried an editorial in its June 13 issue calling attention to this unconstitutional deportation order. I insert the editorial from the Metropolitan Herald herewith as a part of my remarks:

CIVIL RIGHTS—CLEVELAND, OHIO, STYLE

In America a man can choose to live where ever he pleases. There are no passports required for crossing State lines as is true in Europe where many small countries, each with their borders guarded, prevent free travel.

The right to live and work where one pleases is as much a part of civil rights as is the right to mix and mingle, regardless of race, color, or creed, as is being advocated on a Nationwide basis today.

These being facts of life, it is rather incongruous to read where a jobless Negress was, under a court order, placed on a bus with her eight minor children and told to leave Cleveland and go back to her native Livingston, Ala.

We can understand why this woman could be denied public relief from the State of Ohio because she had not been a legal resident for a year, but we can't help but chuckle when a judge in a State which would force integration on the South under a civil rights belief, deports a resident of another State and orders her to catch the bus and get going. She had broken no law apparently, although the article telling of her plight did have some funny angles. It seems her children ranged in age from an 11-day-old infant to a 17-year-old girl. However the dispatch said, "Mrs. Winston and her husband separated 5 years ago. She came to Cleveland 4 years ago because she could not earn a living in Alabama."

A later dispatch said, "A Negro woman and her eight dependent children who were forced to leave Cleveland, Ohio, because they were not eligible for State relief there, returned home today. The husband met his family when they arrived by train from Cleveland."

Maybe the civil rights belief in the North is like the gooney bird, which can't see where it is going and don't give a hoot.

The Freedom Crusade

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. KEATING. Mr. Speaker, under terms of the Geneva talks the Communist Government of China agreed to release all American prisoners. The action of the Reds in keeping in captivity 13 Americans after having made this promise is a matter which rankles us all.

We have been fortunate that one of those imprisoned has subsequently gained his freedom and has returned to this country to tell of the horrors of captivity. He has made vigorous efforts since his return to arouse Americans to the plight of those who remained behind.

This man, Father Harold Rigney, S. V. D., in conjuction with the Back Yards

Council of Chicago, is spearheading the freedom crusade in an endeavor to free those innocent American citizens who are still held in prison. The crusade is a national letter-writting campaign aimed at convincing publicity-conscious Mao Tse-tung of the advisability of releasing our countrymen.

Mr. Speaker, I urge all Members and all other citizens of our Nation to join in this great movement. I have a special interest in the freedom crusade because one of my constituents, Rev. Joseph Patrick McCormack, of Palmyra, N. Y., is among those being held, but I feel the seriousness of the situation should impel all Americans to take pen in hand to aid this program.

Gen. Horacio Aguirre Muñoz, Outstanding Nicaraguan, Is Dead

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 3, 1956

Mr. SIKES. Mr. Speaker, under leave to extend my own remarks and to include other material, I submit for insertion in the CONGRESSIONAL RECORD an editorial from the Americas Daily on the death of Gen. Horacio Aguirre Muñoz. This outstanding citizen of Nicaragua is survived by his widow and by two distinguished sons, Dr. Frencisco Aguirre and Dr. Horacio Aguirre. I am sure my colleagues join me in extending sympathy to the bereaved.

GENERAL HORACIO AGUIRRE MUÑOZ, OUTSTANDING NICARAGUAN, IS DEAD

Gen. Horacio Aguirre Muñoz, outstanding personality in the political and social circles of his country, Nicaragua, as well as the other Central American Republics, died at 12:35 a. m., Monday, after 4 days of being gravely ill.

For the Americas Daily the death of Gen. Aguirre Muñoz is, besides a news item of interest for the Latin American circles, a reason for deep mourning, since he was the father of our publisher and editor, Drs. Francisco and Horacia Aguirre, respectively, and because he gave us his experience as veteran newspaperman at the service of the noble ideals, inspiring always he Panamericanist work of this newspaper, edited in Miami to promote a better understanding among the peoples of the Americas.

General Aguirre was attended by the distinguished physicians, Dr. Manuel Lores, as family doctor, and Dr. John Broward. Rev. Father Antonio Navarrete, distinguished member of the Catholic clergy of Miami, administered the last religious services.

The funeral services for Gen. Aguirre Muñoz will take place tomorrow, Wednesday, at 4 p. m. The funeral cortege will leave from Philbrick Funeral Home, located across the street from the main entrance of Barry College. His remains will rest at Woodlawn Cemetery.

It was only 2 years ago, in June 1954, that General Aguirre Muñoz came to live in Miami together with his distinguished wife, Mrs. Pilar Baca de Aguirre Muñoz. They established their home here in order to be near their sons, and to lend orientation, with his spirit and intelligence, to the Panamericanist work of the Americas Daily. When the paper was inaugurated he was here contributing to the laying of the foundations of this enterprise to which he was connected by spiritual and ideological bonds.

Here in Miami, where he lived with his son, Horacio, as well as in Washington, residence of his son, Francisco, General Aguirre Muñoz made numerous friends—social, diplomatic, and political, conquering the good will and respect of all those who knew him well.

Gen. Aguirre Muñoz was born in León, Nicaragua, on May 22, 1873, the son of Gen. Horacio Aguirre and Mrs. Mercedes Muñoz de Aguirre, who was a daughter of the illustrious Central American hero, José Trinidad Muñoz, who was the first one to face, in the middle of last century, the foreign invasion of Central America.

On several occasions, not only during administrations directed by the Liberal Party to which he belonged and gave prestige, Gen. Aguirre Muñoz was a genuine representative to the Congress of the Republic. Among other important positions he held, in difficult Central-American eras, delicate diplomatic functions, as Nicaragua's Plenipotentiary, and it was his lot also to be outstanding figure at the First International Conference of the Central American Republics, held at the beginning of this century. Also, during 3½ years he was Secretary of the General Command of the Nicaraguan Republic (1933–36). Years after he was Comptroller General of Exchange Operations and later director of the National Bank of Nicaragua.

In Honduras, where Aguirre Muñoz was Envoy Extraordinary and Minister Plenipotentiary of Nicaragua, in another occasion he discharged the duties of private secretary to the President of the Honduran Republic, General Rafael López Gutiérrez. In El Salvador and Guatemala, Gen. Aguirre Muñoz in the first steps of his life, had military duties which he discharged, as when he was in the same service in his own country, with a high sense of honor, manifested in absolute loyalty and always proven valor.

In the course of his long and honest public life, Gen. Aguirre Muñoz took part in the struggles of journalism, dignifying with his opinions and his decorous and elegant writing ability, the high function of the journalist.

In the city of León, Nicaragua, on March 14, 1919, he was married to his now widow Doña Pilar Baca de Aguirre Muñoz, dignified lady, and together founded a home of exemplary virtues, inspired on the most healthy principles of Christian morality and Catholic religion. Descendants of said marriage are his sons Francisco and Horacio and his daughter Merceditas, who died at an early age in Tegucigalpa.

The Americas Daily, when informing on this irreparable loss, sends its expressions of deep condolence to the inconsolable widow of the illustrious deceased, Doña Pilar Baca de Aguirre Muñoz, to his sons, Francisco Aguirre and Mrs. Gladys de Aguirre and Horacio Aguirre and Mrs. Helen de Aguirre, and likewise to his brother, Don Ignacio Aguirre Muñoz, and sisters, Miss Concepción Aguirre Muñoz and Mrs. Mercedes Aguirre de Argüello, the last two residing at León, Nicaragua.

Fiftieth Anniversary of the Ordination of Father Jurica, of Pittston, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader Evening News on Saturday, June 16, 1956, which calls attention to the 50th anniversary of the ordination of Rev. Father Andrew J. Jurica, of St. John the Baptist Church, Pittston, Pa., which was celebrated on Sunday, June 17, 1956:

FATHER JURICA'S JUBILEE

The Reverend Andrew J. Jurica, who will observe the 50th anniversary of his ordination tomorrow with a solemn high mass of thanksgiving in St. John the Baptist Church, Pittston, has had a most unusual career.

When his health failed as he was approaching his prime, he resigned his pastorate and, for the greater part of the past 3 decades, he has assisted at St. John's and other parishes where his services were needed. Between assignments, he has been making his home at Harveys Lake.

Thus, Father Jurica is known not just to his home parish, but to a score of others where he has celebrated mass, conducted special devotions, and filled in at other times.

Father Jurica's life has been one of continuous prayer, service, and sacrifice. He is known far and wide for his piety. In addition to the regular retreats for the clergy of the diocese, he makes private retreats as frequently as opportunities present themselves.

That he has been spared all these years and continues to discharge his priestly duties will be a source of great joy and comfort to countless admirers on the occasion of his golden jubilee.

Foreign Aid and Our Friends Abroad—Address by Hon. Clement J. Zablocki, of Wisconsin

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 19, 1956

Mr. REUSS. Mr. Speaker, it was my great privilege last week to be present at the State convention of the Democratic Party of Wisconsin when my distinguished colleague, the Honorable CLEMENT J. ZABLOCKI, presented a memorable address on United States foreign policy. An audience of some 2,000 gave it undivided attention to a brilliant examination of the strength and weaknesses of our present foreign policy, particularly with reference to our foreign aid programs. This statement by a Member of Congress, whose devotion and diligence has won the deep respect of his fellow members of the Foreign Affairs Committee and of this House generally, deserves an even wider audience. For this reason, I am glad to be able to insert the complete text below:

ADDRESS OF HON. CLEMENT J. ZABLOCKI, OF WISCONSIN, AT THE WISCONSIN STATE DEMOCRATIC CONVENTION, SUPERIOR, WIS., JUNE 16, 1956

I am pleased to have this opportunity of reporting to you on the subject of our foreign policy.

Specifically, I want to address myself to that rather unpopular topic known as foreign aid. Our foreign-assistance programs have been under a particularly serious attack

for a number of months, and they will be a campaign issue. It is incumbent upon us, therefore, to acquaint ourselves thoroughly with this subject.

It is a matter of record that never in the history of mankind did any single nation extend as much aid and assistance to others as did the United States during the past decade. The generosity and the far-sightedness of our people find no parallel in history. We have spent billions of dollars to help our friends abroad, even though we had to shoulder the burden of tremendously high taxes to do it.

As of the first of this year, we have spent a total of $53 billion on foreign grants and credits: $26 billion between the end of World War II and the outbreak of the Korean conflict, and $27 billion since the beginning of the Korean war. Of this amount, $42 billion consisted of outright grants, and $11 billion of loans. As you know, Western Europe was the primary beneficiary of our assistance, receiving about $34 billion in grants and credits. The remaining $19 billion were distributed all over the world.

The figures which I have just mentioned are staggering. It is no wonder, then, that many of our people are questioning the need for any further sacrifice on our part, and calling for an end to all forms of foreign aid. They do this in the belief that we can cut off our assistance to our friends abroad without any adverse effect on our own Nation—and in the hope that the termination of foreign aid will enable us to reduce our tax burden at home.

I personally believe that neither of the two expectations can be fulfilled, and I shall briefly outline the reasons for my convictions.

In the first place, let me say that I shall not attempt to justify our past foreign-aid programs. They are already a matter of history. Their value has been well established. We have spent the $53 billion on projects considered necessary for the reconstruction of the economies of our allies, for the creation of a collective defense against communism, and for the establishment of a sound basis for lasting world peace.

These were not only noble—but at the same time very practical goals. I am certain that if we had not pursued our past policies, many of the free nations would have been unable to withstand Communist advances. Without our aid, the borders of the Communist-dominated territories would not be in Eastern Europe, but would probably reach today to the very shores of the Atlantic Ocean.

What concerns us today, however, is how shall we conduct ourselves with respect to our friends abroad in the years to come. Shall we continue our foreign-aid programs? If so, which programs would be best suited to further our own national interest, and at the same time meet with the wholehearted support of our people?

Let me digress here for a moment to stress the importance of a public acceptance and support of our foreign programs and policies. If we are divided on this subject at home, our action in the international field loses much of its effectiveness. Our assistance becomes as bitter as gall to its recipients when they read that some Americans refer to their countries as "ratholes," to their people as "worthless, backward savages," and to the aid itself as charity extended against the donors' will. I am certain that we would feel the same way if we were in their position.

We can be proud indeed that the American people on the whole have actively supported our foreign-aid programs in the past. The Democrats have established an enviable record for themselves in this regard. As you well know, we have supported the United States foreign policy without indulging in partisan considerations—even though during the last 4 years all-out support became quite a chore.

Just this week, all three of the Democratic Congressmen from Wisconsin again voted in favor of the President's request for an extension of the mutual-security program—while only 1 of the 7 Republican Representatives from our State stood up and backed his President.

The Democrats in Congress have consistently given President Eisenhower more support on issues vital to the welfare of our country, than did the members of his own party. On the Mutual Security Act of 1956, 163—or 76 percent of the Democrats—supported the foreign policy of the United States, while only 112—or 62 percent of the Republicans—backed the bill. Even among the Republicans who voted for the bill, many did so only because they wanted to get through the forthcoming election on President Eisenhower's coattails—but they will be among the first to leave him as soon as the election is over.

For this reason, I do not see much sense in a man running for the President of the United States when he cannot even command the loyalty of his own party members when the chips are down. I think that it would be much healthier if the Republicans were honest with the people, and picked for their candidate a man who professes their own ideals. In that way, the people would know the programs and policies they are voting for, and there would be no need for the Democrats to bail the administration out whenever it gets into trouble. I believe that the legislative record of the 84th Congress would have been a sorry sight indeed if the American people had given the President a Republican Congress that he campaigned for in 1954.

Regardless of whom the Republicans pick for their candidate, however, I am confident that we shall not face this situation in the years to come because the American people, come November, will elect a Democratic president and Democratic majorities in both Houses of Congress.

The first point we ought to bear in mind as we look to the future is that extensive foreign aid, of the kind which we granted in the last decade, is a thing of the past. The staggering job of post-war reconstruction is virtually completed. Foreign aid today has come to represent only a small fraction of our Federal budget—and two-thirds of it is military in nature.

During the last couple of years, we have spent about $4 billion annually on foreign assistance. If we subtract the portion which went to military preparedness, and for defense support, we find that nonmilitary aid to our allies has been running at the rate of about one-fourth billion dollars to one-half billion dollars a year. This is the figure we should bear in mind when we speak of foreign aid today.

Personally, I believe that we ought to classify foreign military assistance together with our own defense expenditures. There are ample reasons for this. Everybody knows very well that today no single nation can stand alone very long, and try to match the Communist military might bolstered by forced conscription and requisitioned resources from the captive nations. Such a course would prove economically unfeasible in the long run.

Our strength against the Communists rests today on the foundations of the collective security arrangements which have been established together with other independent, self-governing nations. A wing of jet bombers stationed in England, in France, in Turkey or in Greece, means as much to our own security against a common menace as if it were based in Wisconsin. Consequently, the $36 billion which we have put aside this year for our own Defense Establishment, and the $2 or $3 billion that Congress may appropriate for the mutual security program, are actually being devoted to the same purpose: the security of the United States and—in a larger sense—of the entire free world.

There is, however, one difference; each dollar that is spent through the mutual security program produces 4 to 10 times as much defense as a dollar actually expended for a like purpose in the United States. In other words, our country would have to spend an additional $12 or more billions a year at home in order to obtain as much security as we are getting for $2 or $3 billion through the mutual security program.

You can see, therefore, that if we discontinue our military cooperation and assistance to our allies, we will have to spend proportionately much more for our own defense budget—and we will either have to increase our taxes to do it, or cut corners on such vital domestic programs as highway construction, hospital building, veterans benefits, social security increases and the like.

Furthermore, by departing from the framework of the collective security arrangements which we have constructed with such great effort, we would have to increase our own Armed Forces and be prepared to send more of our boys overseas when necessary—an eventuality which, I am certain, does not appeal to anyone of us.

In the long run we cannot hope to save by eliminating the mutual security program. On the contrary, such action can prove uneconomical and expensive both in terms of dollars and in terms of national security.

We come, then, to the second portion of our foreign-aid program: the $1¼ to $1½ billion spent annually for technical and economic assistance to the other free nations. This assistance consists of outright grants, of loans, of gifts (or sales below world prices) of our surpluses, and of the expense of sending American technicians and specialists to foreign countries for the purpose of aiding them in raising their standard of living.

The question before us is: Can we eliminate this annual expenditure without any bad effects on our national economy and well-being?

The answer to this question is almost as clear as the answer to the issue of foreign military assistance. Before we come to it, however, let us look at a few facts.

Very few people seem to realize to what extent our American security, prosperity, employment, and standard of living depend on our friendly relations with the rest of the world. Last year, the United States exported almost $20 billion worth of goods and services, exclusive of military aid. This tremendous export trade means jobs for our workers, and profits for our industries.

Can this trade continue unless we remain on good terms with the rest of the free nations and unless they have the income with which to buy our goods? The answer should be self-evident. And we should also remember that increased purchasing power abroad can only come through an increase in the standard of living of those peoples. As a result, whatever we do to aid our friends in their own efforts to improve their standard of living will ultimately increase their ability and willingness to trade with us.

Let us look next at the other side of our foreign trade—our imports. Did you know, for instance, that of the 184 materials needed for the production of automobiles and other motor vehicles, some 50 items are being imported from abroad? Did you know that the production of a simple telephone requires 48 imports? Or that we must have imported metals to produce light bulbs, television and radio tubes?

And you, ladies, did you know that the essential ingredients of various beauty creams and lipsticks must be imported from abroad?

We depend on foreign sources for a great portion of our copper, zinc, lead, tungsten, and other needs. In addition, over 90 per-

cent of our domestic consumption of manganese ore, long-fiber asbestos, nickel, strategic mica, chromite, tin, tantalum, and industrial diamonds comes from abroad.

The list of items which are vital to our high standard of living—and whose production depends on imports from foreign lands—is extremely long. What is perhaps more important is the fact that, with a growing population and with an ever-increasing standard of living, we are going to become even more dependent on foreign sources for strategic materials and other commodities than we are today.

Now it is only commonsense to stay on good terms with the people on whom you depend for something—and that you help them when they require your assistance to produce the goods which you need. These commonsense principles are observed by every businessman in our country. They apply with even greater force in the realm of our foreign affairs. This fact ought to be clearly understood by every one of us—but unfortunately it is not. It is our job, therefore, to go out and talk sense to the people, to show them in concrete terms how much our foreign programs mean to our own welfare and security—and that, by cutting them off, we will be—so to speak—cutting off our nose to spite our face.

I am afraid that I have taken a little more time than I intended to on this subject. However, the pressures against all forms of international cooperation and assistance have been growing each day. This came about, I believe, in the first place, as a result of the misinformation spread around by some of our public officials and certain newspapers, and, secondly, because too little has been done to stimulate and promote public understanding of these issues.

I am confident that if we bring the facts to the people—and show them what is at stake—the reaction will be entirely different. We Americans are known world over as practical, sensible people. Our countrymen will act without hesitation in our own best interest—but it is our job to help push aside the cobwebs of misunderstanding, of prejudice, of emotionalism, and of partisanship, which at times obscure the exact nature and location of our national self-interest.

Before concluding, I want to say a few words about the foreign policy of the present administration.

In general, the Eisenhower administration has tried to follow the policies and programs initiated under the previous Democratic administrations—but its efforts have been feeble and often confused. The only truly new proposal that the present administration can claim is the "open sky" plan of disarmament inspection—which, by the way, was reportedly introduced against the advice of some of the President's counselors, and even today does not have the wholehearted support of some people in the Pentagon.

Even though President Eisenhower has tried to follow the collective security and economic aid programs established before he took office, the foreign policy of the United States has suffered tremendously under his leadership. This happened because the present administration has failed to follow a consistent, straightforward course in world affairs. There have been so many contradictory, confusing, and completely unintelligible statements made on this subject by the President and his assistant, that today nobody seems to know where we stand, and where we are going.

Let me illustrate this inconsistency and bungling of the administration for you with a few examples:

In 1952, the Republicans condemned President Truman's action in assigning the 7th Fleet to guard Formosa, by claiming that the former administration was holding Chiang Kai-shek back from invading and recapturing the China mainland. In following up on these statements, the President, in his first state of the Union message, made a great ado about "unleashing" Chiang Kai-shek and his army of the Chinese Nationalists. I would venture to say that, following that announcement, the whole world—and particularly Generalissimo Chiang Kai-shek—expected to see the Nationalists, with our help, driving the Communists from the China mainland.

But what really happened? After this initial grand gesture, the President not only told Chiang Kai-shek to sit tight on Formosa, but even went a step further and insisted on the turning over to the Communists of some of the off-shore islands. This completely confused everyone concerned. The people, particularly in Southeast Asia and the Far East, no longer knew where we stood, or what the United States would do next.

There are many similar examples. The Democrats were criticized, for instance, for the containment policy which was intended to stop any further Communist expansion. This was not good enough for the Republicans. The Communists had to be driven back, and the captive countries liberated. Many persons took the Republican spokesmen at their word.

But the grand pledges, as it turned out, were directed only with an eye on the political ballot box at home—not at the realities of the world situation. No sooner did the administration take office, than the hedges and contradictions began. Instead of containment, we saw retreat and compromise in Korea, and in the China Sea, and in Indochina. Communist domination and influence began to spread. And thousands of refugees and escapees who crossed the Iron Curtain at the risk of their very lives—believing that the United States and the free world were waiting for them with open arms—soon discovered to their great disillusionment that prolonged, aimless existence in a displaced persons' camp was not too much better than the suffering to which they were accustomed under Communist rule.

These things are a matter of record. And so are the confused efforts of the present administration, on the one hand to arm the free world against the Communist threat, and, on the other hand, to enter into the "friendly spirit of coexistence," engendered at the Geneva conference.

To mention another contradiction—just last week the President, in his press conference, took time out to tell the American people that neutrality is a sound position for the nations—particularly in the Middle East and Asia—which have but recently won their independence. The President argued on behalf of neutrality for those countries, pointing out that the United States followed a neutral path during the first 100 years of our national existence. He added that the Secretary of State, Mr. Dulles, would have something more to say on this subject.

Mr. Dulles did have something to say—but what he said contradicted the position taken by his Commander in Chief. Speaking at Ames, Iowa, only 3 days after the President's press conference, the Secretary of State insisted that, and I quote him, "except under very exceptional circumstances," neutrality is "an immoral and shortsighted conception."

How could any two statements be more contradictory? How can the American people know what the administration's policies are when our President says one thing, and the members of his Cabinet something entirely different? How can the free peoples of the world—whose friendship and cooperation are important to us—know where we stand, and what the United States is going to do, when our foreign policy is as full of contradictions and uncertainties as it has been during the last 4 years? How can we attempt to lead them when, from all appearances, our own Government does not know where it is going?

These considerations are not trivial, because they cut to the very core of our security, and of our future. Is it any wonder that the NATO military structure is crumbling, and that the SEATO alliance is dragging its feet? If the spirit of Geneva—that precocious offspring of the Eisenhower foreign policy—has really opened a new era in East-West relations, why should the nations of the free world devote their meager resources to expensive armaments, when they can use that wealth to improve the standard of living of their peoples? If the United States is content to trade with the Communists, and if the world outlook is really as rosy as our administration would have us believe that it is, then why is Mr. Dulles asking our friends abroad to sacrifice and to build stronger defense? And why, in view of these things, should they listen to him?

I fully realize the dangers inherent in any attempt to make specific recommendations on the subject of our foreign policy because, even as members of the Foreign Affairs Committee, my colleagues and I receive very little information about the true state of world affairs from the White House. The recommendations which I venture to make are based on my personal observations during several study missions, and on the information gleaned during my 8 years of service with the Foreign Affairs Committee. I hope that they may merit your consideration.

In the first place, I would suggest that we face facts squarely and put the cost of our collective security where it belongs, together with our overall defense and preparedness expenditures. As long as our long-range security planning relies to a large extent on the combined resources of our allies, we ought to stop deceiving ourselves by passing off the cost of military international cooperation as a charitable donation for the benefit of some foreign country.

Secondly, I would suggest that, as far as nonmilitary assistance is concerned, we make it perfectly clear that we shall cooperate with the free nations as a matter of policy—rather than on emergency basis—to an extent consistent with our capabilities and our national interest. The Foreign Affairs Committee included a declaration to this effect in the 1956 mutual security bill, and the House approved it. I believe that it should become the cornerstone of our foreign policy, consistent with our present role in world affairs.

Thirdly, in extending nonmilitary assistance, we should return to the spirit of the original point 4 program, outlined under the Truman administration. In this respect, we ought to aid the underdeveloped nations—within the limits of our capabilities—in their own plans and efforts to develop their resources in a manner consistent with their own cultural and economic frameworks. We should stop trying to rebuild the world in our image, which tendency has become all too apparent in the last few years under the impact of the grand visions of some of our overzealous planners.

Fourthly, we must not condition our cooperation with other countries on their un-

qualified acceptance of permanent dependence on the United States—both in terms of military and of economic ties. We should not try to make independent countries into satellites of the United States. They will grow much faster, and will become truer friends, if we help them to achieve real independence—rather than if we try to buy them thereby turning them into our mercenaries.

Finally, elaborating on the above point, I would suggest that we face the facts of life in the relationships which must exist between truly independent nations: that we do not become outraged whenever anyone dares to criticize us, or threaten to sever our ties with any nation which chooses to make an independent decision without receiving prior approval from Washington. As any parent knows, family ties become much stronger, and much more meaningful, when proper respect is shown for any grownup member's right to his or her own opinion. We should adopt more of this kind of thinking in the area of our foreign relations. We should deal with our sister nations—whether they be small or large—on an adult basis. We must recognize their equality and their right to their own opinion.

We are a Nation of free men and women, and we prize our liberty and our independence. Let us allow others to enjoy their blessings, without begrudging them the exercise of their sovereignty. It is only in this manner, if we follow the advice of the founding fathers of our own country, that we hope to remain friends with the free peoples of the world and work together for lasting and just peace in the world.

More Evidence of Our Lack of Foreign Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. MULTER. Mr. Speaker, I direct our colleagues' attention to the following article by George Sokolsky, which appeared in the Washington Post and Times Herald of June 21, 1956:

THESE DAYS
(By George Sokolsky)
NASSER'S VICTORY

The celebration in Egypt over driving the British out of the management of the Suez Canal means more than taking over the ditch that played such a role in the Victorian British Empire. Realistically, it means that Soviet Russia, Nasser's ally and underwriter, has developed a big role in the Middle East and that the system of air bases which the United States has erected in North Africa may well be liquidated by political action.

The key American base, the Wheelus Air Base, is in Libya, which has been receiving a subsidy of approximately $17 million a year from the United States and Great Britain.

Egypt and Saudi Arabia are offering Libya the same amount of money if Libya will join them and drop the United States and Great Britain. Saudi Arabia gets its funds from American oil companies which have developed the natural resources of that otherwise barren land. It would not at all be surprising if some day Saudi Arabia drives out the American oil companies and sells the product to Soviet Russia. It might prove to be a profitable deal to Saudi Arabia for a while.

Will we protect American property and national interests by armed force? Probably not, under the theory that if a nation wants to be neutral, it ought to be permitted to be neutral because the United States was neutral in the early years of its history. This will go down in American history as the Eisenhower doctrine alongside the Monroe Doctrine and the John Hay doctrine of the open door.

The inadequacy of the Eisenhower doctrine on neutrality is that it does not explain to any country, for instance to Libya or to France or Italy, why all nations should not be neutral, bargaining as they can with anyone that will bargain with them.

Or better still, why should not Libya take its $17 million from the United States, take whatever it can from Egypt and Saudi Arabia and from anyone else that is handing out money as foreign aid while their own people suffer privations? Why not grab whatever is lying around while the grabbing is possible? Maybe before long some country will get wise to the futility of handing out money with no strings attached.

It would be interesting to read a verifiable account of what Ibn Saud has done with the hundreds of millions which have come to him, apart from proliferating harems. How much of this great wealth has worked its way to the Arab peoples?

The real measure of the value of foreign aid, certainly from this country, is not what goes to governments but what goes to the people in the form of higher standards of living, more education, better facilities for improving health, etc. How much of the money that the United States has paid out to any nation is used in this manner and how much goes to the coffers of the ruling families?

This has been an important problem since the days of UNRRA when we discarded the World War I and post-World War I relief experience and adopted a pattern which benefited governments. The discarding of all prior experience was characteristic of the 1940's, which suffered from what might be called a Marco Polo complex; that is, each man became an original discoverer of what had already been discovered and fully explored.

But we are now in 1956 and it would seem that we should have learned something by experience and one thing we might have learned is that there is no value in giving our wealth away except on the basis of doing something to help the people of a country raise their standard of life and doing it with an American label.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 14, 1956

Mr. BOW. Mr. Speaker, an examination of the reciprocal features of the NATO Status of Forces Agreement as they have worked out in 3 years of practice discloses that reciprocity exists only on paper. The numerical results, from any approach, fail to sustain the claim.

We have a million of our men serving abroad. There are only a few thousand foreign servicemen in our country at any one time, the total who may come and go during the year being about 12,000.

As of November 30, 1955, a total of 10,249 of our personnel had been accused of offenses subject to the primary jurisdiction of foreign courts throughout the world. In the same period only 3 foreign servicemen had been charged with any offenses in our courts.

Invariably proponents of the status agreements will say that we would not want to give up the right to try foreign servicemen in our courts, usually offering some unjustified hypothetical case of murder or rape. Again, this thought is not supported by the fact. In 1944 we adopted an act to implement the jurisdiction of service courts of friendly foreign sovereigns within the United States. The American Legion has favored granting the right of trial to foreign troops if the United States is given the right to exercise complete jurisdiction over its servicemen.

We should recall that our troops are serving abroad in complete organizations and prepared to try their own men. In many cases the foreign servicemen are in such small numbers that it would not be possible for them to hold a trial by their own nationals. We also have the Uniform Code of Military Justice which was provided by Congress in carrying out its constitutional right and duty to make rules for the Government and regulation of the land and naval forces.

The code contains all the safeguards provided for an accused under our Constitution and more safeguards than afforded by any foreign court under any system of jurisprudence or by treaty. It was adopted so that all serving in our Armed Forces would be treated alike.

The Status of Forces Agreement, and similar agreements with countries outside NATO, have thwarted the will of Congress. Our servicemen in this country enjoy a favored position, while our servicemen stationed abroad are exposed to almost as many systems of justice and degrees of punishment as there are agreements.

Radio-TV Commercials

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. HOSMER. Mr. Speaker, yesterday I promised a second interim report on my campaign against loud, noisy, and obnoxious radio-TV commercials. This is not it, but a special report on certain types of commercials originated mostly by local stations, not excluding those in the Washington area or in any congressional district except my own, of course.

Thanks to one of Jim Derby's old columns in the Chicago Tribune, I can offer the following updated, but still hypothetical, letter to an airways advertiser:

DEAR SIR: I have just heard about the horrible tragedy that has befallen you and I wish to offer you my deepest sympathy. It seems to me that you should appeal to the Federal Emergency Disaster Commission or

to the International Red Cross. Maybe even to the President himself.

Surely in this humanitarian age there is some agency that looks out for such things. Because of storms, snow, rain, other upleasant elements of the season, cursedness of your competitors and landlord and a once in a lifetime combination of other dire circumstances, every single item of your merchandise will be ruined if your big sale fails to go over and you're forced to dump 98 carloads of furniture into the streets.

I heard about all this just last night when I failed to go to the kitchen for a sandwich and listened to the commercial instead.

I know that these must be anguishing hours for you and I hesitate to write you a long letter. However, I know of your great philanthropies and the announcer told us about how your pluck and sagacity makes it possible for us to buy from you much cheaper than from anybody else, with such E–Z credit, too.

So I don't want to see you lose your wealth, and I wonder if it has ever occurred to you that you might be surrounded by incompetent men.

Your announcer mentioned your loss of 10 warehouse leases within the last year. Despite that, one of your trusted employees seems to be wandering around the country ordering trainload after trainload of furniture when you don't have an inch of space to store it in.

The upshot is that you virtually have to give away everything you have on hand. Macy's and Gimbel's don't make such bobbles. Why do you let your underlings make you look like a chump?

But you can take heart in the fact that you are not the only one in such a fix. This morning alone other advertisers on the station confessed they were stuck with the following mountains of merchandise: 10,000 golf clubs, 8,000 shotguns, 131 carloads of automobiles, a gigantic floor full of dresses, 5,000 fur coats, and an entire square block of TV sets.

Almost every businessman in town seems to be on the brink of ruin because of overordering. If what the announcer says about you and all those other sellers is true, it is obvious that the economy is on its last legs; it simply can't totter along much longer if everything is being sold at a loss.

Remembering how Henry A. Wallace approached the farm problem so sanely back in the thirties, paying a bounty for the ears of every slaughtered pig, and how this program put an end to surpluses and wiped out hunger throughout the world, I'm writing my Congressman today. I'm sure if the Government would just begin paying handsome sums to you and these other merchants for burning every stick of surplus furniture, destroying every auto, every shotgun, every TV set, every brandnew item they can't get into their overcrowded warehouses, the terrible situation will be cleaned up.

Yours sympathetically,

A. LISTENER.

P. S.—If you are not really in distress, please let me know right away and I'll send the following letter to your announcer:

"DEAR MR. ANNOUNCER: Are you tired of screaming hysterically about the stupidity of your advertiser who is always goofing things up by ordering too much and is forever forced to sell at a loss?

"Would you like to have a calm, dispassionate script to read in which you could explain that your advertiser is a sane and solid American, thoroughly honest, of the finest integrity, but out to make a buck?

"I'll help you out by boycotting any product you're forced to shout about.

"A. L."

Israel's Meaning

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article written by Joseph Alsop from Jerusalem, which appeared in the Washington Post and Times Herald of June 20, 1956, as well as in other newspapers:

MATTER OF FACT

(By Joseph Alsop)

ISRAEL'S MEANING

JERUSALEM.—In a whole series of different ways, it is an eye-opening experience to visit Israel. After a long struggle with redtape, you pass through the Mandelbaum gate from Arab Jerusalem to Israeli Jerusalem. Instantly you are breathing a new air, observing a new landscape, and seeing the future in a new perspective.

Essentially, Israel is so different from the surrounding Arab lands, and, indeed, from the countries of the West, too, because this is a place where they believe in miracles. They believe in miracles, in turn, because they have accomplished miracles.

When you consider the massive counterforces that were overcome, the creation of the State of Israel was in itself a miracle. So was the transformation of this once barren and unfruitful land into a rich and smiling landscape of vineyards and orchards, fertile fields and grassy meadows, populous busy towns and productive industries.

Again, the transformation of the people themselves is also touched with the miraculous. For here the Jews of the Diaspora have been gathered, from both sides of the Iron Curtain, from Africa and from Asia. Peddlers from the Casablanca Casbah have been made into sturdy farmers, as I saw at a new cooperative farm. Long-locked Jews from the premedieval ghettoes of the Yemen have become steelworkers of a high technical category, as I was shown in a new pipe extrusion plant. And these and all the others in this enormous gathering in of the tribes are being rapidly merged into the national whole, and turned into Israelis in the full sense of the word.

The state, the land, the people, in short, all in different ways represent achievements which any rational, practical forecaster would have held to be utterly impossible only 10 or 20 years ago. Therefore, there is a mood here going far beyond the mood of the old Scotch song—"What other men dare, we can do." Here the mood is, "We can dare and do far beyond other men."

The prevalence of that mood makes the very air of Israel quite remarkably exhilarating to anyone accustomed to the moods of other lands, where defeatism and materialism, self-indulgence and despair, suspicion and self-seeking so often seem to compete for dominance. But while this Israeli mood is so exhilarating in itself, it is also a hard political fact that must be judged coldbloodedly, like all other hard political facts.

The Israeli mood, for instance, makes nonsense of the State Department's complacent trumpetings about the success of U. N. Secretary-General Dag Hammarskjold's Middle Eastern peace mission. So far as can be observed, Hammarskjold had no long-range success of any kind.

He certainly did not succeed in persuading the Arabs to accept the existence of the State of Israel. More immediately important, he certainly did not succeed in persuading the Israelis to abandon those policies which may lead to an outbreak of war with the Arabs.

On the contrary, from Prime Minister Ben-Gurion to the simplest private in the Army, the Israelis are all but unanimous that their national security depends on meeting Arab terroristic acts along their borders with stern military reprisals against the Arab governments. And from Prime Minister Ben-Gurion to the poorest farm worker, the Israelis are all but unanimous that their national future depends on going forward with the Jordan water diversion scheme, which the Arabs have said will mean war.

The Israelis are people, moreover, who think very little about risks, including even the risk of war, when they are convinced that their national security and national future are genuinely at stake. They must further be expected to be even more careless of all risks, if Soviet Foreign Minister Shepilov climaxes his Cairo visit by announcing the Kremlin's support for a reduction of Israel to the frontiers proposed in the U. N. partition scheme of 1947. That will be a threat to end Israel as a workable State; and the Israelis will be all the more inclined toward an early showdown.

In another way, too, viewing the mood of Israel as a hard political fact makes nonsense of the opinions now prevailing in Washington and London. It is highly unlikely that the Arabs will ever make peace in return for the little bits of Israel that Prime Minister Eden and Secretary of State Dulles have tried to persuade the Israelis to sacrifice. The effort to persuade the Israelis to make serious territorial concessions was even more unrealistic. As Prime Minister Ben-Gurion bluntly informed Prime Minister Eden, the Israelis will fight first. There should be no mistake about that.

In short, grim courage and ruthless self-denial make Israel intensely admirable as a human accomplishment, but this same courage and self-denial also make Israel highly intractable as a political fact. There is no use saying about the Israelis, "They ought to do differently." They will not behave as many Western policymakers think they should behave, because that is not their nature. And, one must add, they only exist today because that is not their nature.

At Last—Flood Protection

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. KARSTEN. Mr. Speaker, I should like to bring to the attention of the House the following editorial from the St. Louis Globe-Democrat for June 19.

In order to conform with the rules, it was necessary to delete a few of the words, but it expresses most eloquently the thanks of the people of my city to the Congress for the granting of preconstruction planning funds for the St. Louis flood wall:

AT LAST—FLOOD PROTECTION

Old Man River was given his come-uppance by Washington when the United States Senate voted to spend $551,000 to get an antiflood program under way in St. Louis. By one of those eversights hard to explain, the biggest city on the Mississippi is the last to get the dikes and wall that will protect it from high water in floodtimes.

In the past, Washington dished out millions to cities like Memphis and Kansas City to protect them from ravages of the rivers along which they sit. The inland streams are the wards of the Federal Government, and Washington's responsibility to keep them from running amok is long recognized.

Earlier, the House approved the same $551,000 grant that will enable Army engineers to begin final planning for a $130,987,000 antiflood protection system for St. Louis. This item is included in a larger appropriation bill that now has to be approved by a joint Senate-House Conference Committee and again approved in final form by both Houses.

But the $551,000 for St. Louis should get over these hurdles without difficulty.

St. Louis civic and political leaders effectively presented the case for the city in the hearings at Washington.

* * * * *

St. Louis is grateful to them and to Congress for getting an antiflood program for the city underway.

What Direction Should Our Foreign Aid Program Take?

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to commend to the attention of the membership of this House an editorial which appeared in the Milwaukee Journal of June 13, 1956, entitled "What Direction Should Our Foreign Aid Program Take?"

I believe that this editorial very aptly summarizes and analyzes the sentiment in Congress, and throughout our Nation, with respect to the dire need for a reappraisal of our foreign policy. Such a review should be undertaken to determine where we are going, and to what extent our present programs should be modified to meet the recent changes in world conditions. Finally, such a reappraisal should lead to the outlining of new methods and tactics which our Nation can undertake to continue energetic and constructive leadership in the efforts to achieve just and lasting peace.

Even the administration has recognized the need for such a re-evaluation of our foreign-aid programs, by suggesting the appointment of a Presidential Commission to accomplish that task. The Committee on Foreign Affairs gave serious thought to that suggestion. In the final analysis, it was decided to defer action pending congressional approval of the Mutual Security legislation requested by the President.

Even at that time, there was an understanding within the committee that a review and a continued careful study of our foreign-aid programs would be undertaken as promptly as possible—either by the whole committee, by a special ad hoc committee, or by the existing subcommittees which are responsible for legislation affecting different areas of the world.

The results of these studies would provide the groundwork for the analysis of the overall effect of our programs. In this manner, the basic work could be accomplished by the time the next Congress convenes in January of 1957.

The fact that we must bear in mind is that fundamental changes have taken place in the world situation and in the relative strength of countries both friendly and unfriendly toward the United States since the inception of our foreign-aid programs. At the same time, there has been no public, nonpartisan examination of our programs and policies since the beginning of the Marshall plan.

Because an important portion of our national budget has been, and continues to be, devoted to foreign-assistance programs, the need for a reappraisal of our policies is urgent. As the following editorial so succinctly points out "a sound, comprehensive nonpartisan study of the whole problem" is needed:

WHAT DIRECTION SHOULD OUR FOREIGN AID PROGRAM TAKE?

The drastic House slash in President Eisenhower's foreign-aid proposal cannot be blamed simply on isolationists, "aginners," economizers, irresponsibles, and election-year opportunists. The margin for passage of the reduced bill was too large for that.

There is evidence here that more and more House Members, like a growing number of citizens, are not satisfied that the United States is getting its money's worth in the present foreign-aid program.

It isn't necessarily that too much money is being spent. It's more that the world situation has changed, thanks to the new look in Russia following Stalin's death, and we're still going on in the same old pattern. It was a good program when we were trying to save Europe economically, and when we were trying to rearm the free world after outbreak of war in Korea, but is it a good program now that Europe is in good shape, that the free world is partially rearmed, and that the Russians are talking and inaugurating economic and political competition instead of primarily military competition?

What's needed, pretty obviously, is a sound, comprehensive, nonpartisan study of the whole problem. This has been proposed many times, but nothing has come of it. The President and his administration better do something about it now, and quickly, or next year's foreign-aid program may run into even more trouble than this one.

There are many questions that need answering. Is present emphasis on military aid wise? Is the military buildup we are supporting the proper kind in view of the shift to nuclear weapons? Would it be better if we funneled more economic aid through the United Nations, the North Atlantic Treaty Organization, the Colombo plan and like groups instead of pasting United States labels on practically all our aid?

Would it be desirable to place less emphasis on grants and more on long-term loans? Technical assistance programs (point 4) are usually considered one of our more successful aid ventures. Should we dramatically expand them? Should we concentrate more on short term aid projects—streets, highways, bridges, public buildings, etc.—rather than on such long-term projects as dams, hydroelectric and industrial plants?

What should be our aid policy toward neutrals? How far should we go in competing directly with the Soviets for the favor of uncommitted countries?

An independent study resulting in logical answers to these questions would go far to get the foreign-aid program back in public understanding and favor.

As for the immediate program, it would seem that the House has cut too deeply. We liked what Representative MCCORMACK, Democrat, of Massachusetts, said the other day during the debate: "I'd rather err on the side of strength than the side of weakness."

The Senate would seem well advised not to try to restore the full sum recommended by President Eisenhower, but at least not to slice our security so thin as the House has.

Our Judicial System Is Still the Finest Civilization Has Yet Produced

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. MULTER. Mr. Speaker, the following editorial from the Washington Post and Times Herald of June 21, 1956, should cause some of our colleagues to temper their remarks:

SNIPING AT THE COURT

The intemperate criticism of the Supreme Court that is heard so frequently these days is a reflection of the emotionalism that has grown up around many public issues. Some men in public life are not willing to discuss court decisions on their legal merits. Rather, they fly to the ridiculous conclusion that members of the high tribunal have been brain-washed or influenced by subversive propaganda. Such far-fetched charges can ordinarily be dismissed as the product of anger or imaginations running riot. But the prevalence of such charges in recent weeks must be a matter of concern to thoughtful citizens who place a high value on the judicial process.

Undoubtedly much of this criticism stems from the Supreme Court's decisions in the segregation cases. Some men who do not like those decisions have deliberately set out to discredit the Court which handed them down. In other instances, however, the attacks upon the Court are much broader than the segregation issue. The country's noisiest superpatriots are firing recklessly at the Court because many of its decisions are out of tune with their schemes and objectives.

Criticism of the Court is not, of course, anything new in American history. The Court over which Chief Justice Marshall presided came in for much abuse from the Jefferson administration and its successors. The Taney Court was much abused, and Lincoln became the chief critic of the Dred Scott decision in the pre-Civil War period. During the thirties the Court again came under severe attack for its so-called anti-New Deal decisions. Fortunately, the Court survived all these and other assaults because of its high standing with the rank-and-file of the people. No doubt it will continue to do so if the people are kept aware of what it has done and why.

Most of the present criticism seems to be based on the mistaken notion that the Court is a kind of judicial slot machine which, when a case is presented to it, merely grinds

out the appropriate precedent by which it should be decided. To be sure, the Court does give great weight to precedent. But it is also constantly engaged in a reexamination of principles and legal relationships to keep its interpretation of the law in tune with present realities. Our constitutional system could scarcely be expected to outlast a generation if our judicial system did not have within it sufficient flexibility to correct its own past mistakes and to look at the law as an instrument serving a dynamic society.

It would be foolish to pretend that the Court is infallible. This newspaper often criticizes decisions of the Court and will continue to do so. But we respect the integrity of the justices. We believe they voice their honest views of what the Constitution and the laws require, and that is the acid test of an independent court. No court will ever fully satisfy a country as large and varied as ours. But critics ought to voice their complaints in a spirit of respect for the institution itself; for the preservation of a strong and independent Supreme Court is one of the basic requirements of our Federal system.

Can the United States Continue To Be Wasteful of Its Human Resources?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the June 19, 1956, issue of the Belleville (Ill.) News-Democrat. The editorial Can This Waste Go On? follows:

CAN THIS WASTE GO ON?

There is optimism in Washington in Federal agencies that have been trying to find ways and means of influencing industry to discard the standard, automatic, arbitrary, 65-year retirement age.

Officials, who say their problem is to chase away the hobgoblins which many in industry see, reported at a conference of the Federal Council on Aging and the Council of State Governments that they believe the phantasms eventually will be dispelled. The first of these is an idea that hiring older workers unduly increases pension costs. The other is that older workers are inferior to younger in productivity and performance.

Of course, government isn't the only level at which the retirement question is being studied. Industry is greatly interested. So is science. At the University of Chicago researchers have been looking for some way, other than birthdays, to measure age.

The approach is that while some workers wear out physically and emotionally more quickly, and ought to be retired earlier than 65, others should be graded for the degree of maturity they display—particularly if their skills or talents have been little impaired by time.

With the future promising to continue to add years to man's life expectancy, it is quite apparent that if retirement at 65 is to be the hard and fast rule, an ever-increasing share of the Nation's wealth will be diverted to the support of these nonproducing elders. Some will have ample resources of their own but many will be dependent upon others, directly or through government.

A large percentage of these individuals would, if permitted to do so by industry or government, continue to work and supply their own needs. It is the vast store of human resources which they represent and which will grow as their numbers mount that should be of concern to all.

Can the Nation continue to be wasteful of these human resources?

The Doctors and the Presidency

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. MULTER. Mr. Speaker, the following item by Walter Lippmann, which appeared in the Washington Post and Times Herald of June 21, 1956, and other papers, is important reading:

TODAY AND TOMORROW
(By Walter Lippmann)
THE DOCTORS AND THE PRESIDENCY

The President, it appears, is taking it as a matter of course that the country is expecting him to decide once more whether he will run again. It may be useful to remind ourselves that the situation in which he finds himself is peculiarly difficult for him. For the doctors who must advise him, and for the press which must keep the people informed, the root of the difficulty is not so much medical as it is constitutional.

The President is the key figure in the American system; without his active guidance and control the system does not work. The President is elected for a fixed term of 4 years, and if he becomes in some measure incapacitated, there is no one to take his place. When, therefore, the President has had a serious illness, the crucial question is not his life expectancy. If he dies, the system provides that the Vice President take over. The crucial question is whether he can count on his energy and his personal powers over a period of 4 years.

For the system, as now established, makes no provisions for invalidism or for failing powers. This is what is in the back of peoples' minds when they listen to the medical opinions of the doctors. They are waiting to be reassured about the President's health for the next 4 years.

It is here that a misunderstanding, such as it is, has arisen between the doctors and the public. The doctors have been talking about the President's recovery from his heart attack and from his operation. The politicians, who are playing for very high stakes, have been treating what the doctors say as an expert verdict on the President's fitness to carry the burden of the Presidency for a second term. These are not one and the same.

Owing to the fact that the President has a fixed term of office and that there is no one to substitute for him if he cannot carry the burden, the doctors are being pressed to make a prognosis which must in the nature of things be highly speculative. They are expected to say not only whether he has recovered from his heart attack and is recovering from the ileitis but really whether he will be in full vigor during a second term. If this were a parliamentary government on the British model, this question would not arise. The head of the government would not be committed to a fixed term, and therefore it would not be necessary to do any medical guessing about what will happen in the future over a period of years.

The question does arise here, and in the case of President Eisenhower, given his age and medical history, it is a momentous question. The American system, as it works now in practice, cannot do with a sick or a failing President.

It can be said that the system is more defective than it needs to be, and that some of the worst features of it—as they were exhibited when Garfield and Wilson were disabled—could be remedied. It should become the established practice that when the President is ill, the Vice President takes over until the President recovers. There is little doubt that this is what the authors of the Constitution intended.

Any sick President—it might have been Eisenhower himself—can put this constitutional arrangement into effect. He can invite the Vice President to sign official documents, let the action be challenged in the courts, and have its validity tested promptly in the Supreme Court. The Vice President would not, of course, be sworn in as President. He would remain the Vice President, temporarily discharging the powers and duties of the President.

The alternative is the device of the regency, as operated by Mr. Sherman Adams during the two illnesses of President Eisenhower. This device was worked well enough because the President has not been badly incapacitated for a long time. The device would not work at all well in case of prolonged disability, such as invalidism or the failing powers of age. For the country would not long like the Office of President administered by men who have not been elected to any office.

But when all has been said and done about remedying the gross defects of the system, it will still be true that there is no substitute in a presidential system of government for a strong President in the full possession of his powers. This truth is the point of reference for the decision that must be made by the President, and, if he decides to run, then later on by the country.

From what the President said when he was making his first decision we know that after the doctors have said all that they are able to say, he has no choice but to reach his conclusions by applying his commonsense, informed by his experience of the Office of President. The country will have to make its judgment in the same way.

Vice Admiral Francis C. Denebrink, USN

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. KEOGH. Mr. Speaker, after a long and honorable career in the United States Navy, Vice Adm. Francis C. Denebrink, USN, is retiring to inactive service.

At the beginning of World War I in 1917, Admiral Denebrink received his commission as a youthful ensign in the Navy. His service has spanned two world wars and the Korean conflict, and reached its zenith upon his promotion to the grade of vice admiral in 1952. He was one of the capable officers chosen to attend the Naval War College course in naval warfare. His excellent war service was recognized when he had con-

ferred upon him the coveted Legion of Merit.

During the last years of his active service, Admiral Denebrink has been the able Commandant of the Military Sea Transportation Service, the organization that has done such a splendid job in transporting our Armed Forces across the seas of the world.

Upon his retirement from active service and upon his birthday, which he will celebrate tomorrow, Admiral Denebrink is to be congratulated by his many friends in the armed services and in civilian life. It is their sincere hope that he will have many years during which he may enjoy the fruits of his excellent service.

I Am Old Glory

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. CANFIELD. Mr. Speaker, I was very happy last Tuesday to present to the ninth grade classes of the Thomas Jefferson Junior High School of Passaic, N. J., an American flag which had flown over our Capitol on June 14, 1956, Flag Day.

Old Glory means a lot to this splendid group of young American citizens who for some time have felt that many good Americans have been remiss about flying the flag on holidays and other appropriate occasions. They determined to do something about it and under the leadership of their principal, Mrs. Margaret McCarthy Nordstrom, and their teacher, Mr. Andrew Bacha, they canvassed an area near their school which on last Memorial Day had 78 homes displaying flags. Joyce Graeter and Joel Gersmann were student chairmen.

Do you have an American flag? If so, will you remember to display it on Flag Day? If you do not have a flag, will you consider the purchase of one? These are the questions the boys and girls asked and at every home they left a leaflet on the proper use of the flag prepared by the Gerald V. Carroll Post of the American Legion. What happened? Came Flag Day, June 14, and the covered area had 235 flags flying where 78 flew on the holiday 2 weeks before.

I am very proud of my young constituents and their graduation project honoring Old Glory. What is Old Glory? The flag pamphlet of the United States Marine Corps gives the answer in these words:

I am Old Glory: For more than eighty-score years I have been the banner of hope and freedom for generation after generation of Americans. Born amid the first flames of America's fight for freedom, I am the symbol of a country that has grown from a little group of Thirteen Colonies to a united Nation of 48 sovereign States. Planted firmly on the high pinnacle of American faith my gently fluttering folds have proved an inspiration to untold millions. Men have followed me into battle with unwavering courage. They have looked upon me as a symbol of national unity. They have prayed that they and their fellow citizens might continue to enjoy the life, liberty, and pursuit of happiness, which have been granted to every American as the heritage of freemen. So long as men love liberty more than life itself; so long as they treasure the priceless privileges bought with the blood of our forefathers; so long as the principles of truth, justice, and charity for all remain deeply rooted in human hearts, I shall continue to be the enduring banner of the United States of America.

I am Old Glory.

Clean Elections—Now or Ever?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. UDALL. Mr. Speaker, 10 days ago I attempted to point out to our colleagues the vital stake this Congress has in enacting prior to the political campaign this fall a respectable Corrupt Practices Act which will compel honest elections.

No action has been forthcoming, and it would appear that my remarks have fallen on deaf ears.

It is still my belief that Congress cannot afford to finish its work this summer without writing an election code which will stifle the suspicions and charges which will otherwise fill the air during the political contest this fall. As evidence that this opinion is shared by responsible organs of public opinion, I present the following editorial, which appeared last Sunday in the St. Louis Post-Dispatch:

FOUR MONTHS, NO ACTION

It is now almost 4 months to the day—a third of a year—since LYNDON JOHNSON, of Texas, the majority leader, solemnly promised on the floor of the Senate tht there would be no postponement of legislation to tighten up the all-too-loose controls on campaign spending.

The promise was made when JOHNSON and Senator WILLIAM KNOWLAND, of California, the Republican leader, introduced a substitute for the carefully prepared bill sponsored chiefly by Senator THOMAS C. HENNINGS, JR., of Missouri. Extended hearings had been held on this measure, and it had been on the Senate Calendar since June 22, 1955.

Senator O'MAHONEY had demanded action on the Hennings bill by the end of March—or, if a majority of the Senate so desired, on the much weaker Johnson-Knowland substitute. But the Hennings bill has been sidetracked, and the Johnson-Knowland bill is all but forgotten in the Rules Committee. The word is that it will stay there until the Senators go home in July.

If so, there will be another presidential campaign under conditions which are a standing invitation to scandal. Fletcher Knebel, of Look's Washington bureau, estimates that $200 million will be spent preliminary to November's voting. He also estimates that $140 million of this will come from less than 20,000 people.

Unless the law is changed, nobody will ever know how good those estimates are. But they serve as approximations of the situation which Senator HENNINGS and other honest men in public life have long sought to improve. Under the existing law national committees and individual candidates are under impossibly low limits on what they may spend in soliciting votes. They also must report contributions. But any number of independent campaign committees may be formed, and for these, for all practical purposes, the sky is the limit.

Individuals are not supposed to contribute more than $5,000 to a candidate; but they and their families may give money to every candidate on the ticket. Thus, a University of North Carolina study of 1952 campaign contributions showed that the Pew family of Philadelphia gave the Republicans at least $148,480. The Rockefellers gave the party $150,000; the Du Ponts, $81,000; the Vanderbilts, $57,000; the Mellons, $51,000; the L. C. Hunt family of Texas, $46,800; the Guggenheims, $42,000; the Weirs, $29,000, and the Luces, $25,000.

The Democrats did not do so well, but they got $56,000 from the family of Joseph P. Kennedy of Boston; $26,000 from Albert M. Greenfield of Philadelphia; $23,000 from the Reynolds family of North Carolina, and $23,000 from the Wade Thompsons of Nashville, Tenn. These and similar large gifts were legal. And they probably were more disinterested than smaller contributions from contract hunters and favor seekers.

There is no getting away from the fact that a modern campaign of national scope costs a lot of money. And the largest contributions naturally are to be expected from those who have the most to give. Nobody has yet introduced legislation calling on the Treasury to assume the cost of campaigning as a part of the cost of Government. The solicitation of small gifts is still novel and therefore still relatively unproductive.

Some Senators excuse themselves from pushing for this publicity on the ground that labor unions do not want attention called to their campaign contributions. If so, the unions are wrong. There is nothing shameful about an honest campaign contribution. But Senators put themselves in a false light indeed when they are unwilling to have the voters know who is financing campaigns. If the people were given the full facts, candidates might be able to look to the many rather than to the few for support; might be able to look to those with no axes to grind rather than to those who may ask a return—and perhaps a questionable return—for their help. Surely this would be better for all concerned.

Must another oil company offer another Senator a check before Congress reduces the temptations in electioneering?

Education Is the Function of Government

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial from the Washington Post and Times Herald of June 21, 1956:

A VOTE ON SCHOOLS

For the first time during the decade or more that Federal aid to education has been before Congress the House of Representatives is going to have a chance to vote on the issue. The Rules Committee, by a division of 8 to 3, decided yesterday afternoon to give the Kelley bill an open rule. This will mean that it should come to the House floor some time next week.

Amendments, including the Powell amendment which would inject the irrelevant controversy over racial relations into the school-aid problem, could be offered by any Representative. No doubt efforts will be made to kill the Kelley bill by loading it with such amendments. But, given a fair chance to debate the question and vote on it, the House, we are confident, will dodge these entrapments and send a simple, solid, and practicable school-aid measure to the Senate. We congratulate the House Rules Committee on having done a most constructive piece of work yesterday. There is now real hope for the future of America's public schools and for the future of the children attending them.

The U. S. S. R. Atomic Energy Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of the House and Senate to a story which appeared in the April 27, 1956, issue of Colliers, The Red Atom, which gives a revealing look inside Russia's supersecret atomic laboratories, as follows:

THE RED ATOM
(By Lin Root)

Last November seismograph needles around the world were suddenly agitated by heavy shock waves, and rain lashing down on Japan began clicking off a radioactive count of 4,000 to 30,000 a quart per minute instead of the normal 20 to 40.

The cause of this violent activity soon became apparent: the Soviet Union had exploded its second hydrogen weapon. And when all the scientific evidence was in, there were hurried reappraisals of Russia's nuclear potential in the chancelleries and nuclear laboratories of the Western World.

British estimates put the Soviet weapon in the 15-megaton class—the equivalent of 15 million tons of TNT, and almost as strong as the H-bomb which the United States had exploded in the Bikini Atoll in March 1954. It was the most powerful device yet tested in the Soviet Union. But even more significant, it had been touched off at a very high altitude—tens of thousands of feet, in the opinion of some informed sources.

What was the Russian weapon and how did it get there? Some scientists think that the explosion was that of a missile warhead. If so, it was the first; neither the United States nor Britain has yet joined a thermonuclear (hydrogen) warhead to a missile. Others think the weapon might have been dropped from a plane. If so, it is also a first, for we have no plane capable of attaining such heights with a thermonuclear load; in United States tests, hydrogen devices have been placed atop steel towers for detonation. Still other scientists speculate the weapon may have been suspended from a balloon.

Whatever the Soviet weapon was, it clearly calls for a reevaluation in our thinking. The conviction that the U. S. S. R. has not the knowhow to catch up with our atomic lead is widespread and extends into high places. On November 17, even as the shock waves of the Russian H-weapon were being recorded, Commissioner Thomas E. Murray, of the United States Atomic Energy Commission was proposing an international demonstration of an American thermonuclear explosion at Eniwetok in the Pacific to cancel out Soviet propaganda "that they have overtaken us in atomic and thermonuclear weapons."

The need is urgent, therefore, for a clearer understanding of what has been and is going on in research laboratories behind the iron curtain—of the real story of the Soviet Union's nuclear and thermonuclear progress in terms of accomplishments, equipment, technology and manpower.

Fortunately, a realistic assessment of the U. S. S. R.'s nuclear program is now possible. Most of the evidence comes from Dr. Arne Lundby, chief of the Reactor Physics Department in the Norwegian Atomic Energy Institute, who recently made an unprecedented 2-week tour of Russia's atomic installations, attending scientific meetings and talking freely with its scientists. Among those with whom he spoke at length was Dr. Bruno Pontecorvo, formerly a senior scientific officer at Britain's Harwell atomic laboratories, who disappeared behind the Iron Curtain in 1950. The conversations are among the first—and certainly the most detailed—Pontecorvo has had with a Western scientist since he threw in his lot with the U. S. S. R.

Dr. Lundby is particularly well qualified to appraise what he saw and heard in Russia; he has worked on all types of atomic machines in the United States, Britain and Norway, and is fully conversant with Western nuclear progress. His observations supplement reports read by Soviet scientists at the Atoms for Peace conference which I attended in Geneva last year, and other bits of information that have seeped through the Iron Curtain.

From these sources, then, we can set down this partial score sheet of Russia's nuclear progress:

The U. S. S. R. exploded what was probaby the world's first true H-bomb in August, 1953. The United States exploded an H-bomb 7 months later. (Although we had touched off the world's first thermonuclear explosion in November, 1952, the most reliable information indicates that no bomb as such was involved, but rather a hydrogen device too heavy to be transported by plane and not feasible as a weapon.)

The U. S. S. R. has been producing nuclear source materials (U–235, plutonium) for 10 years and has made them freely available to its scientists for all kinds of experiments and research. The United States began production of nuclear source materials 3 years earlier, in 1943, but until recently has kept a tight rein on their use.

The U. S. S R has the world's largest synchro-cyclotron and will put into operation this year the world's largest proton-synchrotron. The United States has the next largest synchro-cyclotron and the currently largest proton-synchrotron. Both machines are accelerators with which the secrets of the atom can be studied.

The U S. S. R. has one 5,000-kilowatt atomic power station in operation, supplying electricity for a community, and a 100,000-kilowatt plant under construction; by 1960 it plans to have nuclear power stations in operation with a greater total capacity (2,000,-000-2,500,000 kilowatts) than those contemplated in the United States and Britain together. The United States still has no nuclear power stations in regular operation, and as this is written the capacity of plants planned for completion by 1960 totals only 689,000 kilowatts. However, we have a much bigger and more diversified research program under way than Russia—we are experimenting with 5 to 10 different types of reactors; Russia, with only about half as many.

Eyewitness Lundby sums up the overall picture of Soviet nuclear progress this way: "There is no longer any doubt that the U. S. S. R. is among the foremost countries of the world in the development of atomic energy. All the time I was in the Soveit Union I had the strangest feeling of experiencing something I could not believe was true * * * discussing the most advanced experiments with Soviet scientists, problems that we never imagined the Russians were investigating * * * examining reactors, giant accelerators, massive engineering structures of which we had never heard a word before."

How has Russia, a late starter in the nuclear race, been able to catch up so quickly? The answer seems to be that Soviet leaders recognized early that conquest of the atom gave them the means to close the gap between the country's agrarian past and technological future in one leap. They turned loose the nation's best scientific and mathematical brains, provided everything needed in the way of money and equipment—and got results.

Dr. Lundby was given an unexpectedly look at much of the work—and the results. He was impressed not only with the advanced nature of the experiments he saw under way, but with the amounts of U–235, thorium and plutonium that went into them. He was even more impressed, however, with the quality of Russia's nuclear laboratories—and the equipment in them.

Take the Institute for Nuclear Problems. Until Dr. Lundby's visit, Western scientists had not even been aware of the existence of this highly organized, ultramodern establishment devoted exclusively to study of what goes on inside the atomic nucleus.

The institute is situated 83 miles north of Moscow at the junction of the Moscow Canal and the Volga River. To get the hydroelectric power needed for the institute, the Russians evacuated several villages and created an artificial lake so big you can barely see across it in some places. The institute itself lies a few miles east of the main Moscow road, and clustered around it are numerous houses, 2 to 3 stories high, of brick and concrete and usually painted mustard color. These are the homes of the scientists and technical personnel employed at the institute.

The world's largest synchro-cyclotron is housed in the institute. A synchro-cyclotron is one of several types of acceleration machines, all of which have the same main objective: to speed up charged particles (protons, the heavy positively charged particles in the nucleus of the atom; or electrons, the light negatively charged particles) in order to find out more about their structure.

Dr. Ernest O. Lawrence of the University of California developed the general principle of the accelerator in 1930. He showed that charged particles moving within the field of a magnet can be regularly kicked up to a higher velocity each time they cross a point in their orbit where they are affected by an electric field. Lawrence's original-type cyclotron accelerated the protons to 20 to 30 MeV—millions of electron volts. Russia's synchro-cyclotron, based on a modification of Lawrence's principle, achieves 680 MeV, and develops such a heavy stream of speeding protons that 5 percent of them can be channeled off to other areas for special study. The diameter of the maget-pole pieces is about 20 feet, and the magnet itself weighs 7,000 tons.

Dr. Lundby spent several hours examining the huge synchrocyclotron; he was especially interested in it because he had worked for 2 years with a smaller one in Chicago. "The giant Russian model is supposed to have been completed in 1949," he told me, "but it seems to have been running at maximum energy only during the last couple of years. It's very nicely engineered—windows to look into the vacuum chamber between the pole pieces, double vacuum seals to introduce or extract samples inside the chamber, automatic equipment to start the machine or shut it off, and so on.

"It's not as compact as the synchrocyclotron in Chicago—the control room is in a building a hundred yards away, and therefore very inconvenient—but there's more

working space around the machine itself. The Russians had more than a dozen experiments lined up behind the shield of the machine when I was there, among them studies on high-energy protons, neutrons, mesons, and the like. And they were using the most modern equipment—just like that used in the United States."

It was at the synchroclytron that Dr. Lundby had one of his long talks with Bruno Pontecorvo, who does his research there. (Their other conversations were at scientific meetings in Moscow.) "He looked very well, a little fidgety and restless maybe, but then he's a nervous type," Dr. Lundby recalls. "He was dressed better than the other scientists I saw, not more expensively but in better taste—more as though he knew what to select.

"As we talked, he had a little difficulty expressing himself in English at first. He laughed about it, and said he was out of practice—but after a couple of days it came more easily and he seemed quite pleased. He seems to speak Russian without difficulty."

The Italian-born Pontecorvo is now a Soviet citizen, has won a Stalin prize and has been elected a member of Russia's highest scientific body, the Academy of Science. What share ideology may have played in his decision to leave Britain could not be determined by Dr. Lundby, but I learned from some of Pontecorvo's former British colleagues at Harwell that the superior working and living conditions offered him by the Soviets may have been a decisive factor. According to the Britons, Pontecorvo is primarily a scientist with his roots in the laboratory, has no national ties whatever, and likes the creature comforts of life. Apparently frustrated and impatient because there wasn't enough of anything in England in 1950—laboratory equipment, food, heat, light—Pontecorvo took off for the East.

I asked Dr. Lundby whether Pontecorvo seemed to have any regrets. "Not that I could notice," was the reply. "He seems perfectly satisfied with his life. He lives with his wife and three children in one of the yellow brick garden houses in the institute community. His children go to the village school. He also has an apartment in Moscow, and often drives to town."

Dr. Lundby said he asked Pontecorvo whether he wouldn't like to have the award made by the United States Government to him and six other physicists as payment for a patent claim they had filed for their early work with neutrons. "He told me he wouldn't mind if his relatives got the money," Dr. Lundby said, "but he claimed he wasn't interested in it himself."

At the institute, Pontecorvo works in a small chamber set up inside a shield behind one yoke of the synchrocyclotron magnet. He is studying pimesons—short-lived particles created in a burst of energy when a proton traveling at high speed smashes into an atomic nucleus. They are believed to be the particles responsible for binding the nucleus together.

"Still higher-energy meson work has been done with the United States Atomic Energy Commission's Cosmetron at Brookhaven National Laboratory," Dr. Lundby told me, "but the accuracy of Pontecorvo's work is far greater because he has a higher intensity (more mesons) to work with. Furthermore, the mesons travel directly into his little room, enabling him to work with greater ease and concentration.

"His experimental skill is great, and from the amount of work he has done he must spend practically all his time at the synchrocyclotron. He enjoys the work very much, and his experiments have a direct bearing on one of the most fundamental problems in physics today—namely, how the finest building stones in nature, the atomic nuclei, are constructed. Even if the final solution is not immediately at hand, there is great satisfaction in making any basic contribution. Pontecorvo also has the pleasure of designing his own equipment, and whatever he wants is always built for him."

Pontecorvo showed Dr. Lundby a "bubble chamber" the Russians had built. A "bubble chamber" is a vessel full of liquid, usually hydrogen, into which a stream of protons may be directed. When the speeding protons crash into a hydrogen nucleus, energy is released, forming minute bubbles. These bubbles dissolve too fast for visual observation, but they can be photographed by a built-in camera, and thus the behavior of high-energy particles may be charted.

Not satisfied with having just the world's largest synchrocyclotron, the Russians are now building the world's largest proton-synchrotron—another type of accelerator which speeds up protons into the BeV (billions of electron volts) range. Its main advantage over the synchro-cyclotron is the increased speeds which it gives the proton stream; its disadvantage is that the protons tend to smash themselves against the sides, leaving comparatively few in the mainstream for study.

At present, there are only three proton-synchrotrons operating in the world. The largest of them—the Bevatron at the University of California—yields up to six BeV. The model under construction in the Soviet Union was designed by Prof. Vladimir L. Veksler, Russia's synchrocyclotron pioneer, to achieve 10-BeV speeds, and it has a magnet weighing 36,000 metric tons. It will go into operation later this year. Design studies for even higher-energy machines are being made in both the United States and Europe, but these devices will not be completed for 3 to 5 years.

To Dr. Lundby, the new 30-story Moscow University building on the road from the Moscow airport to the capital itself was another eye opener. "Going through the laboratories of the university, which is almost entirely devoted to science studies, I was amazed by the abundance of apparatus," he says. "In the physics department there were all kinds of devices for making cosmic-ray experiments—arrays of Geiger counters, scintillation detectors, and ionization chambers, all very cleverly arranged. It looked as if there were no limit to the amount of apparatus available." Dr. Lundby said he asked some of the instructors what arrangements they had to make to get money for apparatus. All they had to do was ask for it, they told him.

"Most of the apparatus I saw at the university and elsewhere in Russia was pretty much like American equipment," Dr. Lundby says. "Some of the devices—for example, the bubble chamber at the Nuclear Institute—were copied from descriptions in United States scientific journals. However, the Russians have made one device which no one elsewhere has been able to achieve—a special-type solid scintillator. With this, it is possible to photograph particles and their movements inside the scintillator—an admirable, original detector which clears better and permits even faster photographs than is possible with a bubble chamber."

Dr. Lundby spent considerable time visiting atomic reactors—devices in which controlled chain reactions are staged, usually for research purposes or to make power. When natural uranium is used as fuel in a reactor, pieces of the uranium ore must be distributed in a moderator—graphite, heavy water, beryllium—to keep the chain reaction going. If enriched uranium (containing a higher percentage of U-235) is used, ordinary water will serve as a moderator. A chain reaction creates terrific heat, and in a power reactor this heat is carried off by a circulating coolant—water, metal or gas—to make steam which turns conventional turbines.

The U. S. S. R. built the world's first atom-fired electric power station on the Oka River, 67 miles south of Moscow. This 5,000-kilowatt plant, whose reactor furnace is fueled with enriched uranium having 5 percent U 235, moderated with graphite and cooled with pressurized distilled water, has been serving Obinskoje, a billage of 10,000 people, since June 1954. But the station is probably more important as a propaganda weapon than as a power station; it is strictly a small-scale experimental project and its design has proved to be highly uneconomical. "Russian scientists and engineers are aware of its shortcomings," Lundby said, "but they have the advantage of several years' operating experience." (Actually, the first full-scale atomic-power reactor was built by the United States in 1953, but it was designed to propel the atomic submarine *Nautilus*, not to light up a community.)

Far more significant to Lundby than the atomic-power station were Russia's research reactors. He said their construction was preceded by extensive study of the changes which uranium, graphite, steel, insulating materials and coolants undergo in reactors. The research types included:

A light-water reactor. It runs on enriched uranium and is moderated and cooled with ordinary water. In principle it is much like the United States swimming-pool reactor. Both the United States and U. S. S. R. have offered to sell this type of research reactor at essentially construction costs to other countries under bilateral agreements.

A heavy-water reactor. In operation since 1949, it is cooled and moderated by heavy water (water in which the hydrogen nucleus is twice as heavy as in ordinary water). Dr. Lundby, who had worked for more than 3 years with a heavy-water reactor of similar design and power rating told me: "The old natural-uranium rods in this Russian reactor are now being replaced with enriched-uranium fuel elements, which will increase its 500-kilowatt power level to 10,000 kilowatts. In principle, the reactor will now be like one of the most advanced research models in the United States—the C. P. (Chicago Pile) 5. Moreover, as result of their experience with this reactor, the Russians are now building a 100,000-kilowatt electric-power station with a heavy-water-moderated, gas-cooled reactor."

A graphite reactor for physical and technical research. It also is of unique Russian design. It is cooled with distilled water, moderated with graphite and fueled with enriched uranium. This model provided experience and ideas which were incorporated in the atomic power station reactor.

So much for equipment. Now for the other factor that has enabled Russia to keep up near the lead in the nuclear race—manpower. Soviet scientists soon may, if they do not already, outnumber their American counterparts. More significant, enrollment in the sciences is increasing in the Soviet Union, decreasing in the United States. This year, for example, Russia is graduating 130,000 or more scientists and engineers, the United States 70,000.

Dr. John R. Dunning, dean of the School of Engineering at Columbia University, and a member of the Congress-appointed panel on the Impact of the Peaceful Uses of Atomic Energy, attributes Russia's tremendous increase in scientific manpower to a decision taken in the Kremlin more than 25 years ago. The decision: To make science and engineering, and the growth of young scientists and engineers, "a keystone of national policy."

"The success of this propaganda and educational venture, using all media open to the state in these last 25 years, has been little short of astounding," Dr. Dunning said in a recent speech. "All of us who have studied the campaign have been generally far too conservative in appraising its effectiveness. * * * Now the Russians are passing us in numbers, but what is even more

serious, their rate of growth is 2 or 3 times that of ours."

While the tendency in the United States is to look down on scientists and engineers as bookworms, Dr. Dunning said, Russia idolizes its scientific personnel. Dr. Lundby agrees. "While Russian girls dream of becoming ballerinas," he told me, "Russian boys dream of becoming scientists. The true place of science in the Soviet Union is so different from what I believed that it took my breath away. In the supposedly classless Soviet society, the scientists are the favored sons. Even beginners are paid about 10 times more than a skilled laborer. They have cars, town apartments, country places, TV sets. Most important, and contrary to western impressions, research scientists have complete freedom in their choice of work."

From other sources, I learned that most Soviet scientists can ignore politics—provided they appear at the right public functions and parrot the right phrases on such occasions. Nor do they seem to mind doing these things, or to miss the right of political discussion. They love argument and dispute violently over every scientific idea and theory, but they don't question the Communist regime. They simply accept it, like the weather.

They keep abreast of what is going on in the outside scientific world by reading scientific journals and reports in English, French, and German; their libraries, in fact, have more copies of important scientific magazines and textbooks than would be found in most American institutes, according to Dr. Lundby. And far from downgrading western work, he says, Russian scientists have a high respect for it. They know all the places in the United States where nuclear research is going on, and discussed it with him.

Surprisingly, Dr. Lundby reports, he found Soviet scientists more eager to talk about their experiences, explain their accomplishments and discuss future research than most American scientists. The Russians showed no awareness that they were talking to a westerner, he says.

One of the questions most frequently asked in the United States about Russia's nuclear progress is what part espionage played in the Soviet advance. In other words, how much time did the atomic secrets betrayed by Dr. Klaus Fuchs, the British scientist, and other western sources save the Soviets? Dr. Lundby sought the answer during his visit to Russia.

Here is his report: "All during my stay—during my visits to institutes and installations—I tried to see to what extent the activities of spies had helped the development of atomic energy in the U. S. S. R. However, I found that Soviet scientists work differently than those in Western countries; they seem to do the same type of job with their own particular techniques.

"Doubtless, facts transmitted by spies have saved the Soviet scientists some time. But from the amount of basic work the Russians have done, and from the experimental results they showed me and the individually designed engineering apparatus they have developed, the indications are that whatever time was saved could not have been much—certainly not a matter of years. After all, Russian scientists have essentially the same background and experience as any other scientists."

Some people have blamed security leaks and Soviet spies for the fact that the Russians were able to explode a hydrogen bomb before we did. The facts indicate otherwise.

Ash from the first Soviet H-bomb explosion fell in Japan, and analysis showed that it contained lithium. That element was the secret of the Soviet success, and all evidence indicates that the Soviets developed the technique for its use themselves. Up to that time, most Western researchers had believed that expensive tritium—triple-weight hydrogen—was necessary for a hydrogen bomb, and it took 90 pounds of then-scarce plutonium to make 1 pound of tritium. The Soviets showed that a light, cheap, plentiful lithium salt could cut down, perhaps even eliminate, the need for tritium. Further, lithium combined with the other essential ingredient in the H-bomb, deuterium (double-weight hydrogen), so that it could be carried in an easy, compact form instead of having to be compressed into liquid and transported under vacuum.

Therefore, Fuchs and others familiar with Western research probably could not have contributed anything valuable to the Soviet discovery of lithium as the key ingredient of the H-bomb. Even if they had known some of our thermonuclear plans, their information presumably would have been about the experiments that resulted in our impractical device of 1952.

Not that the 1952 device did not serve a useful purpose. It did—it proved that the heat created by the fission of an A-bomb was enough to cause the fusion of heavy hydrogen and release its even more destructive power. By the time the Russians exploded their first H-bomb the following year, we, too, were on the trail of lithium—although obviously not so far along it. We exploded our own lithium-based H-bomb in March 1954, adding a further factor of fission in the uranium blanket around the bomb to the fission-fusion mass. The explosion set a new high in destructive power—possibly as much as 20 megatons (equal to 20 million tons of TNT)—and from this point on there seems to be no limit to the size and strength of fission-fusion-fission devices.

Last November's high-altitude Russian explosion seems to be of this order. We still don't know the size of the atom-bomb trigger used by the U. S. S. R., but Russia's Communist boss, Nikita Khrushchev, said the Soviets were working on "minimum amounts." This is the way to the thermonuclear warhead for guided missiles, ballistic missiles, projectiles—transportable thermonuclear devices of all kinds.

Such, then, is the state of Soviet nuclear science today. In the opinion of leading American scientists, it poses a challenge to the United States which cannot be ignored. The terms of that challenge were laid down by Columbia's Dr. Dunning in a recent speech. Either we must correct the imbalance caused by our approach to science and engineering, he said, or "we might just as well write this country off the books."

Anniversary of the Proclamation of the Republic of Vietnam

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 21, 1956

Mr. POWELL. Mr. Speaker, in observance of the celebration of the second anniversary of the government of President Ngo Dinh Diem, of Vietnam, on July 7, 1956, and because Congress will not be in session on the occasion of the celebration of the first anniversary of the proclamation of the Republic of Vietnam, October 26, 1956, I wish to take this opportunity to extend sincere felicitations and best wishes to President Ngo Dinh Diem.

Under the leadership of a dedicated man, President Ngo Dinh Diem, the people of Vietnam shook themselves loose from both the shackles of colonialism and the tentacles of communism. By the referendum of October 23, 1955, the majority of the Vietnamese people clearly manifested their desire to get away from all forms of corruption of the past. In the October 26 election of the Chief of State of Vietnam, Premier Ngo Dinh Diem, and the subsequent proclamation of the republic, for the first time in modern history, the people of Vietnam had an opportunity to vote in a national election. The elected leader of the Vietnamese people is a man whose patriotism, courage, and honesty are renown the world over.

Political independence can only be complete where economic independence is also genuine. The National Government of Vietnam has been fighting a valiant struggle against the exigencies of forces which have served to disrupt and dislocate the economy. Possessing considerable potentialities for a country whose development is still in its beginnings, Vietnam devotes most of its resources to economic reconstruction.

That President Ngo Dinh Diem is unwilling merely to give orders without seeing for himself the progress being made in the national reconstruction policy he has followed since coming to office is evidenced by his frequent tours throughout the Provinces.

The press and information service of the Embassy of Vietnam in the United States reports in its volume 2, No. 1, edition:

These Provinces are almost entirely agricultural and their population of nearly 1 million is almost completely made up of farmers. As a result, President Ngo's visit has emphasized the importance of the Government's agricultural policy and the value of gifts of all kinds made by the Government to the farmers of the area.

Under the leadership of President Ngo dinh Diem, the government has as its main objective the well-being of the people, without political or religious discrimination:

We are only beginning. Thanks to the help of friendly countries, especially the United States, we can see our way to achieving our aim of raising the standard of living and contributing to the happiness of every member of the rural community as much as possible.

An address given by the Minister for Foreign Affairs, Mr. Vu van Mau, to the ministerial conference of the Colombo plan at Singapore further underscored the economic problems facing the nation:

Our economic troubles, resulting from 8 years of war, are still cause for concern: factors include the dwindling of the production potential, a chronic trade deficit, the unaccustomed obstruction of channels of distribution to the detriment of production. * * * Immense mining and forest resources, essential for our growing industries, have been taken from our control, we hope, at least, temporarily. Deprived of the coalfields of Hongay and Dong Trieu, we, and the whole free world, find ourselves without any important source of thermal energy and at the same time robbed of a considerable reserve of exportable materials. * * * The reestab-

lishment of these * * * will necessitate considerable investment and cannot be achieved without difficulty and delay.

The development of a strong public administration, the raising of the economic level of a nation, are difficult tasks. The free world must cooperate wholeheartedly in achievement of the common goal which is to build a free and strong Vietnam. The president of Vietnam and the National Government are working toward peace and social progress—silently, steadily, without fanfare. In this struggle for national survival, a survival necessary to the whole Far East, Vietnam asks the understanding of its allies, and believes that "From this understanding we will draw the strength necessary to achieve a purpose which is more than just."

The Vietnamese people are very grateful for the generous help given by the United States and France and also for the aid given within the framework of the Colombo plan, by Britain, Australia, Canada, and New Zealand. They appreciate this aid fully in that it is making it possible for them to conquer communism by combatting poverty.

As one who deeply believes in freedom, democracy, and the importance of achieving a better understanding among all nations, I want to take this opportunity to wish President Ngo Dinh Diem and the people of Vietnam every success which they so richly deserve.

How To Argue With a Republican

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. METCALF. Mr. Speaker, the Democratic Party will win the coming election if it can get the facts to the American people. The following article in the May issue of the Democratic Digest presents impressive and factual refutations to some of the most commonly heard arguments made by members of the opposition:

HOW TO ARGUE WITH A REPUBLICAN

IN MILITARY MATTERS, IKE KNOWS BEST

GOP argument: "Fortunately, the man who is President of the United States is one of the greatest military leaders in the world today. He is an expert * * * and I believe that we can and that we should have confidence in his decision in [military] policy."—Vice President NIXON, March 13, 1954.

The answer: No man's judgment is infallible, no matter how expert he is, and President Eisenhower's judgment about our defense policies has been proven imperfect by his own reversals of policy in the defense field. Examples:

On March 29, 1950, less than 3 months before the Communists attacked, General Eisenhower told Congress "I have strongly urged that [$15 billion for defense] not be exceeded." He expressed his belief that we could "work out an effective defense at that level." Only a few months later, after the Korean attack Congress was appropriating $60 billion for defense—four times what General Eisenhower thought sufficient.

In 1947, as Army Chief of Staff, Eisenhower said: "The one place the current days and times we must not cut is the Air Forces." Yet in 1953 Eisenhower cut the Air Force $5.5 billion, reducing Air Force goals from 143 to 120 wings. In 1954, Eisenhower in effect admitted the error of this by increasing the Air Force budget and upping the Air Force goal to 137 wings.

WORKINGMEN AND WOMEN SHOULD SUPPORT THE GOP

GOP argument: I do not fear the participation of union leaders in the next campaign * * * they will find that union members are better off today than they have ever been in the history of unions."—Vice President NIXON, February 13, 1956.

The answer: Compare the increase in workingmen's wages versus corporation profits between 1954 and 1955:

	Percent
Corporation profits	up 28
Industry wages	up only 6
Jones & Laughlin Steel Co	up 100
Steel workers	up only 14
General Motors	up 48
Auto workers	up only 10
General Tire & Rubber Co	up 116
Rubber workers	up only 11
Monsanto Chemical Co	up 78
Chemical workers	up only 5

SURPLUSES TO BLAME FOR LOW FARM PRICES

GOP argument: "Why are farm prices low? The major reason is the tremendous farm surpluses which hang over the market."—Vice President NIXON, January 20, 1956.

The answer: Farm prices have declined drastically on commodities in which there is no Government-held surplus (such as beef cattle, which have suffered a 29-percent price drop; and hogs, which have dropped 39 percent). Therefore, surpluses are by no means the major cause of the farm slump.

What is more, farm surpluses are not as large as GOP spokesmen would have us believe. On only two commodities (cotton and wheat) was there more than an 8 months' supply in Government hands as of December 31, 1955. On other important commodities, this was the supply on hand (at 1952 rates of domestic consumption and exports):

Months and days present supply will last

Commodity:	
Corn	3 months 19 days
Butter	1 month 14 days
Oats	24 days
Rye	7 months 25 days
Rice	7 months 8 days

INFLATION HAS BEEN HALTED

GOP argument: "Inflation has been halted; the cost of living stabilized."—President Eisenhower, January 5, 1956.

The answer: The costs of many necessities of life have risen substantially under the GOP, costing United States consumers billions (see table below). The reason the over-all cost of living has been steady is the drastic 17.7-percent drop in farm prices, which has brought about a much smaller drop (3.2 percent) in food prices.

Percent price increase, 1952 to 1955:

Rent	11
Gas and electricity	6
Other fuels	5
Household operation [1]	7
Medical care	9

[1] Includes such items as furniture, kitchen appliances, laundry, telephone, and domestic services.

Total added cost to United States consumers:

Rent	$2,196,000,000
Gas and electricity	537,000,000
Other fuels	383,000,000
Household operation [1]	4,416,000,000
Medical care	1,842,000,000
Total	9,374,000,000

[1] Includes such items as furniture, kitchen appliances, laundry, telephone, and domestic services.

GOP HAS CUT GOVERNMENT SPENDING AND WASTE

GOP argument: "Government waste and extravagance were searched out. Nonessential activities were dropped. * * * Total spending was cut by $14 billion."—President Eisenhower, January 5, 1956.

The answer: Of the cuts in total Government spending between the first Eisenhower budget and the most recent GOP budget, every penny has come out of the defense budget—with the result that Air Force build-up has been delayed 2 years, and the Russians are outproducing us in many aircraft types.

Actually, the cost of civilian Government (nondefense spending) has gone up under Eisenhower (from $21.3 billion in the first GOP year to $25.5 billion in the most recent GOP budget). Even spending over which the administration has complete control—i. e. spending not fixed by law or national security requirements—has gone up under Eisenhower (from $8 billion in the first GOP year to $9 billion in the most recent GOP budget).

GOP GAVE RECORD TAX CUTS

GOP argument: "[GOP economies] made possible * * * the largest tax cut in any year in our history. Almost $7½ billion were released and every taxpayer in the country benefited."—President Eisenhower, January 5, 1956.

The answer: Of the $7.4 billion in tax cuts that took effect in 1954, $6 billion was actually enacted by a Democratic Congress before the GOP took office. And in the $1.4 billion tax-cut bill that the GOP did sponsor, the tax-relief dollar was distributed this way:

Seventy-three cents went to corporations.

Eighteen cents went to families over $5,000.

Only 9 cents went to families under $5,000.

GOP "FLEXIBLE" FARM SUPPORTS NOT YET TESTED

GOP argument: "We should not scuttle and run before the flexible price support system, advocated by Secretary Benson and President Eisenhower, has been tried out."—Senator KNOWLAND, Republican of California, October 29, 1955.

The answer: For most farm commodities, the "sliding scale" system has been in effect ever since Benson took office in 1953, and Benson has taken full advantage of it. He has lowered supports on every commodity on which he had authority to do so. The following table shows how Benson has lowered farm supports, and how this has raised production, rather than reducing it, as Benson claims it should.

Between 1952–55 price support went down

	Percent
Sorghum grain	24
Rye	17
Barley	23
Flaxseed	23
Oats	22
Soybeans	20
Milk	17

Between 1952–55 production went up

	Percent
Sorghum grain	173
Rye	75
Barley	71
Flaxseed	42
Oats	30
Soybeans	30
Milk	9

GOP ACHIEVED WAR-TO-PEACE TRANSITION WITHOUT DEPRESSION

GOP argument: "Under President Eisenhower • • • the country has passed from a wartime economy to a peacetime economy • • • a major dislocation. This economic miracle has never before been accomplished • • • in all recorded history." (Postmaster General Summerfield, October 27, 1954.)

The answer: This is hardly a peacetime economy, with defense spending higher today than it was during the height of the Korean fighting. ($40.8 billion in 1955, compared with $37.3 billion in 1951).

Moreover, after World War II, the Democrats succeeded in leading the United States through a much more drastic war-to-peace transition with less unemployment than we have today. Here are the facts:

Drop in defense spending:

	Billion
1945–47 (Democrats)	$62.6
1953–55 (Republican)	8.1

Average unemployment:

	Million
1947	2.1
1955	2.7

GOP FOREIGN POLICY HAS STRENGTH AND FIRMNESS

GOP argument: "Strength, firmness, and courage is the way to peace without surrender. And the American people want four more years of that kind of decisive leadership. (Vice President NIXON, January 20, 1956.)

The answer: Does the GOP consider Secretary of State Dulles' "three times to the brink of war" misadventure an example of "strength, firmness and courage" in foreign policy?

Does the GOP consider the recent confusion over American policy on the tank shipment to the Middle East (in which the State Department reversed its policy twice in 2 days) an example of "decisive leadership?"

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Brief History of the Oregon State Federation of Labor

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, June 22, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a most interesting historical presentation of the long annals of the Oregon State Federation of Labor which, during recent years, has celebrated its 50th anniversary.

The article, which was published in the Oregon Labor Press of June 15, 1956, was written by Kelley Loe, who served for 17 years as a member of the staff of the Oregon Federation of Labor, and prior to that was an active figure independently in the labor movement of the Pacific Northwest. Mr. Loe is a most able reporter and historian.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE FEDERATION'S COLORFUL STORY DATES FROM 1902

(By Kelley Loe)

(This brief history of the Oregon State Federation of Labor is excerpted from a longer history written for the federation's 50th anniversary convention in 1952. Its author, Kelley Loe, served for 17 years as a key member of the federation's staff prior to his retirement in April 1954.)

The birth of the Oregon State Federation of Labor on May 5, 1902, was the culmination of labor organization growth during the preceding 20 years. However, the intensive work leading to organization was in the preceding few weeks, largely through the efforts of G. Y. Harry, a sheet metalworker who became the federation's first president.

During the 1880's a number of local craft unions were formed in Oregon, most of them in Portland. In the 1890's a larger number were formed. In the late 1880's a Portland city central body was organized, largely at the urging of Samuel Gompers. This was named the Federated Trades Council.

It had a stormy career and in the 1890's an attempt was made to form a dual council, but its career was brief—probably due to the AFL frowning upon the dual movement whose sponsers' purpose was to supplant the existing council. Fragmentary evidence indicates that the backers of the new and dual movement were dissatisfied because the existing council did not meet their desire for greater political action.

The Federated Trades Council saw continued dissension even after organization of the State Federation, and in 1908 was reorganized under the name Central Labor Council of Portland and Vicinity. It consisted of subcouncils such as the building trades, metal trades, label trades, and others. Each of them then, as now, did much of their work within the section.

At the time of organizing the State federation, three other city central bodies had been organized and were represented in the organizing convention. These city central bodies were at Astoria, Baker, LaGrande, and Portland.

Agitation for organization of a State branch of the AFL was begun by Mr. Harry in 1901, first in the Portland Building Trades Council which then was regarded as the backbone of the labor movement, being the leading group in fighting for the 8-hour day, a battle that was paralleled throughout the Nation.

Organizer Harry lost no time in making good his prediction that organization could be accomplished in a short time. He went up the Willamette Valley and into eastern Oregon. Where he found an insufficient number of workers to obtain a craft charter, and that was true in most localities, he organized Federal unions, that is, unions which accept in membership a worker in any craft. Most of his organizing success was in that field, as is shown by the number of Federal unions which sent delegates to the first convention in 1902.

The Oregon experience is a glowing example of what can be accomplished by a determined man, or small group, whose vision does not include failure. Had G. Y. Harry not persisted, the Oregon Federation might not have been born for many years after 1902.

Some of the oldtimers insisted that one of the motives which kept Harry active in his agitation was his desire for political action. He was an active party man (Democrat) but the official record indicates that his first interest was in legislation beneficial to labor.

Mr. Harry declined renomination for president of the State Federation at the second convention held at LaGrande in May 1903. Verbal reports, not supported by any official records, are that partisan political considerations entered into the election of the second president of the Federation. Charles Gram a teamster who was later to serve as State labor commissioner for 24 years (1919 to 1943), was elected in 1903 and served for 5 years.

Neither the president nor the secretary received a salary for many years, being only paid for time devoted to the Federation. Many years later salaries were fixed for both officers.

First officers of the federation, in addition to President Harry, were: secretary, William H. Barry, Portland printer; treasurer, Chales Mickley, Portland tailor; vice presidents (now known as executive board members), J. F. Welch, Astoria fisherman; George Hornby, Portland longshoreman; G. F. Johnson, baker, member of a federal union, employed in county assessor's office; W. E. Miller, Salem federal union; Fred Langever, Pendleton painter.

Pictures of the first federation officers, appearing in the Oregonian and in the Labor Press, disclose that 7 of the 8 officers were bewhiskered, President Harry sporting a heavy handlebar mustache. Unfortunately the photographs cannot be obtained.

The initiative and referendum amendment to the State constitution was on the State ballot to be voted upon a month after the Oregon State federation was organized. Members of labor unions had been in the forefront, along with farm organizations promoting the amendment.

The organizing convention was unanimous in support of the amendment which was to give the citizens of the State the last word in legislative enactment. Popularity of the measure was attested when it was adopted by the voters of Oregon on June 2, 1902, by a ratio of approximately 11 to 1.

Labor, agriculture, and other groups thought the interests of the people were secure forevermore. Later it was discovered that reactionary interests would attempt to use the initiative and referendum for their own selfish ends.

The first convention also declared for nomination of party candidates for public office by primary elections, for election of United States Senators by popular vote, to abolish contract labor by prisoners, an 8-hour day by statute, regulation of public utilities, and creation of a department of labor in the State government.

The initiative and referendum was adopted in less than a month after the convention. The labor bureau was created at the session of the 1903 legislature, and direct primaries, election of United States Senators by popular vote, and the recall of public officials all were written into the State law within a few years.

Eight years later the State adopted an initiated measure known as the employers' liability law, which removed the common law defenses against personal injury claims by workers. The State federation of labor and farm organizations initated the bill by petition. In 1913 the workmen's compensation law, placed upon the ballot at a special election, was adopted.

In all this popular government trend, union labor took a leading part and was almost unanimous in its support. Labor then was voting perhaps 90 percent, as were farmers—indicating an interest in Government that has regrettably declined in recent years. Unanimity of labor voting then was effective, and when joined by farmers always prevailed in elections.

The degree to which the legislature bowed to the will of the people is further shown by enactment of a measure creating the Industrial Welfare Commission in 1913. The Commission was given power in regulating hours and wages for women and minors employed in industry.

The 1919 legislature enacted the first Oregon law specifically barring labor injunctions, prohibiting courts from granting restraining orders involving or growing out of a dispute concerning terms or conditions of employment.

Gradually the courts—or some of them—by interpretation weakened the law. Effective relief was had when in March 1933 the Oregon Legislature adopted what is known as the Little Norris-LaGuardia Act, patterned after the Federal law enacted by Congress in 1932.

A number of antistrike bills have appeared in the State legislature, but generally they have been defeated. In 1938 opponents of union labor initiated an antistrike or antilabor bill which, owing to much industrial turmoil at the time, was adopted by a majority of almost 50,000. It was invalidated by the State supreme court 2 years later, without a single attempted prosecution under its drastic provisions.

Since that time industrial relations have steadily improved until now Oregon stands in the forefront in amicable relations between employers and unions.

Antilabor measures have been introduced in almost every session of the State legisla-

ture. But in most cases labor has persuaded a majority of legislators that they were unwise. Some antiunion measures have been invalidated in appeals to the courts.

Labor has been required to fight a two-front battle—one for the enactment of beneficial legislation and the other a defensive fight to prevent enactment of legislation discriminatory against labor.

The State federation was the first organization to officially state its opposition to the general retail sales tax and has been the leader, along with progressive farm organizations, in defeating the sales tax in five elections.

Membership in Oregon labor unions has increased 1,700 percent since the first convention of the State Federation of Labor, from an estimated 12,000 in 1902 to more than 200,000 today.

This growth in membership is paralleled by an increase in the number of local unions. Oregon had 77 local unions in 1902; it has more than 600 today.

But numerical growth is not the only factor showing labor's gains. Wage increases, both in dollars and in buying power, also reflect labor achievement.

In 1902 the average wage in all union crafts was $3 per day. Most men worked 10 hours a day and 6 days a week—and premium pay for overtime was unheard of. Most union craftsmen were glad to take home $18 for a 60-hour week.

WHO'S WHO SINCE 1902

Since its founding in 1902, the Oregon State Federation of Labor has elected these men as its top officers and has held its conventions in these cities:

Year	Convention city	President	Secretary
1902	Portland	O. Y. Harry	William H. Barry.
1903	LaGrande	C. H. Gram	George E. Shaver.
1904	Oregon City	do	Do.
1905	Portland	do	H. G. Kundret.
1907	do	do	W. E. Ritschke.
			T. M. Leabo.
1908	Astoria	do	James F. Cassidy.
1909	Salem	Will Daly	Do.

Address By Hon. Alexander Wiley, of Wisconsin, to the National Association of Plumbing Contractors

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. WILEY. Mr. President, during my recent tour throughout Wisconsin, I was pleased to address a splendid organization which is a pillar of the United States construction industry. I refer to the National Association of Plumbing Contractors.

I was glad to refer, in the course of my remarks, to the importance of labor management teamwork in realizing the highest possible goal for United States construction.

It was a pleasure to praise one of the outstanding leaders of this industry, another man with deep roots in my own State, the able president of the Plumbing Contractors, Mr. Peter T. Schoeman. I ask unanimous consent that excerpts from my address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS UNITED STATES GOLDEN AGE IS HERE—URGES UPGRADING OF AMERICA'S HOMES TO CREATE INFINITELY BROADER MARKET

(Excerpts from address by Senator WILEY to the National Association of Plumbing Contractors convention at Milwaukee on Tuesday, June 12, 1956)

I am delighted to attend your outstanding convention—the greatest in history.

It is a particular pleasure for me to add my personal word of gratification that you have honored America's vacation land, Wisconsin, by meeting here in this great convention city.

I hope that you have been enjoying the opportunity to see all you can of this great port city, and that you will be seeing more of the Badger State, as well.

ENJOYING LIFE'S GOOD THINGS

Why? Because to do so is to enjoy more of the good things of life—wholesome leisure in pleasant, attractive surroundings. And that is precisely my theme to you this morning: America's enjoying more of life's good things.

This great country of ours has entered upon its true golden age—an age where Mr. and Mrs. Average Man are going to enjoy a better home, broader comforts, more stable security than they have ever known before.

Of course, no one can foresee through the veil of the future. A grim cloud can appear on our national horizon—such as that cast by the illness of our great President. But with God's help, all will be well.

My theme is that the motto of America can well be "Future unlimited" if we but choose to make it so, if we but use our God-given ingenuity and understanding, if there be genuine and continuing labor-management teamwork in fact and in spirit.

TRIBUTE TO BUILDING LABOR

I am delighted that among our honored guests is, of course, the distinguished president of the plumbers' union, Mr. Peter T. Schoeman, a former Milwaukeean, as you know.

Pete Schoeman is truly representative of the highest type of leader of American organized labor. We are proud of him and of other leading representatives of the officers and rank and file of the building trades. They constitute a traditional cornerstone of the labor movement. They are builders in every sense of the word—literally and figuratively—skilled builders side by side with the skilled building and repairing contractors in this vast audience.

It is you who are—day in and day out—truly building, you who are contributing to almost every structure that extends below the surface and silhouettes against the prairies or the villages or the skylines of our Nation.

CONSTRUCTION—KEYSTONE IN ECONOMY

The building industry, as you well know, has become an ever more important keystone in our expanding American economy.

"As the construction industry goes, so goes America." Not only home construction but also as home repair and home improvement go—as factory repair and improvement and expansion go, so goes America.

Our whole vast economy, with its $400 billion total of goods and services, pulsates with the beat—the tempo—of the huge construction industry.

MODERNIZE 12 MONTHS A YEAR

The month of August, as you know, is designated Plumbing, Heating, and Cooling Month.

But I would like—as you would like—August to be just the start of a year-long forward surge of modernized plumbing, heating and cooling for our country.

This is the challenge confronting us.

The building of new homes, improvement of older houses, the needed expansion of industry, the construction of nonresidential buildings such as churches, schools, office buildings; hospitals, playgrounds, hotels, motels, restaurants: All of this is a tremendous opportunity, a new and bigger market for your sales and service.

SIZABLE ESTIMATES FOR 1956

It means more jobs, more pay envelopes, more expansion of companies, a greater income for more people.

As you know, there were about 1.3 million houses built last year. It is expected there will be slightly less, but still, perhaps, a million two hundred thousand houses erected in 1956.

I'd like to see that total topped. It can be topped, if we pursue the right governmental and private policies.

As for improvement on homes, the estimated goals range between $10 billion and $12 billion in total value annually.

The potential for new commercial and other nonresidential construction ranges up to $15 billion.

These amount to a significant proportion of our whole economy.

CHANGING THE FACE OF AMERICA

Residential construction has, of course, long been our No. 1 interest.

The pattern of America has almost been revolutionized by the new type of suburban living. Whole new developments—whole new shopping centers—whole new towns, have almost completely changed the face of many countrysides.

But even in the center of cities, as you know, modernization programs have been changing the face of America.

For homemakers, modernization means better living in many ways:

1. Extra space by finishing off basements and attics, enclosing porches, and utilizing other unused areas.

2. More efficient and more comfortable heating and cooling systems.

3. Remodeling for improved beauty and greater livability.

THE BEST HOUSED PEOPLE ON EARTH

We are all rightly proud of the trend. We're proud of the free enterprise system which has shot up the percentage of individual home ownership to more than 55 percent, making ours the best housed people on earth.

SHOCKING CONDITIONS FACING SOME HOMEMAKERS

Unhappily, however, it is necessary to point out some disturbing conditions in American homemaking.

Of more than 50 million homes in our great country almost 10 million are in slum areas; more than 20 million are in need of repair and improvements.

According to a recent survey, about 40 percent of homeowners actually spend nothing—I repeat, nothing—on home maintenance and improvements.

To illustrate, I cite these familiar statistics: 13 million homes have no bathtubs or showers; 7 million have no kitchen sinks; 7 million have no running water.

This is the challenge:

Of course, a considerable proportion of these statistics are represented in some depressed areas. Fortunately, these areas are relatively few in number; fortunately, we are making progress in revitalizing them.

But we Americans, however, proud of our past accomplishments, rightly proud, I may say—we are, nevertheless, realistic, and we are not going to just rest on our laurels. We are going to roll up our sleeves and go to work—harder than ever before.

We Americans are never 100 percent satisfied. We are a restless, dynamic people. We are constantly seeking new horizons, new and higher goals. This is our natural talent—our natural genius—improve, improve, improve.

SUPERSALESMANSHIP NEEDED

To attain our goals for peak home improvement is going to require a tremendous selling job. This does not mean, of course, high-pressure salesmanship.

Instead, it requires bringing the facts of the situation and the knowledge of opportunity to American homemakers.

If we succeed, the effect will be better living for all our American families.

Our objective, of course, is to raise the American standard of living to a higher plateau—even though our standard is presently the highest in the world of any major power.

ENTERPRISE NEEDED FOR ALL TO BENEFIT

To achieve our goal will require a renewed display of imaginative and enterprising work, public relations, and service, such as you yourselves have demonstrated.

The result, however, will be for the benefit of everybody.

1. For every plumber and plumbing contractor in the country:

2. For the suppliers, manufacturers, retailers, distributors, the transporters, and others;

3. For home owners;

4. For industry and manufacturers; and

5. For the overall economic well-being of our great country.

Fortunately, your United States Congress is helping.

NEW HOUSING LEGISLATION

As you are aware, the Senate recently passed the Housing Act amendments for 1956. This is an important step toward providing homes for more people. The principal features of this extension of the Housing Act are:

1. Extend home improvements and repair loans until September 30, 1959.

2. Increase the loan maximum from $2,500 to $3,500.

3. Extend the repayment period from 3 years to 5 years.

4. Increase FHA mortgage insurance authority by about $1 billion.

5. Gives more favorable terms to provide housing for elderly persons.

6. Provide for slum clearance and urban renewal. Increasing authorization from $200 million to $250 million for 1956.

7. One year extension of FHA home loan program. (I had personally introduced a bill for longer extension of this splendid program, but I'll settle temporarily for 1-year extension.)

These important features need to be brought to the homemakers of the Nation.

The bill, of course, now goes before the House of Representatives to be acted upon. If enacted—and it should be—this will be a boon to our economy.

AVOID EXTREMES OF INFLATION AND DEFLATION

Inevitably, when one discusses the construction topic, we come full face with the issue of our national credit policy. As we are all aware, America has faced a twin problem at opposite extremes—how to avoid the evil of inflation, on the one hand, and how to avoid the evil of deflation, on the other hand.

Fortunately, the value of the dollar has been relatively stabilized following years of of depreciation.

Now, however, a great many of us are inclined to feel that the antiinflation brakes may have been put on too hard on our economy, by the Federal Reserve Board. There is at present too much of a credit pinch—too much of a deflationary tendency.

No thinking person wants overly loose credit, wild speculative credit. None of us wants to see the average American get so deeply into debt that he became hopelessly swamped with bills, bills, bills.

We want sound credit. But we want ample credit.

I personally am inclined to feel that a liberalization of credit is in order. At the same time, we must maintain constant caution to prevent the sort of loose practices which can lead to default on personal or company debts.

SMALL-BUSINESS CREDIT PROBLEM

The credit problem of many small-business men has, as you know, become particularly acute. Many a small man simply cannot get sufficient bank or other credit at attractive terms.

Yet, all America, of course, is or should be aware of the indispensable contributions of our 14 million small-business concerns—particularly those in the construction industry.

A symbol of our free enterprise system, the small-business men is basic not only to the economic well being, but to the stability of our Nation.

In view of his importance, it is imperative that we provide the "economic climate" in which the small-business man may prosper and expand his operation.

SMALL BUSINESS COMMISSION

Wisely, the President has recently appointed a seven-man Commission for the purpose of keeping in touch with the problems of small business.

The primary responsibility of the Commission is to recommend both administrative action and new legislation to resolve problems faced by small business.

The main factors to be considered by the Commission include the following:

Loans and defense contract assistance provided by the Small Business Administration;

Antitrust enforcement by the Justice Department;

Various managerial and technical aids available from the Commerce Department;

Efforts by the Office of Defense Mobilization to strengthen the productive potential of small firms in our defense program, and helping small business in the housing field.

These are sound objectives.

ANTIMONOPOLY ACTION IN CONGRESS

One continuing threat to the future of small business is monopoly and monopolistic practices. More and more, small business is being faced with competition from chains, merged corporations and big business in general.

As you may know, I am a member of the Senate Judiciary Committee. Currently, we are examining proposals for protecting the small-business man.

Many people feel that the recent increase in corporate mergers may jeopardize somewhat the freedom with which the small-business man may operate. So, our monopoly subcommittee is considering, among other matters, the problem of mergers, as well as diverse monopolistic practices as they affect the free economy of our Nation.

Our objective, of course, is to determine legislative action which is necessary to provide a fair competitive climate for the small-business man.

PROGRAM FOR 1956

Meanwhile, our large job—our overall job—is to blueprint a program that will pave the way for full speed ahead progress. The objectives of this program are to:

1. Provide and preserve a fair competitive environment for the small-business man.

2. Continue to assist the small-business man with access to financing, technical guidance, and other aids.

3. Continue the VA home and FHA loan programs to provide better homes for more Americans.

4. Make a thorough study of reserve material—to avert shutdowns due to shortage of building materials.

5. Assist in "selling" the "Better Living for More Americans" theme to all America.

6. Provide more adequate homes for our elder citizens.

7. Meet the needs of business and industry expansion—relative to erection of more factories, machine shops, service buildings, and other construction.

8. Enact tax relief for small-businessmen. I recently joined in cosponsoring such a bill.

9. Provide ample credit to enable businesses to operate at maximum efficiency.

10. Expand the program of nonresidential buildings, churches, schools, and other construction.

The new Federal-State highway law will be a tremendous boost. It will involve $37 billion in road work over a 13-year period. And this, in turn, should mean a vast amount of new buildings alongside the roads as well.

SPOTTY UNEMPLOYMENT IN UNITED STATES

I said, at the outset, that we have entered into a "golden age." I firmly believe this.

But I am a realist, not a Pollyanna. I do not wear rose-colored glasses.

We all know that there are trouble spots here and there.

In the State of Wisconsin, we have hit a few bumps in the road, particularly in auto-producing centers and in areas where farm implements are manufactured, as well as in some other places.

Coming as you do from the 48 States, you know that here and there, some of your own State's industries have had to cut back, and there is unemployment and shrinking of purchasing power.

Meanwhile, our American productivity is so enormous—our mass producing of washing machines, air conditioners, dryers, and all the other vast variety of appliances is constantly growing to such an extent that, inevitably, we must open up whole new markets, if we are to absorb the productivity.

I think we can do so. In fact, we must do so.

MORE MIDDLE CLASS AMERICANS

Fortunately, the record of the past few years shows that more and more Americans are graduating upward into the middle class. That means more people who want better home heating and who want air conditioning and other essential features of comfortable living.

The so-called lower income brackets are shrinking in percentage of the total population. And the percentage of our people who are in what we call the middle class is increasing.

But if ever there was a country which is truly "classless", it is ours.

That does not mean that there cannot be a wide difference of income, because obviously there is.

But it does mean that ours is a ladder-of-success society. A man of humblest origin can rise from his shirtsleeves and can accumulate considerable means by his own hard work.

It is my task as a legislator to keep our society this way. I want to keep it expanding, dynamic, rather than to see it become frigid, frozen—with people unable to climb up the ladder of success.

To do so, we must, of course, have a sound tax system, a sound credit policy, sound labor-management teamwork.

And we must have a government which gives overall encouragement to you and your associates in serving America's expanding needs.

CONCLUSION

It has been a great pleasure to be with you today. I hope that when you return to your States you will carry with you the most pleasant memories of this convention. And I hope that the day will not be long distant when you will return to the Badger State.

Age Analysis of Members of Airline Pilots' Association

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, June 22, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent that, for the information of Senators and the country, I may be allowed to have printed in the Appendix of the RECORD a table showing an age analysis of all apprentice, active, executive, inactive, and executive active members of the Airline Pilots' Association. This material was furnished me by Mr. Larry Cates, Washington representative of the Airline Pilots' Association. I think it will be of interest to the Nation.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Airline Pilots Association age analysis of all apprentice, active, executive inactive, and executive active members, Mar. 15, 1956

Year of birth	Age	Number of members	Accumulated total (older than)	Percentage	Accumulated total (younger than)	Percentage	Weighted age
1892	64	1	1	0.01	10,788	100.00	64
1893	63		1	.01	10,787	99.99	0
1894	62	3	4	.04	10,787	99.99	186
1895	61	5	9	.08	10,784	99.96	305
1896	60	12	21	.19	10,779	99.92	720
1897	59	3	24	.22	10,767	99.81	177
1898	58	14	38	.35	10,764	99.78	812
1899	57	15	53	.49	10,750	99.65	855
1900	56	35	88	.82	10,735	99.51	1,960
1901	55	13	101	.94	10,700	99.18	715
1902	54	28	129	1.20	10,687	99.06	1,512
1903	53	37	166	1.54	10,659	98.80	1,961
1904	52	43	209	1.94	10,622	98.46	2,236
1905	51	65	274	2.54	10,579	98.06	3,315
1906	50	85	359	3.33	10,514	97.46	4,250

Federal-Aid Highway Construction Program

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, June 22, 1956

Mr. MARTIN of Pennsylvania. Mr. President, the new road bill will increase the taxes of Americans more than a billion dollars a year during the next 16 years.

The Wall Street Journal discusses the matter in today's issue in an editorial, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE STICKING POINT

When the conferees between the House and the Senate took up the new highway construction bill they quickly agreed to pay out $27.7 billion of Federal funds over the next decade or so. Then they stuck on the point of how to pay for these roads.

Of course, with Congressmen and Senators this familiar sticky point is usually got over, given enough political push, just as it was yesterday. The House-Senate conferees agreed to pay for these roads by boosting the road taxes you already pay.

Still, there is a touch of symbolism in this momentary boggle over the bill. It is refreshing that the Congressmen should pause. It would be even more refreshing if the pause should make them reflect.

Whenever anyone claims that the country could use more roads or schools or houses or hospitals than we happen to have, he is usually stating an almost self-evident proposition. In any event, only a curmudgeon would argue that the country ought not to build more schools or hospitals.

But it surely ought not to make a curmudgeon out of a man if he pauses over the question of how to pay for these things. A nation no more than a man has unlimited resources; the real problem is how best to use those resources to get the most from them.

Take road construction. The United States has without question the finest road system of any country in the world. These roads have been built almost entirely by State efforts; Federal funds have been a drop in the bucket. Yet now somebody says we need even more roads—which is probably true enough—and right away Congress thinks it has got to vote billions of Federal funds or the roads won't get built.

But the Federal funds, of course, have to be supplied by the people and businesses of the several States; there's no other source. That means more Federal taxes. That, in turn, means less tax resources for the States. That means the people in many States will have less money for other things they would like to do—building hospitals, for instance.

The higher taxes also mean the citizens themselves will have less money of their own—for building their own houses, for example, or paying for a new addition to a local school. As the Federal budget grows bigger and bigger, the taxes grow larger and larger, and the squeeze on everybody gets tighter and tighter.

This is not an imaginary squeeze. Local school boards and local hospitals are already caught by it. Many a man in the lower income brackets can no longer provide for his own old age because the Government is taking his money away from him to spend for what it thinks he needs.

Well, the Federal Government is going ahead with this multi-billion-dollar road program. When they get built we will be happy to ride on them, if by that time we can afford to. In spite of our arteries we will always welcome new schools, and because of them we'll welcome more and better hospitals. Like others, we are always pleased to see more of all good things.

But we are also pleased to see even a small pause at the sticking point. For the man who doesn't reflect on how he's going to pay for all these things, soon or late finds he can't pay for any of them.

Report by Director of International Rescue Committee, Saigon

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most informative report made to the board of directors, International Rescue Committee, for the month of April, by R. MacAlister, director, International Rescue Committee, Saigon.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

INTERNATIONAL RESCUE COMMITTEE,
New York, N. Y., May 12, 1956.

To: Board of directors, IRC.
From: R. MacAlister, director, IRC, Saigon.
Subject: Report to board for month of April.

I gather from the American newspapers and magazines, which I am able to get here in Saigon, that there is currently a great deal of discussion in our country about foreign aid. Because I feel that this is a vitally important subject for all of us, I am going to digress this month from my usual practice of giving you a factual report about IRC activities in Vietnam. Instead I should like to take this opportunity to discuss the human side of foreign aid. I will use Asia for the purpose of my discussion, since this is the area I know best.

America's position in Asia is an ironic one today. Never before in history has any nation spent so much on foreign aid. Even so, we find ourselves becoming increasingly disliked. Why is this? I can offer no simple answer, because America's position in the world today is a complex one; and certainly Asia presents a panorama of vast complicated societies.

However, on the basis of extensive travel, and having lived for almost 4 years in this part of the world, I definitely feel that one of the major reasons we are disliked and misunderstood is because our aid has not been human enough. We—the most generous nation in the history of the world—have been selling ourselves short. We have spent millions of dollars on propaganda alone to impress on Asians that the main reason we are helping them is because of the Communist threat. In stressing primarily the negative aspect of our aid, we have played into the hands of the Communists. This was bad enough as long as the open aggression policy of Stalin was evident. However, with the coming of Bulganin and Khrushchev's sweetness and light, our continued stress on negatives becomes a policy of national suicide for us in Asia.

Picture, gentlemen, the vast areas of poverty, squalor, and ignorance which exist on this continent. Picture sick and undernourished men, women, and children. Picture new nations who are determined to rise from the degradation of the past. We have sent aid to these people—yes—but what in essence do many of the pronouncements of the legislative and executive branches of our Government tell them. In essence we continually tell them, "the main reason we are helping you is because of communism." Sensitive Asians are quick to grasp the corollary of this approach; namely, "if it were not for communism Asia could live in misery." There are, of course, plenty of Communist propagandists just waiting to seize on such negative remarks of our leaders and use them for their own destructive ends. Naturally, those who are poor, those who suffer from malnutrition, those who are sick will take our aid; but it should be quite evident by now that offering help on a negative basis doesn't build good will and understanding for us.

What a tragedy that Khrushchev and Bulganin, the products of one of the most destructive systems ever known to man, should be able to march into Asia and proclaim, "We come as brothers to help you because communism believes in the brotherhood of man." Please recall that they have never said, "We come to help you because we are against the Americans." Once again we find ourselves on the defensive, when we, of all peoples, should be on the offensive, when it comes to demonstrating our concern for human beings.

You and I know that we are a most generous people. You and I know that we don't like to see people go hungry or be sick. You and I know that as a Nation which was once a colony, we feel a warm kinship with the newly independent countries of the world. Why then don't we say so more often? Why not export the best ideals of America—the positive force that has made our country great?

You have the most successful example of what I am talking about in the Philippines. For 50 years we built up the Philippines not because we were against communism, but because we felt a responsibility toward the Philippine people themselves as human beings. What is the result? We have one of the stanchest allies in the world. Moreover, the Philippines really like us. We have our differences but the Philippines are not neutralist, there is no great anti-American sentiment and they are the most thoroughly democratic country in Asia. I am not proposing that we try actually to administer all of Asia as we did the Philippines. Those days are gone forever. I do propose that without attempting to assume political control of Asian countries, we announce loudly our feeling of responsibility for the human beings of Asia, not because we are against communism but because we are for democracy and the dignity of the individual. If we worry more about stressing democracy, human kindness and the dignity of the individual when explaining our aid we can afford to worry less about communism.

To cite the Philippines again, I believe that the minor deterioration which has taken place in our relations recently is partly due to the fact that we now stress, all too often, that our assistance to the Philippines is on an anti-Communist basis rather than because of a personal interest in the Philippines as human beings.

I realize that our burdens are heavy, but even if we keep our aid on the scale on which it now operates, let's use it to make friends. Let us stress the human side. Even better, let us seriously consider our Government going to the American people and requesting funds for a great worldwide crusade against sickness, hunger, illiteracy, poverty, etc. Perhaps it can't be done; but America is known for its willingness to try new ideas. Let us at least make the attempt. If in the presentation of this request the American people are shown pictures of hungry people, sick people, poverty-stricken people, I think they will respond as they always have. We cannot support the world, but we can help it to become self-supporting.

As I stated in the beginning of this letter, the question of foreign aid and all of its ramifications are most complex. Naturally, I would never contend that the basic approach which I advocate can be divorced completely from economic, political, and social factors. In other words, in stressing the human approach I do not believe that it is a panacea for all of the problems which confront us in Asia. Nor would I maintain that the human approach would make every Asian avidly pro-American. Neither would it convince every Asian nation to join SEATO or always vote on our side in the U. N.

However, I do feel that the human approach would go a long way toward stemming the growing tide of anti-Americanism in this area today, preserve the true independence of these new nations and provide our country with a wonderful opportunity to demonstrate what we really believe in, thus building for us a solid relationship based on mutual respect and confidence with our Asia friends.

I do not worry about disagreement on policies which arise among nations who have mutual understanding and confidence for each other. However, thinking in terms of the present and the future, I am frightened when I see over half the people of this world disagreeing with us because of a basic lack of understanding and confidence coupled in some cases with downright distrust of us. If this situation is not corrected, the consequence could be extremely grave for America as a nation and for all that we stand for.

Before I close, let me spend a short time on IRC. Private voluntary organizations like IRC are the essence of the human approach. We can become personal as Government never can. In our work here I have been stressing the fact that IRC's presence in Vietnam is not only motivated by our antitotalitarian interests but by the direct personal concern of individual human Americans for individual human Vietnamese. Financially, we are a drop in the bucket compared to Government aid but our influence in human relations is multiplied many times in proportion to our economic resources. Because of all that I have written previously, I hope you will agree with me that IRC must certainly stay in Vietnam.

I would like to make it clear that I do not intend this to be a report. In my opinion, both the Democratic and Republican administrations have been guilty of negativism in the fields of foreign aid. Above all, this is a subject so vital that in no sense should it become a political football for narrow purpose.

Faithfully yours,

ROBERT J. MACALISTER,
Director.

Reaching the Russians

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the New York Times from Dr. Charles Wesley Lowry, former pastor of the Chevy Chase Episcopal Church. The letter is dated June 5, 1956, and was published in the New York Times of June 10, 1956, under the headline "Reaching the Russians." I ask also to have printed in the Appendix of the RECORD a brief personal history of Dr. Charles Wesley LOWRY.

There being no objection, the letter and history were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 10, 1956]

REACHING THE RUSSIANS—AID AND ENCOURAGEMENT FOR PEOPLES SUBJUGATED BY SOVIET URGED

(The writer of the following letter, an Episcopal theologian and author, now is chairman and executive director of the nonsectarian Foundation for Religious Action in the Social and Civil Order.)

To the EDITOR OF THE NEW YORK TIMES:

I have just read your editorial, Khrushchev on Stalin, in your issue of June 5.

May I especially compliment you upon the insight and strength of your key sentences:

"The essence of the matter is that the real defendant before the bar of history is not Stalin or the Stalinist group. The real defendant, the real culprit, is the Communist ideology itself."

In these words you put your finger unerringly upon the central issue of our epoch. It is of the utmost importance that intelligent citizens of the free world everywhere see this and hold fast to it at the present dangerous moment when the successors of Stalin are attempting to use his degradation as a propaganda ladder on which to hoist Lenin and Marxism-Leninism to new heights of glory and promise for the future.

It was the greatest of all Russians, Feodor Dostoievsky, who said: "To be a genuine Russian means to become the blood brother of all human beings."

BETRAYAL OF MULTITUDE

This beautiful declaration points to the great betrayal of our time, the betrayal of the Russian people and of the hopes and dreams of the hungry and thirsty multitudes of the 20th century. It is a betrayal which cannot be foisted on the demigod whose body rests in state beside that of Lenin, but whose ghost will not so easily be confined to a solitary perdition.

In some sense this massive and shattering betrayal of man goes back more than 100 years to the thoughts and acts of will of the premier architects of totalitarianism, Marx and Engels. These apostles of universal revolutionary violence dismissed religion as "the opium of the people," asserted that the Judaeo-Christian ethic of justice, mercy, and love was a rationalization of outmoded property relationships and branded the principles of traditional jurisprudence as "only economic reflexes" (Engels).

In a nearly absolute sense the great betrayal lies at the door of Lenin, the first and foremost exemplar of 20th century totalitarianism in theory and practice. At an early stage of the bloody and chaotic period which followed the "October Revolution" of 1917 colleagues took Lenin to task for spilling so much Russian blood. With perfect consistency this emancipated son of the great Mother Russia replied: "It isn't a question of Russia at all, gentlemen. I spit on Russia. * * * This is merely one phase through which we pass on the way to a world revolution."

RESPONSIBILITY OF WEST

In a real sense, also, the betrayal of which we speak and the agony of man in our period are realities in which we of the West have a responsibility. I well remember encountering more than two decades ago Albert Schweitzer's account in his autobiography of his realization well before the end of the 19th century that something had happened to the moral and spiritual foundations of civilization.

Out of moral decline and spiritual poverty world war was born, followed by the totalitarian political religions. A Lenin, a Hitler, a Stalin, a Perón became possible. The hollow and deceitful lament of a Khrushchev became possible. Still more ominous—it became possible that such a gesture might take in a large part of a globally unified and interrelated world. This is a real and present danger—it is by no means imaginary.

For such a situation no people is without blame, and no educated, knowledgeable person is without responsibility. But this also means that there is a way out. There is a solution. This solution is a quickening of conscience on a world scale; it is a new universal realization that knowledge and science are not enough and can never by themselves create a great civilization. Civilization requires at its heart a profound sense that the ethical perfecting of the individual and society matters.

America at her best believes this and would confess this as her democratic faith. The hope of a better world lies in a more sincere practice on our part of this faith and a more effective witness to it by word and deed before other nations and peoples.

MESSAGE OF TRUST

May it not be, also, that the time is now ripe for conveying to the Russian people over the heads of the Kremlin oligarchy this message and our trust that the country which could produce a Dostoievsky and a Tolstoy has a unique and decisive contribution to make to a new and finer age?

There are not a few signs that the people of the Soviet Union are mentally and spiritually very hungry. This hunger and the realization still more poignantly of the monstrous baseness and evil of the Communist system, as a result of the Khrushchev accusation and confession, present a priceless opportunity if we have the wit, the imagination and the humanity to offer this long-suffering people bread and not a stone.

This "bread," I suggest, is the aid and encouragement that our Government and private organizations should give to the Russian people (great Russians as well as others) to seek freedom and self-government. Such an approach will make an indispensable contribution to the rebirth of man under God and the renewal in a global setting of humane civilization.

CHARLES WESLEY LOWRY.

WASHINGTON, June 5, 1956.

PERSONAL HISTORY: DR. CHARLES WESLEY LOWRY

Dr. Charles Wesley Lowry was born in 1905 in Indian Territory (now Oklahoma). After attending the public schools of Oklahoma, he received his B. A. degree from Washington and Lee, his M. A. from Harvard, his B. D. from Episcopal Theological School, Cambridge, and, January 1933, his Ph. D. from Oxford.

On his return to the United States, Dr. Lowry became Episcopal chaplain at the University of California, Berkeley, and lecturer in theology in the Church Divinity School and the Pacific School of Religion.

In 1934 he became a professor of theology at the Virginia Theological Seminary, Alexandria. In 1943 he became rector of All Saints' Church, Chevy Chase, Washington, D. C. Since 1943, he has been a stated lecturer at Virginia Theological Seminary, General Theological Seminary, and Philadelphia Divinity School. In 1937, 1939, and 1950 he attended ecumenical conferences in Great Britain, Holland, Switzerland, and France. In 1949–50 he was vice president of the American Theological Society and is at present treasurer of this society.

In 1952, Dr. Lowry was sent abroad by the State Department to represent the United States at the first International Convention on Peace and Christian Civilization in Florence, Italy. Here in the famed Palazzo Vecchio he lectured on The Present State of Christian Civilization.

He resigned his rectorship in 1953 to concentrate in the field of religion and public affairs with special reference to the philosophy and psychology of communism and the need for a spiritual revitalization of democracy. That same year he became a special consultant to the Administrator of Federal Civil Defense and, with Dr. Edward L. R. Elson, minister, National Presbyterian Church, as cochairman, established in Washington the Foundation for Religious Action in the Social and Civil Order.

Dr. Lowry is widely known as an author and a lecturer. His books include the internationally famous Communism and Christ (now in its fourth printing); The Trinity and Christian Devotion (1946), a joint Lent selection of the archbishop of Canterbury and the presiding bishop of the American Episcopal Church; and Anglican Evangelicalism (1943; with others). Among his special monographs and studies are Conflicting Faiths (1953), Where Is the Conscience of the West? (1953), Christianity and Materialism (1948), and Origen As Trinitarian (Journal of Theological Studies, 1936). He has been a contributor to numerous volumes, including 18 articles in the Encyclopedia of Religion (Ed., Ferm, 1945), and to various periodicals.

Dr. Lowry has lectured extensively throughout his professional life. More recently he has concentrated on the general theme of Communism, Christianity, and Democracy. During the past 3 years he has lectured in numerous universities and colleges, at the Air War College, the Naval War College, and the Pentagon, and in many American cities and towns under varied auspices.

Dr. Lowry is a Rotarian and is Protestant chaplain of the Variety Club of Washington.

Political Propaganda About the Health of President Eisenhower

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. JENNER. Mr. President, on behalf of my colleague, the senior Senator from Indiana [Mr. CAPEHART], I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, appearing in the Washington Star of June 21, 1956; and an editorial which appeared in the Indianapolis News of June 20, 1956, on the sub-

ject of political propaganda about the health of President Eisenhower.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Star of June 21, 1956]

ATTACKING AN AILING PRESIDENT—TREATMENT OF EISENHOWER BY DEMOCRATS CONTRASTED TO RESTRAINT ON ROOSEVELT

(By David Lawrence)

When Presidential Secretary James Hagerty said he wasn't going to engage in a debate with newsmen on what some doctors have been quoted in the press as saying about the President's illness because, as he points out, they don't know this particular case, it was, of course, a commonsense decision.

There is a certain puzzlement, however, as to why there are such persistent attempts in the press to try to knock down what the President's physicians have said.

It's a strange contrast to the way the press behaved from the time Franklin D. Roosevelt became a candidate for the Presidency in 1932 till the day he died in April 1945. Not a single movie newsreel and not a single news photograph that this correspondent ever saw or heard about told the people that the President of the United States actually couldn't walk, that special ramps had to be built at the White House and the Capitol, that he couldn't stand when greeting foreign visitors, or that he never stood up at a single press conference. When he campaigned, his entrances to and exits from meeting places were carefully screened.

None of the news dispatches of the President's inauguration on January 20, 1945, moreover, reported that Roosevelt had to be lifted up by members of his family and supported while he took the oath of office and read the inaugural address from the White House balcony. There was no adverse comment on why he didn't go to the Capitol for the occasion.

Throughout Roosevelt's public life—as Governor of New York and as a candidate for the Presidency and while he was in the White House during a period of more than 12 years—no appreciable number of the American people ever knew of the physical disability of the man they elected four times. Some newsmen hereabouts were told in 1944 about the comment of an eminent Boston physician that a paralysis such as Roosevelt had suffered would cut down his life expectancy. But they didn't write the story.

Was this a mistake on the part of the press and its photographers? Not at all. It was good taste and decency. It was a respect for the high office of the President. The only question that was germane then and that is germane now is whether a President is mentally capable. A man with the type of heart attack Eisenhower has had doesn't suffer any injury to his mind—and neither does anyone with his experience with ileitis.

Then why is so much prominence given to the speculation by 1 or 2 doctors that the illness might recur, when the doctors handling the case say they believe it will not recur? Why is there so much emphasis on the alleged damage of the stomach ailment expressed by Democratic politicians and their henchmen who keep on thinking up every day new angles for skepticism?

The theory usually heard in defense of such tactics is that the American people are entitled to all the facts about their President. They certainly are, but the implication that, when once they know the facts, they will not vote to reelect Eisenhower is just partisan thinking of a wishful nature.

The best refutation of the theory that the American electorate will not elect a man with a physical handicap is the way the people reacted toward Franklin Roosevelt. Does anybody who is an admirer of Roosevelt really believe that, if his ardent supporters throughout the country had known in November 1944 that Roosevelt was not a well man, they would have refused to elect him and would have voted for Dewey? Did the people know whether an obscure Senator from Missouri who had been nominated for Vice President would make a good President?

It will be said in reply that, of course, there was a war on then. But today there's a crisis almost as important to the world—the maneuvers of the cold war and the threat of world war III.

The electorate naturally will discuss a candidate's health whenever the opposition party spokesmen bring it up. But looking back to 1944 and assuming that the Republicans had had the bad manners and bad taste being exhibited today by the Democrats, few persons who have studied the trends in presidential elections will agree that this would have elected Thomas E. Dewey.

Restraint is better in the long run than smear campaigns which violate the Nation's sense of decency. Attempts to picture Eisenhower as a hopeless invalid or to imply that he isn't carrying on the duties of this office because he doesn't do everything the partisans want him to do are bound in the end to lose votes for their sponsors. The American people react to wrong tactics because they have an innate belief in fair play.

[From the Indianapolis News of June 20, 1956]

PLAYING CYNICAL POLITICS WITH THE PRESIDENT'S HEALTH

President Eisenhower isn't the only one who is sick.

We—and surely millions of Americans—also are sick. Sick of the way some Democratic leaders are trying to make it appear doctors are in some sort of conspiracy to force an unfit man on the people for a second term as President.

This propaganda movement, obviously aimed at bringing about Mr. Eisenhower's withdrawal from the presidential race, is headed by Democratic National Chairman Paul Butler, of South Bend.

It was joined yesterday by Representative RAY MADDEN, Democrat, Indiana.

Mr. MADDEN even dragged in the American Medical Association and its own propaganda movement against socialized medicine.

Just what that has to do with Mr. Eisenhower's physical fitness for another term is beyond our understanding.

The only medical voices that should be heeded are those of the doctors who have treated or examined President Eisenhower. In response to sharp questioning from the press—not in volunteered comment—these doctors have expressed belief Mr. Eisenhower should be well enough to serve again.

But Mr. Butler has complained about the doctors "inventing a new science—political medical science." Seemingly, he would be satisfied with nothing less from them than a pronouncement that Mr. Eisenhower should not run again.

And there appears to have been some Democratic shopping around for doctors who have not examined the President but who will say, at least in effect, he should retire.

Actually, the White House staff has bent over backward to spread the facts about the President's health before the people.

Yesterday, in response to further questioning by reporters, the President's doctors reaffirmed their opinion that he is physically able to run for reelection despite his recent operation. Maj. Gen. Howard M. Snyder, the President's personal physician, emphasized that politics had nothing to do with their opinion. "We can't recognize a Democrat from a Republican," he said.

The Butler team's attack is particularly unseemly when one recalls 1944, when the Democrats controlled the White House and made every effort to hide the facts about a dying President from the press and the people.

In contrast, the honesty of President Eisenhower about the state of his health has been almost unprecedented in the history of government. His staff officers have been forthright in presenting the people facts to which thye are entitled. There has been no provable effort to hide or distort anything, despite innuendoes of opposition politicians.

We believe citizens can have confidence they are getting the truth.

The International Nickel Co., Inc., Cartel

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 19, 1956

Mr. METCALF. Mr. Speaker, on June 5, 1956, I placed in the RECORD on page A4473 a letter I had addressed to the Secretary of the Interior concerning a proposed lease of Government-owned lands to the International Nickel Co. for a reported period of 50 years.

In the letter to the Secretary I raised the question of whether or not the proposed lease had been cleared with the Antitrust Division of the Department of Justice in order that the monopoly aspects, if any, of the lease could be considered.

I now wish to call to the attention of my colleagues two letters which have come to my attention concerning the workings of the International Nickel Co. monopoly, or cartel, as it applies to businessmen in the United States.

These letters indicate that even a South African concern may not sell nickel to an American businessman without the transaction going through the International Nickel Co., Inc., of New York. I am advised that the International Nickel Co. actually carries out a governmental role in the allocation of nickel to American consumers.

The ridiculous aspect of this allocation system, which is done in agreement with our executive agencies, is that both the Commerce Department and the Office of Defense Mobilization stoutly contend that they do not believe that controls should be exercised by the Government over the allocation of nickel which is in short supply largely because the Government takes some 40 percent of all available for defense and stockpiling purposes.

I submit, Mr. Speaker, that this is, indeed, a most extraordinary example of what some people choose to call free-competitive enterprise. Small-business men call it something quite different.

NICKEL ANODES
NEGRETTI & ZAMBRA
SOUTH AFRICA (PTY.), LTD.,
June 5, 1956.

ROCKWELL MANUFACTURING CO.,
Pittsburgh, Pa.

DEAR SIR: It is with regret that we have to advise of our inability to be of assistance in procuring for you the nickel anodes—your letter of April 11, 1956, reference ACB: gas referring.

The attached copy letter from Imperial Chemical Industries will show the position as advised to us.

Yours faithfully,

NEGRETTI & ZAMBRA S. A. (PTY.) LTD.,
ARTHUR A. PASSMAN.

NICKEL ANODES FOR EXPORT

IMPERIAL CHEMICAL INDUSTRIES
(SOUTH AFRICA), LTD.,
Johannesburg, May 14, 1956.

NEGRETTI & ZAMBRA SOUTH AFRICA (PTY), LTD.,
Johannesburg.

(Attention: Mr. A. A. Passman.)

DEAR SIRS: Further to our letter FS/WH of April 13, we would advise that we have heard from our principals regarding supplies of nickel anodes to the United States and are given to understand that all nickel sales to that market should be referred to the International Nickel Co., Inc., 67 Wall Street, New York.

The supply position for anodes being even more acute in the United States than in this country, deliveries are strictly controlled between customer/supplier on the basis of previous purchases. There is, therefore, nothing further we can do in the matter, except suggest that the Rockwell Manufacturing Co. approach the International Nickel Co., Inc., of New York for their requirements, for even if we were allowed to supply nickel to the United States, we would definitely not be permitted to ship to any one particular concern without the consent of the International Nickel Co., Inc.

We trust the above information is of assistance to your customer.

Yours faithfully,

IMPERIAL CHEMICAL INDUSTRIES
(SOUTH AFRICA), LTD.,
E. SIEBERT.
WATER TREATMENT AND ENGINEERING TRADES,
W. R. STEPHENS.

An American Jewish Hero

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. MULTER. Mr. Speaker, the following articles about David Marcus, familiarly known to his friends as Micky, appeared in the June 1, 1956, issue of Israeli Speaks. June 8, 1956 marks the eighth anniversary of his tragic death in Israel, while fighting to keep that new state free. Colonel Marcus went to West Point from my congressional district.

AN AMERICAN JEWISH HERO

(Judge Arthur Schwartz)

The saga of David Marcus has yet to be told. Colonel Marcus came out of a community peopled by immigrants. Trained in the public schools of New York, he evidenced at an early age the mature judgment and the constructive and aggressive characteristics so vital to achievement. He received an appointment to West Point. After graduation, while in the service, he studied law.

Upon the completion of his term of military service, he became an assistant United States attorney under the late George Z. Medalie, an inspiring public servant. That was the beginning of my tie with him. That public position was one of a series of public service achievements. He was deputy commissioner of corrections, then commissioner under Mayor Fiorello LaGuardia, was active in innumerable community groups. Then even before war broke out, he voluntarily returned to the military service to train American men for World War II.

His career in World War II was as unique as it was varied. As Secretary of War Patterson said, he was the only man in the United States Army who, although assigned to the Judge Advocate's Office, had the authority to lead men in combat. He served in every area of military activity, both geographically and functionally—from training Rangers to preparing peace treaties, from jumping on D-day with the paratroopers to preparing orders and procedures for the government of the defeated countries, from visiting the vanquished areas and concentration camps to attending the Yalta Conference with President Roosevelt.

When Israel was battling for freedom and independence in an energetic but comparatively ineffective military manner, his services were sought out. He had just completed his service to his country and was on the verge of a real respite and the commencement of a private law practice which promised to be lucrative. His early history, his war experience, and his love of man only served to intensify his desire for the maintenance of freedom-loving places and democracy. As a Jew, it was easier for him to sacrifice his family contentment and personal safety in order to enrich the life and history of Israel.

Some day the story will be told publicly of how he, an American, came to Israel and trained a modern effective army, in a miraculously short period. He was no phantom general. He was an experienced handler of men. He was able to get along with the convict, the worker, the public servant, the leaders in the community, mayors, governors, presidents, and heads of foreign governments. The United States tacitly approved of his going. Although he died in Israel while training his forces, his body was finally laid to rest at West Point. He was Israel's Kosciusko or Lafayette.

Legends of great heroes come into being 50 or 100 years after death, but the Marcus legends started even before he entered the Israeli picture. They grew while he was in Israel, and have grown ever since. There is no need to create a Marcus legend. We need not wait 100 years to appraise his contribution by fostering wishful thinking or by exaggeration. Every Israeli person who has paid me a visit because of his contact with Marcus has only served to confirm what we all knew for many years.

Our foundation has sought to perpetuate his memory here. We know his memory is eternal in Israel. Here in the United States, there are many chapters of fraternal and community organizations named after him. New York City has honored his memory by naming a junior high school after him, by naming a playground after him, and by declaring June 8—the anniversary of his death—as David Marcus Day. Private industry has utilized his name by naming a theater after him. Boys High School, where he attended, awards a prize in his name, as does West Point. We are on the eve of greater recognition by the possibility of a book or a movie production based on his life and career.

One public servant said of him: "In 1 day (the day of his death) he has achieved an eternity which men struggle a lifetime to accomplish." That is not strictly true. He never struggled for eternity in his lifetime. He fought for what was right, and for basic truths. That was eternal. The world's events and his willingness to become a part of what many thought was a remote and minor event, the founding of a new nation against almost impossible odds and which turned out to be an important facet of international activity, brought him eternal recognition. May he rest in peace.

Statement by Assistant Secretary of Defense Carter L. Burgess on Defense Personnel

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. STENNIS. Mr. President, recently Assistant Secretary of Defense Carter L. Burgess appeared before our Department of Defense Appropriations Subcommittee to give us firsthand information in regard to personnel losses and technical shortages in the Armed Forces of the United States. I believe that this is the best and most informative current statement on this subject, and I ask unanimous consent that Secretary Burgess' statement be printed in the Appendix of the RECORD.

There being on objection, the statement was ordered to be printed in the RECORD, as follows:

SPECIAL STATEMENT ON DEFENSE PERSONNEL BY ASSISTANT SECRETARY CARTER L. BURGESS BEFORE THE SUBCOMMITTEE ON DEPARTMENT OF DEFENSE OF THE SENATE APPROPRIATIONS COMMITTEE, MAY 15, 1956

Mr. Chairman and members of the committee, for some time there has been a great deal of activity in the Halls of Congress, statements by administration officials and widespread coverage in the press and columns on the subject of personnel losses and technician shortages in the Armed Forces of the United States.

Rather than risk the impression that any responsible Government body or executive department is standing idly by while these problems continue or grow, I consider it high time that we take stock, count our progress and blessings and at the same time review our long-range problems and outline actions that are underway or are proposed.

Because of the intense interest and action that the Senate Appropriations Committee has taken in these matters and because the sizable financing required for each program comes before this distinguished group, I consider it imperative that I render for your personal consideration this detailed statement.

The problem of personnel losses and critical technical needs is not a problem that faces the Department of Defense and the armed services alone in today's American world.

Solving our personnel problems is more important in many respects than providing additional funds for additional items of complex equipment.

But let's take a look at the total American picture as of today and then later get on with a detailed analysis of Defense's administrative and legislative program for improving our personnel outlook.

In the New York Times of the Sunday just passed, May 13, 1956, the following was noted with respect to our Nation's present educational and industrial activities:

1. The average United States national high-school enrollment in physics is 4.4 percent; in chemistry 7.5 percent; in geomerty 11 percent; and in algrebra 25 percent.

2. A statement on education which read: "In recent months the Nation's attention has been focused on the shortage of scientists and engineers, particularly in view of the fact that the Soviet Union is making the training of technical men its major educational effort."

3. A special feature stressed that "with atomic energy, jet engines, automation, and other scientific revolutions erasing the boundary between university and factory, scientists are becoming as fundamental as salesmen in industry's scheme of things."

4. Finally, in turning to the business section, you find page after page of industrial block advertisements offering endless business opportunities for engineers to handle turbojet controls, engine vibrations, missiles systems, inertial navigation, supersonic and transonic aerodynamics, infra-red physics, and on and on.

The Sunday nearest May 13 in 1950 was Sunday, May 14, and for curiosity I carefully scanned the New York Times for that date because of its proximity to the beginning of the Korean war and to the period of this year.

In the 1950 business edition of that Sunday's Times there is but 1 wanted block advertisement for 1 radar engineer-physicist, as compared to the 62 or more block ads in this Sunday's section just past which announces openings for such industrial personnel on a grand scale.

But let's deal with today.

The Armed Forces and their personnel programs and problems are part and parcel of this change to produce a better tomorrow.

And this administration and this Congress are doing a great deal to keep abreast and ahead of this change.

Let's take a look at the elements of the change and the reasons for them:

An aggressive national industrial might providing the latest in research and development for new product needs.

The largest-sized Armed Forces maintained by America in times short of going war with 800,000 deployed outside continental United States and another 370,000 afloat and mobile.

The highest industrial employment rate in America's history.

Factors such as these set the stage for a sizable requirement on the quality production from our high schools and colleges of technically and professionally trained individuals. It places large-scale industrial activity and large-sized military forces in competition for personnel to construct and then later utilize and maintain the tools of modern war.

But all's not lost.

We plan to maintain a force of approximately 2,850,000 for the indefinite future. Reenlistment rates have gone up to over 40 percent, but within this range we are still not retaining our specially qualified military personnel at optimum combat effectiveness rates. Industry is benefiting from the trained contributions it receives from the military services. But our problem of maintaining a force of this size is a greater challenge than when we were at one-half this strength only 6 years ago. Pay and related military and civilian personnel costs, excluding housing, represents $16 billion out of our overall defense budget of $35 billion.

We must have a personnel system which is alive, responsive to changing needs. We need such a system even though we realize the size of our work force takes time to permit its problems to be identified. Then they must be understood, corrective action developed, and, when appropriate, tax dollars obtained.

Forward thinking must be applied in the personnel field or our hardware will outdistance the ability of our people to employ it.

AREAS OF APPROACH

In motivating our people toward military careers of a proper duration, I would like to discuss three general areas of approach to the problem:

First, is the broad one of better circumstances under which men and women of the Armed Forces serve. By this I mean better housing, reasonable tours of continental duty as compared to duty in overseas or outlying and remote areas, assured medical care for dependents, adequate schooling, and so on.

Second, the elimination of many inequities which cause discontent within the Armed Forces.

Third, reimbursement—and when I say reimbursement I am not talking just money. I am talking about status in the community and standard of living. I mean pride in profession and accomplishment as well as ability to provide for their families in a manner which compares more favorably with what similar talents could attain in industry.

EARLY RECOGNITION OF PROBLEM

More than 2 years ago the elements of our problem began to be apparent. The great expansion of our military personnel during the Korean war was by volunteers, but volunteers motivated by patriotism rather than a desire to make the military service a career. These men were coming due for discharge and, with the termination of the shooting war, they were not reenlisting.

We had a mass exodus of experienced personnel. Our military force was widely deployed overseas. With industry at peak employment levels and with a decision to maintain a military force of double that of pre-Korea, it was reasonable to encounter reenlistment problems. The reenlistment rate for regulars dropped to an all-time low of 23.7 percent in fiscal year 1954.

REENLISTMENT BONUS ACT

The first corrective action taken was the passage by Congress of the Reenlistment Bonus Act in July 1954. This new act sharply increased the amounts of the bonus, with the largest amounts going to those reenlisting for the first time.

This was an across-the-boards measure; it gave the same reenlistment compensation to leaders and technicians. It was a proper step at the time to check the flood of specially qualified military personnel moving toward the greater stability of civilian life.

CAREER INCENTIVE ACT OF 1955

In November 1954, it was determined that an overall adjustment in military compensation and certain allowances was vitally needed to make the military career more competitive with opportunities in civil life and to compensate for the 13-percent increase in the cost of living. The result was the prompt passage of the Career Incentive Act of 1955 which became effective on April 1, 1955.

This bill gave selective increases to military personnel after an initial period of service. These increases ranged from a maximum of 25 percent to a minimum of 6 percent.

This act also provided for improvements in situations which are peculiar to military life. It increased hazardous duty pay for officers and enlisted; it established a dislocation payment of 1 month's quarters allowance for each permanent change of station; and it authorized a special mileage allowance for movement of trailers for those families who occupied this mode of living.

We anticipated that this act would possibly give us an increased reenlistment rate of approximately 10 points. It would also protect an investment in basic training of those who would reenlist of about $320 million.

We were right in this prediction. The overall reenlistment rate changed from a low of 23.7 percent in fiscal year 1954 to a 33.8-percent rate for the final quarter of fiscal year 1955.

CIRCUMSTANCES OF SERVICE

Housing

All over the world, commanders rank housing as a priority item for discussion when I arrive. Annual increments of new housing are being constructed in the United States and abroad. This is helping our situation but we still have quite a distance to go in this area.

Meanwhile, we have some of our personnel occupying inadequate quarters for which they are charged the full amount of their rental allowance. We have proposed in S. 1947 that such quarters be occupied on a rental basis without loss of quarters allowance. This would require the serviceman to pay a fair value for the housing but not the inflated value he now pays.

We recognize the deficit in dependent housing cannot be corrected overnight but this does not take off our hands the unhappy families who must do duty in these locations when there is no housing available.

Tours of duty

This is an area where administrative competence can continue to correct whatever problem exists. The services have established normal tours of duty in various geographical locations with the shorter tours in the less favorable locations. Tours have been shortened when dependents are not with the principal.

We still have too many and too rapid transfers of personnel but continued policing of this subject and hard-boiled administrative competence within the Department of Defense can work on this problem.

There are other elements of what I have called the circumstances of service such as schooling for dependents and absentee voting which I will not develop with you but which cast their shadow to make up the gray area between a wanted and a not-wanted career.

DEPENDENT MEDICAL CARE

Final action by the Congress on the dependent medical care bill is imminent in view of the Senate vote in support on this measure yesterday.

We estimate the 40 percent of our military dependents are not near medical facilities or that overcrowded conditions prevent their treatment in these facilities. This 40 percent would get medical treatment under this bill. The other 60 percent would be assured that they would continue to receive dependent medical care. It would also improve retirement medical care for the principal and his dependents.

The worth of this bill in giving peace of mind to the serviceman that, regardless of where he is his dependents will have adequate medical protection cannot be priced out in terms of dollars and cents or predicted in terms of specific increases in the reenlistment rate. We feel certain that it will reduce one of the major deterrents to continued service for some of our personnel.

ELIMINATION OF INEQUITIES

I would like to cite three specific examples of inequities which have been identified and for which proposed corrective action in specific legislation is now before this Congress. These are survivors benefits, Academy-ROTC longevity credit, and retirement in highest grade held.

SURVIVORS BENEFITS

The inequities in the present survivor benefits system have come about unintentionally through piecemeal changes in the various programs over a long period of time. Legislation is now before the Senate (H. R. 7089) which would eliminate many of the existing inequities and modernize the overall survivorship program.

To illustrate the inequity in survivor benefits which exists under the present law, I might mention that if two captains, one a reservist and the other a regular, were killed in the same aircraft crash, they would leave their surviving wives and children with vastly different benefits. The family of the Reserve officer, with entitlements under the Federal Employees Compensation Act, would receive

about twice as much as the family of the regular officer while the children are of minor age. The widow of the reservist would receive almost four times as much as that of the regular after the children come of age.

These facts prompt this question: "Why be a regular?"

And here is a hard fact—almost 75 percent of our officers on active duty are reservists. We may have that very question asked us: "Why be a regular?" by the officers we plan to augment into the regular officer structure if S. 3124 on regular officer augmentation is passed as we are recommending.

I do not want to go into how the proposed survivor's benefits bill and regular officer augmentation will operate to correct these inequities but, if they are corrected, we can predict that they will have positive and far-reaching benefits on the overall problem.

ACADEMY/ROTC LONGEVITIY CREDIT

In the Army in fiscal year 1956 about 90 percent of the officers expected to enter the Army will come from ROTC sources. In the Air Force in fiscal year 1956, the great bulk of the 5,974 pilots they propose to train will come from the officers they expect to commission from ROTC sources.

Actually there are some 12 methods of training leading to a commission in the armed services. The route to officership via the military academies and the Reserve Officer Training Corps are the only ones in which the officer candidate does not earn longevity for pay purposes.

This is an unintentional affront which we just cannot explain. It means that the monthly base pay of an Academy or ROTC graduate on commissioning is $222 per month; an individual commissioned via other sources may earn as much as $296 per month on commissioning. Surely, it is not the intention nor the attitude of the Congress that these groups of officers should continue in a secondary category within the Armed Forces.

I invite your attention to H. R. 10212, the Cole bill, which has the endorsement of the executive branch. Its passage would have a favorable influence on reducing turnover in our officer personnel.

RETIREMENT IN HIGHEST GRADE SATISFACTORILY HELD

Present laws authorize the retirement of officers of the Navy and Marine Corps in the highest grade they have held satisfactorily on active duty. Similar temporary authority for officers of the Army and Air Force will expire December 31 of this year.

Most officers in the Air Force and many in the Army serve in temporary grades, many times two grades higher than their permanent grades. It is unreasonable to expect them to understand and accept this inequity.

There is a bill now before Congress to correct this. Unless this bill is passed, many of our best officers must look forward to years of additional service before retiring in a grade lower than that in which they have satisfactorily performed their duty. This does little to persuade such individuals that they are pursuing a wanted career.

The illustrations I have given you of inequities and our proposed action outline one of our major fields of continuing endeavor and that is to build a strong foundation for our personnel system based on equality among the various members of our Armed Forces.

STANDARD OF LIVING

The composite effect of what we have done and are doing will do much to advance both the status and the compensations—in monetary values and in personal values—for our military personnel. We must remember always, however, that we are working with an alive subject—it does not stand still. Nor does industry.

The military and civilian employees of the Department of Defense are, by far, the largest single work force in the country. To motivate our personnel to stay with us on a career basis, we have to be prepared to offer them community recognition and a standard of living which will compare reasonably favorably with that to which the individual could aspire to in industry.

CAREER RETENTION

In the current discussions of retention of personnel on a career basis we have normally talked on a gross numbers basis. You will recall that I have cited an upward trend in reenlistments in the last 2 years. Some would believe that this in itself will give us the balanced defense work-force we need. This is not so. Do not be deceived by the apparent.

We need to look more closely at the elements of this overall picture to see if we are in balance. We need to examine what is happening to the people with special military qualifications. By special military qualifications I mean the infantry squad leaders, the aviation mechanic, the propulsion technician in an atomic submarine, the K-bomb sight mechanic, the demolition specialist, and so on, and their officer counterparts. These are the men with the military talent needed to deal with today's complex equipments and to react to the more demanding problems of independent action by smaller formations of men and equipment in today's fission and fusion world.

REENLISTMENT RATES BY SKILLS

A study of the reenlistment rates for first termers by selected skills in the Army, Navy and Air Force shows that there is wide difference in reenlistment experience when we analyze it by skills.

Our retention rate is the lowest in the skills which are the most expensive to train, demand greater learning ability of the trainee, and take the longest time to train. We aren't keeping enough of the people we most need.

I well recognize the benefits to our economy as a whole derived from ploughing back into industry the millions of dollars of training accomplished in the Armed Forces. This is a beneficial byproduct of the continued maintenance of large Armed Forces but it must not be permitted to imperil the primary mission or combat effectiveness of the Armed Forces.

The training time needed to bring an individual to a usable level of training in selected skills is quite different. This means that the portion of an enlistment available after training has been completed varies widely. Possibly we need to adjust the length a man serves by the amount of training he receives during that service.

If this be a break with tradition, let us so label it and bring it into the open. The cold fact is that there is a general marketability to industry of the in-service training an individual receives and we may need do more to protect the investment we make in a man's training.

We would like that step to be one which the individual chooses for himself—a military career. But if this is not possible, then other measures appear necessary.

REENLISTMENT COMPENSATION

One such measure which suggests itself is flexible reenlistment compensations. Right now we pay the same reenlistment compensation to all men of the same grade and length of service regardless of the in-service demand for these individuals or industry's demands for them.

As the demands for personnel of certain talents change inside the service due to the changing weaponry and conditions of service, we generate excesses of certain talents. Unless the individual has a capacity for retraining into some other skill for which a demand exists, it may be that this individual should no longer be permitted to remain in the service.

This would break with the traditional view that a man who has merely kept out of trouble has a place in the military service for as long as he elects to stay. It is time we break with such tradition.

I have the feeling that we can do more with the same amount of money we now use for reenlistment compensations. I visualize a system with flexibility in it. The system would pay a higher reenlistment compensation to the individuals who are in short supply and a lower amount to individuals in oversupply. This would be an incentive system at work within the services which, by the law of supply and demand, would compensate for overages and shortages in personnel with special military qualifications by motivating individuals with the needed talents to enter the shortage fields.

RETENTION OF NEEDED PERSONNEL

In my discussion, I have tried to show how successive steps have been taken in this problem of career personnel. We have used stopgap legislation like the reenlistment bonus and the more sophisticated Career Incentive Act; we have pressed to eliminate inequities which detract from career service.

At each step upward on this ladder, we have attempted to apply the lessons learned on the previous step; we have attempted to focus from the broad general picture to the specific problem areas.

We believe we are at the point on the ladder of success where we need to refine our procedures more precisely to the point that we attract to and keep in the services, for careers of proper duration, the proportion of personnel with special military skills—leaders and technicians, officers, and enlisted—that we really need. This is not only a question of dollars. It is a question of prestige, acceptability, self-respect, first-class citizenship, and dollars.

The Congress recently took a step in the direction of paying more for special talents which are in short supply when it granted additional compensation to doctors and dentists. The need for this kind of incentive compensation has long been recognized in the hazardous duty areas of aviation, submarine, and parachute duty.

But the rest of the military machine grinds along with no discrimination between men of the same grade and length of service for different levels of special military qualification. All receive the same. This leads men in the hazardous and nonhazardous fields to seek out the less arduous and less demanding assignments because the compensations are the same. That is why we are 25 percent short in the combat arms MOS of the top three pay grades in the Continental Army and 25 percent over in administrative specialists.

ACTIVE PROGRAM

The Secretary of Defense has just appointed Mr. Ralph J. Cordiner, president of General Electric Co., as Chairman of the Defense Advisory Committee on Professional and Technical Compensation.

The committee is charged with responsibility of submitting to the Secretary of Defense recommendations for legislation that may be necessary to strengthen and stabilize the status of career personnel with special military qualifications. These recommendations are to be submitted before the next session of Congress convenes.

Further, the committee will recommend at the earliest practicable time any administrative or personnel policy improvements that can be instituted without the necessity of additional legislation.

Meanwhile, we are continuing our analysis of the administrative possibility of adjusting periods of service to equate training re-

ceived with obligation accepted; of adjusting our health standards so that individuals with motivation and skills which are in short supply will not be denied the opportunity of career service for some physical reason which limits general duty but which does not affect the area of his special talent; of expanding the portion of defense work which is done under contract by industry.

These legislative and administrative measures represent our continuing evaluation of where we are and where we should go in this changing and competitive personnel game. As I indicated in my opening remarks, we share this personnel problem with much of industry. We have come a long way with your help. In charting our future course, we must maintain contact with reality and recognize that even the most forward step by Mr. Cordiner's committee, the Defense Department and the Congress will not be the last step. It will only be the next step in this changing world.

May I say again, if our Armed Forces are to be manned with competent people, dedicated to the security of their country, we must make military life a wanted career.

Another Warning to Secretary Dulles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. MULTER. Mr. Speaker, from the bulletin of June 18, 1956, of Economic Trend Line Studies, I excerpt the following:

Winston Churchill, in his book The Gathering Storm published in 1948, gave the most dramatic story of the prelude to World War II which has ever been written. It is a lesson for all time and worthy of quotation again and again.

"In this sad tale of wrong judgments formed by well-meaning and capable people, we now reach our climax. That we should all have come to this pass makes those responsible, however honorable their motives, blameworthy before history.

* * * * *

"Still, if you will not fight for the right when you can easily win without bloodshed; if you will not fight when your victory will be sure and not too costly; you may come to the moment when you will have to fight with all the odds against you and only a precarious chance of survival.

"There may even be a worse case. You may have to fight when there is no hope of victory, because it is better to perish than live as slaves."

This, then, is Winston Churchill's eloquent comment on appeasement. We hope that China or Eastern Europe or Indochina do not correspond to Czechoslovakia. We hope that there is not a future Poland in a Communist government that suddenly dominates France or Italy or the Middle East. It probably will not happen, because the parallels of history do not repeat with such exactness. Nevertheless, we cannot escape the fact that Communist doctrine is spreading in the world while traditional democratic doctrine is receding.

The decisive battle of the cold war will probably be fought over the next several years in Asia, Africa, and the Middle East. It is not likely to involve atomic weapons, but it may involve planes, guns, and tanks. It will also involve propaganda, foreign aid, trade deals, and all sorts of political and economic pressures. The pawns in the game will be the millions of uneducated and poverty-stricken natives. The West, if it is to win, will have to show more courage and boldness in the next 10 years than it has in the past 10.

Annual Address by Master of the Oregon State Grange

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, June 22, 1956

Mr. NEUBERGER. Mr. President, the Oregon State Grange, the largest farm organization in Oregon, recently held its 83d annual session in Pendleton.. The Oregon Grange has been a stalwart fighter for full development of our natural resources and for a forward-looking agricultural policy to benefit the family-size farms.

I am proud to say I am a member of the Oregon Grange, and I have long had a deep personal interest in the problems affecting our farm people. Mrs. Neuberger was born on a farm near Cloverdale, Oreg., and her mother now owns a dairy farm.

Mr. President, Elmer McClure has made a distinguished record as master of the Oregon State Grange, and I request unanimous consent to have printed in the Appendix of the RECORD that portion of his annual address at the 83d session of the Oregon State Grange, in Pendleton, which refers to national or Federal issues so that Members of the Senate and the public will have the opportunity to study some of the basic questions which deeply concern the people of Oregon.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ANNUAL ADDRESS OF ELMER MCCLURE, MASTER OF THE OREGON STATE GRANGE, PENDLETON, OREG., TUESDAY, JUNE 5, 1956

* * * * *

2. AGRICULTURE

Right now the Government is proposing to pay farmers for retiring land from the production of surplus crops and it looks like the cycle is beginning again. Personally, I cannot envision how the present administration's so-called land bank can be of substantial benefit to farmers of the West. The wheat farmer already has had his acreage reduced to the point that any request that he "bank" additional land may be likened to asking a man to join a bond-a-month savings plan when it takes every penny he can earn to buy groceries.

As to our family-size farms in western Oregon doing much soil banking, the amount they can take out of production will not go far in solving the present surplus problem.

The biggest blow to western agriculture came when the President vetoed the certificate plan for wheat. Under it, poultry, dairy, and livestock producers, who make up a substantial part of western Oregon's agricultural economy could look for sizable cuts in feed costs, cuts which in many instances could mean the difference between profit and loss. Wheat men were confident—a confidence resulting from more than 30 years' study of the plan—that it would provide the solution to the wheat surplus problem. The veto was a severe setback in this respect but I urge that we not let it discourage us too much and that we make another try at getting it enacted next year.

In contrast to the shoddy treatment handed the wheat folks, the Midwest corn growers, where the heavy farm vote is to be found, came out exceptionally well. Growers planting within their allotments would have their corn supported at $1.50 per bushel, but the catch is that those who ignore allotments completely would still have supports at $1.25 per bushel. If the wheat man would do that, he'd have a lot of "hot" wheat on his hands, with severe penalties to pay.

Later this summer the wheat folks are going to be asked once again to vote on marketing quotas, which, if rejected, would drop the support price to 50 percent of parity to somewhere around $1.16 per bushel, f. o. b. Pendleton. That would put the support level below the world market price and bring it down to the 1929 level.

The cost-prize squeeze continues to tighten and it is only those things that farmers buy from other farmers that are lower in price.

Credit restrictions are such that in some instances reported to me farmers are paying as much as 8 percent interest on crop loans. Eight percent interest on a crop loan is almost usury.

Farm-wage rates are up more than 230 percent since 1940 and machinery and equipment costs have just about doubled. During 1955, farm income dropped 10.6 percent to slightly more than $10½ million, about on a level with 1939. And they tell us that the end is not in sight.

Hardest hit is the small, family-size farmer. None of the present programs are of tangible benefit to him and, to my knowledge, no effort is being made to bring him relief from the cost-price squeeze. He is the forgotten man of American agriculture and may soon be the nonexistent man if economic trends continue along the present course.

* * * * *

5. HELLS CANYON DAM

In treating with the present status of the Hells Canyon Dam controversy there comes to mind an old quotation which goes like this:

"When you study the past or contemplate the present, do so at least without despair in your heart, and if possible, with all the hope you can muster."

Frankly, I am more optimistic about ultimate victory in this long drawn out fight than I have been at any time since the Federal Power Commission granted Idaho Power Co. the licenses to build the three small dams.

This briefly, is the current status of the controversy:

On May 15, oral arguments were heard in the United States Court of Appeals for the District of Columbia on our appeal from the Commission's findings. In the brief filed by the National Hells Canyon Association a very strong case is made for cancellation of the Idaho Power Co.'s licenses and I would not be the least surprised if that were done when the court renders its decision within the next few weeks.

The bill to authorize Federal construction of the high dam has been stymied in the Senate Interior Committee because it lacked but one vote of having a committee majority to bring it out on the floor. Recent developments have brought a change in the personnel of the committee, giving the advocates of the measure the necessary votes to bring it to a full vote of the Senate. Thirty Senators, including MORSE and NEUBERGER, are cosponsoring the bill and once it gets on the floor, favorable action is anticipated. A court decision in our behalf would make this almost a certainty.

If neither of these things come to pass, we will have recourse to the United States Supreme Court and to the courts here in Oregon. Oregon's attorney general has ruled that Idaho Power Co. is in violation of State law in proceeding with the construction of Brownlee Dam without a license from the Oregon hydroelectric commission and has referred the matter to the Baker County district attorney for prosecution. It is hoped that the district attorney will institute criminal proceedings immediately in keeping with his sworn duty to uphold the law.

A still further opportunity for legal action against the company recently fell through when the Secretary of the Army and the Department of Justice declined to prosecute the company for commencing construction of a bridge across the Snake at the Brownlee site before plans for the bridge had been submitted to and approved by the Chief of Engineers and the Secretary of the Army.

The fight for Hells Canyon still goes on and it is far from being the lost cause Idaho Power Co. would have us believe. This battle has been going on only since 1948, and, relatively speaking, that is but a short time when compared to the 30-year struggle to have Coulee Dam authorized and built. In that fight the proponents of the dam faced every obstacle that we have encountered in the Hells Canyon controversy, plus many more, but through dogged persistence they won out—and so will we.

6. PELTON DAM

The tactics used by Idaho Power Co. in proceeding with construction in disregard of Oregon law are being emulated by Portland General Electric Co. in the building of Pelton Dam on the Deschutes.

The Grange is opposing the Pelton project because it violates the spirit of the Columbia Basin Interagency compact reserving the tributaries of the lower Columbia as a fish sanctuary and also because the Federal Power Commission license for the dam assumes that the Federal Government rather than the State of Oregon has the highest priority over water rights, an assumption which, if allowed to go unchallenged at this juncture, could imperil every State-granted water right.

Sportsmen's groups are also vigorously opposing the project but for slightly different reasons than those of the Grange.

In any event, construction has started on the dam in defiance of State law and the attorney general has referred the matter to the Jefferson County district attorney for prosecution.

With both of the companies openly defying the State of Oregon in this respect, the time may soon be at hand when the question of jurisdiction over waters of the State must be tested in the courts.

Senator NEUBERGER has introduced legislation (S. 3250) which would revoke the Federal license for the Pelton project. It should have our support.

• • • • •

8. THE COST OF POLITICKING

In this election year it should be painfully obvious to everyone that the major offices being contested for do not always go to the most competent but instead to those with the most money to spend.

A conservative estimate is that the major 1956 campaigns will cost some $200 million. Where is the money coming from? Not from the candidates, certainly, because in the average senatorial campaign, for example, many times the total 4-year salary a Senator would earn is expended in just promoting his candidacy.

I need not tell you that huge contributions to political campaigns are not made for charitable purposes. They are considered by the donors as investments and tangible returns are expected. With the cost of getting elected to public office continuing to spiral, few candidates reach their goals without being committed to work for special interest groups.

One of the biggest items in the campaign cost ledger goes for radio and television time. Newspapers generally are liberal with their space in publicizing the words and deeds of top candidates, but not radio and TV. Time was in the early days of radio when broadcast time was allotted to candidates as a public service, but no more. Political broadcasting today is a mighty lucrative business, in some instances taking an even higher rate than regular commercial programs. A half hour on a national TV network will cost upward of $40,000.

Radio and television stations operate under monopoly licenses granted them by the Government. To get those licenses they pledge to devote a substantial part of their time to public service programs, a pledge which all too many forget about once the license has been granted. What greater public service could they render than granting the use of their facilities free to responsible candidates so that the public could be better informed at the polls?

Several moves are afoot to cut the cost of campaigning. What better way than to require radio and television stations to live up to their public service pledges and grant major candidates free and equal air time.

The Farmers Should Not Be Surprised, Although They Have a Right To Be Disappointed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. MULTER. Mr. Speaker, the following interesting item appeared in Drew Pearson's syndicated column which appeared in various papers, including the Washington Post and Times Herald:

THE WASHINGTON MERRY-GO-ROUND
(By Drew Pearson)
BENSON SWITCHES CONFUSE FARMERS

City folks sometimes wonder why the farmer is confused, bewildered, and irate. The manner in which the man who is supposed to help the farmers, Ezra Taft Benson, backtracked, flip-flopped, and reversed himself on the question of the soil bank illustrates one reason why.

Here is the record of how the Secretary of Agriculture has gyrated on what has been heralded as the key to the Eisenhower farm policy:

Flip-flop No. 1: Benson's Department sent official letters to Congress July 27 flatly vetoing the so-called soil bank as impractical and too expensive. (It was originated by Henry Wallace in New Deal days.)

Flip-flop No. 2: President Eisenhower proposed the soil bank in his State of the Union message January 5.

Flip-flop No. 3: Despite previous opposition, Benson chided Congress in March and April for being slow in passing the soil-bank program. "Time is of the essence," he said on March 23. "The soil-bank proposal has been before Congress for 3 months, even though the President urged quick action," he said on April 5.

Flip-flop No. 4: On May 29, as Mr. Eisenhower signed the soil-bank bill, Benson announced: "We are moving immediately to put the soil-bank program into effect. Initial procedures have already gone out. The needed contract forms have already been discussed with State farmer-committeemen."

Flip-flop No. 5: At a jampacked press conference May 31, Benson further announced that price-supported crops could be plowed up "if not too far advanced," and payments would be made for them under the soil-bank program. This was adoption of the Henry Wallace plow-up program which Benson has repeatedly ridiculed.

Benson further explained that farmers were to call at local agricultural stabilization and conservation committees and enter into "agreements with committees" for soil-bank payments.

Flip-flop No. 6: Next day, farmers reading Benson's advice in the newspapers, called at ASC committees, found no contracts to make out, no instructions as to whether they were qualified to participate. Irate farmers then fired back at Washington. Farm-area newspapers also began querying Benson's office. It then developed that Agriculture Department attorneys were still studying the law. It would be 2 or more weeks, it was stated, before instruction would go to local farm committees.

Flip-flop No. 7: Speaking in Beaver Dam, Wis., on June 4, Benson stated that farmers who lose crops because of drought and flood would get no soil-bank payments. The program, he said, was to be a cut-back program.

This brought an immediate protest from Congressman CLIFF HOPE, of Kansas, a leading Republican. He called the White House privately, demanded that Benson reverse himself. A delegation also descended on the White House, including HOPE, Senators CARLSON and SCHOEPPEL of Kansas, HILL from drought-stricken Colorado, and LOVRE, of South Dakota—all Republicans.

Flip-flop No. 8: On June 8, Benson was called to the White House. This was on the day Eisenhower was rushed to the hospital for an emergency operation. He did not see Benson, but White House aides are now accustomed to assuming considerable prerogative for Ike. They told Benson he would have to reverse himself.

Later that day he did. He issued a statement that payments of $6 per acre would be made for wheat lost through drought, wind, or flood.

Flip-flop No. 9: This was a press conference called by Benson to explain there had been no flip-flop.

Newsmen had made an advance agreement not to ask Benson whether he had reversed himself on drought payments. They knew he expected to be asked, so they didn't ask him. After some awkward hemming and hawing, Benson finally took the initiative and referred to press statements that he had reversed himself.

"Of course that has not been done," he said.

He explained that when he spoke at Beaver Dam the lawyers were still interpreting the law, so he couldn't have reversed himself on drought payments.

West Virginia To Supply Coal to West Germany

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 2, 1956

Mr. BYRD. Mr. Speaker, the recent announcement in the press that one of West Germany's biggest steel companies has completed negotiations for the pur-

chase of 3 million to 4 million tons of coal from producers in West Virginia, to be delivered in 1956, is indeed heartening news. There, however, is a disheartening side to the report, and that concerns the critical shortage of railroad freight cars. The shortage has been continuous since the end of World War II.

I should like to point up the irony in the problem of the boxcar shortage. During the recent foreign-aid hearings before the House Committee on Foreign Affairs, of which I am a member, testimony was presented to the effect that India obtained some $18.5 million in railroad rolling stock during the fiscal year 1955—much of which was purchased in the United States. I thereupon directed attention to the serious shortage of freight cars that exists in the coalfields of West Virginia, as well as in other States. Accordingly, I asked that this contribution on the part of the United States be translated into units. In response to my request, the following information was supplied for the record:

Under operational agreement No. 17, Railway Rehabilitation, the United States committed a total of $38.5 million to India during fiscal years 1954 and 1955.

The above funds were to provide the following: 100 type WG broad gage locomotives (steam); 4,365 broad-gage freight wagons; and 4,365 meter-gage freight wagons.

Country of source	Item	Value
United States	50 WG locomotives	$8,940,650
Do	1,650 MC cars	7,080,299
Do	1,650 O cars	5,846,546
	Total	21,867,495
Japan	25 WG locomotives	2,038,750
United Kingdom	do	2,036,750
Do	2,215 MC car bodies	6,176,115
Do	1,715 O car bodies	
Austria	1,000 O car bodies	1,942,000
Japan	2,715 MC wheel and axles	2,533,910
Do	2,715 O wheel and axles	
France	500 MC car bodies	750,000
	Total	15,477,525
	Grand total	37,345,020

In my opinion, the comment which I made during the hearings is apropos. It follows:

Mr. BYRD. I am quite sure that the American people, who haven't been too well pleased with the treatment that we Americans get from the Indians, as voiced by Mr. Nehru himself, are not happy and will continue not to be happy when we supply the Indians with implements of equipment that we ourselves are doing without.

The following article, which appeared in the June 20 issue of the Wall Street Journal, reports the arrangements that have been made for the supply of coal by West Virginia to West Germany:

WEST GERMAN STEEL PRODUCER GOES TO WEST VIRGINIA FOR COAL SUPPLY—BUYS 3 MILLION TO 4 MILLION TONS, TAKES OPTIONS ON LIKE AMOUNT FOR 1957

NEW YORK.—An executive of one of West Germany's biggest steel companies has completed negotiations for the purchase of 3 million to 4 million tons of American coal to be delivered in 1956.

Dr. F. W. Siebert, director of the Phoenix-Rheinrohr A. G., which describes itself as West Germany's second biggest producer of steel ingots and Western Europe's biggest maker of pipes, said he had arranged for the purchase of this quantity of coal from "a number of wholesalers and producing companies in West Virginia."

Dr. Siebert also disclosed he'd also made arrangements on options for a similar quantity of coal to be delivered next year. He said he believed the United States would remain a "permanent" supplier of coal to West Germany, despite the fact that American coal landed in his country is currently about $10 a ton more costly than other supplies.

Neither British, German, nor any other coal-producing nations of Western Europe can meet West Germany's soaring need for coal, he said. He estimated Western Europe's purchases of American coal this year would amount to some 42 million tons, compared with approximately 27 million tons in 1955.

According to the latest statistics of the United States Bureau of Mines, the United States in the first 2 months of 1956 had exported close to 1½ million tons of coal to West Germany, compared with less than 400,000 tons in the corresponding 1955 period.

But the Bonn Republic isn't the only foreign customer beating a broader path to America's coal counter; Italy, the Netherlands, Japan, and Argentina are all showing substantial increases in their purchases of coal from the United States, according to the Bureau of Mines. Total United States coal exports, over 90 percent of them bituminous, amounted to 8,735,657 tons in the first 2 months of this year. They were 4,907,638 tons a year earlier.

The president of the biggest commercial coal producing company in the United States, George H. Love of the Pittsburgh Consolidation Coal Co. told the company's annual meeting in April he expected United States coal exports this year to "reach or slightly exceed" 500 million tons, compared with 470 million tons in 1955. The company, which has properties in West Virginia, Pennsylvania, Ohio, and Kentucky, recently began a $20 million project aimed at opening up a new mine and processing plant near Moundsville, W. Va.

Coal exports, along with increased demand for coal on the part of chemical producers and atomic-energy plants, are credited with much of the improvement in coal industry fortunes in recent months. It's been a sharp turnabout, too. Pittsburgh Consolidation, for example, showed first quarter earnings of 51 cents a share after its 3-for-1 stock split, compared with 37 cents a share on present stock in the first quarter of 1955. The West Kentucky Coal Co. in the same period reported earnings of 57 cents a share compared with 19 cents a year earlier.

Shipping companies operating tramp steamers and railroads moving the coal to United States ports are also participating handsomely in coal's recovery. Overseas coal movements have proved an important prop under tramp shipping rates, pushed so high of late that coal producers in combination with several railroads and the United Mine Workers of America are currently organizing a $50 million corporation solely for the transportation of coal overseas. Railroad companies such as the Chesapeake & Ohio, Norfolk & Western and Virginian railway credit coal clients for much of the 20 percent or more improvement in profits in the early months of 1956, compared with the like 1955 months.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Foreign Policy Address by Former Senator William Benton

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by former Senator William Benton, publisher of the Encyclopaedia Britannica, before the Union League Club of Chicago on June 14, 1956. I am informed by the Public Printer that the address will require 2¼ pages of the RECORD, at an estimated cost of $180. Notwithstanding this estimate, I ask unanimous consent that the address be printed in the RECORD, because it deals with the vital question of foreign policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SOVIET CHALLENGE

(Talk by William Benton, publisher, Encyclopedia Britannica, Union League Club of Chicago, June 14, 1956)

Since 1928 when I spent the first year of my married life in Chicago, this great city of yours, the greatest business city of all the world, has been my second home. Thus I was honored to accept your invitation. Perhaps I was pleased also because you had invited a businessman who believes the Democrats may have been better for business over the past half century than the Republicans. If you want me to document that belief, just write me and I shall do so.

Colonel McCormick, whom I counted among my friends, never could quite bring himself to an all-out crusade against monopoly. But he opposed what he called "absentee ownership." Though I am absent from Chicago most of every month I do not regard myself as absent in any but a merely physical sense. As chairman of two Chicago companies each day I am in intimate touch with the city of the broad shoulders. Still today, as I approach 60, I spend at least one week each quarter in Chicago. I have no personal connections or responsibilities which mean more to me than my role as trustee of the University of Chicago and the Cradle Society. Here from this community came 3 of my 4 children. Here now lives the fourth, my oldest son, and here live also many of my closest friends and business associates. But among you are many far more competent than I to sing the glories of Chicago and its great institutions. You have asked me today to talk to you about the Soviet Union.

Until about a year ago you and I, as businessmen, couldn't learn much about the U. S. S. R. We couldn't do much about anything we learned. Russia seemed to be a problem for the technicians. It was a problem for the military men, and for the intelligence officers, and for the diplomats—all with their information classified and secret and for a handful of scholars and newspapermen.

The picture is changing today. It is becoming visible and it is developing in ways that are extremely significant to all of us. The basic aim of the Soviet Union hasn't changed. That aim is still to communize the world—and to dominate the world once it is communized. It is the strategy and tactics that have begun to be transformed. This process started shortly after Stalin's death. It is symbolized in many people's minds by the Geneva Conference of last summer—the summit conference—and by the great Soviet propaganda phrase, "the spirit of Geneva."

This new strategy seeks to play down the use of force, and the threat of force, in the international arena. It softens the crude, harsh manners of Stalin's last years. It lifts the Iron Curtain a fraction. It strives to place new emphasis on ideological competition and on economic competition.

I spent 2 years, just after the war, as Assistant Secretary of State in charge of our meager American worldwide information program. I said then, and I say now, that we are taking an ideological beating from the Communists in many key areas of the world. The Communists have poured the men and the money and the talent into ideological warfare. We have not. They have learned the propaganda techniques. We still haven't.

Western observers now seem agreed that, as a consequence of these new tactics, the Soviets will be far more difficult for us to meet and outmatch in the future. At the same time these tactics can produce greater insight into the world problem—and greater participation in it—for our citizens. We can hope that this greater understanding may prove to be one clear gain for our free democracy.

As between military competition—hydrogen bomb competition—on the one hand, and ideological and economic competition on the other, all of us most fervently prefer the latter. Further, rightly or wrongly, we Americans happily choose to think we are pretty good at ideological and economic competition. At least it is in the open. We can follow it and try to take part in it.

At first, shortly after the death of Stalin, some western observers claimed the new Soviet dictators were leading from weakness—that the Soviet strategy was switched because of failure and desperation. As recently as last autumn our Secretary of State told a congressional committee that the Soviets seemed on the verge of callapse. Today most experts believe that Khrushchev and Bulganin and the Presidium are leading from strength. They often seem confident they can win the world without a war—and so why fight? Khrushchev attacks Stalin for his unwarranted and unjustified fears. A few weeks back, when the Soviets cut down their military force by 1,200,000, our Secretary of State decided that their purpose was still further to build up Soviet power by putting the soldiers into industry. On this, I think he was right. This is the new front of the new cold war, but backed, as always, by military power.

Last week Khrushchev told the Young Communist League of Moscow, "We believe that communism will vanquish capitalism without war." That phrase "without war" is new. A staple of Communist dogma has been the Marxist teaching that the capitalist nations, after fighting among themselves, would in their death throes lash out at communism.

As seems to me fitting in this capital of world business and industry, in the balance of this talk today I shall describe to you briefly some aspects of Soviet competition as I have observed them, as they are unfolding on the economic front. Competitive coexistence, I believe, is going to prove plenty competitive. The Russians may prove just as formidable competition in the economic sphere as in the military or ideological.

Underestimating his competition, as every good businessman knows, is the worst of the deadly economic sins. Let us therefore not sneer at the cards the Reds hold—even though the cards be stained with blood. Let us remember that we may be competing with the Russians for higher and ever higher spirals of productivity for the rest of this century. The prize is the uncommitted billion of the earth's population who may hold the world balance of power.

The most dramatic postwar development in the U. S. S. R. is the striking growth of its economy. Today the Soviet Union stands second only to the United States as the world's largest industrial power. It produces virtually every conceivable product from hydrogen bombs to television sets, from jet passenger planes and automation equipment to toys.

Even more dramatic is the gigantic future growth planned by the Soviet leaders. They propose to surge forward another 70 percent by 1960. They have committed themselves to sensational new goals by the 1960 target date of the current 5-year plan. Coal output is to increase from 390 to 590 million tons, which would make the U. S. S. R. the largest producer in the world. Steel tonnage is to rise from 48 to 68 million tons—metric tons, 10 percent heavier than hours. The projected steel increase is greater than the total present output of great Britain. Sixty-eight million tons is greater than the combined production of Britain and West Germany. Electricity is projected to rise in the 5 years from 166 to 320 billion kilowatts—to about half of the United States output. And so forth, across the industrial boards.

This proposed rate of expansion is much higher than that of any Western country, including the United States. Even more significant, as a long-range trend, is the fact that whereas in the West 70 percent of industrial resources goes into consumption, in the Soviet Union it is only about 40 percent. The Soviet steel doesn't go into cars and refrigerators and dishwashers—it goes into armaments and into machine tools and into facilities for making more steel.

This tremendous effort, of course, comes out of the hides of the Russian people. It is drawn literally out of their blood, sweat, and tears. But it comes also out of the use of their brains and their talent. This we must not overlook. Audiences I have been talking to since my return from Russia seem astonished when I tell them that there are more students above the secondary school level today in the Soviet Union than in the United States, that the U. S. S. R. graduated 63,000 engineers last year—competent and Communist-indoctrinated—to our 23,000. By 1960 they will have as high a proportion of their youth completing high school as we do. Indeed, they project compulsory high school for all, in contract to our current graduating rate of 80 percent. Perhaps more important, the Communists

have developed a system for stimulating and prodding and propelling their ablest students to reach their maximum potential. This is in contrast to the disgraceful statistic that has recently come to light about our own system, under which more than two-thirds of the ablest 20 percent of our high-school students—14 out of 20 of our best—fail to finish college. Some never finish high school, some don't bridge the gap to college, others drop out of college—mostly, in my judgment, for economic reasons.

I would call the Russian school system a system of training, rather than education. Our American aim is to develop each student to his highest potential as an individual, for his own happiness and for the good of society. The Russian goal is to produce highly trained human instruments for the service of the state. Nevertheless, the Soviet training system is going to be a mighty force in the competitive coexistence that lies ahead.

I have 6 reasons for believing the current Soviet 5-year plan—the sixth 5-year plan, and by far the most ambitious of the six—will succeed. This current plan not only predicts a 70-percent increase in U. S. S. R. production but a 65-percent increase in capital goods as well.

My first reason is simple. It is history. Though they have consistently failed to meet agricultural goals in the five previous plans, the Soviets have just as consistently confounded western skeptics by achieving or overachieving their objectives in heavy industry. Stalin's visions, which made western experts scoff, are today's industrial realities.

My second reason for refusing to underrate Russian industrial achievement is what I have just been talking about—their tremendous rate of production of trained specialists. I saw evidence of this with my own eyes in Leningrad, Moscow, and Kiev. At the Community Party congress in February, Bulganin said:

"Specialists are our gold reserve. We are proud of them and we value them. Altogether, 4 million specialists are to graduate under the sixth 5-year plan. That is nearly as many as were trained during the last two plans."

Bulganin added: "It is no wonder certain figures in the capitalist state are not without concern that their own countries are behind us in the training of specialists."

I happen to think that Bulganin may have been referring to me. I have been writing and speaking widely on this subject. I met him at a reception in Moscow, and, incidentally, it was only due to this meeting that I was able to arrange to meet the top Soviet educational and cultural officers and ministers, not previously interviewed by any westerner.

This ever-increasing crop of Soviet technicians will pour into the Soviet economy like an accelerating flow of adrenalin. Our American corporations, in their frantic competition for young engineers and scientists, know the productive value of a great stream of highly trained specialists.

Third, the Russians seem slowly to be veering toward their own version of two capitalistic ideas—decentralization and internal competition. We in the United States know these have been keys to our own productivity. The Soviet leaders are now giving more authority, both in planning and operations, to local managers. Inefficient bureaucrats are being lambasted in Russia even as in the United States. As for competition—which they call "socialist competition"—that is growing between different ministries, different regions in the same industry, between industries and between different geographical regions and political units.

It is not the competition we here know so well. But in some ways it's not so different. The fact that the Soviets have three complete airplane industries competing with each other for government largess is said to be a major reason for the excellence of the Soviet planes.

Fourth, the Communists may begin to obsolete equipment faster than we do. They don't have to worry about treasury rulings on amortizing their equipment. They can often junk it more casually. This is an advantage in moving toward widespread application of automation.

Fifth, the new men in the Kremlin, though their ultimate aims are the same as Stalin's, seem more flexible and confident. They are willing to admit the West may have some useful know-how. Their magazines are saying in effect, "Comrades, let us not be arrogant; we have much to learn from the West about productivity." Thus the Soviet leaders want to trade technical know-how with the rest of the world. They ask for "exchanges of personnel," and through these you may be sure they expect to learn and to benefit.

Finally, and sixth, the new generation of administrators and managers—and I interviewed some 40 or 50 in various ministries—struck me as men of ability who would rise in any society. Most were in their forties, thus were small children at the time of the revolution. They are able and dedicated, self-possessed, and relaxed. Further, they are thoroughly indoctrinated Communists, ready to sacrifice themselves and others for the Communist cause. They are, of course, frighteningly ignorant of the West, of its values and its hopes and goals.

If I'm right in my estimate of accelerating Soviet economic productivity, this is a vital deduction to the calculation of American policy. Every day's newspaper brings fresh stories bearing on this epochal issue, I am discussing today. The New York Times carried a story from Moscow datelined just a week ago today, reporting the issuance of the first statistical survey of the Soviet economy since 1939. It covers the period 1913 through 1955. The fact such a report has been published is in itself significant. I find the figures believable. Most Soviet statistics have been so. The record varies widely from field to field. But the overall figure on gross national product is impressive: Taking the 1913 output at 100 the figure for 1939 is given at 578, for 1945 at 593 (observe that there was some growth even during the war years, despite the fact the Soviets lost nearly half their industrial capacity in the first months of the Nazi invasion); for 1955 the figure is given as 2,723—27 times 1913. Thus if the U. S. S. R. achieves its current 5-year goal of another 70 percent step-up, this percentage by 1960 will be 4,349 percent of 1913.

What does this rising curve mean for American businessmen, and for the Western World in general? It seems to me the Soviet economy flings three obvious challenges at us.

The first challenge stems from the fact that most of the world's population lives in what have come to be called the underdeveloped countries: Chiefly in Asia, Africa, and Latin America. To the people of these lands, the Communists argue that they have the system which will solve their problems of poverty and backwardness. "Look how we have pulled ourselves up by our own bootstraps," they say. "Follow us and you can do likewise." The Soviets argue that the tremendous progress of their industry in less than four decades proves that the Communist way of life is the quickest and surest means for propelling a nation forward. Free enterprise, they argue, is just a propaganda phrase for what they call monopoly capitalism. It means continued backwardness, continued exploitation by the advanced industrial nations of the West, and slow industrial growth if any.

This Communist argument isn't new. What is new is that the Soviet Union and its satellites are now in a position to back it up through the export of capital and technical assistance on a major scale and for the first time. Up until now, they've largely had to employ words instead of deeds, promises instead of performance. Now they have a few deeds for sale, and some performance. And with their genius for propaganda they'll know how to exploit this.

The old argument, therefore, now becomes much more impressive. After all, in India the Soviets are today providing a steel mill of 1 million tons annual capacity. In Egypt they are laying the groundwork for an Egyptian atomic-energy industry. In Burma they are building a technological institute which they will staff themselves. They are building roads in Afghanistan and pouring $100 million into her economy.

All signs indicate that this Soviet-type point-4 program will be extended. It will be most surprising, for example, if Latin America does not receive enticing offers from Deputy Premier Mikoyan when he visits there later this year.

The second challenge the Soviet economy flings at the West is the challenge to western unity which will be created by Soviet and Communist-bloc trade offers. The cement of our western unity has been fear of Soviet military and political aggression. We have been fully justified in that fear. But if and as this recedes, as it becomes less obvious and less dramatic, the lure of profiting from Soviet trade will grow and the cohesion of the West will be harder to maintain.

For several years, and most recently during Khrushchev's and Bulganin's visit to Great Britain, the Communists have been arguing that only American obstructionism prevents the free world from selling billions of dollars worth of goods to the Soviet Union, to Eastern Europe and Communist China. In Birmingham. Mr. Khrushchev spoke contemptuously of present trade as the exchange of Russian crabs for British herrings. He offered to buy almost $3 billion worth of British goods if only the present embargo on strategic exports was removed. This may be only a propaganda offer. But it is the kind of propaganda that can create strains among the Western nations.

Now for a third Soviet challenge and this alarms me less than the first two—though it may surprise you more. This is Soviet competition as a seller on world markets. Some of you here today may shortly begin to feel that competition. I suspect we shall find Soviet automobiles, Soviet tractors, Soviet machine tools, and a wide spectrum of Soviet industrial products offered for sale abroad. The terms may be more advantageous to the buyer than ours. There have already been hints that the Soviet Government is thinking of offering for sale the new two-jet passenger planes that were displayed in London several weeks ago. When I was in Finland last fall, the Soviet Government was exerting pressure for permission openly to flood the Finnish market with Soviet television sets, which could receive the Soviet TV broadcasts beamed to Finland and at the time of my visit only available to bootlegged sets.

The Soviets will have several important advantages in this new kind of product competition. The Soviet aim is always more political than economic. On any particular product or commodity, they do not have to make a profit on what is sold abroad. Soviet books and newspapers carrying Soviet propaganda are sold abroad for ridiculously low prices—prices that have no relationship to cost. Similarly, if it suits Soviet propaganda purposes, automobiles or tractors or machine tools can be sold at prices below those of western producers. I am told that the cheapest automobile on sale today in the Argentine is a Soviet model.

In the product competition of the next few years it seems to me that Western products should usually have a decided edge in quality. However, this cannot be taken for granted. Not long ago General Partridge of the Air Force testified to a Senate committee

that the Soviet Bison bomber flies 5,000 feet higher than our best pursuit planes—yes, and also faster. We read how Dresser Industries has been seeking rights to manufacture a Soviet turbodrill for oil wells, said to be 10 times faster than conventional rotary drills. The Soviets have not yet turned their technological skills to the products produced by many of us here today.

• • • • •

I shall not attempt to prescribe policy to meet today these new challenges. I am myself still seeking orientation. There is often, however, a great gap between Soviet statements and Soviet reality. Take Mr. Khrushchev's complaint about British-Soviet trade being confined to herrings and crabs. If you look at the trade statistics, you will find that Soviet purchases in the British Commonwealth have been shooting up because of increased buying of copper, rubber, and textile machinery. Those are strange herrings indeed. This kind of falsification and misrepresentation is common Soviet practice.

The most potent answer, of course, to the economic gauntlet the Soviets are flinging at us is the continuing demonstration that our kind of economy—with its infinite variations—is more productive than the Soviet system.

A further and most important answer lies in the query whether we can speed up economic development throughout the non-Communist world, and not just here in the United States, so that as Communist strength increases, ours of the free world increases even more rapidly.

The new competition that is developing across the globe is between the Soviet economic system, poisoned by ruthless disregard of human values but arguing that it gets fast results, and the American system, represented by you here in this room, you who build businesses on individual incentive, enthusiasm, and conviction.

A new report by the Committee for Economic Development analyzes America's role in the underdeveloped countries. Yes, these countries need capital. Yes, they need technical know-how. But the CED points to a third great need—that for entrepreneurial talent. That is a talent the Russians haven't cultivated as have we. It is a talent that is in short supply even in Western Europe, with its cartels and its rigidities and its class systems. We like to think it is an abundant natural resource of this country, springing out of our feerer economic system.

As I conclude I suggest that we businessmen must understand better and become clearer in our minds about the values America seeks. We Americans pride ourselves because we cherish political and personal freedom. With varying degrees of passion, every people on the face of the earth cherishes these same values. Up to the present moment we Americans have been able to argue that our competitive system leads not only toward political and personal freedom, which are good in themselves, but toward a uniquely high material standard of living. We have had it both ways—freedom and material well-being. In our minds, the two go together.

We shall always have the freedom argument, so long as the Communists remain Communists. In my judgment we shall also have the standard of living argument so long as we keep our system free and competitive. But our economic advantages overseas seem about to become less dramatic. Freedom was always the higher argument. But I do not believe the world is sure that we know this. Many people overseas, even among our friends, are not sure that if ever we Americans had to choose between freedom and material well-being—we would unhesitatingly choose freedom. Yet freedom is the great value which the American people historically cherish.

I would like to hope that business leaders such as you here today will begin to apply your skills to these new problems around which the future of our country revolve. I hope you will apply your skills not only to raising the American standard of living, but to raising a nobler standard—a standard which is the finest product of the ages—the standard of personal, of civil and political freedom—the standard of our American freedom of which you leaders of the American business community should be the proud advance guard.

Proposed National Physical Fitness Commission

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. NEUBERGER. Mr. President, recently in Annapolis, some of the Nation's physical education specialists and prominent figures from the sports world were assembled in a physical-fitness conference at the request of the President.

The direction much of the thinking is taking comes to light in an excellent article which featured the February 1956 issue of the Physical Fitness News Letter from the University of Oregon. It was written by Dr. H. Harrison Clarke, an eminent authority on the subject of physical fitness.

I ask unanimous consent, Mr. President, that the article entitled "What the Country Needs: A National Physical Fitness Commission" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT THIS COUNTRY NEEDS: A NATIONAL PHYSICAL FITNESS COMMISSION

(By H. Harrison Clarke)

CONSIDERATIONS

1. An essential starting point in developing physical fitness throughout the Nation is to redirect physical education as it is practiced in our schools and colleges. During the origins of physical education in this country (1825–1914), physical fitness was the major function of physical education; today, in general, it is subordinate to such objectives as social efficiency, recreational competency, athletic skill, and the like. These objectives are important but do not justify neglect of physical fitness. Therefore, a basic need nationally is to motivate physical education's return to a primary consideration of physical fitness.

2. Several recent events have tended to awaken anew the consciousness of physical educators to physical fitness, especially the Kraus-Hirschland statistics comparing the fitness of European and American children, President Eisenhower's interest in this problem, and a national press devoting space to this issue. However, such stimulation alone will not solve the problem. In fact, the fitness program proposed by the President and others, while well intended, is not properly conceived as it is geared to the athlete and not those who most need physical development, the physically subpar boys and girls.

3. Thus, we need redirection, but we also need a properly designed program and assistance in conducting it. The Oregon physical fitness program, previously described in this News Letter is directed toward boys and girls who are subpar in fundamental physical fitness elements; is based upon the identification of such individuals through the use of the most valid tests available to physical education and is designed to meet the individual needs of each low fitness individual. We feel strongly that this program will vastly improve the physical fitness of the children of this State in ways which are fundamental to their growth and their development into manhood and womanhood.

4. But, even a relatively small-populated State like Oregon, must go slowly in inaugurating such a program, as there are serious problems to overcome. These problems include: A lack of testing instruments, the cost of these instruments, the need for skilled testers, inadequate professional understanding of the program proposed for those who are physically subpar, and the necessary staff and program time to conduct such a fitness program. So, what has Oregon done? The answer: Establish pilot physical fitness centers in at least 1 school in each of 10 areas of the State, with a minimum of 100 boys and 100 girls included at each center. Actually, 12 schools will be involved this year with a total of approximately 3,000 pupils. The plan provides means to expand the program each year. The belief is that every step should be correctly conceived, even though progress is slow but, at least progress should be made at once. This project depends on the voluntary services of many people; the financing is very little, being limited to travel, lodging, and meals for the testing teams. A great deal more could be done if ample funds were available.

5. An effort is now being made to form an interstate physical fitness council. The issue is currently before the Oregon and Washington associations for health, physical education, and recreation. This council would permit concerted action by States toward effective physical fitness programs; and would provide an opportunity for the exchange of ideas and experiences.

PROPOSAL

What this country needs is a physical-fitness Commission. The Commission should have central, regional, and State offices to be completely effective. It should be able to carry out such functions as the following:

1. To devise and promote adequate physical fitness procedures and programs, which may be adapted to various localities and types of institutions: for both sexes and for all ages.

The program proposed should be directed toward identifying those who are subpar in basic physical fitness elements and meeting the individual needs of those so identified. Rather than political appointments, members of the Commission should be those who have had the best experience and have contributed most through field work and research to the development of such fitness programs.

2. To provide an opportunity for professional physical educators and related specialists throughout the country to serve as consultants in proposing and reviewing physical fitness practices adopted by the Commission.

These consultants should provide representation by geographical area, type of institution involved, various age levels, both sexes, and the like. They should be well qualified professionally and should serve both the national Commission and the regional and State offices.

3. To provide field services for inaugurating and conducting the physical fitness program.

In Oregon, it was immediately realized that considerable field help was essential if the physical fitness plan was to get into operation effectively. Thus: the pilot centers, the

visits of the testing teams, the holding of clinics and seminars, and the provision for future expansion. The Commission could logically provide such field services as: conducting special courses to acquaint personnel with the fitness program, holding regional and State conferences to stimulate widespread adoption of acceptable procedures, consulting with State and local personnel on fitness processes, and holding clinics and otherwise aiding in the training of personnel in the understandings, procedures, and techniques involved.

4. To mobilize and disseminate existing knowledge relative to the effective development of physical fitness.

Scientific information related to physical fitness is widely scattered over many fields, including physical education, health education, medicine, physiology, anatomy, nutrition, chemistry, anthropology, growth and development, psychology and psychiatry, and others. To assemble, analyze, and evaluate this mass of material and make it readily available to the field, especially to those planning and conducting fitness programs, should constitute an essential function of the Commission.

5. To stimulate and subsidize needed research in the area of physical fitness to the end that such programs will become as completely scientific as possible.

Through research, the physical-fitness program should become increasingly effective until it becomes par excellent in the world today (outreaching by far, let us hope and pray, similar programs in Russia and other Communist-dominated countries). The research program should emphasize basic studies in physical fitness. Funds should be provided for the development of more scientists in this field through fellowships and grants to individual researchers and institutions for conducting studies sponsored or approved by the Commission. A number of universities now have research laboratories in physical education and in its closely related area, physiology of exercise; probably without exception, these laboratories badly need subsidization to increase their productivity. Also, the number of qualified research workers in these fields has increased markedly since World War II; this number is capable of increasing many fold in the years ahead if research moneys are provided.

SUBSIDIZATION

Many physical educators will argue that the greatest handicaps to conducting widespread physical-fitness programs throughout the United States are inadequate facilities, equipment, personnel, and the like. Therefore, to solve this problem, they would contend that extensive Federal subsidization to the States is essential. There is, of course, considerable validity to this contention. Even for in-school youth, lack of these essential factors is obvious in many States and in many communities in all States. This will become increasingly pressing as school enrollments rise in the years immediately ahead, necessitating new buildings, more teachers, and greater cost for the services of education. To contemplate similar needs to serve the physical fitness of the entire population greatly magnifies this problem.

It is the contention of this observer, however, that such subsidization will not bring about the desired result, to increase the physical fitness of all, unless physical activity and other regimes are directed toward effective physical fitness processes. Thus, any such subsidization should be coordinated with the adoption and conduct of a proper physical-fitness program by the State and/or local community. Initial Federal grants, if contemplated, might better be made for the establishment of a National Physical Fitness Commission.

Foreign Service a Growing Force

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. MANSFIELD. Mr. President, I desire to call attention to an article entitled "Foreign Service a Growing Force," written by Gould Lincoln, and published in the Washington Evening Star of June 24, 1956. In the article Mr. Lincoln points to the improvements which have been made in the Foreign Service in recent years, and quotes Dr. Wriston as follows:

I believe the Foreign Service to be the very best in the world.

Mr. President, I ask unanimous consent that the article by Mr. Lincoln be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL
(By Gould Lincoln)
FOREIGN SERVICE A GROWING FORCE

Uncle Sam's Foreign Service—the Foreign Service arm of the State Department—has made important strides toward a goal of 3,800 Foreign Service officers during the last 2 years. This has been accomplished with painstaking care through integration of competent State Department civil service officers with the Foreign Service and through improved and broadened recruitment methods. The program grew out of the Secretary of State's Public Committee on Personnel, headed by Dr. Henry M. Wriston, then president of Brown University. It has been carried forward with the sympathetic interest and legislative aid of Congress.

More than 3,800 officer positions in Washington and the United States missions abroad have been designated as Foreign Service positions. Almost two-thirds of these are now filled by Foreign Service, as compared to 1,285 when the program was initiated.

The Foreign Service is a hard working corps, highly trained for diplomacy, capable of dealing both with the problems of foreign politics and of economics, foreign and domestic. It differs from the civil service in the State Department in that its officers are at all times available for foreign service—no matter how remote.

Vital force for the United States

The importance of this force becomes all the greater in the light of the shift in tactics of the Communist countries to the economic field. The future of the United States and of the free peoples all over the world is becoming increasingly dependent on the skill and ability of those who work in the State Department and the missions, now more numerous than ever before.

Foreign Service officers must man 68 embassies, 9 legations and 167 consulates in 105 countries. If and when the Iron Curtain is lifted, the demands for additional personnel will increase.

Not only have there been strides in personnel of the Foreign Service, but the morale of the Service and of the whole State Department is on the up and up—morale that suffered during the McCarthy investigations. Also, the recruitment of the best and most efficient of the graduates of colleges and universities in this country has gained, with a changed attitude toward the State Department on the campuses. The Department is making intensive efforts to establish close relationships with the colleges and universities. Its success is shown by the fact that applications for the last three written examinations have totaled 4,504, 5,394, and 4,960 in contrast to the 1,261 applications received in 1954.

When the Secretary of State's public committee made its report there had been no appointments to class 6 (the beginning Foreign Service officer class) for 2 years. Since then more than 300 new class 6 officers have been appointed. The Department expects to appoint a large number of junior officers this year and to continue appointing 250 each year, in order to keep the Foreign Service staffed largely by those who enter at the bottom and through training and ability climb the ladder to positions of greatest responsibility.

Examinations facilitated

The examination of applicants for the Foreign Service has been streamlined, not through any lessening of standards but by shortening the time, making the examinations more easily accessible to applicants all over the country. The written examination may be taken in one day in any of 65 cities in the United States and its Territories. The oral examination no longer requires the applicants to travel to Washington. The State Department sends examining panels to at least 15 regional centers.

The integration of officers in the other personnel systems has worked exceedingly well and a further 300 appointments to the Foreign Service under this program are expected by early fall. One of the valuable accomplishments growing out of the buildup of the Foreign Service has been the return to this country of men who have served long periods overseas, for assignment in Washington. Many foreign officers have served a score of years or more outside the country with only 2 years or less in America. The Department now plans to rotate Foreign Service officers so that they will be in the United States for 4 out of every 10 years. In Washington they perform valuable services, for which they are prepared by their experience abroad, and at the same time they are kept more in touch with the important facts in this country.

Congress has gone far toward making possible the improvements in the Foreign Service recommended by the Wriston Committee. It still has some amendments to the Foreign Service Act to enact. Dr. Wriston himself said recently: "I believe the Foreign Service to be the very best in the world."

Need for Neater Polling Places

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very effective and cogent editorial from the Saturday Evening Post of July 17, 1954, entitled "Neater Polling Places Might Get More Voters." I heartily endorse the policies expressed in the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEATER POLLING PLACES MIGHT GET MORE VOTERS

We have in mind a woman who takes a keen interest in public affairs, but admitted reluctantly that she might not vote in November.

This is what she said: "I want to vote more than ever, but I know that when election day comes around, I'll find myself putting it off simply because I can't face the ordeal. Walking through that maze of party hacks, waiting in line in that cold garage, is too embarrassing."

To the average American male, for whom politics, stale cigar smoke and rooms littered with sample ballots are inextricably mingled, this lady may appear unduly squeamish. But it does seem absurd to put on protracted and expensive get-out-the-vote campaigns if sensitive people are kept from the polls because they can't endure the mess. In many cities polling places are located in garages, firehouses, warehouses, basements, barbershops, grocery stores or any old place which a faithful party hack wants to rent to the city for the purpose. Thousands—particularly the women—are not going to vote as long as polling places are set up in such depressing surroundings.

Unlike most problems, this one has a simple solution: Transfer polling places to the American schools, as has been done already in many communities. Each school can easily handle 2 to 5 election districts. Make election day a school holiday. This would make voting a dignified, important and pleasant experience, and might easily increase the number of those who participate in elections by convincing them that, physically at least, politics need not be a dirty game.

Bolivar Blazed the Trail

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. CHAVEZ. Mr. President, in the New York Journal-American of June 20, 1956, there was published an article entitled "Bolivar Blazed the Trail," written by Bob Considine. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOLIVAR BLAZED THE TRAIL

(By Bob Considine)

"We have plowed the sea," the immortal Simon Bolivar said with bitterness before he died. He had led the forces that liberated most of South America. He had called a great conference at Panama (1826) and found only suspicion of his dream of a united continent. And so he died, unwept and in poverty and rancor, with the despairing thought that he had dug only a short-lived furrow in memoryless water.

In death, the Venezuela-born creole liberator grained incomparable stature. Many of the dreams he nurtured came to fruition after he was dust. His work continues. Late next month, if all goes well, President Eisenhower and the presidents of all other sovereign states in this hemisphere will meet in Panama in perhaps the most momentous conclave of its kind since the Bolivar conference of 130 years ago. Bolivar considered Panama the perfect meetingplace. The Organization of American States seems to have no reason to question that appraisal. In fact, although the date has not yet been officially set, there is a great scramble on for rooms in Panama's elegant El Panama Hotel.

IKE KEEN ON CONFERENCE

Since Canada will not attend, being under the aegis of the British Crown, we will be the only English-speaking nation represented at what would in all probability be history's greatest meeting of presidents. Jim Hagerty, the President's press secretary, flew to Panama a week before the President's illness to inspect the situation and make preliminary plans. The President is very keen on this conference. It could be his first big post-operative engagement and have a bearing on his political future.

But there was no political aspect involved when Eisenhower came up with the conference plan while talking with the President of Mexico and the Prime Minister of Canada at White Sulphur Springs in April. Nor will there be any political flavor attached to his presence when/if the conference comes off next month, except that his presence there would demonstrate that he's back in harness. Eisenhower feels more keenly about bettering Pan American relations than any outstanding American since Cordell Hull.

Eisenhower's chief instruction to Hagerty before the latter flew there was to assure the host president, Panama's Ricardo Arias Espinosa, that the United States delegation wishes to be treated exactly as the representatives of the other 21 countries will be welcomed. There will be no special red carpet treatment; no cause for any mention of the colossus of the north.

Hagerty made a very good impression in Panama. He brought back to his boss a souvenir from the desk of President Arias, the latter's latest golf card. Arias shoots in the low 70's.

Israel's Meaning

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and informative article entitled "Israel's Meaning," written by Joseph Alsop, and published in the New York Herald Tribune of June 20, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATTER OF FACT

(By Joseph Alsop)

ISRAEL'S MEANING

JERUSALEM.—In a whole series of different ways, it is an eye-opening experience to visit Israel. After a long struggle with red-tape, you pass through the Mandelbaum gate from Arab Jerusalem to Israeli Jerusalem. Instantly you are breathing a new air, observing a new landscape and seeing the future in a new perspective.

Essentially, Israel is so different from the surrounding Arab lands, and indeed from the countries of the West, too, because this is a place where they believe in miracles. They believe in miracles, in turn, because they have accomplished miracles.

When you consider the massive counterforces that were overcome, the creation of the State of Israel was in itself a miracle. So was the transformation of this once barren and unfruitful land into a rich and smiling landscape of vineyards and orchards, fertile fields and grassy meadows, populous busy towns, and productive industries.

Again, the transformation of the people themselves is also touched with the miraculous. For here the Jews of the Diaspora have been gathered, from both sides of the Iron Curtain, from Africa and from Asia. Peddlers from the Casablanca native quarters have been made into sturdy farmers, as I saw at a new cooperative farm. Long-locked Jews from the premedieval ghettos of the Yemen have become steelworkers of a high technical category, as I was shown in a new pipe extrusion plant. And these and all the others in this enormous gathering in of the tribes are being rapidly merged into the national whole, and turned into Israelis in the full sense of the word.

The State, the land, the people, in short, all in different ways represent achievements which any rational, practical forecaster would have held to be utterly impossible only 10 or 20 years ago. Therefore there is a mood here going far beyond the mood of the old Scotch song—"what other men dare, we can do." Here the mood is, "we can dare and do far beyond other men."

The prevalence of that mood makes the very air of Israel quite remarkably exhilarating to any one accustomed to the moods of other lands, where defeatism and materialism, self-indulgence, and despair, suspicion, and self-seeking so often seem to compete for dominance. But while this Israeli mood is so exhilarating in itself, it is also a hard political fact that must be judged cold-bloodedly, like all other hard political facts.

The Israeli mood, for instance, makes nonsense of the State Department's complacent trumpetings about the success of U. N. Secretary General Dag Hammarskjold's middle eastern peace mission. So far as can be observed, Hammarskjold had no long-range success of any kind.

He certainly did not succeed in persuading the Arabs to accept the existence of the State of Israel. More immediately important, he certainly did not succeed in persuading the Israelis to abandon those policies which may lead to an outbreak of war with the Arabs.

On the contrary, from Prime Minister Ben-Gurion to the simplest private in the army, the Israelis are all but unanimous that their national security depends on meeting Arab terroristic acts along their borders with stern military reprisals against the Arab governments. And from Prime Minister Ben-Gurion to the poorest farmworker, the Israelis are all but unanimous that their national future depends on going forward with the Jordan water diversion scheme, which the Arabs have said will mean war.

The Israelis are people, moreover, who think very little about risks, including even the risk of war, when they are convinced that their national security and natural future are genuinely at stake. They must further be expected to be even more careless of all risks, if Soviet Foreign Minister Shepilov climaxes his Cairo visit by announcing the Kremlin's support for a reduction of Israel to the frontiers proposed in the U. N. partition scheme of 1947. That will be a threat to end Israel as a workable state, and the Israelis will be all the more inclined toward an early showdown.

In another way, too, viewing the mood of Israel as a hard political fact makes nonsense of the opinions now prevailing in Washington and London. It is highly unlikely that the Arabs will ever make peace in return for the little bits of Israel that Prime Minister Eden and Secretary of State Dulles have tried to persuade the Israelis to sacrifice. The effort to persuade the Israelis to make serious territorial concessions was even more unrealistic. As Prime Minister Ben-

Gurion bluntly informed Prime Minister Eden, the Israelis will fight first. There should be no mistake about that.

In short, grim courage and ruthless self-denial make Israel intensely admirable as a human accomplishment, but this same courage and self-denial also make Israel highly intractable as a political fact. There is no use saying about the Israelis, "they ought to do differently." They will not behave as many western policymakers think they should behave, because that is not their nature. And one must add, they only exist today because that is not their nature.

We Have the Kind of Government Americans Want

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by A. M. Piper, editor of the Council Bluffs Nonpareil:

WE HAVE THE KIND OF GOVERNMENT AMERICANS WANT

The American people elected Dwight Eisenhower President in November 1952, because they wanted peace, security, thrift, and integrity.

We have peace. President Eisenhower, as he promised the Nation in the 1952 campaign, ended the war in Korea—after 157,000 American soldiers had been killed and wounded during Democratic rule.

Incidentially, it was the third war in the 3 Democratic administrations of this country.

We have security. The spread of communism has been checked. Under Roosevelt and Truman 18 nations were taken over by the Communists. Millions were enslaved by the Reds.

Under Eisenhower the Communists have been thrown out of Central America. The Communist advance in Europe has been halted. Progress has been made in the atoms for peace program. Communists and Communist sympathizers no longer occupy high places in our Government.

We have security in terms of money. Under Republican policies your dollars are worth as much as they were when Eisenhower became President. The $100 you saved in 1953 is worth the same today. Under the Democrats the $100 saved in 1939 was worth only $52.20 by 1952.

We have thrift in Government. Republican policies cut $10 billion from the budget recommended by President Truman just before his term expired. Republican policies have, in not quite 4 years meant savings of $1,000 for a family of 4. Republican savings made possible the greatest tax cut in the history of the country—reducing everybody's taxes.

We have honesty in Government. The men and women President Eisenhower appointed to office have given the United States the kind of honest Government you want.

Our Government officials are not cheating the taxpayers. They are not pulling crooked deals. They are working hard to give the country good government.

Under President Eisenhower we have peace instead of war. We have security instead of irresponsibility. We have thrift instead of waste. We have integrity instead of corruption.

We have the kind of Government the overwhelming majority of Americans want for their country.

Necessity for Expansion of Foreign Economic Aid

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered on June 21, 1956, by John Cowles, publisher of the Minneapolis Star-Tribune. The address is most timely because the foreign aid and mutual security questions will be before the Senate in the near future.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE MUST EXPAND ECONOMIC AID TO KEEP NEUTRALS OUT OF RED ORBIT

(By John Cowles, president of the Minneapolis Star and Tribune Co.)

Although the Russian leaders in recent months have changed their tactics, are now talking about peaceful competitive coexistence, and are frequently putting on false masks of pretended friendliness toward the West, there is not as yet the slightest evidence that their basic aim of absolute Communist world domination has changed an iota.

Recently a friend of mine who holds one of the most important posts in our Government reminded me of what in 1931 a then leading Russian Communist, Dimitri Manuilsky, said at the Lenin School of Political Warfare in Moscow.

Let me quote: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. The bourgeoisie will have to be put to sleep, so we will begin by launching the most spectacular peace movement on record. There will be electrifying overtones and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

I need not in this audience add 30 years to 1931 to make 1961.

Now I am entirely aware that many of you may be thinking, "Yes, but things have changed and are changing in Russia." My answer is, undoubtedly, in some ways, but let's be certain we don't do anything that might jeopardize our national security until and unless we are absolutely sure that the Communists are not simply engaging in a temporary tactic to lull us into a feeling of false security.

The philosophy of Lenin, the whole system of long-term strategy and short-term tactics that he outlined for the Communists to follow in order to take over the entire world, is far more of a sacred bible to the Russian Communists than even Hitler's "Mein Kampf" was to the German Fascists. The program that the Russian leaders are currently following fits in exactly with the strategy that Lenin set forth.

Of course we should all hope that there has actually been, or will at some future date be, a fundamental change in the Russian Communists' ambitions for world dictatorship and the destruction of the capitalist democracies. But anyone who is naive enough to accept Russian words, before there is unmistakable evidence in the form of deeds, that the Communists have had a basic change of heart is a dupe who deserves to retain neither his liberty nor his life.

MUST KEEP VIGILANT

Since our aim is peace, we should, of course, welcome and encourage every indication that the Communist system is becoming less inhumane and less menacing. We should at the same time try to demonstrate to human beings all over the globe that our free society holds more promise for them than does communism, whether they live in Europe or Asia or Africa or Latin America, and whether their skins be brown or yellow or white or black. But we must nevertheless keep vigilant and maintain our military strength unimpaired for the indefinite future.

Until we have attained universal global disarmament, under complete, continuous and unqualified international inspection and control, we can never be sure that Russia may not be planning a sudden, cataclysmic atomic attack on us.

I personally think it extremely unlikely that Russia will precipitate a major war in the few years immediately ahead. It is, nevertheless, a possibility, and when one is dealing with such a thing as our freedom, or our very survival, we must take no chances involving national security.

What worries me far more than the remote possibility of Russia's launching a surprise attack on us in the near future is the grave possibility that the Communists may be able in the next 5 or 10 years, without open war but through propaganda and economic and political pressures, progressively to absorb into the Communist orbit most of the presently neutral or uncommitted nations. If that should happen the free world would be in dire peril.

POPULAR FRONT PRESSURES

In addition, I fear that in some of the nations of Western Europe, such as France or Italy, the pressure for so-called "popular front" governments will grow to a point where the Communists will again hold cabinet seats in coalition governments as they did just after World War II.

The Communists now control one-third of the human race. Neither the Roman empire at its greatest, nor Islam at the height of its expansion, nor any other system at any previous time in history ever controlled such a proportion of the world's population.

The uncommitted nations of Asia and Africa contain roughly half the world's population. If they should slide into the Communist orbit—and there is a frightening likelihood that unless we in the United States adopt a much bolder, more understanding and more imaginative foreign policy many of them will—then the Communists would control about five-sixths of the population of the world.

But what is even more important than mere population totals is the fact that the Communists would then control the sources of many of those minerals and raw materials which are vital to the functioning of the free world's industrial economy.

If that should come to pass, possibly or even probably, some of the countries now a part of the so-called free woird would conclude that they had better come to terms with the Communists. It is even conceivable that T. S. Eliot's phrase about the end of the world coming not with a bang but with a whimper might be prophetic.

DANGER OF COMPLACENCY

I hope I am much too pessimistic, but I fear that unless the American people become far better informed upon the realities of international affairs, the United States will not do the things that are necessary to reduce or avert the possibility of the Communists' absorbing so much more of the globe as to lead to possible future disaster. We are, I think, in danger of becoming too complacent about the long-term Communist threat, simply because there is no hot war raging today.

I express no opinion as to how long it may be before the Communists might take over most or all the rest of Asia and most of Africa, unless we take moves to prevent it, but certainly within the lifetimes of most of us here today and possibly in a very few years.

What can we do, you ask, to avert this calamity?

The first part of the answer is to find some way to educate the American people as to the potential future danger in the existing international situation, so that an informed public opinion will induce the Congress and the executive branch of the Government to do certain things that they are not now doing, either because they are themselves uninformed as to the urgency of the situation or because they think the public, that is, the voters, would not approve.

We should promptly adopt a much larger and far more imaginative program of foreign economic aid—not military aid—to help raise the productivity and standards of living of the poverty-stricken countries of Asia, most all of whom have just emerged from colonialism. I do not think President Eisenhower asked the Congress for as much money for foreign economic aid as he should have asked, but I suspect he asked for the maximum he thought the Congress would conceivably appropriate, and it now appears that Congress is going to approve only a part of what he requested.

I believe we could reduce our foreign military-aid expenditures by an amount approximately equivalent to what we should add to our foreign economic aid. I am in general agreement with the congressional belief that the amount of foreign military aid that the administration requested is larger than necessary, but I think Congress is probably cutting it too much.

However, I think it is utterly silly for us to provide Thailand, for example, with squadrons of modern jet planes when those funds could be used far more beneficially for more economic assistance in southeast Asia. Whether Thailand does or does not have some jet planes will not determine whether or not not we have a third world war, or who wins it if it comes.

In view of Russia's shift in tactics we are, I believe, grossly exaggerating the value of some of our foreign military pacts and alliances. I think the antagonism and distrust created by SEATO (the Southeast Asia Treaty Organization) and the Baghdad pact outweigh their possible military advantage.

STRENGTHEN BRITISH TIES

Let no one get the mistaken impression, however, that I am belittling the value of all military alliances. Quite to the contrary. We should strengthen our ties to the limit with Great Britain and such other countries as we believe would be dependable and effective if the Russians should launch war. We should coordinate to the maximum our military forces and Canada's so that we would have a really unified continental air defense against a possible Russian attack over the arctic.

Let no one get the erroneous idea, either, that I advocate any sizeable reduction in America's own national defense expenditures. I doubt if we are now spending enough in the fields of research and development.

The American people have a grossly exaggerated idea as to the amount of money we are currently spending on foreign economic aid. The bulk of our foreign aid is for direct military purposes even though much of it is labeled economic aid. Moreover, four-fifths of all our foreign aid is going to South Korea, Formosa, Indochina, Pakistan, and Turkey.

Only a tiny trickle of the funds of the International Cooperation Administration (formerly called the Foreign Operations Administration and previously to that called ECA or point 4 or the Marshall plan) is going to the economic development of such presently uncommitteed nations as India, Indonesia, and Burma.

ASIAN DEVELOPMENT CORPORATION

I have read or heard most of the arguments advanced against America's continuing foreign economic aid. Of course there is waste in the program, probably considerable waste. Perhaps the time has come when most of this economic aid should be in the form of loans, however soft, instead of in grants. Probably it would be wise to create an Asian Development Corporation, for example, and give the Asian countries actual control, with a majority of its board of directors, even though we put up 80 percent of the capital. Or conceivably it might be wise for us to offer to channel our economic aid through the United Nations, and invite Russia to do likewise.

Those Americans who call foreign economic aid a "give-away program," and say it is of no benefit to the United States, for the most part fail to realize its real purpose. Primarily, it is simply an effort to enhance our own national security by reducing the likelihood that the underdeveloped nations, with their manpower and natural resources of minerals and raw materials, will slide over from their present positions of neutrality into the actual Communist orbit.

Wholly in addition to helping to enhance our own national security, economic aid can be justified on humanitarian or spiritual grounds. We Americans believe every human being was born to live his life as a free individual, not to be submerged in collectivist totalitarian slavery. We thus have a moral obligation to try to help the poverty-stricken, largely illiterate, politically immature new nations that have only recently emerged from colonialism.

DETERMINED TO ADVANCE

The billion people who are living in almost indescribable poverty in these underdeveloped areas of the world are just as determined to industrialize their economies in an effort to raise their standards of living, as they are to maintain their recently secured independence from colonialism.

The Russians are offering the loans, contingent on the recipient nation's spending the money for Russian-made machinery and equipment, with Communist engineers moving into those countries to supervise its initial installation and future operation and maintenance.

Unless the United States helps these underdeveloped nations help themselves, it is overwhelmingly likely that many or most of these countries will end up as an integral part of the Communist political as well as economic empire. Critics of foreign economic aid fail to realize how gravely jeopardized America's national security would be if anything approaching five-sixths of the people of the world with all their natural resources slipped into the Communist orbit.

These underdeveloped countries are determined to industrialize in an effort to raise their standards of living and make themselves more economically self-sufficient. If the United States does not help them, most of them will accept Russian aid, probably without fully realizing that in so doing they will inevitably enmesh themselves progressively in communism.

NO FREE CHOICE UNLESS—

The critics of foreign aid fail to appreciate the fact that the presently uncommitted peoples of Asia and Africa will not be in position to make a free choice as between "going Communist" and staying outside the iron or bamboo curtain until and unless the United States offers them, as the Russians are now offering them, some of the capital and scientific and technological know-how that they so desperately need.

Perhaps our giving them economic aid will not prove sufficient to prevent these countries from going Communist, but I ask those who oppose giving the aid: "What alternative do you propose?"

We and the Russians are in a long-term struggle to see whose way of life will prevail.

Americans must be made to understand that our growing educational crisis directly affects our national security. Russia is currently graduating each year many more engineers, physicists, and chemists than is the United States. Estimates indicate that before long Russia may be turning out twice as many as we. Unless we strengthen the teaching of mathematics and sciences in our high schools, and unless we see to it that a much higher proportion of our talented high-school students go on to—and through—a good college or university, we may well find the Russians far ahead of us in brainpower.

If we are to preserve permanently our free institutions here at home, if we are going to be able to live in peace and security and prosperity, we must not only greatly improve the quality and quantity of all phases of our educational system, and intensify our research and development in the field of national defense, but we must also learn more about all the distant lands of the world and the strange peoples that dwell in them.

MUST KNOW EAST

Our cultural heritage comes from Europe. Almost all Americans have been consciously or unconsciously oriented toward Western Europe. The time has come when we must learn more about the East, both the Near East and the Far East, lands of ancient civilizations long before Columbus discovered America. We must not look down on Asians because of the color of their skin; their, to us, peculiar religious beliefs; their lack of past technological progress; their almost indescribable poverty.

We have much to give them but they also have much to give us, if we are humble enough and intelligent enough to recognize and accept it.

If we Americans will first come to understand the nature of the long-term threat of world communism, and then will rise to the challenge and employ all our resources of intelligence and strength to meet it, I have no doubt as to the eventual outcome. Freedom will prevail, and the world can live in peace, amid both material and cultural abundance that will far surpass that enjoyed by any previous generation.

Delay on Action on Nomination of Simon E. Sobeloff To Be Associate Judge of the United States Court of Appeals

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. BEALL. Mr. President, it has been almost a year since President Eisenhower nominated the Honorable Simon E. Sobeloff, Solicitor General of the United States, to be an associate judge of the United States Court of Appeals for the Fourth Circuit. It should distress all of us to realize that numerous delays have prevented definite action on the nomination, thereby depriving the court and the people associated with it of the vitally needed services of this distinguished citizen. Members of the Maryland State Bar Association recently reemphasized their strong feelings on this

matter during their annual meeting in Atlantic City. To show the sentiments of these men, most of whom have had close contact with Mr. Sobeloff, I request unanimous consent that the message sent to me by the bar association secretary, Mr. S. Vannort Chapman, be printed in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

Senator J. GLENN BEALL,
Senate Office Building,
Washington, D. C.:

This resolution was unanimously adopted at the 61st annual meeting of the Maryland State Bar Association, Atlantic City, N. J., June 23, 1956:

"Whereas the United States Court of Appeals for the Fourth Circuit, a tribunal only one degree below the Supreme Court of the United States, is currently manned by only one judge in active service status, namely, Chief Judge John J. Parker; and

"Whereas Hon. Simon E. Sobeloff, Solicitor General of the United States, was nominated by the President of the United States on July 15, 1955, as an associate judge of the said court, and the failure to take action on the said nomination, which has been pending for almost a full year, is unfair to litigants, to the court, to the attorneys that practice therein, as well as to the nominee; and

"Whereas in the opinion of this association there is no doubt as to the eminent qualifications of General Sobeloff by reason of his character, training, temperament, experience, and learning to fill with the highest distinction the position to which he has been nominated; and

"Whereas his qualifications have been recognized by the subcommittee of the Judiciary Committee of the United States Senate, which after hearings has reported favorably General Sobeloff's nomination; by the Honorable Chief Judge John J. Parker of the United States Court of Appeals for the Fourth Circuit, who has twice urged before the Judiciary Committee of the United States Senate the immediate confirmation of General Sobeloff's appointment; by the American Bar Association's committee on Federal judicial appointments; by the Bar Association of Baltimore City; and by the endorsement of the leaders of his own community, and great numbers of other distinguished citizens throughout the Nation; and

"Whereas an extraodinarily long and searching inquiry has utterly failed to develop the slightest basis whatever for any reflection upon his long and distinguished career, during which he has served as United States attorney for the district of Maryland, city solicitor of Baltimore City, chief judge of the Maryland Court of Appeals, the highest judicial tribunal in Maryland and Solicitor General of the United States, in which position he is now serving; and

"Whereas this experience with both state and Federal laws, and as the highest judicial officer in Maryland, preeminently qualifies him as a judge of the United States Court of Appeals for the Fourth Circuit: Now, therefore, be it

"*Resolved by the Maryland State Bar Association*, That the association hereby approves the action of its committee on Federal judicial appointments in recommending the confirmation of Judge Sobeloff, and respectfully but urgently requests the Judiciary Committee of the United States Senate to take immediate action to report favorably the nomination of Honorable Simon E. Sobeloff as an associate judge of the United States Court of Appeals for the Fourth Circuit; and be it further

"*Resolved*, That a copy of this resolution be sent by the secretary of this association to the chairman and each member of the Judiciary Committee of the United States Senate and to Senators JOHN MARSHALL BUTLER and J. GLENN BEALL, of Maryland."

S. VANNORT CHAPMAN,
Secretary, Maryland State Bar Association.

The Role of the CIO in Oregon and in the Nation

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the June 15, 1956, issue of the Oregon Labor Press, by Mrs. Emsie Howard, describing the history of the Congress of Industrial Organizations in the State of Oregon, on the occasion of the official merger between the CIO and the AFL in the State of Oregon. Mrs. Howard's able article highlights the progress and history of labor organizations in our State in recent years.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIO PLAYS VITAL ROLE IN OREGON AND NATION

(By Emsie Howard)

In the mid-thirties a family quarrel within the American Federation of Labor exploded.

Basis of the quarrel was the impatience of one group that sought to organize workers, primarily in mass production industries, on an industrial or vertical basis. This meant that all workers in a given industry would be organized into one large union.

The other faction clung to the principle of horizontal organization—that workers in various crafts be organized into the unions representing those crafts.

The differences divided and weakened organized labor for almost two decades. The faction urging industrial organization withdrew from the AFL and formed their own group which later became the CIO—Congress of Industrial Organizations.

Now in the mid-thirties the two organizations are reunited as the AFL–CIO. Implicit in the reunions is the admission that the division was a mistake.

On November 9, 1935, the CIO was established. The following months produced frenzied and successful organizing drives.

In early 1936 a 6-week strike gave the United Rubber Workers a strong foothold in the rubber industry. Meanwhile major organizing drives were under way in the steel and automobile industries.

The first big break came in Flint, Mich., after a 44-day sit-down strike against General Motors. This victory gave the United Automobile Workers a beachhead in the automobile industry but only after days of struggle and anxiety. The police used tear gas but failed to drive the strikers from plants. The governor of Michigan, sympathetic to the workers' plight, steadfastly refused to call in the militia.

Then came the dramatic announcement that the steel industry, one of the strongholds against unionism, had signed with the Steel Workers Organizing Committee which was to become the mighty United Steel Workers of America.

These victories touched off a string of organizing successes for the CIO. But the two great basic industries, automobile and steel, have remained the firm core of the CIO.

The CIO has exerted influence in other areas, including organization of newspapermen into the American Newspaper Guild, but its basic strength has always been in mass production industries.

Almost from the moment of its birth, the CIO has been a hard-fighting and effective national political force. Its Political Action Committee has exerted strong influence at all levels since its inception in 1943.

John L. Lewis of the United Mine Workers was the first president of the CIO. In 1940 he opposed the reelection of Franklin Roosevelt. Lewis resigned shortly after Roosevelt's sweeping triumph over Wendell Willkie.

He was succeeded by Philip Murray, the soft-spoken president of the Steel Workers. A native of Scotland, Murray, like Lewis, had been a miner. He was an outspoken and vigorous opponent of communism and all foreign ideologies. His calm and statesmanlike leadership commanded national respect throughout the war years.

Murray died in late 1952, a few days before the death of AFL President William Green.

Leadership of the CIO then passed to Walter Reuther, the fiery, tireless leader of the UAW. George Meany was elected president of the AFL. Almost immediately after taking over the leadership of the CIO and AFL, Reuther and Meany launched plans for the merger that was accomplished last December.

Red-headed Walter Reuther is a rare combination of idealist, scholar and fighter. His uncompromising stand against Communist elements seeking to gain a stronghold in the UAW resulted in a dastardly attack on his life. An assassin's bullet fired into the Reuther's kitchen was almost fatal and permanently crippled his right arm.

The CIO's stand against communism and its views on international affairs closely parallel those of the AFL.

The CIO has urged active participation of its State and local industrial union councils in community affairs. It has worked vigorously to promote racial and religious tolerance, better housing, industrial safety, and other measures for human welfare.

The first Oregon union to receive its CIO charter was the International Woodworkers of America. Its organization in logging and sawmill operations has remained the backbone of CIO organizations in Oregon.

The IWA was chartered in August 1937 and was followed within a few days by the International Longshoremen & Warehousemen's union.

Less than 18 months later, in January 1939 organization had proceeded to the point where delegates from 45 local unions met in Harmony Hall, Portland, for the first convention lof the State Industrial Union Council.

The local unions represented were affiliated with the IWA, Longshoremen, Textile Workers, Steelworktrs, Amalgamated Clothing Workers, Cannery Workers and the Columbia River Fishermen's Union.

John Brost of the Longshoremen was elected first president of the council and Ralph Peoples of the IWA was named secretary-treasurer. The delegates voted a monthly salary for both officers.

The council was organized to serve as the political arm of CIO unions. From the outset, all of its efforts were directed toward organized political action.

Steady and rapid growth followed. When the 1941 convention opened, 81 local unions were affiliated with the council.

The CIO had taken its place in Oregon. President Brost reported to the convention that "we are represented on nearly every major committee in the State."

Secretary Peoples reported that paid-up affiliation was 3,000 above that of 1940.

Turning to the council's activities at the State legislature, he had this to say:

"We coordinated our lobbying activities with the Oregon Commonwealth Federation and depended greatly upon Monroe Sweetland for his knowledge of politics to help put over or defeat bills which affected labor. Our relations with the federation were profitable."

Peoples also cited the close cooperation of the State Industrial Union Council with the Farmers' Union and the Oregon State Grange.

(The Oregon Commonwealth Federation was a group of labor, farm and community leaders working for liberal legislation and to wrest control of State government from reactionaries by supporting liberal candidates.)

The council's offices were moved in 1941 from the Governor building to more desirable quarters in the Platt building. Peoples reported further that "we secured more dignified furniture." They were moved again a year or two later to the Woodlark building, where they have remained.

The first endorsing convention for the purpose of recommending candidates for local, State, and National offices was held in September 1942. Adoph Germer, grand old man of the national CIO, bespoke the underlying philosophy of the CIO that the gains of unions must be protected on the political front when he told the convention: "It costs so little to vote right. It is far cheaper to vote than it is to strike."

Growth of the CIO locally was further demonstrated by the reestablishment in 1942 of the Portland industrial union council, which has remained an active force ever since. In 1942 the local council undertook an educational program by sponsoring a weekly radio broadcast.

The national CIO's war relief committee, described by President Philip Murray as "an example before the whole world of the wartime service which industrial unionism is giving to the United Nations" had its local counterpart. Oregon was served during the war years by a CIO community services committee with offices in Portland.

In 1943 the State industrial union council sent its first delegate, Stanley Earl, to the national convention in Philadelphia. Earl had succeeded Peoples as secretary-treasurer.

The CIO was represented on the principal war-time Government agencies as well as the Red Cross, United War Fund and the Community Chest. Its place in the community was secure. Its voice was heard, its influence felt.

An increasing awareness of the importance of public relations was reflected by a resolution at the 1945 convention urging the national CIO to establish a research and education department and to provide trained personnel to serve throughout the country.

Again in 1948 the convention urged the national CIO to develop education programs for local unions to arouse and sustain interest in such subjects as current events, labor history, politics, economics, candidates for public office and community problems.

By 1947 a total of 83 unions had affiliated with the council. As it grew in strength, action on the legislative and poltical fronts was broadened. Political action included support of public utility district, school legislation, old-age pensions and logging and trucking legislation.

Always in the forefront of every program was a militant fight for civil rights and against discrimination.

Safety in industry was recognized as an important issue demanding legislative action and education among union members.

Climaxing the efforts of Oregon CIO unions was the national CIO convention held in Portland in November, 1948, which brought President Philip Murray, Walter Reuther, Jim Carey and almost all top CIO leaders here.

Local civic and business leaders thronged the convention halls to listen to some of the Nation's top labor spokesmen.

In reporting to the 1950 convention, George Brown, who had succeeded Earl as secretary in 1949, said that important gains in the registration of workers had been accomplished through the combined efforts of the AFL, CIO, Machinists and Railroad Brotherhoods "working as a unit with various civic and fraternal organizations."

Recognizing the value of coordinating their efforts toward their common purpose, the AFL and CIO were moving closer together in the field of political action.

In 1953 the council joined with the State Federation of Labor in all-out support of the National Hells Canyon Association. And in 1954 the CIO legislative committee joined with the State Federation and threw all its strength behind Richard L. Neuberger and Edith Green. Both candidates were elected.

In 1956 the AFL and CIO of Oregon have worked closely with one another.

Together they made their recommendations for candidates and for measures that were deemed worthy of organized labor's support in the primary election.

Speaking of the merger, George Brown said: "For many years we have worked together in the legislative field. As we have consolidated our efforts and pulled together we have become increasingly successful.

"If our union members will register and will vote in their own interest on election day, our united efforts can mean increased security and improved conditions for all of us."

Use of Compulsory Union Dues for Political Purposes

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. GOLDWATER. Mr. President, the statement made by President Eisenhower, on the occasion of the merger of the CIO and the AFL, that "the rights of minorities holding differing social, economic, and political views must be scrupulously protected and their views accurately reflected," is being recognized across the length and breadth of this great Nation as a true and proper position not only for the Republican Party to occupy, but, I suggest, also for the Democratic Party. The use of compulsory union dues for political purposes is exactly what the President was getting at in his statement. The recent announcement, by the head of one of our major unions, to the effect that his union will have more than $500,000 dollars available for contributions to candidates, has caused one of the most highly respected editors in the Southwest, Mr. W. P. Stuart, to comment on the subject in an editorial entitled "Double Standard in Politics," published in the Prescott Evening Courier, of Prescott, Ariz. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DOUBLE STANDARD IN POLITICS

It has long been illegal for corporations to make contributions to candidates for political office. This legal restriction, obviously, is based on the theory that corporations otherwise would use their economic power to elect men who would serve special interests

Whether or not such laws are wise is debatable. What is not debatable, however, is that similar restrictions do not apply to organizations which also have great economic power—the unions.

The head of a major union, the International Ladies' Garment Workers, has said that his union will have more than $500,000 available for contributions to candidates in this year's national election campaigns. He said also that the combined AFL–CIO political fund may reach $3 million.

What conceivable justification can there be in forbidding corporations from financing political candidacies—and at the same time permitting powerful unions to spend money on a huge scale for political purposes and political ends? And how do the vast number of corporation stockholders feel about the situation?

United States Should Be Generous to Retired Employees

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by A. M. Piper, editor, the Council Bluffs Nonpareil:

UNITED STATES SHOULD BE GENEROUS TO RETIRED EMPLOYEES

Bills are pending in Congress to increase substantially the retirement and family survivorship benefits of Federal employees.

Senate bill 2875 would increase the annuities of Federal employees who retire in the future by about 25 percent and boost family survivorship benefits by more than 50 percent.

It would also increase disability retirement benefits and permit retirement after 30 years of service with less financial penalty.

In return for the various benefits provided employees would pay 7 percent of their salaries into the retirement fund instead of the present 6 percent.

Other bills are pending which would increase the annuities of former Federal employees now on the civil-service retirement rolls, in line with the annuities provided for those who retire in the future.

The most satisfactory of these is Senate bill 3731 introduced by Senator CARLSON, of Kansas, with Senators JENNER, of Indiana, and MARTIN, of Iowa, as cosponsors.

It provides substantial annuity increases for retired Government employees and does not require a special appropriation.

Many thousands of Government employees who retired years ago when the cost of living was much lower than at present need increased annuities this year.

The pending bills mark a forward step in the fight for adequate annuities for Federal employees who retire in the future and for aged former employees who have retired in the past, for those who are sick and disabled and modest annuities for widows of certain employees.

Congressional committees and Members of Congress are coming to realize that annuities of retired employees should be adjusted in conformity with increases in the pay of active Federal employees.

The American people can well afford to be generous to employees who have devoted their lives to the service of the Nation.

Observations on Round-the-World Tour by Former Dean Edward Steidle, College of Mineral Industries, Pennsylvania State University, University Park, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. VAN ZANDT. Mr. Speaker, upon his return to the United States in May 1956 after a round-the-world tour, former Dean Edward Steidle, College of Mineral Industries, Pennsylvania State University, University Park, Pa., made available to me the following observations.

Dean Steidle, who is currently Chairman of the Federal Coal Mine Safety Board of Review, was accompanied by his lifelong friend, Dr. A. C. Fieldner, both of whom traveled at their own expense.

Dean Steidle's observations are as follows:

OBSERVATIONS ON ROUND-THE-WORLD TOUR, JANUARY 11–MAY 16, 1956

(By Edward Steidle)

The tour included more than 35,000 miles of travel in 15 countries. I was accompanied on the entire trip by Dr. A. C. Fieldner, retired chief fuels technologist of the United States Bureau of Mines. The following viewpoints are concluded from my observations and experiences in interviewing former students, mineral leaders, American businessmen, and members of our foreign services, in the various countries.

Cuba is reported to be revolt-ridden and depends upon the Army to keep order; and crush any localized revolts. The people appear to be going along very much as usual.

The Panama Canal is guarded by American servicemen from ocean to ocean, especially from aerial attack. Panama wants the canal internationalized, and the more radical members of the government claim full possession, in spite of the fact that the rent has been tripled, and vast real estate holdings have been granted to Panama since World War II. There is strong evidence of resentment, especially to the Americans living in the Zone.

Near Gatun, I took note of the big hole for a third lock, near Miraflores another hole—monuments to futility on which about $75 million was expended before the project was abandoned. The solution of the canal problem is long overdue. It is reported that a commonsense plan for this was developed in 1943, known as the Terminal Lake plan.

Honolulu does a beautiful job in carrying out the spirit of aloha—love, welcome, goodbye. The ocean water at Waikiki was much too warm to be exhilarating. The population is about 35 percent Japanese. There is a feeling among some longshoremen as well as pineapple and sugarcane workers, that one word from Harry Bridges could paralyze the island and that, as a consequence, the United States Government will be slow in taking action against him.

Upon our arrival in Japan, the Japan Coal Association initiated us into the ancient Japanese tea ceremony, and followed with a banquet in our honor.

The people in Japan still respect MacArthur very highly. He was the benevolent leader which appeals to the Japanese temperament. The occupation was nonvindictive and aimed at getting Japan on its feet again as soon as possible. The former prosperity of the country was the result of generations of work, and although it is difficult and slow work to rebuild after a war, even with industrious folk like the Japanese, they are recovering with amazing progress. By way of contrast, the Koreans appear to be unprogressive and we can be pessimistic about that country.

United States security forces in Japan are gradually diminishing by mutual agreement. Reaction to withdrawal is mixed since the security forces employ many thousands of Japanese in offices, shops and private homes. We buy millions of dollars worth of supplies from Japan annually.

Nonmilitary spending by Security Forces' personnel is currently averaging about $30 million per month; military spending is approximately as much more. This income gives strong support to the Japanese economy. A strong spirit of patriotism and self-respect fosters a vague desire to encourage our withdrawal, but officials of the Japanese Government weigh the advantage of the income from American occupation.

There does not appear to be any anti-Americanism in Japan. This country might prove to be a "friend in need," but it must have more space, more food, more raw materials of industry, and more markets abroad in order to gain a peaceful prosperity. Population growth is a serious matter throughout the Orient, and Japan is the only country that is taking positive steps toward some control.

Formosa was a pleasant surprise. Our ship was the first passenger ship to land on the island in 6 years; consequently, we were tendered a genuine fireworks, firecracker welcome. We expected to find everyone on the defensive, but saw nothing on sea, land, or air at Keelung, our port of call, or in the capital that would make one conscious of possible attack. Apparently, major defense efforts are on the west side of the island. Formosa is making progress, but it is doubtful whether the country can ever stand without United States aid. Coal on the islands of the Far Pacific is generally low grade, and difficult to mine economically and safely.

Hong Kong is truly a fabulous city in every respect, and is a convenience, a listening post for Great Britain. It seems evident that Red China could capture the city any time she desired, and is willing to face world opinion. The United States does not need Hong Kong for strategic reasons. It is not impossible that Hong Kong might be handed over to Red China outright. The city could also be lost to the Communists by infiltration, as evidenced by the fact that the British Government is considering a proposition for allowing people from the Communist mainland to come to Hong Kong freely. The refugees from Red China who have escaped across the border live in fear of their lives. These poor people, especially the Christianized, will be the first targets to be wiped out as soon as the Communists just across the hills can lay their bloody hands on Hong Kong.

The Philippines are making rapid recovery from the ravages of war, with United States aid. The Philippine people appear to have complacent confidence in continued United States support. The Japanese are still busy salvaging the vessels sunk in Manila Bay, first by Japan and later by the United States, in part payment of their reparations. Trade between the Japanese and the Philippines is "a natural" and growing slowly. Corregidor stands as a peaceful monument today. It was not difficult to appreciate the value of the battle for the Leyte Gulf with respect to General MacArthur's return to the Philippines. The United States National Cemetery with 22,000 Italian marble crosses, on the outskirts of Manila, is very impressive but, in retrospect, one contemplates whether it is equitable and fair to force our men to fight and die in the jungles on the other side of the world for a cause they cannot understand.

The Malay Federation is 80 percent Chinese. In fact, the wealthy Chinese control most of the banks and the business houses, including tin and rubber. And much of the tin and rubber is available to the communistic countries who want it and can pay the price. The rich Chinese are on the fence ready to fall whichever way the wind blows in their favor. The leaders are well aware that North China tried to make a deal with Red China and failed in the effort. The secretary general of the Communist Party in Malay is reported to have talked with the Singapore Chief Minister, David Marshall, before the Minister visited London recently to negotiate an independence deal for Singapore. Some local people feel that Britain has already agreed to writeoff Singapore. But Singapore is one of the world's pivotal ports, and the gateway to the Far Pacific, and others feel that Greatin Britain will fight to hold it, perhaps with United States help.

In this connection, the press has reported that the British Colonial Secretary, Alan Lennox-Boyd, told Mr. Marshall, on April 23, that Britain will not permit Singapore, one of the few remaining footsteps of British power in the southeast Asia area, to fall under Communist domination and become a Chinese Communist outpost. Singapore is still a British Crown colony and its importance has been heightened by the threatened loss of naval and airbases in Ceylon as a result of the Celyonese election which took place shortly after our visit there. Singapore is doomed to be another world's hotspot within 6 months.

Indonesia is made up of a number of states having independent local politics. The people are different and are mostly illiterate and poor, and will probably try anything new that will promise fuller stomachs and better living conditions, in spite of the fact that the vast majority of the people are not Communist at heart because of their religious beliefs.

Thailand is surrounded by hostile communistic countries, but is not afraid to show its appreciation for the economic and military help of the United States. It seemed clear that her recent border dispute with Cambodia was inspired by Red China. It appears that Thailand is the envied rice basket of the Far Pacific and will have to fight to hold her independence.

Ceylon is a beautiful island, and the drive to Kandy was equaled only by the mountain drive in Formosa. Ceylon is the first place where we could observe elephants at work. Tea, rubber, and coconut oil are the base of the economy of the country. The new Prime Minister of Ceylon was quoted in the press, as saying, "Bases must go, that is, British forces based on Ceylon. * * * Having foreign bases on our soil is not at all consistent with our sovereignty as a nation. * * * Agrees with Nehru's spirit in foreign policies * * * that no danger of Communist subversion is possible in Ceylon." The platform of the New Prime Minister called, also, for higher wages, and lower costs, including food.

The social evils and the living standards of the masses of India have not changed appreciably through the years, in spite of the fact that the country is blessed with a bountiful supply of primary wealth. There is no

unity, thus making the position of neutrality partly understandable. India appears to be fearful of its internal complexities, of all imaginable kinds, many of which cannot be legislated. Secondly, India looks vulnerable from end to end and too weak to defend herself. She will take help from anyone, but does dot want interference. She accepts United States aid, but also hires Russian technicians. Some industrial progress is being made, but principal objectives, including higher standards of living, may require generations. India is very critical of United States policy. Mr. Reuther arrived in New Delhi while we were there and, in his first press interview, represented American labor in taking exception to several policies of our State Department. For example, one headline read: "United States Workers Want Goa To Be Free." According to the press, he favored more help on the part of the United States and called upon the workers of the world to work collectively for eradicating poverty, hunger, and social injustice throughout the world.

Mr. Nehru, a Kashmir Brahman Hindu, persists in his claims that Kashmir is an integral part of India, in spite of the fact that 95 percent of the people of Kashmir are Moslems, and naturally favor Pakistan. It is significant that India urged the Hindus in Pakistan to move to India, and Pakistan urged the Moslems in India to move to Pakistan at the time of the partition of the two countries, thus creating additional refugee problems.

The Iron Pillar of Delhi is a unique example of corrosion-resistant iron that has withstood the corrosive action of sun and storms for 1,500 years. It is a solid shaft of wrought iron about 16 inches in diameter and more than 20 feet high. Its smooth surface shows no visible corrosion.

Taj Mahal at Agra is the most beautiful and impressive man-made edifice in the Orient.

The Persian Gulf is the waterway to Middle East oil. Empty tankers coming into the gulf and loaded tankers sailing out can be seen at all times, evincing the importance of the Middle East in present-day world economy. Most of the tankers head for the Red Sea, Suez Canal, and points west.

The Suez Canal is a strange contrast to our Panama Canal. The former is a sea-level ditch through flat desert country, while the latter is in tropical climate and requires a system of locks to raise and lower ships 100 feet. Ships travel through the Suez in convoys that can pass only at two points, which makes it necessary for one convoy to tie up 3 or more hours. There is no interrupted travel through the Panama Canal. No British soldiers were seen along Suez, but Egyptian soldiers guarded the railroad crossings at Isnailia and El Qantara.

A nationalistic spirit runs high in Egypt, and the country is militarized, a striking contrast to my visit in 1936. Armed forces were observed at Suez, Port Said, Alexandria, and Cairo, and soldiers were on guard at the docks in Alexandria and at the railroad stations between Alexandria and Cairo. Nasser is being hailed as the George Washington of Egypt in the same manner as Ataturk is recognized as the George Washington of Turkey.

The Egyptian Gazette—Cairo—April 18—Arabic Press Review headline, "Britain's Idea of Peace Is Not Ours," condemns British policies in the Middle East, including Balfour Declaration, arming and supporting Israeli, followed by proposing intervention and preservation of peace.

The Red China delegation arrived in Cairo at the time of our visit. A good example of what happened in their deliberations with Egyptian officials is Egypt's recognition of Red China announced in the press on May 17. According to the press, this action was taken because of the West's attitude toward her and the Arab national cause.

Communism appears to be on the wane in the northern industrial areas of Italy, and on the increase in the southern part of the country, as far north as Florence. It seems incongruous to see Rome and Florence plastered with posters, "Vota Communista," and showing the Russian hammer and sickle. There are 2½ million people out of work, mostly laborers, yet there is a shortage of skilled workers. The unemployment situation has been greatly increased by the loss of her colonies, especially Ethiopia. Nationalization is stifling development of a much-needed oil and gas industry, in contrast to Sicily which is still leaning to private industry.

Communism does not appear to be too serious in the northern or heavy industrial areas of France, but communism is holding its own in other parts of the country, including the Mediterranean area. In the pro-Communist areas, there are too many small shopkeepers who avoid taxes and render inefficient service at relatively high prices. Loss of her African colonies would reduce France to a second-class nation, and all of Europe will be affected.

The armed forces of Spain are alert against anarchy and fifth columns. Low wages are a sore spot in Spanish economy that may lead to serious unrest, especially if Franco should die, as there appears to be no one qualified to assume his leadership. Spain must make a serious effort to develop her colonies, both by encouraging planned emigration and by economic means.

Our policy in the Orient must be based on a better understanding of the people, and a respect for their culture and traditions. No one country has the power to foresee absolute solutions. A true understanding can only be attained by living associations within the various countries, and a sincere study of their peculiar individual problems—a study of man's relations to his natural environment. In stamping out malaria in the South Pacific and sleeping sickness in Africa, pollination was also interrupted, thereby killing life itself by chain reaction. We must maintain an earthy approach to all problems, rather than jump to absolute conclusions.

The refugee problem has created manmade sores in Formosa, Hong Kong, the Malay Federation, India, Pakistan, Saudi-Arabia, Jordan, and the Gaza Strip. Living conditions of refugees in many instances are not fit for human beings by any standard, and sanitation of refuges, especially in Karachi, capital of Pakistan, is so wretched, one simply cannot believe one's eyes. Progress will be slow in Pakistan, although recently geologists have reported favorable structures for oil.

If Red China were admitted into the United Nations at this time, it is my considered opinion that all of southeast Asia, including Indonesia, Ceylon, and India, would slowly move into Communist hands through infiltration. The people are religious, but there is a high rate of illiteracy in most of these submarginal countries. The people would have nothing to lose but freedom which they do not comprehend and cannot eat.

Some people feel that recognition would further weaken the prestige of the United States in the Far Pacific, but that some solution will be found to trade with Red China. They point out that we have long-term political commitments with Formosa but that, when Chiang dies, the Peking Government will merge with Formosa, and the United States is likely to close its eyes to the trade that will result.

It is questioned whether any of the oriental countries, excepting Japan, is ready for democracy or self-government. Some of the politicians do not appear to know what is meant by democracy and are quick to point out the weak spots in democracy as practiced in the United States. SEATO is meant to function like NATO is supposed to function, but does not. Perhaps it is time to consider that Japan is the colossus of the Orient and that a defense organization built around Japan wuld be more likely to prosper and preserve freedom in the Orient.

Russia offers materials for construction and development projects, and necessary experts to lead in the work, all on a loan basis, and this plan seems to match the needs of the states receiving this aid. Russian loans are long term, at low interest, and payments are to be made in the products of the states, bringing economic stability to the states concerned.

It would seem that the vertex of British domination in the Orient was the sinking of the battleships *Princes of Wales* and *Repulse* in the sea directly north of Singapore in December 1941. Obviously the Pearl Harbor fiasco 2 weeks earlier contributed to the circumstance of face-losing of the white man. But many responsible nationals freely admit that the British and Dutch colonization was in the best interests of the people in spite of high profits, and question whether the people concerned will have peace among themselves upon their own responsibility in the next 100 years.

The Moslem world, 350 million strong, stretches across northern Africa, through the Middle East, into Pakistan, Afghanistan, and Nashmir (and Turkenen, Uzbek, Tadzhik, and Kazakh under the U. S. S. R.), thence into Malay where 50 percent of the population is Moslem. Moslems also make up 9-percent of Indonesia, 4 percent of Burma, 3 percent of Thailand, 4 percent of Philippines, and 5 percent of China.

The Moslems seem to be uniting in their resentment of Israel, and it is not inconceivable that they will one day fight as a unit to restore that area to the Moslems. Russia is taking full advantage of the situation in order to get a foothold in Africa, and with an eye on Middle East oil. Due to the increasingly large numbers coming into Israel, the Moslems fear that they will eventually seek expansion. They have no faith in the proposed Jordan Valley project. Compensation for the Arab refugees will not solve the problem. The feeling of injustice is said to be too deep to be satisfied by money compensations, and it is already evident that freedom-loving countries need the support of the Moslem world in their fight against communism.

The British Government publishes a sales and trade information news sheet periodically in which it lists sales possibilities from all foreign gifts and loans in terms of pounds and dollars. The United States Government should give more aid to United States business representatives in this and similar ways. United States dollars or credit should be used to purchase American-manufactured goods unless the same quality and price is available elsewhere, which is not likely anywhere under present conditions.

I doubt whether the oriental peoples understand what the United States means by "standards of living." Some are quick to point out our lack of respect for all of the great religions of the world. They know that we cannot put a "bottle of milk on everybody's doorstep," and can question why we talk so much about "two cars in every garage," great wealth, great strength, when we depend upon our military expenditures and foreign-aid programs for our current economy and much of our way of living, including high wages, and are dependent upon the rest of the world for many raw materials of industry, and for markets for our manufactured products. They could wonder how the United States can meet the annual deficits of foreign countries when it cannot meet its own deficits. They could wonder how it will all end if and when the current

submarginal countries have their full share of wealth created by manufacture and are taking their rightful place in world affairs. They could believe that the United States will be a "have-not" long before India, for example, is a "have" nation, and that a decent and honorable Russia with its unscratched natural resources can become, with due amount of native brains, initiative, and skills, the dominant nation of the world. They could believe that our economy is based on helping and protecting them, and that we could not turn off the faucet without destroying ourselves. From my own point of view, we have just reason in every respect to sing "God bless America," but perhaps a new, companion song, "God help America," would help us to be a bit more nationalistic, and give more concern to the politics of our own best interests.

Nature Pitches One of Her Curves; Armless Girl Clouts It Out of Park

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BENNETT of Florida. Mr. Speaker, when I picked up a copy of the Jacksonville Journal the other day I saw the beautiful face of Jo Beth Johnson, a little girl who is receiving medical care in the district which I represent. Some years ago I saw her at Dowling Park, Fla., where she was a student and I, as the Congressman in that area, was making a little talk to the school in which she was being instructed. I was then inspired by her courageous approach to life; and by her happy and healthy outlook on life, despite the fact that she has neither of her arms. She was an inspiration to me then and she is now. I am particularly happy that the news is that perhaps modern medical attention and surgery may make it possible for her to live a more normal life than she has in the past. At this point I call attention to the newspaper article to which I have referred, written by my dear friend, Mrs. Beth Van Zile, as follows:

WHAT SHE DIDN'T GET, SHE DIDN'T NEED—NATURE PITCHES ONE OF HER CURVES; ARMLESS GIRL CLOUTS IT OUT OF PARK

(By Beth Van Zile)

Nature pitched her a curve but Jo Beth Johnson caught it squarely—not with two brawny arms and a huge catcher's mitt, but with two beautiful, dainty, nimble feet.

But don't feel sorry for this little 11-year-old girl, because she counts her troubles as experiences—experiences that day by day have developed faith to combat her difficulties, no matter how adverse they are, because, you see, she "keeps God in her pocket."

The Lord and Jo Beth are more than friends. They walk along together, so she really hasn't needed the arms that failed to develop.

Jo Beth has been a patient at Hope Haven Hospital for the past 5 or 6 weeks where she has undergone a series of operations that will make possible the attaching of artificial arms to the muscles in her shoulders. Within the next week or 10 days she will leave for Atlanta and the rehabilitation program that will open up a new world for her.

But she really hasn't needed what nature deprived her of. She has taken piano lessons, she sews, paints, feeds and dresses herself and handles her dainty little toes as well as the average person uses fingers and hands in accomplishing the things they want to do and are necessary in day to day living.

Recreation enters into her program, too, in her school and home life. She plays baseball with the skill of a big leaguer. Anyone who can hit a four-bagger can be assured that Jo Beth will make the home run. With one strike against her, her life has been a continual scoring game.

She attends public school in Dowling Park, near Live Oak, Fla., where she lives with her parents and younger sister, Ann. Not only is she a good student, but she takes an active part in all school activities, has a flair for mathematics, but hates history and English. She'll be an eighth grader next year.

At home she is capable of making as big a mess as any of the other children, but has equal responsibilities in cleaning it up, her mother says.

A painting of a red rose won a blue ribbon at the Jacksonville Beach Art Exhibit yesterday for this little artist. Each brush stroke a success story of determination in an obstacle race run by a child who has to prove to herself that she can't do a thing before she gives it up.

Mrs. Johnson recalled putting a pencil between Jo Beth's toes and giving her a piece of paper, when she was very young.

"I think she would have done it anyway, if I hadn't. Since that time she has never had any trouble doing the things she wanted to do."

When it came time for the operations that will open up a new adventure for this brave little girl, the decision was hers to make. "When she decided she wanted to go through with it, we brought her to Jacksonville and to Hope Haven," her mother said with a note of genuine pride in her voice.

It hasn't been easy these last few days, and there have been nights when "it never quit hurting" for the little girl who someday hopes to drive a car and to have some pretty clothes, for like all little girls, she loves pretty things. Straightening her bandaged shoulders and with the true faith of a little child, she expressed her fondest desire. "Maybe someday I can go to college and be a teacher • • • that's what I'd like to be."

Putting a final stroke on a modern lamp she was painting in the physical therapy workshop at Hope Haven, she laid down the brush, swung around, placed her tiny feet in her patent leather slippers and prepared to leave the room that "has been so much fun to work in" and go back upstairs to her bed where she will proceed to cut out paper dolls for the little patients in nearby beds "who are handicapped."

Jo Beth has run her obstacle race and won—not only a blue ribbon for her painting of a red rose, but a blue ribbon for her living portrait of life—the life of a little girl who cannot fail because she "has God in her pocket."

Bicycling for Health

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SHEEHAN. Mr. Speaker, the city of Chicago, working in conjunction with the forest preserve district and the park district, has put a great deal of time and thought on the development of special facilities for bicycle riders in the public parks. With the number of youngsters using bicycles in a metropolitan city and with no other place to ride except in streets often carrying heavy traffic, the provision of bicycle paths is a safety measure as well as a source of healthful pleasure.

Chicago can well be proud in taking the lead in this development. June 2, 1956, at the inauguration dedicating a series of safe bicycle paths in 27 Chicago parks, the very famous doctor who has been working closely with President Eisenhower since his heart attack, Dr. Paul D. White, of Boston, Mass., delivered the main address. Dr. White's address delivered at Ogden Park in Chicago was as follows:

Mr. Mayor, ladies, and gentlemen, it is with great appreciation of your kind invitation that I welcome this opportunity to present to you some of my thoughts about bicycling in the United States of America. Today may prove to be a red letter one in history both for the people of Greater Chicago, including the present group of 250,000 cyclists and those who should and will become such, but especially as a spur for the rest of the cities and towns in the country. From this acorn I hope that there will grow a huge oak of development for the sake of the health and happiness of the Nation.

PERSONAL EXPERIENCE

I would like to give you first some personal experiences as a cyclist. Of course, like other children I had a bicycle as a boy and used it in play and in going to school and doing errands. In those days, 50 or more years ago, there were relatively few automobiles in the streets and this method of locomotion was relatively safe. As a freshman going to college, I used to ride my bicycle morning and afternoon to Cambridge from where I lived in Roxbury and back again, a 5-mile distance twice a day, which was perfectly easy and practical. In later years with my wife, I took many bicycle trips in Europe where there had already been developed much better facilities for the use of the bicycle. This is especially true in Holland where we spent a week cycling around the country on paths both broad and narrow reserved entirely for cyclists. It was a delightful experience and a pleasant and inexpensive way to see the country. We cycled also in Sweden, in England, and in France. Finally, in our personal experience, our family continues to ride bicycles although more, of course, in the country where we have a small place at Harvard, Mass., 30 miles outside of Boston. However, on occasion, we have cycled in other places, for example, in New Hampshire, and only last summer my son and I cycled around Martha's Vineyard on a very pleasant day. We put our bicycles on the train leaving Boston for Woods Hole, transported them across a short bit of water by boat to Vineyard Haven, and after a pleasant night's sleep, we started off and cycled to Squibnocket, Menemsha Bight, and West Tisbury, and onto Edgartown where we spent the second night. This day's ride covered about 30 miles. It was perfectly easy and pleasant and because we were not accustomed to cycling very much, it left us pleasantly tired at the end of the day. Actually, such a distance is less than a third of that which our fathers thought very little of when they did a century, that is, 100 miles a day, but in these days of softness and lackadaisical exercise, a 30-mile ride leaves many of my friends and associates aghast. This is a ridiculous situation and certainly needs correction.

AS A MEASURE OF HEALTH

There are many health reasons why cycling, like a good many other exercises, is to be highly recommended if it can be done safely. In the first place, it is an aid to good muscle tone, much needed by the American people today. It aids (a) the circulation and thereby the heart and its work by keeping the blood actively moving in the legs (muscular contraction squeezes the veins which with their valves direct the blood back toward the heart); (b) the lungs which through good tone of the diaphragm make it easier to bring oxygen into the body and pump out carbon dioxide; (c) the brain, by keeping down the cobwebs therein; (d) the nerves through improving sleep and maintaining equinamity and sanity (vital needs in this country today and a help in combating the hysteria about a red Indian behind every tree or a witch in every college classroom along with the current ridiculous slavery of our people, men, women, and children to the television and other pushbutton devices which should be our tools and not our masters); (e) our digestion, whereby it may even protect against peptic ulcers if we don't try to establish new speed records every day; (f) our weight, in its control, if we at the same time keep the caloric and fat content of our diet where they belong; and (g) finally, our longevity, since it may quite possibly help in the long run (like other healthy exercise) in reducing the amount of high blood pressure, coronary thrombosis, and diabetes which have engulfed us—this we must, of course, determine by further detailed research, but there is a strong likelihood that this is true.

ECONOMY

Certainly both for private individuals and for the community and country at large, the substitution of at least a small fraction of the excessive traffic on the roads today by bicycles on safe paths should be a very useful step in economy. There are various arguments that can readily be deduced.

(a) The initial cost of the bicycle is much less than that of the automobile, it requires little attention, is able to stand hard use, and repairs can be made easily.

(b) It requires no gas for operation.

(c) It can traverse all types of roads. If a road is blocked, the rider can walk and remount at the first clearing.

(d) Almost everyone aged 4 to 90 can ride a bike or can be taught to ride in a few hours.

(e) When accidents between bicycles occur, there is much less danger of serious injury to either passenger or machine than in the case of the automobile.

(f) It is possible even to equip bicycles with sidecars to transport passengers and one correspondent has said that it might be possible to attach a small truck to carry supplies.

The argument about its difficult use in severe weather is, of course, of some importance, but in almost all cities and towns in this country, it can be a practical method of transportation for 8 or 9 months of the year with some added protection in inclement weather during those 9 months.

A PRACTICAL FORM OF EXERCISE, NOT LIMITED TO CHILDREN

Bicycling, of course, can be a useful sport as well as enjoyable. It can become and should do so, as in Europe and many places abroad, a routine of daily life to take us to work or to visit our neighbors, friends, or relatives, to go to plays, movies, and concerts, or to sport events such as ball games as in the Old World. Thus we can be more than passive participants in all these entertainment devices that are ours today. Many adults have told me, however, that they are embarrassed in getting on bicycles today because it is supposed to be a child's game. This attitude or point of view, which is current and which does deter many persons, must be combatted. It is quite unnecessary—witness the routine bicycling in the course of a normal way of life in the Old World.

CYCLING BRINGS US BACK TO EARTH AND TO THE ENJOYMENT OF NATURE

In travel it is the common experience that we get to places fastest by airplane but we see the least en route. The train and automobile come next and we are so engrossed by our method of transportation that we can hardly enjoy the country through which we pass. Walking is, of course, the best way of all, but not infrequently it is impractical if one wants to go any distance. Thus, of all methods of transportation bicycling gives us the opportunity to see the country through which we ride, to become acquainted with the beauties of the scenery, and to learn about the people themselves. This is perhaps one of the most potent of all arguments in favor of bicycle touring on vocation. This custom is much appreciated abroad and I have had letters from Americans, living in Germany or other places abroad, who see and have participated in the enjoyment of the people resident there who, every day or every week, go off on bicycles with their families to enjoy the countryside.

CYCLE PATHS MUST BE SAFE

After all these arguments re cycling, we come to the vital issue of the day and that is that this means of transportation and exercise must be made safe. It should not be reserved simply for children in parks. It should become a routine measure to bring thousands of our people to their daily jobs safely from their homes 5 or 10 miles away in every city or town.

Just as important as what I have said about the safe bicycle paths coming into the cities is the opportunity now to build safe bicycle paths into the new highway program just being planned throughout the country and in every State in the Union. It can and should be done to give an opportunity for people to tour the country by bicycle, going from one town to another. My father told me that when he was a young man he and a few others rode their bicycles from Boston to Albany, from Albany to New York City, and back to Boston. This is hard to conceive of today, but the opportunity should be reestablished.

CONCLUSIONS

Thus, depite all the relatively minor difficulties in getting this idea started and in planning and building the actual paths, with the expense involved, I feel certain that the establishment of cycling as a routine in the daily life of Americans young and old, can become one of the most vital steps in restoring health and vigor to us all in the important days ahead. Let us bequeath to our children who will be the citizens here tomorrow more than the gadgets that surround us. The bicycle will not, of course, alone do this, but it can become a symbol of the red-blooded vigor, personal independence, economy, and restoration of a mens sana in a corpore sano so much needed in our beloved country today.

First Junior High Diploma Is Awarded at Hope Haven

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. BENNETT of Florida. Mr. Speaker, I recently read a very inspiring article about Gwen Chung, a lovely young constituent who has faced serious obstacles and met them well. I believe that my colleagues, and Americans everywhere, will have a feeling of humility and inspiration when they read of the quiet heroism of this sweet youngster. The article by my good friend, Mrs. Beth Van Zile, is as follows:

FIRST JUNIOR HIGH DIPLOMA IS AWARDED AT HOPE HAVEN

(By Beth Van Zile)

Gwen Chung, lovely 15-year-old Chinese-American girl, held an important document in her crippled hands yesterday, a document that spelled scholastic achievement and fortitude, for it marked her graduation from junior high school at Hope Haven Hospital.

Commencement exercises could not take long for this little girl, whose bed was rolled into the hospital auditorium for the ceremony that gave her the distinction of being the first graduate of the hospital's junior high school. Released from an oxygen tent only a few hours before the long-anticipated event, Gwen, with champagne bubbles in her black eyes, showed the same dauntless spirit that has carried her through the years with an affliction that has kept her bedridden most of her life—rheumatoid arthritis with a heart complication.

An A-B honor student, this girl graduate is a living document of the ancient proverb of her people: "The longest journey begins with a single step." Her steps in education, taken one at a time, have been long and rugged.

Rolled to and from her classroom in her bed, this brave girl, even though not feeling well, never tried to shirk her responsibilities. She could always be counted on to hand in her school assignments on time. Getting out of homework because of not feeling well never entered her mind, because she has been thinking forward and working forward to the limit of her ability.

With a deep love of life, people, and things, she believes that you can reach any goal in life if you are willing to work for it. Conquering her ills with no thought of defeat, Gwen yesterday passed another milestone toward her next goal, graduation from high school. With all her handicaps, she looks with pleasure on things she has today and with gratitude on the happiness of yesterday.

The daughter of Mr. and Mrs. S. C. Chung of Dinsmore, Gwen started her schooling in the Pickett Public School. Later, because of her illness, she received instruction through the homebound program of the Duval County Board of Public Instruction. Unable to attend public schools, she became the pupil of Mrs. Nathan Finney until the time it became necessary to be hospitalized at Hope Haven. Here she has been under the supervision of Miss Nancy Graham, teacher of grades 5 through 12.

"I've never heard Gwen mention any particular school subject that she didn't like," Miss Graham said yesterday, in reviewing her ninth-grade record. "She likes them all."

Books are among her most treasured possessions, her teacher said. The thought of completing her ninth grade has kept her moving along up to the very day—with a few stops out for oxygen.

There have been many rainy days for Gwen, but the puddles in her life have reflected the light of the sun. She hasn't her thoughts fixed on her difficulties, nor does she complain about them. She takes a positive angle and lives joyously—truly a blessing to those around her and associated with her.

There were no large crowds at this commencement; the band didn't play, and only her doctors, nurses, teachers, and members of her family attended.

But it was commencement day, right on, and one of the happiest days in this girl's life—the little girl who has tapped the secret of the universe, the secret of victorious living.

Address by National Commander of the American Legion Before Graduates of the FBI National Academy

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by Mr. J. Addington Wagner, national commander of the American Legion, before the graduating class of the FBI National Academy on June 8, 1956.

In this address Commander Wagner gives a penetrating analysis of the menace to our country represented by the Communist philosophy. I am sure his address will be of special interest not only to Members of Congress, but to the general public, as well.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY NATIONAL COMMANDER J. ADDINGTON WAGNER OF THE AMERICAN LEGION BEFORE THE GRADUATES OF THE 57TH SESSION OF THE FBI NATIONAL ACADEMY, WASHINGTON, D. C., JUNE 8, 1956

I am very happy to be here. I consider it a privilege and an honor for myself, and for the American Legion, to be invited to speak to this distinguished class of graduates of the 57th session of the FBI Academy.

The opportunity extended me to speak to you is a tangible evidence of the continuing friendly association, and the cooperation between the American Legion and the FBI. We are proud of this association, and of the many years it has prevailed. We look forward to its continuance, and we hope that it will grow even stronger in the years to come.

This graduation is another milestone in a wonderful program which began almost 21 years ago—in July 1935. Since then, 3,163 law-enforcement officers including the 98 from this class, have graduated from the Academy. They represent every State, the District of Columbia, Puerto Rico, Canada, and many foreign countries. What a great contribution, indeed, this Academy has made to the honorable profession which all of you represent.

Every graduate—each of you here—exemplifies the progress which has been made in the field of law enforcement. Today the police officer is much more than a person who apprehends criminals. He is also looked upon as an honored citizen, a skilled technician, and quite often, a civic leader.

But before all else, the law-enforcement officer is a highly trained professional in a specialized field. The social development of our people has made it clear that the problem of dealing with the criminal is essentially the problem of dealing with the maladjusted citizen. And as in the case of medical science, which more and more seeks to cure disease by preventing it, those responsible for law enforcement have come to realize that the most effective way to reduce the number of criminals is to find out why people break the law, and then to deter them from doing so.

The focal point of this thinking, of course, has been the youth of the Nation. And, certainly, one of the great pioneers in the study and the alleviation of the problem of juvenile delinquency has been the distinguished Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover. I believe it is a demonstrable fact that Mr. Hoover has done more than any other single person in the United States to make the American people aware of the many aspects of the problem of juvenile delinquency, and to urge that something positive be done about them. For his unremitting efforts in this field alone, the Nation owes him a very great debt of gratitude.

The American Legion shares the interest of all other good citizens in seeing this problem relieved. We have devoted a substantial part of our own activities to the promotion of juvenile opportunity. That is why we maintain our vast junior baseball program; our boys and girls State programs; our oratorical and essay contests. These American Legion programs afford healthful recreation, as well as sound training in good sportsmanship and good citizenship for more than a million young men and women this year. In addition we are very active in scout work. At present American Legion posts sponsor more than 4,000 Boy Scout troops. And also, of course, there is our child welfare program, which has spent more than $125 million in direct aid to needy children since 1925.

Our work in the fields of youth activity and child welfare derives from our deep interest in the security of America. We know that the national security depends to a great extent upon the physical and mental vigor, the moral strength and the social well-being of America's youth.

I mention these things because I want each one of you to know that the American Legion post back home is your ally in the cause of maintaining public order.

You know the very existence of the FBI Academy is an excellent example of the difference between the idea of a policeman in the mind of a free American citizen, and in the mind of a citizen slave of the Communist tyranny.

In this country, the policeman is the guardian of the rights and of the personal safety of the individual citizen. In the Communist world, the policeman is the guardian of the rights of the state, and his principal duty is to watch the citizen and compel him to conform to the will of the state.

These two concepts are accurate reflections of two philosophies so basically different that there can be no bridge between them. America is a society of individuals. The State has been organized to serve their common needs. Law enforcement is one arm of the State—providing a necessary and limited service.

Communism is a society of the mass, organized to serve the state. Under communism, law enforcement is absolute and repressive. It is that arm of the state which is designated to see that each citizen renders the required service to the state—or else.

Thank God, in America we have no police state. Here we do not even have a Federal police force. The FBI, for example, is an investigative agency. The maintenance of law and order is the responsibility of the community. The local police are recruited from among the citizens of the community, and they are answerable for the performance of their duty, not to a central government, but to their fellow citizens. In this system is one of the greatest strengths of individual freedom and of the preservation of our democracy.

The necessity of keeping in mind this and other essential differences between the Communist philosophy and that of the Free World is becoming more difficult in the face of the current changes in Communist tactics. The important thing to remember, of course, is that although there is presently evident a marked change in Communist procedures and methods, both within and without the borders of the Communist empire, there has been no repudiation of the basic principles of Communist doctrine. This doctrine still professes the ascendency of the state over the individual, the coming of the world triumph of communism and the justification of the use of any means to achieve this goal. According to their own words these things are still believed by the leaders of communism both in Soviet Russia and in other Communist lands—including Red China.

And whereas Khrushchev and Bulganin appear to have adopted the expedient of enclosing the mailed fist in the velvet glove, Mao Tse-tung and his comrades have as yet seen no necessity to do the same thing. In Red China, communism continues to display the naked tyranny and the overwhelming oppression that is a true reflection of what it actually is, and what it stands for.

It is certain that communism has not changed and as long as this condition remains there cannot possibly be any common ground on which the two worlds—slave and free—can meet. For the United States to accept Red China into the family of nations would be to betray the memory of thousands of American soldiers who died in Korea to emphasize the essential difference between our world and theirs.

In this election year, I believe the issue of any such acceptance must be faced. To understand why, it should be sufficient to review the record of our experience with the Red Chinese regime.

It is a fact that Red China, without provocation, joined in the hostilities against the Republic of Korea and the United Nations troops which were defending that country.

It is a fact that the Red Chinese tortured and mistreated American prisoners of war. The Red Chinese Government imprisoned American soldiers on trumped-up charges and some of these American citizens are still unaccounted for.

Red China has violated the terms of the Korean Armistice agreement.

The Red regime has imprisoned and murdered American and other missionaries.

Red China poses a constant threat of renewed warfare in Korea and in the Formosa Strait, requiring us to keep substantial forces of our own on the scene.

And in addition to all of these things, the Communist revolutionaries in China have launched what is generally recognized as the greatest blood bath in the history of the human race. Hitler, and Stalin himself, in their bloodiest purges did not approach the wholesale human destruction which Mao Tse-tung and his henchmen have carried on since 1948.

This is the regime which some Americans propose to do business with. With all of the seriousness at my command, and in the name of the entire American Legion, I pray and hope that the proposal will fail.

If the other nations of the world are so devoid of moral responsibility that they would admit the Chinese Communists to the United Nations—then that body is no place for the United States of America.

Both of the major political parties will hold their conventions during this summer. The American Legion calls upon each of them, and the candidates for office whom they will select, to make clear whether they will actively oppose the admission of Red China to the U. N., and the granting of diplomatic recognition to Red China by the United States.

The American people are entitled to an unequivocal declaration on this subject.

I have spoken to you on some matters which go beyond the scope of your immediate interest and duty. However, it is natural to think of such issues here, in the seat of our National Government and in the company of those who are dedicated to American ideals of justice and liberty. Acknowledging that all of you are primarily interested in law enforcement, it is well to

remember that the enforcement of international law and morals is an obligation which devolves, at least to some extent, upon the shoulders of each American. This is so because we are free citizens, and we have the privilege and the responsibility of sharing in every decision of our Government. Only to the extent that we do so shall we continue to be free.

All of you are charged with the solemn obligation of working for America in a very special way, in keeping with the traditions of the profession of which you are members.

With the help of the knowledge you have gained at the FBI Academy, I am sure that you will fully meet the measure of your obligation. And I am sure, too, that by virtue of what you have learned here, you will be able to help your fellow officers in the agencies which you represent, to increase their effectiveness, to the end that American citizens can live safely in their homes, and walk safely on their streets—secure in the knowledge that they are guarded by vigilant men and women, dedicated and trained in the American tradition of equal justice under law for all men.

In your endeavors you have the warm support and encouragement of the American Legion.

We honor you for your willingness to serve in the public interest. We admire your work—and especially your desire to do your work even better, which is manifest in your attendance at the FBI Academy. We pledge you the continuing cooperation of American Legionnaires.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio broadcast concerning the Rural Electrification Administration.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP—MONDAY, JUNE 18, 1956

REA. Every farmer knows—and certainly most city people, too—that those three letters stand for Rural Electrification Association. And what a blessing it's been to farm people. How could you possibly get along without it on the farms? REA, today, provides the electricity to light the house, the barn, the chicken house and farm machinery sheds. It refrigerates the food—does countless chores for farmer and farm wife.

Yes; REA and the power it supplies to farm people is taken for granted these days—has become a vital part of farm living. Actually, though, the program is only 20 years old. This year marks the 20th anniversary of REA. It came into being through the passage of a law passed by the Congress back in 1936 and signed by President Franklin D. Roosevelt.

One of the authors of the law that gave birth to the REA was the late Senator George Norris of Nebraska. The other was SAM RAYBURN—Speaker of the United States House of Representatives. Recently the cornerstone was laid in Washington for a new building for the National Rural Electric Cooperative Association. And SAM RAYBURN was the principal speaker. His speech was a very significant one. You'll find it carried on the editorial page of your Farmers Union Herald. Hope you've read it. If not, check back on that issue—the last one you've received—and read what SAM RAYBURN had to say.

Less than 10 percent of the farm homes in America had the comforts and conveniences of electricity back at the time REA was born. Today, well over 90 percent have electric power. Farm people have come a long way—in 20 years—in getting the benefits of rural power. RAYBURN discussed what that's meant to farm families. But he also stressed what it has meant to business, to manufacturers, to wholesalers, to retailers. He said that conservative estimates from all available sources are that farmers have purchased in the neighborhood of $15 billion worth of merchandise which they could not have used without electricity for their homes.

And, as he noted, "This made profits for manufacturers and every business concerned that touched these products. It made profitable labor for thousands of unemployed men and women." Here's another fact he cited: the rural market today is the largest user of electrical energy per average consumer by about 50 percent. And—listen to this—surveys show that more than 200 different services are now performed on farms and ranches by electricity.

So, you see that REA is a prime example of a program that has been a marvelous help to not only farm people, but city people, as well. REA is one of the many programs developed in giving farmers a helping hand. And, other key laws have provided price support programs to help give farmers some measure of protection for their prices.

And when farmers vote in the wheat referendum on July 20, they will be voting not only to save the wheat program—and assure themselves of at least 75 cents a bushel more—but they'll also be voting to help preserve the whole price-support program built up over many years by farmers working together. The farmers who own and operate GTA—the co-op way, urge all wheat growers to be sure to vote—and to vote "yes."

Chief Judge Finis James Garrett

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the United States Customs Court upon the death of Chief Judge Finis James Garrett of the United States Court of Customs and Patent Appeals:

RESOLUTIONS PASSED BY THE UNITED STATES CUSTOMS COURT UPON THE DEATH OF CHIEF JUDGE FINIS JAMES GARRETT OF THE UNITED STATES COURT OF CUSTOMS AND PATENT APPEALS

Whereas members of the United States Customs Court have learned with deep sorrow of the passing of Chief Judge Finis James Garrett of the United States Court of Customs and Patent Appeals in Washington, D. C., on May 25, 1956, after having served on that court with great honor and distinction since March 5, 1929; and

Whereas Chief Judge Garrett possessed a background of rich judicial and legislative experience, having served with honor as a judge in his own beloved State of Tennessee and later, for a quarter of a century, as a distinguished Member of Congress from his State; and

Whereas such rich and distinguished background, together with his keen analytical mind, his indefatigable energy, innate wisdom, and even temperament fitted him so admirably for the high position he occupied on the United States Court of Customs and Patent Appeals; and

Whereas the contribution which Chief Judge Garrett made to the jurisprudence of customs law and will live on and on for all time as a revered monument to his fairness, industry, integrity, and profound thinking, as well as serve as a guidepost for future generations; and

Whereas he was widely known, honored, and highly respected, not only as an outstanding jurist, but also for his courtesy, dignity, and clarity of expression, and

Whereas he was a devoted Christian gentleman who sincerely and consistently practiced the tenets of his religious faith, a recognized Bible scholar and historian, who, being possessed of a golden eloquence, was over a period of many years in great demand as a lecturer on the Bible and ancient culture; and

Whereas he was a kind, generous, and devoted husband, father, and grandfather, a true and affable friend and colleague, and an inspiration to all who knew him or with whome he came in contact: Therefore be it

Resolved, That it is the sense of the judges of the United States Customs Court, in regular conference assembled, that they express their irreparable loss in the death of Chief Judge Finis James Garrett of the United States Court of Customs and Patent Appeals, and extend their deep and abiding sympathy to his bereaved family, his colleagues and friends who mourn his passing; be it further

Resolved, That a copy of these resolutions be spread on the minutes of the meeting of the United States Customs Court and that copies be sent to the United States Court of Customs and Patent Appeals for transmittal to his family.

Webster J. Oliver, Chief Judge, United States Customs Court; William A. Ekwall, Judge; Charles D. Lawrence, Judge; Irvin C. Mollison, Judge; Jed Johnson, Judge; Paul P. Rao, Judge; Morgan Ford, Judge; David J. Wilson, Judge; Mary H. Donlon, Judge.

A Resolute People

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an editorial, "A Resolute People," appearing in the Boston Post of June 19, 1956. As this editorial well said:

Striving to restore the fertility of a desert land, hauling themselves up by their bootstraps and performing these extraordinary exertions with a rifle in one hand to fight off attacks—the people of Israel have earned something more than expedient treatment.

I thoroughly agree with this editorial, and particularly "that the people of Israel have earned something more than expedient treatment" from our Government.

The editorial follows:

A RESOLUTE PEOPLE

The Soviet Union has wasted no time in demonstrating its new power and importance

in the world of the Middle East, where basic Russian anti-Semitism is being exploited to the fullest extent.

No course is left for Israel but to prepare to take bold measures or to tamely submit to the crushing pressure which the Soviet Union is applying through the Arab states. The visit of Soviet Foreign Minister Shepilov to Egypt and the Arab states was heralded by demonstrations against Israel and the west in Syria, where the government was toppled. In Jordan the Arab legion pressed King Hussein to establish diplomatic and treaty ties with Russia. In this situation the responsible head or government in Israel—Premier David Ben-Gurion—had no choice but to discard the moderate foreign policy of Moshe Sharett and stiffen against the aggression in the making.

It is tragic that the United States at this hour has been worked into a position where it has no freedom of choice. The justice of Israel's cause is manifest to a pioneering people like Americans. They believe in energetic tackling of problems, courage in defending their rights, and the adage that God helps those who help themselves, which is what has made the state of Israel the doughty country it is today.

The oil of the Middle East is weighed aaginst the righteousness of Israel's cause and claims, and Israel hasn't been given the best of it. There is risk of war in espousing the cause of Israel—but there is that risk in defending any righteous cause.

Shepilov's mission to the Middle East is to put the finishing touches on the alliance against Israel. Moshe Sharett had striven for 8 years to bring about peaceful settlement within the framework of the United Nations and, quite apart from the internal politics in Israel, was viewed in the world as an apostle of moderation.

But the appointment of Shepilov to the Soviet foreign ministry after he had arranged the Cairo arms deal to enable Egypt to become militarily superior to Israel was an urgent signal that Israel had only one recourse—to appeal for help to the United States and to the other western powers and, if it were not forthcoming, to prepare for all-out war.

There may be some salve for the western conscience in the efforts of the Secretary General of the United Nations to implement the truce and to arrange for a cease fire. But the western nations already knew that UN was impotent in the task of putting down aggression against the very nations it had created.

Striving to restore the fertiltiy of a desert land, hauling themselves up by their bootstraps and performing these extraordinary exertions with a rifle in one hand to fight of attacks—the people of Israel have earned something more than expedient treatment. To their eternal credit they are prepared to meet any new threat to their nation with resolution and courage.

Statements Made at Small Business Administration Meeting, Baltimore, June 21, 1956

EXTENSION OF REMARKS
OF

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article with respect to the Small Business Administration meeting held in Baltimore on June 21 in cooperation with the Baltimore Association of Commerce and the partial statements made by the following individuals in connection with this meeting:

Mr. Wendell B. Barnes, Administrator, Small Business Administration; Mr. Ormonde A. Kieb, Assistant Postmaster General, Bureau of Facilities, Post Office Department; Mr. John Hamlin, Director of Small Business, Office of the Assistant Secretary of Defense; Mr. Frederick H. Mueller, Assistant Secretary for Domestic Affairs, United States Department of Commerce; Mr. Clifton E. Mack, Commissioner of Federal Supply, General Services Administration; Mr. John S. Patterson, Deputy Administrator, Veterans' Administration; Mr. Harrison Garrett, president, Baltimore Association of Commerce; Mr. T. M. Baldauf, Chief of Procurement and Property Management Division, United States Department of Agriculture; Mr. David F. Shaw, Assistant General Manager for Manufacturing, Atomic Energy Commission; Mr. D. Otis Beasley, Administrative Assistant Secretary of the Interior.

It is hoped that meetings such as this result in some real benefit to our small-business men.

Approximately 1,000 owners of small businesses assembled in Eastern High School, in Baltimore, last Thursday and heard top Washington officials say that opportunities to do business with the Government are countless, and contracts are available to those with the "sharpest pencils"—the lowest qualified bidders.

Representatives of the Department of Defense, the Atomic Energy Commission, the General Services Administration, and other Federal agencies appeared before the group, which included operators of small firms from Maryland and adjacent States, and revealed that a large percentage of their purchases are made from small businesses.

Samples of products the Government regularly buys were on display, along with hundreds of sample-bid invitations from the Department of Defense, and other Government agencies.

Gov. Theodore R. McKeldin of Maryland, who designated June 21 as "Small Business Day," greeted the small-business men and emphasized the importance of small business to the Nation's economy.

Harrison Garrett, president of the Baltimore Association of Commerce, which cosponsored the meeting with the Small Business Administration, extended a welcome and there were speakers representing all of the departments and agencies of the Government which buy goods and services.

United States Senator J. GLENN BEALL, of Maryland, said in a welcoming message sent to the small-business men that such meetings are designed to be "mutually beneficial to you, who are representatives of small businesses, and to our Government, which relies on you so much for its continued strength." He added that it had been extremely gratifying to him to be able to cooperate with the "men of action" in the Small Business Administration and the Baltimore Association of Commerce in planning for the conference.

Wendell B. Barnes, Administrator of the Small Business Administration, in hailing the meeting as a success in disseminating information on how to do business with the Government, said that his agency plans to hold similar Government procurement conferences in other parts of the country. The 15 Regional Directors of the Small Business Administration attended, and Clarence P. Moore, Richmond, Va., regional director for the area, presided. Mr. Barnes said:

"It is the plan of the Small Business Administration, with the cooperation of other Government departments and agencies, to hold procurement conferences in other parts of the country after the pattern of today's conference.

"Requests have come from various parts of the country for such a conference as this one. Where the local trade associations and civic-minded citizens express this desire, we shall do all that we can to comply.

"As I see it, nothing but good can result from this Small Business Conference and others to be held. Every one benefits: Small business, the communities, and the Government through broadened sources of supply.

"One of the major continuing responsibilities of the Small Business Administration is to see to it that small firms have an opportunity to get a fair share of Government business.

"This is important. The United States Government is the largest purchaser of goods and services in the world. It is only fair and just that small firms share in supplying their Government's needs. Indeed, small firms with their specialized skills often can underbid large companies.

"Small businesses often have an inherent advantage over big business. Not all products can be mass produced. In this complex mechanical age great individual skills are often required—and it frequently happens that these skills, the devotion to detail and pride in craftmanship, are most marked in small firms. That is why large firms often call on smaller firms to provide them with the highly specialized component parts they must have to make the complicated machines our industry requires.

"President Eisenhower, recognizing that fostering of small business should be a team operation, recently created a Cabinet level committee embracing major activities of the Government in the small business area. As Administrator of the Small Business Administration, I have the honor of serving on this new committee. We are studying all the areas in which Government fosters small businesses. The committee has the continuing assignment of making specific recommendations to the President for administrative action, and where necessary, for additional legislation, to strengthen small business."

David F. Shaw, assistant general manager for manufacturing, Atomic Energy Commission, said that more than $250 million in materials, equipment, and supplies were produced for the Commission in 1955 by small business firms. Mr. Shaw said:

"At the subcontract level in 1955 we handled 335,000 individual transactions, totaling $338 million. Of this amount $250 million went to small business concerns to purchase materials, equipment, and supplies.

"These purchases were made on a fixed-price, competitive basis. They represent standard, semistandard, and off-the-shelf items. An ever increasing number of business owners are making inquiries to discover the extent to which the Atomic Energy Commission offers a market for their products and services and are participating as suppliers or manufacturers for the AEC programs.

"Those of us who are associated with the AEC purchasing operations are very pleased with this turn of events, since an increase in the number of prospective suppliers inevitably means keener competition, superior products and services and better prices.

"Typical purchases for construction include electrical equipment, such as control panels, transformers, substations, and cables, tanks; valves, piping, compressors, evaporators, structural steel, lead, process control instruments, and heavy construction equipment.

"Purchases for operating purposes include inorganic and organic chemicals, such as nitric acid, aluminum nitrate, trybutyl phosphate, trichloethylene, and other items such as tubes, housings and covers, gloves, shoes and overalls, nuts, bolts and washers, graphite and graphite molds."

PARTIAL TEXT OF ADDRESS BY D. OTIS BEASLEY, ADMINISTRATIVE ASSISTANT SECRETARY OF THE INTERIOR, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL AUDITORIUM, BALTIMORE, MD., JUNE 21, 1956

Turning to the matter of primary interest at this conference, I will describe the procurement procedures followed in the Department of the Interior. The basic procedures are, of course, controlled by statutory provisions generally applicable to all Government agencies.

As you know, procedures require that Federal procurement as a rule be accomplished after advertising for competitive bids. The exceptions consist of purchases under $500, emergency purchases, purchases made from the only available source, and certain service contracts. In addition, we may request the Administrator of the General Services Administration to permit us to negotiate certain types of contracts under the provisions in the Federal Property and Administrative Services Act of 1949. However, there must be a clear demonstration of need to exercise this authority.

It is the policy of the Department of the Interior to use to the fullest extent possible the so-called open market purchase authority, i. e., we do not solicit formal bids on purchases of $500 and under. Our purchasing officers are expected, however, to check current market prices and where feasible, secure informal quotations in advance, to assure themselves that the Government obtains the lowest prices for the supplies needed.

We are making full use of the short form purchase order, Standard Form 44, which permits a field employee to purchase items over the counter with a minimum amount of difficulty for both the supplier and the Government.

We also use the imprest cashier fund procedure for purchases under $25. This has cut our cost of paperwork by several thousands of dollars in the past few years.

For purchases ranging in excess of $500 to many thousands which might be spent for a single piece of high-voltage electrical equipment—or in the case of construction, the many millions involved in building a major dam—we solicit bids by general advertising. We award the contract to the lowest bidder meeting the specifications. All such bids are publicly opened at established times and places, and the amounts and details of all bids are readily available as public information.

The remainder of our procurement, a very small proportion of the total, consists of contracts negotiated for supplies or services which are authorized by section 3709 of the Revised Statutes, or by a delegation from the General Services Administrator. Occasionally a clear showing can be made that it would be in the public interest to negotiate a contract rather than to advertise for bids. In such cases we have a procedure permitting this method to be used.

In general, its use has been restricted to contracts covering technical and professional services, although in certain cases involving manufacture of equipment needed for research programs, it has been impossible to draft specific specifications and have used the proposal and negotiation method to meet objective performance specifications.

To simplify the explanation of our purchasing and contracting policies, I would like to quote briefly from a recent Interior regulation governing negotiated contracts: "Contracting by negotiation does not require compliance with the rigid limitations of formal advertising, bid and award procedures and determination of the person or concern to be awarded the contract is less automatic. It allows, to a greater extent than formal advertising, the exercise of sound business judgment but in no way decreases the responsibility for properly protecting the interests of the Government. The fact that a contract is to be negotiated does not relax the requirements for competition."

The recent working agreement between the Department of the Interior and the Small Business Administration brings into focus a policy of long standing in our operations. For instance, in the fiscal year 1953, participation by small business in the total Government procurement was 20.2 percent. In that year small business received 42.4 percent of Interior's purchases. Interior has continued to have an impressive record in the division of its purchases between big and small businesses. In 1954, small business received 57.4 percent of Interior's business and only 46.2 percent of the total. For 1955, small business received 63.9 percent, nearly two-thirds, of Interior's purchases against 49.1 percent of the total Government business. The small business proportion of our purchases has increased by 50 percent in 2 years, from 42.4 percent in 1953 to 63.9 percent in 1955.

Interior's operations are conducted in a manner that favor small business. Our hundreds of field installations are predominantly suburban, drawing on small local retail outlets for their needs. In a few instances, experience has shown that centralized purchasing will result in some saving of the taxpayers' money, and we have recently created such offices.

As a stafeguard against the possibility that purchases by these larger offices may be channeled into big business through their increased size, we have adopted the recommendations and criteria of the Small Business Administration. We are now screening prospective orders prior to issuance of bids or placing of purchase contracts, and under certain specific conditions, we reserve those quantities for small business concerns where the needs of our service can be met at a reasonable price.

Prior to April 12, 1956, the general rule of placing contracts with the lowest responsive bidder gave our contracting officers no flexibility which might be exercised to recognize the value of small business concerns to the national economy. There was one minor exception to the rule which did allow award of contracts to small business when the lowest bids received were tie bids. However, the number of instances in which this was applicable was quite small.

In April 1956 new procedures were installed in all procurement offices doing annual business in excess of $500,000. These procedures were worked out with representatives of the Small Business Administration and are authorized by section 214 of the Small Business Act of 1953.

Under our new program, each major field office will be advised by its counterpart field office of the Small Business Administration, and will screen every contemplated purchase over $1,000 before invitations to bid are issued. Whenever it is feasible, purchases will be reserved for small business, if a sufficient number of small business suppliers are available, and if the prices and delivery terms are considered acceptable. These last two conditions are necessary to insure that our appropriated funds are wisely expended and that our work is carried out on proper schedule.

We selected our largest field offices for this new procedure for one principal reason. They are the ones handling most transactions over $1,000 and are staffed to be effective in this effort. I might add it is our feeling that the area of potential gain to small business rests with procurement by those 21 offices. Most of the other offices deal in very small sums, and by far the largest majority of their purchases already flow into small business channels.

In summary, I want to repeat that our Department and all its bureaus are fully aware of the vital necessity for preserving and encouraging the small operator of our basic resources and the small-business man in our industrial and distribution channels. We have in the past been constantly alert to protect his interests, and we are cooperating with the Small Business Administration in every way proper to further the program of that agency in our current activities.

PARTIAL TEXT OF ADDRESS BY DAVID F. SHAW, ASSISTANT GENERAL MANAGER FOR MANFACTURING, ATOMIC ENERGY COMMISSION, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

More than $250 million in materials, equipment, and supplies were produced in 1955 by small business firms for the Atomic Energy Commission, according to David F. Shaw, Assistant General Manager for Manufacturing, Atomic Energy Commission, in an address before the Small Business Administration's six-State procurement conference today at Eastern High School, Baltimore.

"At the subcontract level," said Mr. Shaw, "in 1955 we handled 335,000 individual transactions, totaling $338 million. Of this amount $250 million went to small business concerns to purchase materials, equipment, and supplies. These purchases were made on a fixed price, competitive basis. They represent standard, semistandard, and off-the-shelf items. An ever-increasing number of business owners are making inquiries to discover the extent to which the Atomic Energy Commission offers a market for their products and services and are participating as suppliers or manufacturers for AEC programs.

"Those of us who are associated with the AEC purchasing operation are very pleased with this turn of events, since an increase in the number of prospective suppliers inevitably means keener competition, superior products and services and better prices."

Mr. Shaw explained that the AEC works closely with the Small Business Administration. The design, construction and operation of the Atomic Energy Commission's facilities, said Mr. Shaw, are handled by private industry on a contract basis and he advised small business operators attending the conference that contracts are consummated continuously in the Commission's 10 field offices throughout the country. Mr. Shaw said:

"The small business share of the AEC subcontract dollar has been increasing steadily during the past 5 years and for the first three quarters of 1956 business companies have been awarded $149,300,000 out of $318,500,000 of subcontract totals."

Only contracts which are very unusual in character or involve very large dollar totals require Washington approval, Mr. Shaw pointed out. Contract authority delegated to the 10 AEC managers throughout the country, makes it possible for the Commission's field offices to make individual $2 million purchases and "in some instances," said Mr. Shaw, this authority ranges upward to $5 million, "depending upon the character of the work."

The products used in the atomic energy programs, explained Mr. Shaw, represent almost all industrial classifications. He said:

"These classifications are listed in our publication Selling to AEC, along with a list of AEC and contractor purchasing offices which buy them most frequently. With the exception of a few initial equipment requirements for new facilities, large production-

run orders are not characteristic of AEC procurement."

Mr. Shaw cited wide varieties of items and services purchased from small concerns by AEC in its various operations throughout the country. Products purchased by the New York City office include, for example, the following products which are bought from private suppliers to operate its health and safety laboratory and the administration of a substantial number of research contracts: electrical equipment, pumps, gas liquefiers, refrigeration systems, spectrophotometers, and other products typically associated with scientific laboratory work.

At New York in 1955, Mr. Shaw disclosed, commercial suppliers received contracts amounting to $4,600,000.

At its Oak Ridge operations office in Tennessee and its field offices at Fernald, Ohio, Paducah, Ky., St. Louis, Mo., and Portsmouth, Ohio the AEC, said Mr. Shaw, is concerned "with the construction and operation of plants for the processing of uranium concentrates and other source and raw materials.

"Typical purchases for construction," explained Mr. Shaw, "include electrical equipment, such as control panels, transformers, substations and cables, tanks, valves, piping, compressors, evaporators, structural steel, lead, process control instruments, and heavy construction equipment. Purchases for operating purposes include inorganic and organic chemicals, such as nitric acid, aluminum nitrate, trybutyl phosphate, trichloethylene, and other items such as tubes, housings and covers, gloves, shoes and overalls, nuts, bolts and washers, graphite and graphite molds."

AEC expenditures to subcontractors for supplies in the Oak Ridge region alone in 1955 amounted to more than $119,300,000, Mr. Shaw revealed.

In other AEC operations throughout the country, including Hanford and the Savannah River areas, Chicago, Ill., Schenectady, N. Y., and Idaho Falls, Idaho, contracts awarded to small concerns totaled additional millions of dollars and, according to Mr. Shaw, "they are increasing moderately."

PARTIAL TEXT OF ADDRESS BY HARRISON GARRETT, PRESIDENT, BALTIMORE ASSOCIATION OF COMMERCE, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

It is most gratifying to have the Small Business Administration conduct today's conference for business executives in this area, comprising six States and the District of Columbia. I assure you that the Baltimore Association of Commerce appreciates the opportunity to cooperate with the Small Business Administration in arranging for this meeting.

Sometimes it is difficult to define "small business," but I believe the great majority of the members of the Baltimore Association of Commerce would qualify for this classification. That is one reason why our association and other chambers of commerce throughout this area are interested in today's meeting. They want to help their members to broaden the base of their operations—to add Uncle Sam to their list of customers.

I am told that small-business concerns in Maryland alone are now receiving more than $1 million in Government orders each month. That's a lot of business. And undoubtedly that is one reason for the large attendance here today. You are all interested in securing a share of this business—and the speakers on today's program are here to tell you what the various Government agencies buy and how to obtain these contracts.

I am sure you all will benefit from the information to be disseminated today and as a result you will be in a better position to bid for Government contracts.

And so, on behalf of the Baltimore Association of Commerce, I should like to thank our speakers for coming here today to help the small-business man in his dealings with the various Government buying agencies.

PARTIAL TEXT OF ADDRESS BY T. M. BALDAUF, CHIEF OF PROCUREMENT AND PROPERTY MANAGEMENT DIVISION, UNITED STATES DEPARTMENT OF AGRICULTURE, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

Seventy percent of all goods, supplies, and services purchased annually by the Department of Agriculture are bought from small business concern, T. M. Baldauf, Chief of the Department's Procurement and Property Management Division, told small-business owners and representatives attending the Small Business Procurement Conference today at Eastern High School, Baltimore.

Mr. Baldauf explained that the Department of Agriculture buys more than $50 million in goods, services, and construction each year through its 6,000 field offices in a total of 360,000 individual commercial transactions.

"Almost all of our buying," said Mr. Baldauf, "is done on a competitive-bid basis and 70 percent of these transactions are consummated with small-business concerns.

Citing a variety of services which call for equipment and goods supplied by private manufacturers and merchandisers, Mr. Baldauf said:

"We fight fires, we control insect epidemics using chemicals and airplanes. We build buildings, roads, dams, and other structures. We maintain buildings, camp grounds, forests, streams. We maintain laboraories using many chemicals for research. We provide market news service and statistical services involving high-speed electronic equipment. We buy and store agricultural commodities. We maintain loan and insurance services. We seed range pastures and maintain a radio communication network for our forest-fire lookouts, and many more."

In describing the wide range of items, supplies, and services purchased under his direction, Mr. Baldauf explained that the prospective business bidder can quickly learn from Government publications whom to see at the Department's field-procurement offices and discover what the Government is buying or will be looking for from private suppliers.

PARTIAL TEXT OF ADDRESS BY CLIFTON E. MACK, COMMISSIONER OF FEDERAL SUPPLY, GENERAL SERVICES ADMINISTRATION, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

Clifton E. Mack, Commissioner of Federal Supply for the General Services Administration, said today at the small business procurement conference at Eastern High School, Baltimore, that more than 57 percent of all GSA purchases are now being placed with small business concerns.

GSA is the central civilian buying agency of the Government. It purchases standard supplies and equipment for all Federal agencies to the extent of nearly half a billion dollars per year.

"Small business firms play an integral role in our supply system," Mr. Mack said. "Not only do they share in our local purchasing throughout the country, but they get a portion of our national purchasing programs from which all agencies are supplied."

Mr. Mack said GSA solicits small firms to bid on its purchases "because our requirements are peculiarly adapted to what small firms make and sell. We buy principally standard items of manufacture, such as tools, motors, wire and cable, and about 50,000 other items."

Mr. Mack told the meeting of small business firms that GSA has a standing agreement with the Small Business Administration to set aside a portion of its total purchases so that only small firms can compete. In addition, he said, GSA has developed a nationwide network of business service centers from which small concerns can get accurate, daily information about what GSA is buying, where it is buying, and when.

He told the conference that one of the best methods GSA has of protecting the Government's interest in purchasing is to stimulate as much competition as possible, and that GSA's door was wide open for any supplier to share in the day-to-day purchases GSA makes.

Mr. Mack outlined to the group the GSA system under which a small firm desiring to introduce a new product to the Government supply system can get immediate attention.

He estimated that in the coming year, as a result of increasing emphasis on getting purchasing facts to small firms that the percentage of business going to such business will probably increase.

"The record of small business with GSA is good," he said. "We will take every possible action to make sure that our buying needs are known to small firms and that they get their fair share of our market."

PARTIAL TEXT OF ADDRESS BY JOHN S. PATTERSON, DEPUTY ADMINISTRATOR, VETERANS' ADMINISTRATION, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

Out of the Veterans' Administration's purchases of more than $148 million in supplies, equipment, and plant improvements in 1955, small-business concerns were awarded more than $69 million in contracts, John S. Patterson, Deputy Administrator of the Agency, revealed today at the Small Business Procurement Conference at Eastern High School, Baltimore.

"This constituted 60 percent of the Veterans' Administration's total purchases," said Mr. Patterson in an address before the conference of business owners from Maryland and adjacent States.

"We use approximately 10,000 items in our hospitals, centers, homes, regional offices, and supply depots," said Mr. Patterson, "items that range from every medical supply and equipment used in a clinic and a hospital, every type of food and equipment used in a dining room and cafeteria and numerous articles of clothing, both in hospital and civilian categories."

The Veterans' Administration purchases approximately 6,500 items to stock its supply depot system, Mr. Patterson explained.

"Many items are described in our catalogs," Mr. Patterson stated, adding: "We recognize that the advancement and success of small business redounds to the betterment of all business and sustains the economic welfare of our country.

"A large segment of the business of our Nation is composed of veterans. The importance of small business to the economy of the Nation cannot be too seriously emphasized. All industry is in accord with the thought that the preservation and promotion of small business is an essential safeguard for our competitive system of free enterprise and this the Congress stressed in the enactment of the Small Business Act. With this policy the Veterans' Administration wholeheartedly subscribes. It regards small business as the backbone of our giant industrial system.

"We have always encouraged small business to complete in furnishing our requirements. We endeavor to keep our purchase quantities small enough to be attractive to small business. Our invitations permit offering partial quantities in cases where small business cannot conveniently handle our full requirements. In fact, 97 percent of our purchases are in amounts of less than $10,000. In addition, in cooperation with

the Small Business Administration, we set aside certain purchases specifically for award only to small business concerns, in pursuance of the authority granted by Congress in the Small Business Act."

PARTIAL TEXT OF ADDRESS BY FREDERICK H. MUELLER, ASSISTANT SECRETARY FOR DOMESTIC AFFAIRS, UNITED STATES DEPARTMENT OF COMMERCE, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

In its own purchasing activities the Department of Commerce always has small business in mind. Our procurement of items costing more than $25 during the last half of 1955 involved 31,994 different orders or contracts, and of these, 23,609 orders, or 73.8 percent, went to small business.

Dollarwise, this procurement totaled $116,015,295 and the small-busniess portion was $25,052,886 or 21.6 percent. This overall percentage would be much greater except for the fact that about 70 percent of our procurement was by the Maritime Administration, mainly in contracts for construction and repair of oceangoing vessels which could be handled only by large shipyards. Except for the Maritime phase, about 61 percent of Commerce Department procurement was channeled to small business.

In connection with the maritime work, it should be remembered, however, that shipyards are mainly assembly yards. The building and equipping of a ship involves a great number of smaller contracts and an infinite variety of products—small motors, conduit and wiring, bolts and nuts, pots and pans for the galley, furnishings for the staterooms, and all the rest. The shipyards farm out two-thirds of the work that goes into a large ship.

* * * * *

In addition to common-use items, Commerce Department buying creates many opportunities for small business of this region. For example: the Weather Bureau buys a wide variety of items, especially meteorological instruments such as barometers, theodolites and thermometers, special graph paper, and electronic and electrical parts—transformers, cable clamps, sockets and switches, and so forth.

The National Bureau of Standards purchases annually about $1½ million worth of optic, scientific and electronic equipment and machinery. It also purchases about $1½ million worth of materials such as chemicals and shop supplies.

The Civil Aeronautics Administration during the last half of last year spent $7.7 million for materials and construction, of which $3.6 million, or 46 percent, went to small business. Some of this is electronic equipment for radar and communications along the Federal airways.

* * * * *

Our new public works programs will make business for small business. The Civil Aeronautics Administration is starting a 5-year, $246 million program for improvement of the Federal airways system. Expenditure of $40 million in the year beginning July 1 will break down to about $26 or $27 million for equipment and the remaining $24 million for construction. In the past small concerns have furnished many of the CAA's transmitters and receivers, engine generators and other electrical equipment, and built many of its control towers and other installations along 72,000 miles of Federal airways.

After the President's great new highway program is passed by Congress, those of you who are in construction work—or who furnish equipment and supplies to contractors—will feel the effects of the steady nationwide buildup of roadbuilding.

* * * * *

Traditionally in this country we look to small business as the seedbed for economic harvests of plenty for all the people. Men starting up new small firms are constantly injecting new ideas, new products, and new rivalries into business. They keep free enterprise an enterprising thing, and stimulate improvement in the standard of living. This creative drive in business is a very precious thing which we must preserve.

* * * * *

The entire Eisenhower administration has been vigorously at work findings ways to strengthen the position of small business. One way, of course, is the Government's procurement operations, the subject of this meeting today. During the last half of last year, throughout the civilian agencies, of the items costing $25 or more, nearly one-half the dollar volume—49.1 percent, to be exact—went to small business.

The welfare of the United States demands maximum participation in public projects by our small-business firms. Everybody benefits. More concerns get orders which help them to prosper and increase employment. Your payroll and tax dollars promote the development of your communities and the expansion of other businesses. And the Government is able to shop for its needs in a broader market and get better prices, thus benefiting all taxpayers.

* * * * *

I wonder if all of you gentlemen know about the daily Synopsis published by the Commerce Department? I should think it would be a must for those interested in getting Federal business. It gives current information received daily from military and civilian procurement offices of Federal agencies.

There is a list of unclassified invitations to bid and requests for proposals or quotations, with description, quantity, invitation number, and opening date. Grouped together are the proposed procurements especially set aside to be awarded to small business, although the entire list is, of course, open to small business.

Also listed are contract awards, both advertised and negotiated, showing contractor and address, with dollar amounts and quantities, for contracts of $25,000 and over. This gives you leads to subcontracting opportunities.

A third section lists proposed sales of Government surplus property by all executive agencies of the Government.

The full title of this publication is the "Synopsis of U. S. Government Proposed Procurement, Sales and Contract Awards." It is published daily, Monday through Friday, from Chicago by the Commerce Department field service, and the subscription price is $7 a year for 252 issues. You can get it by sending a check for $7 to the Commerce Department field office in Chicago.

PARTIAL TEXT OF ADDRESS BY JOHN HAMLIN, DIRECTOR FOR SMALL BUSINESS, OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE (SUPPLY AND LOGISTICS), AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL AUDITORIUM, BALTIMORE, MD., JUNE 21, 1956

During the past 2 years the Department of Defense has revised its small-business policies with the objective of doing a better job of assuring a fair share of defense procurement to small-business firms.

We have found that generally speaking there is full agreement about what small firms want. They want a fair chance at the existing business. They feel that if they get this chance they will get a fair share and I am pleased to report that the statistics show this to be true. Small concerns are getting from 60 to 65 percent of the military business which is within their capabilities and are doing this in open competition with all comers.

So our program, insofar as prime contracts are concerned, has aimed at making sure that the military departments conduct their procurements in such a way that the small firms will have this equal opportunity.

Within the past year we have undertaken to extend this concept to the important area of subcontracting. The defense business that small firms get as "primes" has been over $3 billion a year and we think the volume of business they receive as subcontractors, while not precisely known, may amount to $2 billion. We are presently enlisting the cooperation of our large prime contractors in this program. They are showing themselves very willing to go along with our objectives.

Beginning July 1 many of these large contractors will record and report on their subcontracting to small firms, and a year from now we will have some significant figures on this area of small-business assistance.

Our responsibilities to small business under the law are shared with the Small Business Administration. We have been working well as a team on our common objectives. The Department of Defense is giving the Small Business Administration its full cooperation on the program to earmark certain procurement exclusively for small business. Under recent policy changes classified contracts are being reviewed for such set-asides, and further set-asides will be made unilaterally by military departments when Small Business Administration personnel are not present to share in the determination.

All these programs have the continuous and vigorous leadership and support of Secretary of Defense Charles E. Wilson and of Assistant Secretary of Defense T. P. Pike.

The present share of prime contract awards going to firms with fewer than 500 employees is running around 20 percent. It is possible that the total share going to small firms as prime or first tier subcontractors might be as high as 30 percent. What they get as lower tier contractor would have to be estimated and added to that to get a grand total. It is a plain fact that the increasing cost and complexity of modern weapons is making it harder and harder to increase the share of prime awards to small concerns, but in spite of this handicap the share during recent periods is actually higher than the average for the past 5 years. We are proud of that record.

Sound small-business policy is the starting point for any well-conceived effort to help small business. We believe we now have that policy in the Department of Defense. But we recognize that it is a starting point and that its full fruition depends on the understanding and consistent implementation of these policies by the military departments. We are getting that kind of implementation. I am glad that we have here representatives of the military departments from the procuring activities who see these policies in their day-to-day operations, and who can tell you how they are working in the field, and how they are producing more awards for small-business concerns.

PARTIAL TEXT OF ADDRESS BY ORMONDE A. KIEB, ASSISTANT POSTMASTER GENERAL, BUREAU OF FACILITIES, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL AUDITORIUM, BALTIMORE, MD., JUNE 21, 1956

"Of a total annual procurement for goods and services of approximately $565 million in 1955, approximately $385 million is limited as to source, either by statute or market peculiarities, to big business such as railroads, airlines, utilities, prison industries, truck manufacturers, Government Printing Office and others. However, of the remaining $180 million which represents procurement for which the Department exercises policy and administrative control and final contracting authority, over 90 percent or approximately $165 million was spent with small business contracts in 1955.

"These figures are interesting not only from a standpoint of private enterprise but to small business concerns. If we add to this figure the approximately $25 million of capital investment required for construction of new buildings under our leasing program in 1955, the Department entered into over 87,000 small business contracts all over the United States, totaling about $190 million."

Mr. Kieb discussed briefly the urgent need for a postal rate increase this year. "A modest increase in postal rates," Mr. Kieb said, "would enable us to provide in the next 5 years more of the modern equipment we so vitally need today. Material handling equipment of all kinds such as baskets, basket dumpers, conveyers, lift trucks, modern sorting cases, automatic sorting equipment, modern lighting, air conditioning, stools, vehicles, business machines, automatic stamp dispensers, patron mail sorting racks, new bank-type counter lines and other patron service facilities to make possible modern work-flow production lines to bring our postal plant up to date and to serve the increasing growth of this great country of ours."

In the 3 years it has been in operation the Small Business Administration has been able with the cooperation of other Government departments and agencies, to have set aside for competitive award to small firms, more than $1 billion in Government contracts.

This represents Government business that, through our cooperative efforts, is reserved exclusively for small firms. We are proud of this record, but we are also determined to improve upon it. This conference is one facet of our continuing effort in this regard.

Government assistance to small business is spread over many departments and agencies, each having a definite area of operation. All of the departments and agencies represented by speakers at this meeting are intimately in contact with countless thousands of small businesses—Department of Defense, Department of Commerce, General Services Administration, Post Office Department, Department of the Interior, Department of Agriculture, and Veterans' Administration, to name a few.

Then there are the Treasury Department on tax laws, Federal Trade Commission on fair practices, Securities and Exchange Commission, and Department of Justice in antitrust matters.

President Eisenhower, recognizing that fostering of small business should be a team operation, recently created a Cabinet Level Committee embracing major activities of the Government in the small-business area. As Administrator of the Small Business Administration, I have the honor of serving on this new committee. We are studying all the areas in which Government fosters small businesses, with a view to recommending to the President strengthening where advisable, either by administrative action or legislation.

And so, you see, there is a wealth of information available to small businesses simply for the asking—a gold mine of knowledge. An example, relevant to this conference is the Synopsis of United States Government Sales and Contract Awards, published by the Department of Commerce. Assistant Secretary of Commerce Mueller will tell you more about this publication when he speaks.

Yes, this small-business conference exemplifies how Government, Federal, State, and local, can work together in close cooperation with private groups and individual concerns. Our thanks go to all who have cooperated in making this conference a success.

Never before, I think, has anything of this magnitude been attempted. The services, the skills, the exhibits assembled here are for you proprietors of small firms to see. All of this is before you to make the most of.

The men who will speak to you know all the answers. So now, let's move on and when you have learned what you came here to learn and go to sharpening your pencils, may good luck be with you.

PARTIAL TEXT OF ADDRESS BY WENDELL B. BARNES, ADMINISTRATOR, SMALL BUSINESS ADMINISTRATION, AT SMALL BUSINESS PROCUREMENT CONFERENCE, EASTERN HIGH SCHOOL, BALTIMORE, MD., JUNE 21, 1956

As Administrator of the Small Business Administration I extend to all of you a cordial welcome to this Small Business Conference. Here we see in this representative gathering live evidence of the vitality and enterprise of owners and proprietors of small businesses.

Some of you have come many miles to attend, thereby giving added evidence of your enterprise and eagerness to grow, provide more jobs and in all improve the welfare of your respective communities.

We have been honored by the presence and welcoming remarks of Governor McKeldin, who gave further indication of his concern for the welfare of small businesses by issuing a proclamation designating this day as Small Business Day.

This, indeed, is high recognition of the importance of forever maintaining freedom of opportunity. Of course, this phrase "freedom of opportunity" is all-inclusive. It includes freedom of choice and freedom to do business under fair ground rules and freedom to share in supplying goods and services to the Government.

I believe that all of you as well as all of us in Government thank the Baltimore Association of Commerce for cosponsoring this Small Business Conference. Mr. Harrison Garrett, president of the association, has been very active in helping to make this conference a success.

It is the plan of the Small Business Administration, with the cooperation of other Government departments and agencies, to hold procurement conferences in other parts of the country after the pattern of today's conference.

Requests have come from various parts of the country for such a conference as this one. Where the local trade associations and civic-minded citizens express this desire, we shall do all that we can to comply.

As I see it nothing but good can result from this Small Business Conference and others to be held. Every one benefits: Small business, the communities and the Government through broadened sources of supply.

This is a work conference. We have a lot of ground to cover and I know you are eager to get started. One of the great values of a conference such as this is that it provides an opportunity for us in Government to become acquainted with you men who are in business.

The Small Business Administration has only one job assigned to it by the Congress and the President. That job is to help small business.

We have services to help small firms. We are proud of what we have done, but we are not complacent and resting on our oars. As you know the problems of small business are manifold and with your help we shall meet the challenge eager and determined.

We want to know you better, and to provide you with a means of finding out at first hand the services available to you in your Government. We want to know your problems, your needs, and we want to improve our services to meet these needs.

We will be frank with you, and I know you will speak frankly to us. From such an exchange of viewpoints, I am sure much good will come.

One of the major continuing responsibilities of the Small Business Administration is to see to it that small firms have an opportunity to get a fair share of Government business.

This is important. As you know, the United States Government is the largest purchaser of goods and services in the world. It is only fair and just that small firms share in supplying their Government's needs. Indeed, small firms with their specialized skills often can underbid large companies.

It is the main purpose of this conference to provide a means for proprietors of small firms in this area to find out what products and services the Government wants to buy that they can perhaps furnish, and to show them how they can compete effectively for this business.

Our Federal Government is large and diverse. There are, there must be, many complexities in dealing with any branch of it. I know how bewildering, how frustrating it can be, sometimes, to businessmen, large or small, when they visit Washington.

Here is where larger firms frequently have an advantage over smaller firms. They not only have whole departments that are concerned only with selling to the Government, but they also have representatives in Washington who are constantly on the job helping them sell their products to the Government.

There is a widespread belief among businessmen, particularly proprietors of small firms, that it is futile to try to deal with the Government unless you can have a representative in Washington, a "5 percenter."

That is not true, and I am sure that when this conference comes to a close, you will be wholeheartedly in agreement with me on this.

But we must never forget that small businesses often have an inherent advantage over big business. Not all products can be mass-produced. In this complex mechanical age, great individual skills are often required—and it frequently happens that these skills, the devotion to detail and pride in craftmanship, are most marked in small firms. That is why large firms often call on smaller firms to provide them with the highly specialized component parts they must have to make the complicated machines our industry requires.

We want to help you make the most of the unique skills you may have.

The Small Business Administration is so organized that it can and does provide all of the essential services needed to help small firms bid competitively on Government contracts.

At our procurement center, right here in Baltimore, we have on file every day up-to-date bid invitations from all of the major procurement centers in this area. This procurement center provides a ready means for firms to learn authoritatively what the Government is buying in this area. Many businessmen make use of it regularly to increase their business.

John Hamlin, Director for Small Business, Office of the Assistant Secretary of Defense (Supply and Logistics), said that during the past 2 years the Department of Defense has revised its small-business policies with the objective of doing a better job of assuring a fair share of defense procurement to small business firms. Mr. Hamlin said:

"Small concerns are getting from 60 percent to 65 percent of the military business which is within their capabilities and are doing this in open competition with all comers.

"Our program, insofar as prime contracts is concerned, has aimed at making sure that the military departments conduct their procurements in such a way that the small firms will have this equal opportunity.

"Within the past year we have undertaken to extend this concept to the important area of subcontracting. The defense business that small firms get as 'primes' has been over $3 billion a year and we think the volume of business they receive as subcontractors, while not precisely known, may amount to $2 billion. We are presently enlisting the cooperation of our large prime

contractors in this program. They are showing themselves very willing to go along with our objectives.

"Our responsibilities to small business under the law are shared with the Small Business Administration. We have been working well as a team on our common objectives. The Department of Defense is giving the Small Business Administration its full cooperation on the program to earmark certain procurement exclusively for small business.

Under recent policy changes classified contracts are being reviewed for such set-asides, and further set-asides will be made unilaterally by military departments when Small Business Administration personnel are not present to share in the determination.

"All of these programs have the continuous and vigorous leadership and support of Secretary of Defense Charles E. Wilson and of Assistant Secretary of Defense T. P. Pike."

Frederick H. Mueller, Assistant Secretary for Domestic Affairs, United States Department of Commerce, said that the "entire Eisenhower administration has been vigorously at work finding ways to strengthen the position of small business." Mr. Mueller said:

"During the last half of last year, throughout the civilian agencies, of the items costing $25 or more, nearly one-half the dollar volume—49.1 percent to be exact—went to small business.

"The welfare of the United States demands maximum participation in public projects by our small business firms. Everybody benefits. More concerns get orders which help them to prosper and increase employment. Your payroll and tax dollars promote the development of your communities and the expansion of other businesses. And the Government is able to shop for its needs in a broader market and get better prices, thus benefiting all taxpayers.

"In its own purchasing activities the Department of Commerce always has small business in mind. Our procurement of items costing more than $25 during the last half of 1955 involved 31,994 different orders or contracts and of these, 23,609 orders, or 73.8 percent, went to small business.

"Dollarwise, this procurement totaled $116,015,295 and the small-business portion was $25,052,886, or 21.6 percent. This overall percentage would be much greater except for the fact that about 70 percent of our procurement was by the Maritime Administration, mainly in contracts for construction and repair of oceangoing vessels which could be handled only by large shipyards. Except for the Maritime phase, about 61 percent of Commerce Department procurement was channeled to small business.

"In connection with the Maritime work, it should be remembered, however, that shipyards are mainly assembly yards. The building and equipping of a ship involves a great number of smaller contracts and an infinite variety of products—small motors, conduit and wiring, bolts and nuts, pots and pans for the galley, furnishings for the staterooms, and all the rest. The shipyards farm out two-thirds of the work that goes into a large ship.

"Our new public works programs will make business for small business. The Civil Aeronautics Administration is starting a 5-year, $248 million program for improvement of the Federal airways system. Expenditure of $40 million in the year beginning July 1 will break down to about $26 million or $27 million for equipment and the remaining $24 million for construction. In the past, small concerns have furnished many of the CAA's transmitters and receivers, engine generators and other electrical equipment, and built many of its control towers and other installations along 72,000 miles of Federal airways.

"After the President's great new highway program is passed by Congress, those of you who are in construction work—or who furnish equipment and supplies to contractors—will feel the effects of the steady nationwide buildup of road building."

John S. Patterson, Deputy Administrator of the Veterans Administration, said that out of the VA's purchases of more than $148 million in supplies, equipment, and plant improvements in 1955, small-business concerns were awarded more than $69,000,000 in contracts. Mr. Patterson said:

"This constituted 60 percent of the Veterants' Administration's total purchases. We use approximately 10,000 items in our hospitals, centers, homes, regional offices and supply depots, items that range from every medical supply and equipment used in a clinic and a hospital, every type of food and equipment used in a dining room and cafeteria and numerous articles of clothing both in hospital and civilian categories.

"We have always encouraged small business to compete in financing our requirements. We endeavor to keep our purchase quantities small enough to be attractive to small business. Our invitations permit offering partial quantities in cases where small business cannot conveniently handle our full requirements. In fact, 97 percent of our purchases are in amounts of less than $10,000. In addition, in cooperation with the Small Business Administration, we set aside certain purchases specifically for award only to small business concerns."

D. Otis Beasley, Administrative Assistant Secretary, Department of the Interior, said that the Department uses to the fullest extent possible the so-called open market purchase authority for purchases of $500 and under. Mr. Beasley said:

"Our purchasing officers are expected to check current market prices and where feasible, secure informal quotations in advance, to assure themselves that the Government obtains the lowest prices for the supplies needed.

"For purchases ranging in excess of $500 to many thousands which might be spent for a single piece of high voltage electrical equipment—or in the case of construction, the many millions involved in building a major dam—we solicit bids by general advertising.

"In April 1956 new procedures were installed in all procurement offices doing annual business in excess of $500,000. These procedures were worked out with representatives of the Small Business Administration.

"Under our new program, each major field office will be advised by its counterpart field office of the Small Business Administration, and will screen every contemplated purchase over $1,000 before invitations to bid are issued. Whenever feasible, purchases will be reserved for small business, if a sufficient number of small-business suppliers are available, and if the prices and delivery terms are considered acceptable."

Clifton E. Mack, Commissioner of Federal Supply for the General Services Administration, the central civilian buying agency of the Government, said that more than 57 percent of all GSA purchases are now being placed with small businesses. Mr. Mack said:

"Small business firms play an integral role in our supply system. Not only do they share in our local purchasing throughout the country, but they get a portion of our national purchasing programs from which all agencies are supplied.

"We buy principally standard items of manufacture, such as tools, motors, wire and cable, and about 50,000 other items."

T. M. Baldauf, Chief, Procurement and Property Management Division, Department of Agriculture, said that the Department buys from commercial sources about $50 million annually of goods, services and construction, and practically all of it is on a competitive bid basis. Mr. Baldauf said:

"Seventy percent or more of our orders and purchasing dollars go to small business.

"We fight forest fires, we control insect epidemics using chemicals and airplanes; we build buildings, roads, and other structures; we maintain buildings, camp grounds, forests, streams, etc.; we maintain laboratories using many chemicals for research; we contract for research; we provide market news services and statistical services involving high-speed electronic equipment; we buy and store agricultural commodities; we maintain loan and insurance services; we seed range pastures; we maintain a radio communications network for our forest fire lookouts; and many more."

Ormande A. Kieb, Assistant Postmaster General, Bureau of Facilities, Post Office Department, said that of a total Post Office annual procurement for goods and services of approximately $565 million in 1956, approximately $385 million is limited as to source, either by statute or market peculiarities, to big business such as railroads, airlines, utilities, prison industries, truck manufacturers, Government Printing Office and others. Mr. Kieb added:

"However, of the remaining $180 million which represent procurement for which the Department exercises policy and administrative ocntrol and final contracting authority, over 90 percent or approximately $165 million was spent with small-business contracts in 1955."

Twenty-three displays, most of them featuring products needed by large Government prime contractors and by the Department of Defense, that are suitable for small-business manufacture, were set up in the corridors of Baltimore's Eastern High School, where the conference was held.

Three exhibits, showing products needed for various atomic energy programs, were arranged by three prime contractors for the Atomic Energy Commission. The displays were provided by E. I. duPont de Nemours Corporation's Savannah River project, Aiken, S. C.; General Electric Corporation, Schenectady, N. Y., and Westinghouse Electric Corporation, Pittsburgh.

The Air Research Development Command, Baltimore, headquarters for the Air Force's research and development, sent to the conference the entire outer assembly of its "Falcon" guided missile. Many of the parts for the missile are supplied by small firms under subcontracts.

Other displays of products suitable for manufacturing by small firms were arranged by Flight Refueling Corp., Baltimore; Fairchild Aviation Corp., Hagerstown, Md; Bendix Aviation Co., Towson, Md., and the Glen L. Martin Co., Baltimore, which has the prime contract for the Air Force's flight refueling program.

The Supreme Court Again

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. COLMER. Mr. Speaker, the Supreme Court is at it again. The latest act of the Court in the field of legislation, a field set aside by the Founding Fathers for the legislative branch of the Government, the Congress, in its decision removing the teeth from the security loyalty program. This program was set up by the executive department and subsequently ratified by the Congress. The Court has ruled by majority decision that the security loyalty law does not apply to Federal employees not working in so-called sensitive jobs. This act, of

course, if permitted to go unchallenged is a fatal blow at the efforts of the executive and legislative departments of the Government to root out and keep out of the Government subversive employees.

In holding that the law only applies to sensitive jobs, the question is raised: Who decides what is sensitive? Who can say, for instance, that a messenger transmitting highly classified Government papers is not as capable of sabotaging the defense program or the Government itself as the Secretary of Defense? Who determines whether a mechanic who might be called upon in an emergency to repair some minor part on an automobile or an airplane used by high-ranking Government officials occupies a sensitive position or not?

Mr. Speaker, several days ago two splendid editorials pointing up these and other questions appears in a number of the papers of the Hearst newspaper syndicate. Under leave to extend our remarks we submit them herewith:

[From the New York Daily Mirror of June 13, 1956]

THE COURT INTRUDES

The United States Supreme Court, 6 to 3, has knocked the props from under the Eisenhower administration's security-loyalty program in a curious decision, bitterly dissented from, which holds that only those Federal workers who hold sensitive jobs may be dismissed as security risks.

This is another invasion by the Court of the legislative and executive arms of the Government and interference with their functions, contrary to the provisions of the Constitution.

Justice Tom Clark, speaking for himself and the other two dissenters, Justices Stanley F. Reed and Sherman Minton, noted clearly both the intent of Congress and the authority of President Eisenhower to extend the security program to the whole Government—an intent and authority which the majority of the Court now denies.

"By this action," says Justice Clark, "the Court so interprets the act (a 1950 statute) as to intrude itself into Presidential policymaking. This the Court should not do and especially here where the Congress has ratified the President's action."

Now the Government faces the prospect of returning to its payrolls many discharged "security risks" who also may be compensated for lost pay.

Is a Federal job a vested right? The Supreme Court—acting where both the district court and the court of appeals refused to take action—appears to believe so.

President Eisenhower's standard was "complete and unswerving loyalty." The Court has tumbled that standard and, in the dissenters' words, "stricken down the most effective weapon against subversive activity available to the Government."

The field is open. The Government now cannot demand loyalty in all jobs. Federal employment is no longer a privilege, but a right—bulwarked by a decision which is a blanket invitation for subversives of all kinds.

[From the New York Journal-American of June 13, 1956]

DANGEROUS RULING

The majority decision of the Supreme Court limiting the administration to dismissing disloyal employees only when they are working in so-called sensitive jobs seems to us to be based on a dangerous and distorted interpretation.

When you boil away the technicalities involved you arrive at the implicit assumption that a security risk is a risk only when he or she is in a postion to influence the Nation's defense or policy procedures, and otherwise is comparatively harmless. This is an appalling fallacy.

We are in absolute agreement with the dissenting minority of three Justices that the majority decision "has stricken down the most effective weapon against subversive activity available to the Government."

In 1950, when Congress passed the law permitting dismissal of security risks in 11 sensitive Government units, it very carefully included in the act permission to the President to extend its provisions to other agencies as he deemed necessary in the national interest.

President Eisenhower thereafter by Executive order extended them to the entire Government.

He was incontrovertibly right. As the dissenting opinion points out: "One never knows just which job is sensitive. The janitor might prove to be in as important a spot securitywise as the top employee in the building."

One Communist in any branch of the Government, in any level of job, is dangerous. He or she is committed to the overthrow of the United States, and under the pattern of party discipline will try to establish a nest of fellow conspirators, and to infect other employees with the poison of treachery.

The administration and Congress ought to act promptly against this threat to the security program. Either the Executive order ought to be revised to nullify the technicalities raised in the majority decision, or the act itself ought to be rewritten.

There should be no sanctuary anywhere for a security risk in the Government.

Indoor Farmers

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. MINSHALL. Mr. Speaker, with more than 350 acres under glass the Cleveland area has the greatest concentration of greenhouses in the United States. Since a large portion of this extensive acreage is located within the 23d congressional district which I am privileged to represent, it is with a great amount of pride that I insert in the RECORD at this point an article appearing in the June 1956 issue of the Clevelander entitled "Indoor Farmers." It is the success story of an extremely important segment of our agricultural economy—the vegetable growers of America—and I heartily recommend it to your attention.

The article follows:

INDOOR FARMERS

It all began 70 years ago in the winter of 1886 when Martin L. Ruetenik, a truck farmer on Schaaf Road, combined a sashbed—a hillside with southern exposure—and heat from the flue of a wood- and coal-burning boiler, to produce the first vegetables raised under glass in the Cleveland area. Today, the annual crop of Cleveland greenhouse grown vegetables, valued at $12 million is raised in the greatest concentration of greenhouses in the country—and third largest in the entire world.

Mr. Ruetenik's neighbors quickly realized, as he did, that raising fresh vegetables out of season was profitable and by 1900, there were 5 acres under glass. Now there are more than 350 acres under glass in the Cleveland area with a total valuation of $25 million.

While it was by chance that the greenhouse industry was started on Schaaf Road, on the rim of the industrial Ruhr of America, the Cuyahoga Valley, it was not by chance that it prospered and grew to its present stature.

During the early 1900's there was great reluctance on the part of the few successful greenhouse operators to share their knowledge of either plant operation or growing procedures. Fortunately, this feeling did not last long and soon the hothouse operators, as they were called then, were meeting with some regularity to discuss their mutual problems. In 1926, these forward-looking indoor farmers formed the Cleveland Hothouse Vegetabls Growers' Cooperative Association, whose purpose was "to establish standards for grading, packing, and wrapping; to study production and markets, and otherwise to promote the welfare of the hothouse vegetable industry."

A. C. Bartter, who today operates the Columbia Hills and Butternut Ridge Greenhouses, was the first president. John Hoag, operator of John Hoag & Sons Greenhouses in Rocky River, was elected vice president and later became the second president of the association.

The original articles of agreement were signed by 19 members representing 25¾ acres of farms under glass. At the last annual meeting held in April of this year, the Cleveland Greenhouse Vegetable Growers' Association (name changed in 1949) numbering almost 100 members and representing almost 350 acres, unanimously reelected Paul Ruetenik, son of the pioneer greenhouse grower, as president; E. D. Hoag, son of the second president of the association, as vice president; and C. W. Sanderson, son-in-law of the association's first president, as secretary-treasurer.

For the past 30 years, this organization has handled many matters including national and local legislation, research, study and distribution of seed, purchase and supply of greenhouse materials, membership and news and information about greenhouse-grown products.

In 1951 the Cleveland Greenhouse Vegetable Growers Association made history by spearheading a drive to be the first industry to make a gift to the Government. A greenhouse, valued at $18,000, was presented to the Ohio Agricultural Experiment Station at Wooster on behalf of the Ohio Vegetable Growers Association. John Hoag, president of the local association at the time, stated:

"Our purpose in this gift is to help the Government to help us to help ourselves. We have many problems that are peculiar to our own industry—problems upon which the scientists at the experiment station work constantly. It did not seem fair to us to ask the State to foot all the cost of this work, or to ask others in the farm field to pay for the solution of our problems. The idea of this greenhouse was first put to our Cleveland group. It was approved and we contacted associations in Toledo, Columbus, and Cincinnati and the State organization. They all went along as did growers not in the associations. We appreciate the work done for us here and we hope that this house will help the fellows who are helping us."

In accepting the gift, on behalf of the State, Dean L. L. Rummell, of the Ohio State University College of Agriculture and head of the experiment station, commented:

"This gift marks an event unprecedented in farm annals in this State. It typifies the spirit of this vegetable segment of our great agricultural economy. The vegetable growers comprise the only major farm segment which has never received the benefits of Government price supports, marketing agreements, or acreage allotments. They

have run their own show in peace and war and always given the American consumer the best bargain in the market basket."

Greenhouse operators from all over the State now gather each year at Wooster for Ohio Greenhouse Day. The results of hundreds of experiments with seeds, plants, fertilizers, and greenhouse methods and procedures are tabulated, explained, and evaluated in an all-day session.

An aggressive research program under the direction of Walter Pretzer, chairman of this committee, son-in-law of Martin L. Ruetenik, and operator of the original Reutenik Gardens, keeps the Cleveland greenhouse vegetable growers in the leading position in the country in the production of tomatoes, leaf and Bibb lettuce, cucumbers, radishes, and watercress. In addition to numerous field trips throughout the year to other greenhouse areas in this country, sponsored by the association last summer, Mr. Pretzer organized a 45-day tour of Europe to study and report on greenhouse conditions abroad.

The active procedures and policies of the Cleveland Greenhouse Vegetable Growers Association are best exemplified by a recent statement of Paul Ruetenik who, in addition to being head of the local association, is also president of the Vegetable Growers' Association of America. Commenting on President Eisenhower's recent veto of the farm bill, Ruetenik said:

"The bill as finally approved by the Congress fell far short of solving the current farm situation. The continuance of the worn-out inadequate piecemeal approach which attempted to facilitate a social need by preventing the accomplishment of an economic need should have been terminated at the close of the Korean war."

Pointing with pride to the policies of the vegetable growers, he said:

"We have never asked for Government supports and our members are in a far better economic position under the law of supply and demand than those commodity groups who have relied upon Government price supports. Rigid price supports have not only aggravated the present farm price situation but have shifted the difficulties to vegetable growers and other unsupported commodities when restricted acreage was diverted to these other crops."

Mr. Ruetenik added that the Vegetable Growers Association recommends a compulsory across-the-board application of the soil-bank program as a means of solving overproduction supplemented by an aggressive marketing program.

With this fine spirit of cooperation, plus the individual and collective efforts of these indoor farmers, it is no wonder that Cleveland became the greenhouse center of the country.

Commencement Address by John S. Patterson, Deputy Administrator of Veterans' Affairs, at Consolidated Community High School, Mount Carroll, Ill., June 1, 1956

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a commencement address which was delivered by my good friend, John S. Patterson, Deputy Administrator of Veterans' Affairs, at the Consolidated Community High School, Mount Carroll, Ill., on June 1, 1956, together with the commencement program:

YESTERDAY, TODAY, AND TOMORROW

You are kind indeed to invite me to join you on this occasion.

Just as you regard this as your school, so did I regard it as mine. For here I spent 4 of the most memorable years of my life. Here I formed habits of mind and spirit that have guided me to this day.

I don't mind telling you—I went through a lot of soul-searching, thinking about this evening's commencement. What message could I bring you that might have some iota of permanent value?

As I thought about it, I recalled a story my son Dick told me. Dick is a medical student at the University of North Carolina.

North Carolina has an economics professor who's noted for his tough exams. If you think exams at Mount Carroll were tough, try to visualize one 10 times as hard.

Well, just before Christmas midterms were coming along, and the students had studied for long weeks. The fateful morning arrived, and the professor walked into the classroom and wrote one single question on the blackboard:

"What caused the depression?"

A tow-headed young man, sitting in the back of the room, pondered a bit, then wrote the following words in his examination blue book and left the room.

"God only knows. I don't. Merry Christmas."

In due time, the professor returned the blue book. And here's what he had written:

"God gets 100-percent. You get zero. Happy New Year."

The question I'm going to attempt to answer this evening is even tougher. What guideposts of life can I point out to you? What thoughts can I share with you, as you embark upon new ventures? No man on earth can presume to have the answers. All that one can do is point to those principles that have served him well * * * and hope that they will have some validity for others.

What we are doing here this evening is being repeated in schools throughout the length and breadth of our land. Our earliest colonists, and the pioneers after them, set the pattern of education for all. From those days forward, the pattern has been enlarged. Today, publicly supported education has become as widely accepted as the air we breathe.

We Americans dislike inequality. In educational matters * * * ever since the days of our earliest colonists * * * we have despised it. Our goal in this country has always been * * * an opportunity to learn, and to go to school, for every boy and girl in our land, regardless of social and economic background.

We spend countless millions of dollars a year to reach this goal * * * but we're really not spending the money; we're investing it. We're investing it in the future of the most precious asset of America * * * our children.

If you young men and women are experiencing any of the emotions I felt the day I graduated from this school, you're probably keenly aware that in your hands, this night, you hold opportunity—golden opportunity. And it's a good feeling, an exhilarating feeling.

And it's a feeling you're justified in having, for the road you have traveled has been rough in spots, but you have made the grade. There will be other rough roads in the future. They can't be avoided in life. But you, I know, will travel them successfully, because we have faith in you, and you have faith in yourselves.

Tonight we honor you for your achievements. And we also honor others who have played a part in helping you reach this most wonderful of nights—an important part, yet a part performed with self-effacing modesty.

Standing out in front are your fathers and mothers, fathers and mothers who have devoted their lives to making the dream of tonight come true. As a father, I share the rejoicing of all you parents, for refusing to allow setbacks and heartaches blunt your determination to help your children seek the opportunities, assume the responsibilities, and receive the benefits which are their due as free Americans.

You young people may not realize it, and perhaps you won't until you marry and have youngsters of your own, but we parents have worked pretty hard at bringing you up. It's been a labor of love and we've relished nearly every minute of it. All we ask in return is that, as year follows year, you take our places in the world. All we ask is that you pass along to your children that which we inherited from our parents.

Then there are your teachers. How fully they merit our honor on this night. We must never forget them. For they have done far more than teach the "three R's." They have molded character. They have instilled ideals. They have helped you learn to distinguish right from wrong. They have given not just knowledge but wisdom.

They have helped immeasurably to build good, true, young Americans, thinking Americans, Americans better equipped to exercise their rights of citizenship by virtue of their education.

One other group, an unsung group, deserves recognition tonight for the part it has played in the education of our children. I am thinking of those men and women who have no children of their own. Yet we find them in the forefront in supporting the principle of education for all.

To them all honor is due. Their passing unnoticed in these exercises would reveal an ingratitude beyond the ken of fairminded people.

Education begins in the cradle and ends in the tomb.

How true that is. Education is a continuing process, going on from infancy to old ago. Perhaps that is why occasions like this are known as commencements. You young graduates are about to commence a new phase of your life, a new phase of your learning. The knowledge and wisdom you have acquired thus far are but a beginning.

Surely, any high school or any college graduate who feels that his education is complete is shooting wide of the mark.

Schooling provides the foundation, schooling set up directional markers for the life that lies ahead.

Commencement marks the beginning of education, not the end.

And so tomorrow begins a new chapter of your education, a chapter that in large measure will determine the course you follow the rest of your life. Plato, back in the days of ancient Greece, said it much better: "The directions in which education starts a man will determine his future life."

Patterns of life are as varied as they are intricate. Each of us is a weaver. Each must choose his own pattern. Some choose with extreme caution, others with no caution.

But choose you must.

Young men and women graduating from high schools will, in later time, become our business executives, lawyers, doctors, teachers, ministers, artisans, farmers, nurses, salesmen. You can be among them. But you must show wisdom in choosing your pattern of life.

Every once in a while, some young man or woman takes great relish in pointing out to me that some of the most successful people in America never finished high school, while some college graduates have made dismal failures out of their lives.

I used to wonder about it myself. Then, after observing successful people for a good number of years, I came to realize they all had one quality in common:

They had set themselves a goal. They knew where they were headed.

The unsuccessful, regardless of their education, usually had no goal. They were drifting aimlessly. So a goal is essential. And how much easier it is to reach, if you have the education to go along with it.

The pattern of life, the goal, is up to you: Butcher, baker, candlestick maker, doctor, lawyer, merchant chief * * * postman or President * * * farmer or financier. Any goal is worthy, if it's the right one for you.

But choose you must.

As you go forth into the world, you graduates will find that you can place little dependence on cut-and-dried formulas for success. Success does not come in 10 easy lessons. You get success the hard way * * * by exercising discernment to cut through the maze of sideroads and byroads of life on to the basic fundamentals.

Each and every one of you will have to find your own way. And as you get along in life, you will find that the task becomes a bit easier. But you never can afford to relax your discernment, your search for the fundamentals.

And what are the fundamentals of life?

I have several in mind.

The first has to do with industriousness, a characteristic sometimes overlooked by young people. Hard work may be out of fashion in some places, but take my word for it: No one has yet found a suitable substitute.

Once, when Mr. Edison was complimented on his genius, he hastened to reply that whatever success he enjoyed came from industriousness, and little else. I'm sure you'll hear the same thing from any other successful person you might ask.

Too often young persons are misled by appearance. What may look like idleness may not be idleness at all. It can be, instead, a reflection of deep mental concentration. Anyone engrossed in meditation is even busier than he would be, were he devoting physical energy to the problem at hand.

The moral to all this is that undirected movement may very well be little more than fruitless motion. Therefore it is vital to give guidance to whatever we do.

Otherwise * * * if we slash out in all directions at once * * * we'll find welling within us a growing spirit of frustration. And frustration has no place in a life dedicated to service and happiness.

Young persons owe it to themselves, and to their Nation, to develop imagination.

I like John Masefield's remarks about imagination. Here's what he said: "Man consists of body, mind, and imagination. His body is faulty, his mind untruthworthy, but his imagination has made him remarkable. In some centuries, his imagination has made life on this plant an intense practice of all the lovelier energies."

Yes, imagination is an important fundamental. But it, too, must be coupled with proper direction. Undirected imagination merely squanders man's precious energies.

The apex of a career, whatever its nature, is far more important than the beginning. High school graduates are too much inclined to lay stress on the years immediately ahead. Better it is to visualize the position you hope to occupy in middle-life—then set out to reach that position.

The world is not as hungry for young endeavor as it is for mature accomplishment.

Industry and imagination lack much when not bolstered by persistency. Too many of us exert ourselves in spurts. Too many of us are derelict in following up great plans created by an active imagination.

Dripping water wears away the stone. What we need these days is tenacity of purpose that allows nothing to turn us aside. Want to travel the high-road of life? Try tenacity.

Now let's turn to another of the eternal virtues of mankind, the truth.

Old Josh Billings—you might call him the Will Rogers of the 19th century—had something to say about truth that always will stay in my mind: "It is better to know nothing," he said,, "than to know what ain't so."

Or Francis Bacon said it a bit more elegantly: "No pleasure is comparable to the standing upon the vantage ground of truth."

We should remember forever that magnificent beacon of light from the Scriptures: "The truth shall make you free."

Many of the ills of mankind spring from the soil of falsehood. Truth, no matter how much it may hurt, is to be preferred over rumor, gossip or half-truth. The man or woman who refuses to face the truth, wherever it might lead, lacks a fundamental ruggedness.

Such a person lives in fear, in uncertainty. Success does not come to those prone to evade the truth, to those unable to face up to it. For life is full of obstacles that can be met only by truth, obstacles that cannot be skirted by falsehood.

Closely akin to truth is honesty. Those who seek the truth, and have no fear of the consequences, are honest above compare.

Unfortunately, for too many of us, honesty consists of little more than abstaining from picking your neighbor's pocket. But honesty goes further, much further, than that.

I've heard people speak disparagingly of "vested interests" in things material. But do you realize we also can develop vested interests in ideas?

Such "vested interests" retard growth. They stifle social progress. Truth and honesty can help us brush away the cobwebs of the mind caused by vested interests in ideas.

Certainly, well-established notions and ideas have a place in our thinking * * * but not to the point where conflicting notions and ideas are cast away without notice or evaluation.

It is well to change cautiously. In the presence of standpat no-change, progress cannot exist. Be willing to admit your errors and move on if you wish to progress.

The wise man or woman maintains an open mind and an inquiring mind. Every new idea is weighed and weighted. If it is found sound and sensible, it is placed alongside those long-established ideas that have withstood the test of time.

We cannot maintain the open and inquiring mind without truth and honesty. We must strive forever to bring those two vital characteristics of civilized man to full fruition. Truth and honesty. Live by them, and a good and satisfying life is in store for you.

"Know thyself," said Socrates. "Know thyself, control thyself, deny thyself."

"Know thyself," and your days will be full and productive and satisfying upon this earth.

"Control thyself," harness your energies, give them direction, and success will be within your reach.

"Deny thyself," avoid life's excesses, be moderate, don't look for the easy way, and you will discover the true meaning of your existence.

I have given expression to only a few of the thoughts that dwell in my mind on this commencement day.

There are other basic verities of life * * * and you young men and women will discover them for yourselves as you go out into the world. It's all part of the continuing process of education that will remain with you for the rest of your days.

As you go forth into the world, you carry the best wishes of all your fellow Americans. We shall mark your progress with pride and satisfaction.

May you ever be a credit to this great Nation of ours, to the institution which you are now leaving, to your beloved parents.

May the God of Hosts shower His blessings upon each and every one of you.

MOUNT CARROLL COMMUNITY HIGH SCHOOL COMMENCEMENT, JUNE 1, 1956

Processional, Janice Whitehead.

Invocation, Rev. John Main.

Duet No. 4 (Garibaldi), flute duet, Sharon Isenhart and Sharon Spealman.

Address, Mr. John S. Patterson, Deputy Administrator, Veterans' Administration.

Presentation of awards: Lions Club Award, DAR Good Citizenship Award, recognition of scholarship, M. J. Siebert, superintendent.

Presentation of diplomas, Mr. Judson Grove.

Benediction, Rev. John Main.

Recessional, Janice Whitehead. (Audience is requested to be seated during the recessional.)

Class roll: Gerald Bork, Eugene Brinkmeier, Harlan Brunner, Kenneth Buck, Karen Christensen, Ted Colehour, Jr., Bradley Davis, James Eaton, Fred Flickinger, Leo Frederick, Eric Frost, Patricia Fulrath, Leo Gelwicks, William Gengenbach, Leroy Getz, Judson Grove, Barbara Hamilton, Shirley Hicks, Jeanine Hovorka, Martin Judd, Ruby Kaufman, Joan Kearnaghan, Arvilla Keller, Charles Kinney, Jr., Arlan Kneale, Herbert Law, James McDearmon, Gary Morhardt, Carol Preston, Miles Raab, Ruby Randecker, Betty Rausch, Dennis Remrey, Glenda Richter, Sharon Shiley, Linda Siefert, Mary Sue Sisler, Carol Smith, Earl Smith, Mary Glennis Thomson, Michael Williams, Dorothy Wubben, Karen Zugschwerdt.

Junior escorts: Alice Crouse, Carolyn Mackay, Keith Dauphin, James Rogers.

A Mission for Nixon

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial from the New York Times of Sunday, June 24, 1956, which discusses the forthcoming visit of Vice President NIXON to the Philippines. The editorial follows:

A MISSION FOR NIXON

Vice President NIXON has several times been called upon to undertake missions of what is called "good will." The newest call is from the Philippines, and Mr. NIXON and his wife will go there to represent the United States at the July 4 celebrations of the 10th anniversary of the establishment of the independent Philippine Republic. This mission can be of great importance, and Americans will wish the Vice President the highest possible degree of success.

It must be confessed, with deep regret, that our relationships with the Philippines in recent months have been less satisfactory than we want them to be. Philippine President Ramon Magsaysay is a stanch friend of this country, and that very fact has helped to inspire a sort of anti-American campaign in Manila whose object, in part certainly, is to embarrass the President.

The United States has contributed to the discontent in the Philippines through the failure to take more prompt and decisive action on the matter of American bases in the archipelago, and also through the failure, in some Congressional quarters, to under-

stand some of the more sensitive aspects of the Philippine-American trade relationship. Recently there has also been the complaint voiced in Manila that the United States has neglected or by-passed the Philippines in its eagerness to aid or to woo some other Asian states such as Thailand, India, and Indonesia.

This last charge will not bear scrutiny when the entire Asian picture is put into focus. Our assistance has been large and will, we confidently hope, continue to be so.

But relatively minor irritants can have an unfortunate effect on the attitudes of peoples where there is inadequate intercommunication and possibly an inadequate basis of understanding. That seems to have been the case in respect to the Philippines.

It seems appropriate that the United States should be represented by its highest available public officer at this celebration. The Filipinos will be the first to appreciate the propriety of this international gesture, and it was wise and right to make it. From that vantage point Mr. NIXON has a chance to do a solid job in representing his country and contributing to the solution of vexatious problems. He should do it well.

Mr. Speaker, I also wish to include in the RECORD an editorial from the San Diego Union of Sunday, June 24, 1956, which discusses the Vice President's direction of the Youth Fitness Conference. The editorial follows:

VICE PRESIDENT HANDLES STRONG ROLE

The able manner in which Vice President NIXON took charge of the Youth Fitness Conference last week again showed his versatility. Mr. NIXON has the facility for filling in ably wherever needed.

The Vice President's keynote speech to the sports, military, and recreation leaders attending the fitness conference was similar to the kind of talk Mr. Eisenhower would have given. The address was packed with facts. It pointed up the problem directly. It contributed materially to the conference's success.

During his 3½ years as Vice President, Mr. NIXON has been called upon to handle a great variety of important assignments.

He has made diplomatic tours of Asia and Central America which have strengthened American friendships. His ability as a diplomat is well recognized.

Mr. NIXON has served as the President's top-ranking liaison force with Congress. His ability to argue the merit of a measure has turned probable defeat into victory for several administration measures. On occasion, the Vice President himself has been called upon to cast key votes.

Mr. NIXON has been an important member of the President's strategy team, studying domestic and foreign problems. His ability in presiding over Cabinet and National Security Council meetings has won for him the respect of Washington's top officials.

These are a few of the important facets of Mr. NIXON's duties which his critics seldom mention. The Vice President's successful execution of these assignments has made a major contribution to the success of the Eisenhower administration.

GOP Labor Program: Divide and Conquer

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, the attack upon organized labor, coming from the Republican spokesmen since labor unity was achieved by the merger of the AFL and CIO, are shaping up as official Republican Party strategy—the Old Guard strategy of divide and conquer.

In this connection, an article appearing in the April 1956 issue of the Democratic Digest forcefully points up this strategy to divide labor leadership and rank and file labor membership. Under leave to extend my remarks, I include this article, entitled "The GOP Unveils Its 1956 Labor Program: Divide and Conquer":

THE GOP UNVEILS ITS 1956 LABOR PROGRAM: DIVIDE AND CONQUER

After 20 years of separate and sometimes conflicting operations, the two largest labor unions in the United States have now made merger a reality. But that hard won unity now faces a new threat from the Republican Party's open campaign to discredit labor's leadership.

The GOP strategy is clearly revealed in a serious of attacks by leading Republican spokesmen, aimed at driving a wedge between rank-and-file union members and their duly elected officials, using the same divide-and-conquer technique that helped the late Senator Taft of Ohio to victory in his 1950 Senate campaign.

While a few enlightened Republican spokesmen try to maintain the pretense that the Eisenhower Administration is friendly to labor, the overwhelming sentiment of the Republican Party can be seen in the intensity given the GOP divide-and-conquer campaign leading up to and since the merger of the AFL–CIO.

Secretary of Labor Mitchell, for example, told the delegates at the historic merger meeting in New York last December that they should speak out in politics. But Harold Stassen, President Eisenhower's own White House assistant, predicted dire consequences to the Nation if they did. Stassen, the President's Special Assistant for Disarmament, and a frequent Republican presidential candidate, marked the inaugural unity meeting with a speech forecasting that labor's political activity would increase to the point where it would become "a dangerous trend for the future well-being of the workers and of the Nation."

Speaking in Detroit, the home of the CIO Auto Workers, Stassen followed the divide-and-conquer theme by blaming "top leadership of a number of the large labor union," for what he considered a potential menace to the Nation.

Organized labor leaders, wrote Robert C. Albright in the Washington Post, "say speeches of the Stassen type have been so many and so persistent, and stem from Republicans so highly placed in the party, that they add up to a '1956 Republican pattern of attack.'"

One of these highly placed Republicans was Senator KNOWLAND, Minority Leader and heavy contender for the 1956 Presidential nomination, who saw in the newly-merged AFL-CIO some "who visualize taking over control of the Democratic Party in this country * * * and making it into the American equivalent of the British Labor Party."

To another Californian, Representative EDWARD W. HIESTAND, the unanimously-elected AFL-CIO vice president, Walter Reuther, is "Public Enemy No. 1 * * * a Socialist with Communist-Russian background." His prediction is that if Mr. Reuther has his way, the Democratic Party will be forced to adopt "the socialistic measures which have been the political policy of the AFL-CIO." What both these Californians conveniently overlooked is that organized labor consistently supported Republican Earl Warren for Governor of their home State.

Then there was Senator BARRY GOLDWATER, one of the prime movers in the divide-and-conquer campaign against labor. He charged that labor unions were out to build up huge political slush funds for the Democrats and labor leadership would let nothing stand in its way. As chairman of the important Republican Senatorial Campaign Committee, he issued a report accusing labor leaders of "using violence and coercion" in a "conspiracy of national proportions" aimed at controlling the 1956 election results.

The Arizona Senator was quickly backstopped by New Hampshire's Senator STYLES BRIDGES, head of the Senate Republican Policy Committee. With great fanfare, Senator BRIDGES circulated the already published "tabulation of political spending by major labor organizations," in an obvious effort to support his colleague's charges. While these figures were already a matter of public knowledge, an interesting comparison was made between GOP and labor expenditures by the CIO Political Action Committee. The Republican Party spent more than $7 million, while all 41 labor groups spent only $2.5 million during the same period, the CIO reported, and "while labor groups received from their total membership of about 18 million contributions in small amounts totaling $1,882,156.58, the Republican Party received nearly an equal amount—$1,434,084.30 to be exact—from only 738 contributions of $1,000 or more."

The breakdown shows: 10 members of the Rockefeller family gave $66,000 to the GOP; 14 members of the Du Pont family gave at least $51,500; the Mellons of Pittsburgh contributed $40,000; and the Pews of Philadelphia, $25,000.

What it boiled down to, the CIO pointed out, was that for every member of a trade union who gave a dollar to his political action committee, labor league or other trade-union group, one of the GOP's 738 contributors came up with more than $1,934.14.

While most industrialists maintained a wait-and-see attitude as to what labor merger would mean, one prominent businessman had no hesitancy in joining the campaign. He is Frederick Coolidge Crawford, chairman of the "Salute to Eisenhower" dinners held in January, at which prominent GOP leaders keynoted the coming Presidential campaign. As chairman of the widely-publicized fund-raising dinners, Mr. Crawford told a group of political and business leaders that labor leaders are a "small, powerful group" bent on moving into American political life. He pointed out that the rise of the Nazi Party in prewar Germany was "a supreme example of how a few people" could rise to power. His invidious observation that the Nazi rise in Germany developed about the same time that labor was acquiring new strength through organization in this country, came as no surprise to those familiar with Mr. Crawford's anti-labor record.

As present of the Thompson Products in Cleveland since 1933, Mr. Crawford has successfully maintained an open shop by defeating all efforts of his employees to organize. In the process, he has been cited for unfair labor practices by the National Labor Relations Board.

Nor is it a surprise to those familiar with Mr. Crawford's earlier attempts to discredit those he opposes. In a speech in Cleveland in 1939, according to the Cleveland Plain Dealer, Mr. Crawford had this to say: "And what difference does it make if the dictatorship of Germany is consuming one-fourth of production for military grandeur or whether the bureaucracy of the New Deal is consuming one-fourth of production to maintain itself?"

Mr. Crawford, a past president of the National Association of Manufacturers, was quickly joined by the newly-elected NAM president in the GOP divide-and-conquer

campaign. Cola G. Parker, elected last December, saw in labor unity "implications of a very great danger to the American people."

Another approach came from Senator Goldwater in the form of a poll, which he claimed showed that a majority of trade unionists don't like their unions to participate in politics.

Don Montgomery, director of the UAW's Washington office, pointed out that the Arizona Senator used "a partial and distorted summary" of a poll made by one Wayne University student in Detroit who interviewed only 70 persons. The UAW director reported that "a Wayne University poll of 1,150 workers showed that far from being critical of their union's political activities, UAW members are predominantly loyal to the union's political endeavors."

By February of 1956, the open drive against labor took legislative form in a bill sponsored by GOP Senators Curtis and GOLDWATER, which goes far beyond the Taft-Hartley Act in its efforts to destroy union programs to enlighten their members on the issues in Congress and report their voting records.

The labor newspaper, the Machinist, points out that participation of a local union in a citizenship campaign during the past 2 years, or affiliation with an international union that has participated in such a campaign for good government, would bring automatic cancellation of union security provisions in a contract it may have negotiated, if the Curtis-Goldwater bill is enacted. To the Machinist, "the bill could immediately cancel every union security provision in the country," since "there are no AFL-CIO unions that we know of that have not supported one or another of labor's political leagues during the past 2 years."

This GOP concern over labor's political activity had been brought up by President Eisenhower himself, in his brief message to the labor merger meeting in New York, transmitted by telephone from Gettysburg, where he was convalescing. The New York Times headline indicated where the President's emphasis lay. It read: "President bids labor heed minority political rights: greets AFL-CIO." The Times story pointed out that the President's tone was friendly, "but he put unmistakable stress on his belief that labor must develop means for guaranteeing that minority political opinions would be 'accurately reflected.'"

Senator GOLDWATER promptly interpreted this to mean that the President and other prominent Republicans were on his side. "That is what I have been fighting for," commented the Senator, "and I intend to keep on fighting for human freedom in labor unions as well as elsewhere."

Not content with the GOP efforts to drive a wedge between union members and their leaders, Agriculture Secretary Benson's approach to the antilabor campaign is seen in his efforts to turn farmers against city workers. Last September, Mr. Benson charged that wages of city workers are responsible for the farmer's plight. Since the merger meeting, Mr. Benson has issued a report implying that farmers would be better off if wage earners made less, in a divisive effort to use organized labor as a scapegoat for failures in the administration's farm program.

Another Cabinet member, Secretary of Interior McKay, has clearly revealed his hostility to labor. When his Salem, Oreg., automobile agency was under strike by the International Association of Machinists, Mr. McKay crossed the picket lines to inspect his company's books. Referring to members of the striking union, his comment was: "I don't happen to go along with some of the goons they've got running things."

Contrary to the frequent GOP charges being tossed around that unions are dictatorships, a recent study by the National Industrial Conference Board shows the most popular system for election of officers is through international union conventions.

The conservative Wall Street Journal agreed that these democratic processes would continue. "The divergencies of interest among union members themselves * * * remain," said the Journal in commenting on the merger. "All this divergence has been, we think, good for labor. * * * The labor movement is itself stronger by virtue of its differences and the freedom for those differences to express themselves."

The New York Times saw "no cause for alarm" in labor's role in American political life. "It isn't as if the AFL–CIO were to nominate candidates or control those who are elected," said the Times, which agreed with Mr. Reuther that "labor's program may well serve to raise the level of political understanding in America."

Both AFL–CIO President Meaney and Vice President Reuther have repeatedly said that neither they nor anyone else could tell a union member how to vote.

"Organized labor in America," Mr. Meany declared, "will not subjugate itself to any political party. It will endorse liberal and progressive candidates from all parties. It will make known to the workers of this country the records of all candidates. It will urge all citizens to register and vote."

The Republican Party had reason to fear an informed union membership at the polls next November.

Early in 1953, the administration backed down on its pledge to amend the Taft-Hartley law, forcing the resignation of the late Secretary of Labor, Martin Durkin, a stanch trade unionist.

Would informed working men and women vote for an administration that now claims credit for the $1 minimum wage voted by the Democrats, when President Eisenhower himself held out for only 90 cents? Or would they believe this administration is opposed to the State antilabor right-to-work laws when Labor Secretary Mitchell opposes them but is brushed off by President Eisenhower?

Nor has the Eisenhower administration shown friendliness to labor in its appointments to the National Labor Relations Board, which has tightened up Taft-Hartley in practice to the point where Fortune magazine frankly stated that "Management is unquestionably getting a better break at NLRB than it has in many years."

The Republican Party's antilabor attitude is shown again in the move to curb labor's political activities through State legislation. In Wisconsin, for example, where the GOP majority rammed through a bill limiting labor's political activities despite vigorous Democratic opposition. And in Michigan, where the Eisenhower administration joined in the GOP State party's attempts to curb labor on the local level. Acting on a complaint from the Michigan GOP State chairman, the administration indicted the United Auto Workers for sponsoring a radio show endorsing certain candidates for office.

The union did not deny sponsorship of such a program, but contended such sponsorship did not violate the law. The United States district judge, hearing the case, dismissed the indictment, upholding the union's contention.

Organized labor has shown that it does not intend to sit idly by while those who do not believe in the principles of trade unionism attempt to destroy its gains. One Republican spokesman, Gov. Fred Hall, of Kansas, blames the Republican loss of Congress in 1954 on his own party's opposition to Taft-Hartley reforms, pointing out that the Republican Party has been "at odds with labor for 25 years." His frankness serves to point up the 1956 GOP efforts to "get labor" through its attempts to discredit labor leadership.

It's Ike's Farm Depression

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, Secretary of Agriculture Ezra Benson has received considerable criticism in the past 3 years. Some of the criticism was probably well justified; however, for the most part he has been an excellent chore boy for the administration.

The recent veto of the farm bill showed that the man who has not been too concerned about the economic plight of farmers is the President of the United States. Under leave to revise and extend my remarks I wish to insert in the RECORD an article from the May issue of the Democratic Digest titled "It's Ike's Farm Depression." The text of the article follows:

EZRA TAKES THE BLAME BUT IT'S IKE'S FARM DEPRESSION

When President Eisenhower announced that he would run for a second term, Washington's current joke was that he figured he couldn't make a living on his Gettysburg farm while Ezra Taft Benson was Secretary of Agriculture.

The gag was funny for everyone but farmers, who have watched their net income fall about $1 billion a year since Ike was inaugurated and have been personally caught in the drop of the parity ratio to 80 percent of "fair"—the lowest point since 1941.

To farmers, Benson is a fighting word, although they can't help chuckling once in a while at his incredible ability to put his foot in his mouth.

But Benson's performance has been so bad that farmers have been slow to believe that it really reflects President Eisenhower's personal feelings. Many seem to think that Ike has no connection with his Cabinet officer, although such an official can be fired instantly. The same polls that show Benson with practically no friends among farmers show no corresponding dip in Ike's popularity. But the facts are that Ike has strongly backed Benson's every move, and the GOP farm program has come straight from the President, not from Benson.

In 1954 the administration's first recommendation for a change in the price-support laws was submitted to Congress in the form of a special message from Eisenhower. This was the occasion on which Ike officially broke his famous campaign promises about 90 percent and 100 percent of parity and adopted sliding-scale or flexible supports as low as 75 percent of parity. He took to the radio and television on June 11 to urge passage of the lower supports, and he wrote the Republican chairmen of the House and Senate Agriculture Committees on August 12 to oppose a bill raising the support level on dairy products above the level to which Benson had dropped it.

When Congress adopted the sliding scale, over Democratic opposition, Eisenhower told a press conference that he was "delighted" with the measure. And, according to the New York Times, "he rapped his knuckles sharply on the table to emphasize the point that the administration in this case had succeeded in turning one Chamber of Congress away from rigid high price supports."

At another press conference, the President had been asked for his opinion of a Senate

committee version of the bill which would have raised price supports on dairy products from 75 to 80 percent of parity. Ike's reply was that he "thought it was a grave error."

A few months later, in the congressional campaign of 1954, Ike gave a major farm speech at Indianapolis in which he vigorously defended his administration of the farm program.

This year in another special message, Eisenhower asked Congress to keep the minimum price support in the flexible scale at 75 percent of parity and—in the case of corn—suggested leaving the price-support level entirely up to Secretary Benson. He also called for a "soil bank" after having rejected it twice the previous year when it was suggested by Democratic Members of Congress.

Throughout the weeks of debate which followed, Eisenhower frequently urged lower price supports and refused to deny persistent statements by his Secretary of Agriculture that the President would veto any bill returning to high price supports. When the Senate voted, in early March, for his sliding scale of price supports, Eisenhower's press secretary told reporters that the President was "delighted."

Ike also backed Benson's refusal to do anything about the ruinous prices of cattle and hogs. In spite of his famous campaign promise at Kasson, Minn., to find a method for supporting perishable commodities such as livestock, Ike told a press conference 3½ years later:

"I would believe that to go in this whole perishable field and begin the business of price supports would be dangerous. I would want to study it more before expressing myself definitely on it." Hog prices were then at a 14-year low.

In addition to the many instances in which Ike assumed personal command of the farm program, he has shown by personal association great interest in the farm program, rather than the detachment or even ignorance which farmers might want to believe. This began, of course, with his personal selection of Ezra Benson for the Cabinet. As Benson narrated it to a Brigham Young University audience shortly after his selection for the post, Benson gave the President-elect four reasons why he should not be named to the Cabinet. All were rejected, of course, by Eisenhower, who has continued to praise Benson warmly.

During his first year in office, Ike chose Ezra to appear with a couple of other Cabinet members on a coast-to-coast TV show in which the Republican farm program, among others, was stoutly defended. Benson has been the President's guide for inspection trips to the agricultural experiment station at Beltsville, Md., to an animal experiment station at Front Royal, Va., to a demonstration of soil conservation held in the Department of Agriculture and on surveys of both flood and drought damage in the Middle West.

The President's brother, Milton, whom Ike publicly credited in 1952 with "having the brains in the family," is constantly in and out of the White House and keeps in close touch with Republican farm leaders. One of his closest associates is W. I. Myers, dean of agriculture at Cornell University and the man Ike chose to be chairman of his National Agricultural Advisory Commission.

Eisenhower has come to Benson's support countless times. In fact, a critic has said that Eisenhower supports Benson more than he does the farmers. And Benson returns the affection. For instance, the newsletter of the American Farm Bureau Federation quoted Benson as declaring, "There is only one view on farm policy in the executive branch of the Government," and "that is the view held by the President, which I fully support."

The same source quoted Benson as having the full approval of Ike in reorganizing the Department of Agriculture and told its farm readers on another occasion that "Eisenhower last week declared that he has seen no one more dedicated to America than Mr. Benson."

This remark, and many like it, were made by the President in response to reports that Benson would be fired. The Minneapolis Star reported on October 21, 1953, that Ike "backed Agriculture Secretary Benson's policies to the hilt today," adding, "Benson has moved in farm policies with his approval, the President said."

Marquis Childs had a similar report on a Cabinet meeting held after Benson returned from an inspection of the drought disaster of 1953. After Benson detailed what his Department was doing about it, Childs wrote, "the President warmly congratulated him." (At the time, beef cattle had dropped to $16 from $19.70 at inauguration.)

In January of 1954, when the administration's flexible price-support program was first sent to Congress, the Ike and Ezra theme grew louder. The United Press reported Benson as saying that "President Eisenhower himself made the final decision for the administration on the new farm program," adding this clincher: "Earlier Benson told a news conference that Eisenhower spent more time studying the farm program than the Agriculture Department had expected."

In mid-1954, the Washington Star reported that, next to Treasury Secretary Humphrey and, perhaps, Defense Secretary Wilson, "Benson is regarded as the strongest member of the White House's inner circle. Undoubtedly, he is the most respected."

The Washington Daily News found about the same situation. "Through a terrible battering," the News reported, "Mr. Benson remained calm. He knew he had the one thing that counted most—Dwight Eisenhower's support." And Lyle C. Wilson, Washington bureau chief of the United Press, wrote about the same time that flexible supports were voted by the House in 1954 because Eisenhower "adopted a realistic understanding of the necessity for a leader to lead—and to slug, on occasion, if circumstance required it." Wilson recalled that "word around town last year was that Benson was on the way out," but concluded that "he is counted by many today as the most effective man in the Cabinet."

By the fall of 1954, the United Press was able to quote Republican spokesman as saying that Benson is "probably the busiest" Cabinet official in the congressional campaign.

The third year of Ezra's life with Ike, 1955, started with more reports that Benson was leaving the Cabinet, but all were denied. One report, carried in the Washington Post-Times Herald, had it that Benson had asked Ike to relieve him, now that 2 years were up. "After hearing him through," the Post reported, "the President told Benson his resignation was out of the question. When Benson left the job, the President also would be leaving his, the Chief Executive is understood to have added."

The New York Times reported on March 15, 1955, that Ike had assured Benson "of full backing" in any congressional fight over the restoration of high price supports and that Ike would intervene personally if necessary to keep flexible supports. (He did, too. The Washington Post reported in March of this year that "President Eisenhower is personally using the telephones in an effort to rally Senate support for flexible farm price supports and other features of his farm program.")

A few headlines tell the story for the remainder of 1955:

"President Girds to Fight High Supports for Crops"—Christian Science Monitor, May 4, 1955.

"Eisenhower Supports Benson Completely, Backs Six-Point Plan"—Washington Post and Times Herald, October 30, 1955.

"Eisenhower Approves Benson Farm Polices"—Washington Star, October 30, 1955.

Then there were some more denials that Benson was leaving the Cabinet. "The White House flatly and emphatically denied today that Agriculture Secretary Ezra Taft Benson might resign," began an INS dispatch. The Baltimore Sun's report of the same denials, made by Presidential Press Secretary James Hagerty, began: "President Eisenhower has never even thought of replacing his embattled Secretary of Agriculture, Ezra Taft Benson."

Thus, in spite of wishful thinking by the Nation's farmers, Benson has had 3 years of full support from Eisenhower. Yet, as the Washington Star recently analyzed the political picture of agriculture, "President Eisenhower has escaped blame for the farmers' plight. Critics center their attacks on the people around him."

Similarly, the farm writer of the New York Times, William M. Blair, analyzed the situation as recently as February 5, 1956. Benson occupies "an unusual position—even affection—with President Eisenhower" he wrote. "It is as though he were the 'spiritual adviser to the crusade.' Mr. Benson probably is more dedicated to the President and his views on government in the lives of the people than any other Cabinet officer. Thus, he is anchored. He may stumble but President Eisenhower will support him."

If further proof were really needed that Ike is running the farm program, the GOP provided it early this year with a series of newspaper ads and radio announcements estimated to cost $250,000. The ads were headlined, "Help Eisenhower Pass the New Farm Program" and carried the President's picture and signature. A coupon was included for mailing to one's Congressman with the message: "Yes, I am in favor of the Eisenhower Farm Program." Benson's name was never mentioned.

Noting the new emphasis on Eisenhower, himself, the Wall Street Journal concluded: "Republicans figure the farm chief is a political liability. But they have little hope of ditching him because Ike likes him too much.'"

Branch of Government

EXTENSION OF REMARKS
OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. HALEY. Mr. Speaker, the Members of Congress should awaken to the fact that Congress is and has been in the process of delegating too much of its power to the various bureaus and agencies of the Government. If we continue to do this, before long there will be no need for the Congress. The trend for this procedure has been going on for a long time, and I think that it is time that we make a definite reappraisal of the situation.

The Sarasota Herald-Tribune discusses the matter in an editorial of June 22, 1956, and under unanimous consent I am having it printed in the Appendix of the RECORD:

BRANCH OF GOVERNMENT

In the tremendous expansion of Federal Government the last quarter century, the Congress has delegated its powers to some 70 administrative agencies which actually formulate and issue more laws annually than

does Congress; and 20 of them try more cases than all the Federal courts combined.

The loss to Congress of a substantial part of its constitutional function of determining legislative policy is such, that the late Supreme Court Justice Robert H. Jackson, in a dissenting opinion, called these administrative agencies a veritable fourth branch of the Government.

In wartime, the civil agencies which exercised wartime controls were accepted as necessary for the successful prosecution of the war. But there has been growing dissatisfaction with the grab for power that followed the war by the various administrative agencies that arrogate to themselves legislative policy without consulting Congress.

Congress has finally looked into the abuses charged to its creature agencies. A special subcommittee of the House Rules Committee heard noted jurists and lawyers, who were unanimous in condemning the lack of direction and control of these administrative agencies.

This is not an abstract matter of law, however. These agencies affect intimately the lives of all of us, directly or indirectly. Their jurisdiction ranges over almost all aspects of social and economic life. They go their way with little restraint. Review by the courts is necessarily limited, as they are invoked only in extreme cases.

The solution seems to be in setting up new standing committees of Congress to oversee the powers it has delegated to these agencies, study the complaints concerning abuses of administrative authority and correct them. Congress must regain its constitutional legislative functions and not let administrative officials exercise them without direction and control.

Antarctic Airstrip Named for Oregon Serviceman

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 21, 1956

Mr. COON. Mr. Speaker, under unanimous consent I am having printed in the Appendix of the RECORD a tribute to an Oregon boy who was killed in the Antarctic while serving with the United States Navy on Operation Deepfreeze. The Navy has seen fit to name an airstrip for this lad who gave his life in the service of his country.

Max R. Kiel Airstrip in Little America V commemorates a Joseph, Oreg., Navy man who was killed in the Antarctic while participating in Operation Deepfreeze last March 5.

A Seabee driver second class, Kiel was killed when the 35-ton tractor he was driving crashed into a snow crevasse about 110 miles from Little America V.

He was the son of Mrs. Roma Irene Kiel, Box 32, Joseph, Oreg. Kiel was a member of a tractor train carrying drums of fuel oil and gasoline to a point 250 miles from Little America.

The airstrip was named for Kiel on March 10 and appropriate ceremonies were held.

It seems fitting to me that this Oregon serviceman should be honored for sacrificing his life while helping our country to conquer the vast unknown that characterizes this area of the world.

To me, Max Kiel is a hero just as are those who died in battle, for he, too, was participating in a battle—a battle against the elements of that land of the unknown.

Although I did not know Max personally, I have heard many fine reports about his character and devotion to duty. Mrs. Kiel, the State of Oregon, and the Nation can be proud of this boy.

The South Is on the March

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. HUDDLESTON. Mr. Speaker, on December 23, 1886, the spokesman of the New South, Henry W. Grady, in an address delivered to the New England Society in the city of New York, made a statement which is still widely quoted throughout these United States. On that day, the people were slowly seeing the first ray of hope from those times of both economic and mental depression, following reconstruction. In his speech, entitled "The New South," Grady declared:

> There was a South of slavery and secession—that South is dead. There is a South of union and freedom—that South, thank God is living, breathing, growing every hour.

The words of this illustrious citizen of both the South and the Nation, gave new hope to people throughout the southern part of the United States. Also, it allayed the fears of our brothers from the North that the South would drag the entire country down into bankruptcy.

The great vision and wisdom of Grady have been reflected by the constant and progressive growth and vigor of the South ever since his memorable speech. The truth of his words have never been more apropos than they are today. The South is truly on the march.

Mr. Speaker, as further evidence that the South's destiny is to become one of the world's wealthiest areas, it is my pleasure to include in the RECORD a fine article which appeared Wednesday, June 20, 1956, in the Birmingham Post-Herald, one of the excellent daily papers in my district, under leave to extend my remarks:

SOUTHEAST IS VISIONED WEALTHIEST IN WORLD

TUSCALOOSA, June 19—A Columbia University economist said today the Southeast is destined to become the world's wealthiest area because of climate and water supply.

Dr. Harold F. Clark, Columbia professor of economic education, said the water supply will draw industry, boost agriculture and the climate will attract a large labor force.

Clark, who has studied all areas of the earth for economic potential, made the remarks at a convocation at the University of Alabama's opening of "Education Week."

He said the Southeast's 50 inches of rainfall annually is "enough to sustain a widespread, irrigated, commercial agriculture" and "a highly diversified industry."

Clark said many industries need water, particularly the heavy metals industry, many parts of the paper industry and the chemical industry.

Because the work week is steadily shrinking, Clark said the time is near when labor will select locations "by leisure hour possibilities and not by working conditions."

He explained, "When this attitude hits full force, people are going to come where they can be outside the year around. You couldn't find a better place for that than the Southeast."

He said this area's hot Summer temperatures are merely setbacks that will be overcome with air conditioning in homes, automobiles, factories and offices.

Foreign Policy and the Law of Charity

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Father James L. Vizzard, S. J., which appears in the World Alliance News Letter for June.

While one need not agree with all that Father Vizzard states in his article, nevertheless, it is timely and challenging. In this day and age, there is no denial of the fact that our Founding Fathers clearly intended that the moral law should be the basis of our political way of life.

The writer of this article points out that we have erred, perhaps, in our world relationships by insisting that our national interest be geared to military and economic security. The article follows:

FOREIGN POLICY AND THE LAW OF CHARITY

(By James L. Vizzard, S. J.)

In this Nation founded by men who spelled out clearly the moral basis of our political society, it is strange and discouraging to have to insist that our national interest is a much broader concept and reality than mere military security, political stability or economic advantage. Unless this Nation has interests and responsibilities which are rooted in moral principles, how do we differ from the arbitrary legality of totalitarian states? Unless national interest is based upon moral interest, our objectives can claim no superiority over those of the Communist nations. If our foreign economic policy fails to recognize that the very fact of our abundance creates opportunities and obligations which far transcend any narrowly conceived selfish and temporary interests, then we deserve to be weighed and judged by the world and by God in the same balance as Russia.

In public debate and private discussion a great variety of reasons are given to justify programs of international aid; we have smothering farm surpluses; our expanding industrial economy demands overseas markets and raw materials; we need to win friends and bolster our national security; if we don't the Communists will.

But the moral reasons for these programs, if they are mentioned at all, are brought in only parenthetically, or with embarrassed apology. Patronizing realists clearly imply that charity and justice have no pertinence to the issues, that they represent only the sentimental idealism of international do-gooders.

Yet, in fact, love of neighbor and justice not only have validity, even in terms of na-

tional interest, but are motives for programs of aid which are more urgent, more far-reaching, and of far greater value than any other motives. Moreover, these motives, if properly explained, could win much more sincere and practical approval here and abroad. Finally, programs undertaken for these motives are more likely to achieve, as byproducts, the aims of our foreign policy.
